Long before the following sun had risen Alexander Francois had paddled up the lake shore some ten miles, and then hiding his canoe in the bushes as day broke had struck into the woods in an easterly direction, examining the snow-covered ground as he hurried along. His intention was to make a complete circle around the spot where Daunton's track was last seen.

He tramped all day, and at dark camped beside a rock, which he heated with a fire, and then scraping away the hot coals lay down against it. All the next day he walked, inspecting the snow with the utmost care, so that tracks, perhaps half buried, might not escape him. At sundown he built his fire on the edge of a small lake. He boiled a little tea and ate his cold pork, and then stood smoking for a while on the lake shore. Suddenly in the far eastern sky he saw a red glow. It grew brighter and brighter for an hour, and then slowly faded out. Francois smiled to himself, and knocking the ashes from his pipe he rolled himself in his blanket and slept.

About midnight he rose, tied up his blanket and started due east. All night through the snowy forest he picked his way, like some nocturnal beast of prey. The crunching of the snow under his moccasins was the only sound in the forest, until just at dawn in front of him he heard the long drawn howl of a wolf.

"Mah-in-got," he muttered, and hurried on. Sunlight found him on a ridge with a few very tall spruces among the hardwood growth. One of these Francois climbed and inspected the neighboring woods. At length, still to the east, shot up a thin column of smoke, then another and another. Francois slid to the ground and seizing his rifle started toward the smoke on a quick walk, a tireless, swinging walk that required sinews of steel. He never paused for marsh or thicket until at midday he suddenly stooped down.

There were Daunton's footmarks a day old. The Indian hurried on, but noticed the wolf prints beside the man's. He saw the reeling, uncertain character of the trail, and an expression almost equivalent to anxiety passed over his face when the snow betrayed the spots where Daunton had leaned against a tree for support, or where he had fallen outright.

Further on Francois read in the snow that the wolves had stopped, evidently alarmed, and had then bolted

back at full speed. A few rods further and he learned the cause. Daunton's pine tree in falling had driven them off for the time being. Disappointed in not finding the lost man there, the guide rushed along the tracks, only stopping to pick up the empty flask.

The footprints were only a few hours old, but evidences of the constant falls showed the Indian plainly that he might still be too late. Next he came on Daunton's rifle, and the space from this point to the pool, a short distance that Daunton had only traversed with the utmost effort, the Indian covered with a few bounds, and an hour before sunset he found the form of Daunton.

Alexander Francois leaned over the American for a moment, and then lit his pipe with deliberation. He was not too late. MADISON GRANT.

In the Louisiana Lowlands.—VI.

BY FRED MATHER.

[*Continued from last week.*]

THE proprietor of the plantation where the corn shucking was to come off was a young man, not over forty, but he seemed older. There is something in the isolation of a man from his fellows, or at least those whom he considers to be his fellows, which tends to age him. He gets into a habit of self-communion, a sort of introspection or whatever you may term it, that makes him feel himself to be a special creation, and on an entirely different plane from that of other men. We see this in all the old woodsmen whom we employ as guides, and who live in seclusion for more than half of each year. It is also noticeable in the isolated Southern planter, who makes stated visits to his neighbors for social purposes, and who, surrounded by hundreds of human beings, leads a lonesome life.

My notes are blurred as to names, and they are a job lot of notes anyway, but memory retains the facts and the scenes, and I drop the notes in the waste basket. The name of our host for the evening is lost, so as his cognomen is now an unknown quantity, I will call him Mr. X. He insisted on our coming into the house and keeping in reach of the sideboard, but the boys, George and Jack, were too young to care for the sideboard, and the Doctor and I preferred to see the darky bands arrive and hear the greetings.

"Here we is, fum General Cole's plantation; how you does, Unc' Pete? An' dere's ol' Unc' John from Vernon Parish, an' I ain' shuck yo' han' since de las' shuckin' awn Cunnel Law's plantation las' yeah; I'se pow'ful glad fo' to see yo' all. An' heah's Aunt Liza, the bes' possum cook in de whole parish; we got twenty fo' you, Liza, an' yo' mus' do yo' bes' awn 'em to-night. Well, I 'clar', ef dah ain' dat little buck-dancin' Sam! Say, Sam, yo' mus' rub a extra lot o' rawsin awn yo' feet to-night, fo' dey's a buck-dancah from Vernon come to contes' wid yo' to-night, an' dey say he can lay yo' out. Dey's to be some contes' in straight jiggin', but yo' ain' in dat, an' I don' know who dey is. Good ebenin', Miss Melindy, I wants to shake a foot wid yo' w'en de shuckin's done, I spec' I'm awn time."

This was a sample of the talk, as I caught it, but the names are not those of the locality; they are lost, but we must have names in order to tell the story.

Parties streamed in with torch and song until there were at least 300 negroes, 100 women and a lot of pickaninnies, not taxed. We were on the alluvial side of the Red River, where corn and sugar cane grew in profusion, and some distance north of the rice country. There was a mountain of corn in the husk, or "shuck," as they call it South, and when the forces gathered to attack it there seemed no prospect of its being done in one night. But I had not seen a Southern corn shucking. It was, in its quick work, somewhat like a "raising bee" at the North, where the neighbors put up a man's house or barn from material already prepared, and it arises like Aladdin's palace.

Corn Shucking.

When all was ready a very dark and very large darky climbed to the ridge of the long pile of corn and called out: "Now we begin, an' yo' mus' all pay 'tention to de shuckin' an' to de song, an' not do any talkin' w'ile yo's a-shuckin', fo' yo' can talk w'en it's done. Now begin!" and he sang:

"De cawn's in de shuck, but we gwine to get him out
O, roun' up, roun' up de cawn.
An' de possum's in de gum tree, but we gwine to get him out,
O, roun' up, roun' up de cawn.

W'en de cawn's in de tossel, an' de punkin's in de bloom,
O, roun' up, roun' up de cawn.
Den de darky take a res' an' he watch de harves' moon,
O, keep on a-roundin' up de cawn.

Den skin off de shuck an' tear out his heart,
But keep awn roundin' up de cawn;
Tell de gals an' boys not to make too much noise
W'en dey keeps awn a-roundin' up de cawn."

There were yards, rods and furlongs of this verse, and Jake seemed competent to spin it out forever. Doctor Gordon and I stood and listened to it in a spirit that I dare not describe as ecstacy, but will merely say that it was a thing to our mutual taste. The fire-light, the picturesque costumes, which were heightened by that light, and the quaint songs and chorus in the rich voices, were beyond description. Mr. X. and the other white men occasionally looked on, but the Doctor and I seldom left it.

The problem of the Doctor's nativity was far from being solved, and I loved to work on it. He was an American, surely, but so much a man of the world that he had words, phrases and other characteristics of all parts of the country. At the sideboard he expressed a preference for "red likkah," and I credited him to Kentucky, but when he spoke of the heavy dew and called it "doo," I put him down as from the North.

"Doctor," said I, "these darky songs seem to interest us more than they do the other guests, but I suppose it's an every-day matter with them, at least the peculiarities of the plantation darky don't interest them."

"True, they do not, for to them they are not peculiarities, but common every-day traits. They live among these people so much that they never think them at all out of the common."

Then came a mighty shout from hundreds of throats, hundreds of ears of corn were tossed in the air, and then followed a stampede to the barbecue; the last ear had been shucked and tossed into the great pen, which was literally rounded up as the singer and his chorus had advised. The Doctor and I agreed that we preferred to go to the barbecue, but the host had invited us into the house, where a dozen of us sat down to a midnight dinner, which began with a clear soup, rippled over olives and celery, held a large boiled fish awhile in a pool, then meandered over venison chops, and finally ran into a great roasted wild turkey. The flow was aided and abetted by juices of various grapes, but I was wrecked on an enormous plum pudding, and could go no further; the Doctor also stopped at this point. Such a dinner, at such an hour, needs a stronger stomach than mine, but I ate it, all but the pudding, and fortunately there was no room left for that most indigestable mass. The other articles were tempting, and then one "may as well be hung for a sheep as a lamb," and what if I did suffer some for a few days? One has to pay for all good things in this world.

After we had left the table the Doctor proposed that we should go to the barbecue, and I and two others agreed; the rest preferred to sit on the porch with their feet on the rail and smoke. We saw the pits and the great spits resting in crotches, with cranks and ropes to hold the spits from turning with their burdens of quarters of beef, whole hogs and sheep, which had been roasting over live coals. A few pickaninnies were feasting on the remains with great gusto, for there was plenty left. But we heard shouting back near the shucking place and the mansion, and turned toward it and found that the dancing had begun. Mr. X. gave me the number of pounds of beef, pork and mutton, and I recorded the information in my notes, which were thrown away. I hate statistics, and am not sorry; all I remember is that there were twenty possums, and these were reserved for a favored few by the master of ceremonies.

At the Dance.

Cotillions were first in order, on the smooth, hard-beaten ground, and then the old fiddler appeared. Old, frosty-headed and lame, he did not promise much music to the eye, but as he slowly mounted the platform, which had been put up about 3ft. high for the jig and the buck dancers, he realized his importance, and spent much time in tuning up, for it would never have suited his dignity to have done this in private, he called "All ready"; the master of ceremonies shouted: "Gran' salute!" and he shook "Gray Eagle" out of that fiddle in great shape.

"I 'clar' to goodness, Miss Lucinda, yo' does dat pigeon-wing de bestes' I ebbah seed, yo' does, fo' a fac'."

"Go 'long, Sam, yo' is allus flatiron; yo' know yo' does de wing to 'fection, an' I jess try to pattenise aftah yo'."

The old fiddler played the bass with his boot, and the time was perfect. He shifted off to "Money Musk" and "Devil's Dream," and as the Doctor said, was "no slouch."

This remark placed the Doctor in Chicago.

Two more "cowtillions" and a Virginia reel followed, and the "ladies" retired, for the night had waned perceptibly. Then the M. of C. vociferously announced: "Dey's a buck dancah fum Vernon Parish come heah to-night to dance ouah Sam. Dey is a prize o' five dollahs, an' Col. X. is gwine to 'pint three w'ite men judges w'at fum ouah parish o' in Vernon. Any man w'at wants to bet awn hees man, I'll hole de stake."

Straight Jig and Buck Dancing.

Our host had seen that the Doctor and I had a taste for this kind of amusement, and proposed that we be two of the three judges. "My dear sir," I replied, "I feel fully competent to judge a straight jig, but I do not even know what buck dancing is."

"I know," said the Doctor, "and your ear for rhythm and knowledge of the intricacy of the straight jig will make you a competent judge. Of course, the straight jig is the ideal dance, the neatest, cleanest expression of music by the human foot. It makes no claim to a 'poetry of motion,' but it is a dance to be heard as well as seen. The buck dance is of the same order, but coarser, and the dancer moves all over the stage. Accept, and be a judge."

Sam came forward and proclaimed himself as the champion buck dancer. He was followed by a slim fellow from Vernon, and they shook hands after the manner of prize fighters, to show that there was no ill feeling. A Mr. Petro, from New Orleans, had joined us as a judge. He understood the dance, and we made him referee. He called the dancers and warned them that wing steps, all straight jig steps, such as "weed corn," "kiver taters," etc., would be discounted, and the contestants retired to rub the soles of their bare feet with rosin. Four minutes was allotted to each, and the tune was something in the jerky time of "Johnny, get yer gun, gitcher gun," and the boys put in their best licks; Sam was the winner, and insisted on showing a few more steps that time did not permit him to bring in. I was greatly interested in this, because it was a characteristic dance, evidently evolved by the plantation negro. It is common now in the music halls of the North. It was rhythmical, sometimes graceful and at others grotesque, as suited the fancy of the performer.

The more delicate straight jig, danced in thin-soled shoes on a sanded floor, is not a negro dance, what he has of it he has learned from such minstrels as travel with the "kid shows" of a circus, and the performer tries to hold the same spot and move nothing but his legs, while he puts in light doubles and triples; but these boys were not light of foot, and the Doctor said to me: "Old as I am, I can do better than that, at least I believe I can." And I replied: "If it was not *infra dig* I'd like to show these boys a few things in that line, for once upon a time—"

"We'll have it out when we get back to the Colonel's," said the Doctor, and the boys agreed to remind us of the promise.

"For the Rain it Raineth Every Day."

It was daylight and raining when we reached the Colonel's mansion, and throwing our bridles to some of the men, we went to bed, our two boys being hardly able to keep awake until their room was reached. We met at an evening dinner, where the boys were the only ones whose digestions had not been impaired by the great midnight dinner, and as they alone of our party had tackled the plum pudding, the Doctor and I caught each other watching them eat and knew that we both were wondering at what a boy's stomach could assimilate, and were harking back to our boyhood days, when we could stow away any reasonable, or unreasonable, quantity of boiled dough in the shape of plum pudding or in its other forms of "dumplings," things we now regarded as either instant death or long sickness.

Old Tom was in the Colonel's room, where he had been since we left him the night before. The Doctor unbandaged the ankle and said: "Tom, you have done well, the inflammation has gone down wonderfully. I don't know but I had best go and leave you in charge."

"Yes," said the Colonel, "if I stirred in the night the faithful old man was by me ready to dress my ankle, but it has been a long day. Pull up your chairs and tell me about the shuckin'."

"Thank yo', sah," said Tom, as he closed the door; but to this day I do not know whether it was for the Doctor's compliment or for what I thought I saw slipped into the old man's hand. Experience has taught me that there are a few things which are none of my business.

The rain beat on the windows in sheets, and there was a monotonous drip, drip, down the chimney. Said the Colonel: "Old Tom says that it will rain for three days. He saw the cat wash its face three times last night, and the rain-bird—the cuckoo—called three times to-day. Often the old man is right, for he watches these things, but the cat might have performed its ablutions when he was not looking at it, and the cuckoo probably called many times when his ear did not record it, but it is about time for several days' rain, and I will be the gainer by having you indoors."

The boys went back to bed. They outclassed us on eating and sleeping, but we were in good condition to spend the evening with the Colonel. The Doctor no longer called me "sir" in every sentence, and we sat up with the Colonel until "the wee sma' hours ayont the twal," and spent three days in talk, cribbage and chess, not forgetting the jig dancing, which the boys could not be induced to forget, but which we had forgotten.

We just Took a Few Crappies.

The rain held on for three long days, and while the company was congenial I had ever in mind that I had duties to perform. I explained my collecting mission to the Doctor and the boys, as a reason for my leaving them at an early day, and that, while I was not expected to collect ten hours a day, rain or shine, I had scruples about using too much time in the way last week was spent.

Said George: "We've been talking of this, and the Doctor says that you can collect a whole lot of small life over on our pond, if you will go fishing with us. What are the funny names you told me he could collect, Doctor?"

Evidently there had been a deep and dark conspiracy against me, and the Doctor was the chief criminal, who had intrusted the details to an inexperienced boy, and the boy had, in police parlance, "given him away."

"Doctor," said I, "this is a surprise, and—"

"Well, it has turned out so; but the morning is clear, and we have it all arranged to go to the pond and fish. The horses are at the door, so get your rods and tackle, and we'll be off, and I will only say: You can collect the fresh-water mollusks and crustaceans, which you said you had not done, while we fish. You need not fish, but may go on with your collecting; we will not interfere."

"Yes," Jack interpolated, "and if any of these—what's 'e'r names?—is too big for you to handle, we'll all help you take care of them."

The pond was an enlargement of the stream which ran back of Col. B.'s plantation and down into the Red River. It was about a mile long and a half as wide. There were three boats, and I took a darky boy in one for collecting specimens for Prof. Baird, while the Doctor and Jack took another, and George and a darky took the third. I kept to the shore, and with rake and fine-meshed dip-net took in all the lice in sight. The boy who rowed me opened his eyes in astonishment at the harvest. "Well, I done 'clar'! Nebba see such cu'ious t'ing befo'. He got big eyes an' laigs, an' looks lak a heap o' dirt; w'at's he good fo'?"

"Do you see that dragon fly on your oar?"

"Yes, sah; dat's a debbil's darnin' needle; I knows him fo' shuah."

"Well, this thing will change into that big fly next year. It will come out of the water, fly around and lay its eggs, which will hatch into crawlers like this and then die. The crawlers will turn into devil's darning needles the next year, and so they keep it up."

"How does dat crawlah turn into a debbil's darnin' needle? He doan look laik it. An' how does—but I 'spect yo' want to hab some fun wid a po' fool niggah, an' so it's all right."

The boy amused me with his skepticism, and instead of trying to teach him facts in animal transformation I told him that the fresh-water mussels traveled down to salt water and became oysters; I became an authority on oysters in his opinion. The temptation was too great to be resisted. He refused my fact, but accepted the fiction, because one seemed impossible and the other looked probable. If he is living to-day he knows that after the first frost the frogs get wings in one night and fly away, to return in spring; that ghosts never go out on rainy nights, and other interesting facts in nature. His mind was well stored with an assortment of knowledge in the zoological line that day.

With a collection of invertebrates, consisting of many kinds of mollusks, some crustaceans and a lot of insect larvæ, we stopped work and joined the anglers,

They had struck the right spot for crappies, and while the most of them were the big-mouth species, they had three of the other kind, *P. sparoides*, which is more common in the North, and I was glad to note it. I fished with them for an hour, and then we started for home. I had taken about fifteen, and was surprised to see that they had over two bushels of fish, mainly crappies, and those many species of the sunfish which shade off into the rock bass, or red-eye, warmouth, etc., so common there.

"Oh, no," said the Doctor, in reply to a question; "there will be no waste; you overlook the colored contingent, which will use every fish that is left after our small family is provided for."

"Yes, and we let a lot go," said George, "because they were red-horse and suckers, and it is not cold enough to eat them now; they're too soft.

"An' we'd 'a' had more only I got snagged in the tree top three times," said Jack, "and lost time when they were biting fast, an' then I got hold of a turtle 'at wouldn't come in for I don't know how long, and I had to cut the line and rig new hooks. We used up all the bait-fish and then had to cut chunks out of suckers, and that took time, an' I think I lost a bushel of fish in that way."

"Jack," the Doctor slowly remarked, "we were not fishing against time, nor to see how many bushels of fish we could catch. Never regret the time lost in freeing your line, even if the fish are biting freely. Remember, my boy, that we do not want to catch the last fish in the pond, if we could, and that it would be a sin for us to take as many as we have if your grandfather did not have so many people to feed."

My Little Sermon on Killing Things.

The Doctor looked my way, as if he wanted approval of his sermon. He got it in this way: "Jack, never take the life of any creature unless you need it for food, clothing or other use, or because it injures you in some direct or indirect manner. Every insect, bird, beast, fish or reptile is part of nature's great balance wheel in keeping down other forms of animal or vegetable life. Destroy the pond and river fishes and the turtles would starve, the frogs would multiply until they had devoured all the insects which either destroy vegetation or act as a check upon those which do, and the entire balance is upset. Even an alligator has its uses, Jack, in the economy of nature; I don't mean in furnishing man with purses and things from its skin, nor jewelry from its teeth, but in keeping down other forms of life.

"Look at our little summer yellowbird, Jack, the American goldfinch; its mission is to keep down the thistle by feeding on its seeds; the woodpecker destroys the grub, which in their turn would destroy our forests, and the swallow, the martin, the bull bat, the whip-poorwill and the bat keep down the innumerable hordes of insects which make life a torment for us but for their unceasing work, night and day; and it is the same all through animal life, down to the earthworm.

"Jack, I want you to give this matter some serious thought, for it deserves it, and please do not hate me for putting these things before you in this way. I fully realize that it is not a boy's way of looking at the sport of shooting and fishing, and will confess that it was not my way of viewing it when I was your age, and thought it my right and privilege to kill every living thing that came in my way. I have learned better in the course of time. I have come to know that man is only one in the great plan of nature, and that he is dependent for his existence on the balance which is kept up among what he is pleased to call the lower forms of life, even down to the angle worm with which you catch a fish. Do you follow me, Jack?"

"Oh, yes; and I suppose it's all true; but when I go to hunt or fish I want all I can get, and I have no time to speculate on the balance of life or on any other theory."

"Boy fashion," remarked the Doctor, "but the seed has not fallen on barren ground; it will take root in time."

Holding a Council.

When we reached the mansion it was near dinner time. The boys selected the fish for the family breakfast, all crappies, and gave the rest to be divided among the help. When we had made ourselves presentable for the table, the Colonel was also presentable, for old Tom had dressed him, hunted up a pair of crutches, and there he was. Said he: "Tom is a better nurse than Dr. Gordon, for he does what I tell him to do, while the Doctor gives me orders to obey. If the Doctor had been here to-day I would have been kept in bed just to show me that I was under his orders, and with only a slightly sprained ankle. No, sir! Tom is a good enough nurse for me, and here I am."

The Doctor made no reply; but Mrs. H. said: "I told father that it might be injudicious for him to get out of bed so soon, even though he does not touch the injured foot to the floor. I told him, Doctor, that he had better await your coming and advice, and what do you think he said?"

"I can't imagine."

"He looked at me in a pitying sort of way and replied: 'My dear girl, it's very kind of you, and you mean well, but don't know, and Dr. Gordon also means well, but this is my ankle that is sprained, and I know how it feels much better than Dr. Gordon does—and I've ordered Tom to brush my clothes, get crutches and I will be with you at dinner.' Now, Doctor, what can be done with a patient, or an impatient, like that? I believe you take two lumps, Doctor."

"If you please. Don't worry about your father; I'll talk with him to-night in his room."

"Very well; and I think you take your tea clear, Major, do you not?"

"Yes, thanks, I take it straight; I beg pardon, I mean clear."

The Colonel was in fine fettle when we assembled in his room after dinner. He had defied the Doctor, and virtually turned the case over to old Tom, who slept on a cot in a spare room next the Colonel, where he had his meals sent from the family table, and that was good enough for him. The boys were allowed to be with us until 10 o'clock, and we were five, in council.

After a general talk on the events of the day I spoke my piece in this manner: "Colonel B., I have no words to thank you for * * *. That such a trifling incident as that on the Red River steamer should cause you to open your house to me as a guest seems like fiction. In a review of the events which are recent history it seems like a dream; but one of those happy dreams which we cherish and wish might come true, I must leave you. * * *"

Then the Colonel said something which I would not like to repeat, but it ended in an intimation that I would be welcome under his roof at any time.

Jack broke in, boy fashion, and asked: "When must you go?"

"Day after to-morrow, my boy."

"Then let's have another hunt! What shall it be, deer, turkeys or bears?"

"Why not partridges?" asked George.

"There's lots of 'em in the berry patches," Jack replied, "and the old orchard and the cornfields are full."

"All right, boys, I will hunt partridges with you to-morrow, and then I must leave."

"Before we go to bed, will you please tell us what that funny name is that you have for partridges in your country?"

"We call them quail."

"Oh, yes! Good night!"

Said the Doctor: "May I ask you where you drift to when you leave us?"

"Certainly. I go to look over the drowned lands where Red River, when in flood, overflows into the Atchafalaya, and then down into the rice country and into the brackish water, then home."

The Doctor thought a moment and remarked: "The Colonel is doing well, and it is safe to predict that he will not go on another bear hunt until I return. He will be glad to be rid of me, won't you, Colonel?"

"Since you put it in that form, and dare me to say it, I will say yes, but come back on the old terms of friendship as soon as you can."

[TO BE CONTINUED.]

Yukon Adventures.

(*Continued from page 330.*)

Visions of Starvation.

We made ourselves as comfortable as possible in the grove we had selected for a camping spot, but our sleep was far from restful. We did not know that there was a human habitation between the spot where we found ourselves and Dawson, nearly 200 miles away. Dr. Dawson's report on the exploration of the Yukon district, N. W. Territory, which furnished most of our information regarding the country, gave the particulars of the burning of the old Hudson Bay Post at Fort Selkirk by the Indians years before, but did not mention the fact that Harper had since established a store at the same point. We knew we were not more than eight or ten miles from the Pelly River and Selkirk, but for the reasons given we derived little comfort from the fact. We came to the conclusion that our boats would not go any great distance down the river, but that they would either sink or lodge on some bar. In the latter case they were very likely to be covered over by the ice, which had a wonderful faculty for piling up on any stationary object that hindered its progress.

In our sack of dishes we found a few scraps of horse meat and a handful of cornmeal. We made a scanty supper from this, which, as a matter of fact, only whetted our appetites, and made us realize how hungry we were.

For breakfast we determined to shoot some red squirrels. Shortly after daybreak one ran to the top of a spruce directly in front of camp, and sitting on our bedding I dropped him almost in the ashes of the campfire. A short walk gave us two more, and we fried the three in the skillet and ate them, bones and all. Afterward I felt sorry we hadn't eaten the skins.

Caching the majority of our goods on the site of the camp, we made packs of the bedding and some of the clothing, and set out down the river in search of our lost boats. It seemed better to go on foot than in the remaining boat, as if the missing boats were stranded on an island we might not see them from the water till too late, and so be carried past. After we had located them would be time enough to lay plans for reaching them in the boat. All day we followed the edge of the hurrying ice pack, scanning bars and islands for a trace of our missing craft, and seeing nothing to encourage us. At the heads of bars great masses of ice had accumulated, and any of these might be the tombstone of our lost hopes.

Late in the day, tired, hungry and heartsick over the continued disappointment, we came in sight of the high lava cliff which runs from the mouth of the Pelly for a considerable distance down the north bank of the Yukon. Three hundred yards out in the river we caught sight of a dark object stranded at the head of a bar and nearly covered with ice. The object exerted a strange fascination over us, and neither Mac nor I could take our eyes from it, though for a while at least we hardly realized its import.

When opposite the strange object we dropped our packs and without a word waded out into the river. Two other bars intervened, and between these the current swept like a mill race, carrying great cakes of ice a foot thick and many feet in diameter. For all we knew the water was over our heads. There were no two ways about it, however. We had to know then and there the secret of that black object.

We dodged the cakes of ice as well as we could, getting near the outer edges when it was impossible to escape them altogether, and letting them turn on our legs as a tangential pivot. And so we crossed from bar to bar and finally reached the last.

Thank God! it was one of the missing boats, sure enough. The provisions were intact and not even wet. We sank on our knees and from our hearts returned thanks to an all-merciful Providence.

Good things never come singly. From our position in mid-stream we could see around the next bend of the river. There, perched on a high bank, less than a mile below, was the trading post of Fort Selkirk—ten or a dozen houses, including a mission of the Church of England (temporarily abandoned), and the stock yards where Dalton slaughtered his cattle in summer after their long overland journey from the coast.

Fort Selkirk and the Agent.

We reached Selkirk just after dark, and a little man, moccasined and wearing a beaver skin cap with ear tabs 5in. long, came out to meet us and heard in silence our story. When we were quite through he opened his lips for the first time and said:

"What you fellows want by coming into this country I can't understand. Isn't home good enough for you that you should be risking your lives in such cockle shell boats on a river whose every stone is likely to be the tombstone of some man? Go over to that cabin and make a fire, I will get a lamp and see what I can do for you."

This was H. H. Pitts, the man who has had charge of Harper's store at Selkirk for four years. I should like to write a book on Pitts. He has the softest heart, the sanest judgment and the growliest conversation of any man on the Yukon.

We made our fire, and Mr. Pitts came over presently with flour, caribou liver, bacon and tea for our supper, and if ever two hungry men appreciated eating it was then and there. Everything in sight disappeared, and afterward we turned our chairs to the fire and meekly listened to what Pitts had to say. He had an idea that God intended the Yukon for Indians and traders, and perhaps a few old hardened prospectors that had found by experience nothing would kill them. He said no man that didn't know how to starve and be cheerful, or roost on the warm side of a slab of ice, should ever be admitted to the country, and he told us the story of the Thorn boys, of New York City, who spent several months at Selkirk last summer. The brothers, two in number, worked a while for Jack Dalton on condition that he would take them out with him on his return to the coast, but at the last there was some disagreement, and they started up the river on their own hook. They were athletic fellows, used to the refinements of civilization, but weren't practical enough for a country which has so many more square miles than square meals. One of them told Pitts that he hated walking over rocks and asked him if there were as many up river as there were at Selkirk.

It was plain to be seen that the little man had had the brothers on his mind. Outwardly he repudiates the men who come to him in need of assistance—and their name is legion—but in his heart he takes up each separate burden and does what he can to lighten it, though always in a method and manner calculated to make the beneficiary vituperate rather than bless him. There is nothing Pitts dreads more than to be accused of a kind action.

The Thorn boys cleared out and went up river, and for many days Pitts could get no answer to his inquiries regarding them. He worried, as came natural, though no doubt the Thorns thought he was only glad to be rid of them.

A few days before our arrival news at last was received. The Thorns had missed the Indian trail, upon which Dalton has foisted his name, and which no white man can follow when the snow is on the ground, and for days had wandered around aimlessly, wearing out shoe leather and consuming their scanty supply of food. Report had it that Swiftwater Bill had picked them up in a starving condition, and one out of his mind as a result of privations endured.

Pitts is well informed on all subjects connected with the outer world, and knows what yellow journalism is. A newspaper correspondent brought his pretty nineteen-year-old wife to Fort Selkirk, and while living near by later in the winter she froze both her feet so badly that it was at first thought they might have to be amputated. The agent was greatly worried over the case, and particularly so as he had reason to believe that the couple were short on the grub account. He remarked:

"I suppose that fellow has brought his wife into this country to freeze her and starve her, and then write up her sensations for some Sunday paper. He ought to be in a lunatic asylum or the penitentiary."

That night before we turned in Mr. Pitts thoroughly convinced us that he could furnish us no provisions even if we came to the last extreme. No trading steamer had reached the Pelly for two years, and during the summer everything edible except some condensed milk had been cleaned out. The refugees from Dawson had bought the milk and there was nothing left except a very few pounds of flour and beans and sugar, which could not be bought. The agent himself was reduced to a very scant menu, and had practically nothing saved for the support of the hundred and a half Indians who rounded up at the post after hunting and trapping excursions that took them across hundreds of miles of unmapped virgin country. We found out afterward that he was doling out flour to them in pound paper bags long after he had shut down on the white men. He said it would soon be gone, and that the Indians would starve and die like sheep in the spring, but while the little lasted he felt his obligation to the copper-colored men rather than the white. "The Indians were gathered here by traders, who promised them food," he said, "while these chechacoes (tenderfeet) have rushed in here after gold as if they were storming Hell, knowing they couldn't get grub, and deserve to suffer the consequences." There was the hardest kind of an inflection to his words, and yet that very day, when Renaud came in with frozen feet and empty stomach, it was Pitts who brought over his bean pot and ladled out the contents till the worn man said enough, and who bound up and poulticed his feet.

At Selkirk we came in daily contact with Indians. In another article I shall have something to say of the vanishing Yukon tribe.

J. B. BURNHAM.

Throw a bit of alum, about the size of a marble, into a small bowl of water, and wet the hands and face and any exposed parts lightly with it. Not a mosquito will approach you. They hum about a little and disappear.—Bombay Guardian.

Natural History.

Some Indian Natural History.

It was a good many years ago that old Hugh Monoe, who for more than seventy-five years had traveled he prairies of the Northwest, told me that once he had ound a bird's nest in the thick hair between the horns of a buffalo bull that he had killed. He had two Indians with him, and had killed the young bull which the Indians were beginning to skin and cut up; and while hey were doing this he plucked some of the long hair from the forehead to use in wiping out his gun. As he reached down and grasped the hair a little bird—a little gray bird—flew out from under his hand and away. Parting the hair to see whence it had come, he found a round, smooth nest, containing four little young birds. He could not tell me what kind of a bird it was.

Not many weeks ago, when I was sitting in the lodge with my Indian father and elder brothers, principal chiefs of the Blackfeet, I spoke of this tale that had been told me, and learned that all who were present had heard of just this thing. On-ésta-pokau, the White Calf, had known of one case of this kind where the bird was a blackbird; but this he had not seen himself.

Once, however, he did see the nest of a "snow bird" containing four eggs between the horns of a bull. Inquiry, followed by a careful and detailed description, showed that the bird which the Blackfeet call "snow bird" is the prairie shore lark.

After we had talked about this for some time E-kusini, the Low Horn, said to me: "My friend, I will now tell you something. Do you know that Neó-po-muki counts the months of the winter on his tongue?"

"No," I said, "I know Neó-po-muki, but I do not know what you mean by counting the months of the winter on his tongue."

"This is it," said Low Horn. "In spring, if you kill one, and open his mouth and lift up his tongue, you will find under the tongue five other tongues, one tongue for each month of the winter. In the fall he does not have these extra tongues. I do not know why he has them, nor what it means."

Neó-po-muki is the chickadee, and he is so called from his cry; for he says always "Summer is coming, summer is coming."

"Father," I said to White Calf, "I know that the people are afraid of those water dogs (siredons) that live in the little alkali lakes, and I know that they are Under-Water Animals, and as such are fearful; but what do they do to people? How do they harm them? They are not strong creatures; they have not sharp teeth and claws, and cannot bite nor scratch."

"Still, my son, they have strong power," answered the old man. "When they crawl on to a person they suck his skin into them; into their toes and into their belly and into their tail. Wherever a part of it touches a person, the person's skin goes into the animal. It is impossible to get back your skin from them, unless you cut them open and peel them off."

"Saiyáh, surely they have strong power," I replied.

It was a few days later that I was talking with my old father about the painting on the different lodges in the village. There was the buffalo painted lodge of the Iniskim, the elk painted lodge, the one painted with the raven, the one with the cow's head, and many others. And on nearly all of them I saw at the back of the lodge, high up behind the wings and close to the smoke hole, a design roughly in the shape of a Maltese cross, one arm horizontal, the other vertical.

"You must know, my son," said the old father, "that all these fashions of painting the lodges are very old. Long before my time or my grandfather's time the people painted their lodges in this way, and it has been handed down through the generations. Sometimes even the meaning of the painting has been forgotten, though almost always there is a medicine that goes with the lodge, and a ceremony, so that the people have not forgotten what the painting means. All these different ways of painting have come to people in their sleep. They have dreamed that they must paint their lodges in these ways, and they have done so, and now the fashion cannot be changed. Only one man in the camp may paint his lodge in the fashion of the Iniskim, and he is the man who owns the medicine of that lodge. Once there were two lodges of the Iniskim, one of these had a black ground on which the buffalo were painted to represent deep water; and one had a yellow ground to represent shallow water. Dreams telling them how they should paint their lodges came at different times to two men who owned buffalo stones, and so there were two lodges of the Iniskim. One of these is now up north among the Kainah—the Bloods."

"Father," said I, "on many of the lodges, close to the smoke hole I see a mark like that," crossing my two forefingers. "What does that mean?"

"That, my boy, is the sign of the butterfly. You know that it is the butterfly who brings us our dreams—who brings the news to us when we are asleep. Have you never heard a man say, when he sees a butterfly fluttering over the prairie, 'There is a little fellow flying about who is going to bring the news to some one to-night'? Or have you not heard a person say after night, as the fire burns low, and the people begin to make up their beds about the lodge, 'Well, let us go to bed, and see what news the butterfly will bring. All Indians think that the butterfly brings dreams to us."

"Do you know why the butterfly brings dreams, or how it brings them?" I asked.

"I do not know," he said, "but we all of us believe that it is true. Maybe it is because the butterfly is soft and pretty and moves gently, and if you look at him a long time he will put you to sleep, but I do not know why it is nor how it is that he brings dreams to us."

GEO. BIRD GRINNELL.

More about Instinct.

Editor Forest and Stream:

Certain of your correspondents have been arguing learnedly and entertainingly upon the subjects of instinct, evolution, heredity, etc.; and since this seems to be a free-for-all shooting match, I will claim your forbearance while I take a shot with my own little Faber No. 2, though not in a polemical vein, and give some reflections that have been revolving in my own mind on these topics.

What is instinct? The most concise definition is given by Paley, as quoted by Webster: "An instinct is a propensity prior to experience, and independent of instruction."

This means, of course, prior to the experience of the individual; and the philosophers of Paley's time supposed that the instinctive impulse originated spontaneously in the mind in human beings, and its equivalent in animals, in a purely subjective way, without connection with extraneous influences.

With later research and increased knowledge, we have learned in our day that all mental impulses are the more or less complex outgrowth of experience; and that class called instinct are the result of mental attitudes that subsisted during many generations, and became crystallized into persistent modes of consciousness that are transmitted by heredity, surviving in full force long after the impulses which gave them birth have been lost in the obscurity of past ages.

Man's brain organism has by long and slow development raised him to a plane above the instinct-producing stage. But, down in the cellars of his mental edifice there is a store of crude and antiquated furniture which still exists in a good state of preservation and all its pristine strength; constituting a substratum of brain activity which occasionally asserts itself, and proclaims man's near kinship to his brother animals, and his own derivation from quadrupedal ancestors. I will endeavor to draw a parallel between man and the lower animals on the common plane of instinct by citing a few familiar facts.

We see that man and dog enter with equal ardor and mutual enjoyment into the spirit of the chase. Whence was this spirit derived? In both cases it is a survival from a stage of existence wherein the pursuit and capture of game was for innumerable generations their sole or principal means of sustaining life. Hence the impulse survives long after the conditions out of which it grew have ceased. Indeed, the more independent both man and dog may be of the material results of their exertions in the chase, the better and more enthusiastic sportsmen are they.

It is said that the well-fed cat is a better mouser than the neglected and poorly-fed one.

Referring to the horse, we are all familiar with his disposition to "shy" at stumps and bushes, or any sight or sound not common to his experience. And the stronger and better condition the horse may be in, the stronger is his propensity to "shy" at bugaboos. This habit is due to an impulse growing out of an environment which made his own survival dependent upon constant vigilance to elude the deadly spring of predacious beasts of the cat family. The necessity for being so constantly on the qui vive to avoid such attacks planted the instinct indelibly in the horse nature, so that it still persists with unabated strength long after such necessity has passed away.

Incidentally it may be mentioned that flight is still the horse's only weapon of defense against his enemies beyond his own tribe.

Turning again to man. What individual whose habits carry him into the woods and fields has failed to experience that thrill of instinctive terror and impulse to make a great jump when he has suddenly come upon a snake of any kind, or even the semblance of one in vine or crooked stick lying in his path?

The writer has striven manfully, but in vain, to overcome this instinctive repugnance to all forms of snake life by freely handling the harmless kinds, and even with caution the venomous sort; but reason will succumb to its parent, animal instinct; and the repulsiveness of snakes is as strong as ever. But whence this natural repugnance to serpents, which is stronger in man than in other animals? At a time when man had to do battle with his numerous rivals in the struggle for existence on much more equal terms than at present, during the period of transition from physical inferiority to mental superiority, it is probable that the serpent tribe was the enemy most difficult to guard against, from its abundance in his surroundings and his frequent experience of coming unawares within reach of its poisonous fangs or deadly coils. Hence the dread of snakes was deeply implanted in his nature, and still persists with all its original force. When we ask why these instinctive impressions should so long survive the conditions that produced them, the answer is, that the period during which they were slowly developed was immensely longer than the time which has since elapsed.

Another parallel example, showing the dominance of instinct over reason in man, and placing him on the same level with the "beasts of the field," is shown in the contagion of fear, resulting in a state of panic, in which reason is as completely dethroned in large bodies of men as in herds of cattle and sheep. A very pertinent example in the concrete of the potency of fear contagion is now being exhibited throughout the State of Mississippi, where the name "yellow fever" possesses the same panic-producing power as the yelping of a small dog behind a flock of fleeing sheep.

The contagion of rage and passion among large bodies of men, in which reason is cast aside, as exemplified in the ancient cry "Great is Diana of the Ephesians," is still very much alive among mobs and political gatherings of the present time, and has its parallel in the lower animals in the rage excited among a herd of hogs when one of their comrades gives full effect to his vocal powers in calling for help against the attack of a common enemy—a survival from a time when such a social regulation was necessary for the survival of the porcine family.

It may be mentioned in this connection that the grunting of the hog originated under conditions where, feeding in thick cover, it was necessary for the different individuals in a herd by this means to keep in touch with one another.

The whole category of the common superstitious fears in man, the dread which children (and grown persons) have of being alone in the dark, where no possible danger threatens, comes down to us by heredity from a time when man's surroundings were peopled by his imagination with innumerable evil spirits and baneful influences, and the darkness was full of hidden dangers. Instinct is a strong and lasting chain that binds together man and the whole ensemble of animated life in a common heritage of evolutionary development.

Since writing the above I have read Mr. E. P. Alexander's last contribution—a very interesting one—on the subject of blue prints.

In pursuing my own professional labors it is necessary to have stumps, buried logs, etc., unearthed and removed from the base of earthen structures. It occasionally happens in this alluvial region that an insignificant looking root end, protruding from the ground, leads to an enormous stump buried underneath. So Mr. Alexander's blue print theory opens up the whole question now agitating the minds of religionists and philosophers, whether or not a Supreme Ruler of the universe manages all the minute details in the development of organized life by His own intelligent direction on this globe of ours, and planetary system of our own sun, as well as those of some hundreds of millions of other suns which modern telescopes disclose to our view.

This is not the proper place to go into such a controversy, but I think I can present in a clear light the issue between Mr. Alexander and the Darwin school by a simple illustration from nature.

In the lowest swamps of the Mississippi bottoms there grows an oak called the overcup. It is so called because the acorn is almost completely covered by a thick outer hull. The tree in other respects is very similar to the post oak of the hill country. The thick envelope enables the acorn to float, and so survive. The overflow acorns that have not this covering, sink, and the germ is destroyed by long submergence.

Darwin's theory is that, when these conditions were developing, those acorns that chanced to possess envelopes thick enough to float them alone survived the overflow, and by the well established law of the "survival of the fittest" the ultimate form was developed.

Per contra: did the Almighty "in the beginning" foresee these late developments in the quarternary period of the earth's history, and make a blue print in advance of the overcup acorn?

It appears to me that Mr. Alexander's necessity for interposing his blue print theory arises from his failure to avail himself of the unlimited credit in the commodity of time, which all philosophers are permitted to draw upon in the great bank of eternity. In other words, granted time enough as a fulcrum, and Mr. Darwin's lever is fully capable of lifting the protozoan into man.

Game Bag and Gun.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

Oregon Notes.

Editor Forest and Stream:

Well, my dear old friend, how are you? It's a full year since we exchanged greetings. A year! only another wrinkle in the face of time, creased deep enough to incase the panorama of a snap shot at the battle of life. But to us poor little mortals a year, with its own four seasons, to say nothing of the numerous close and open seasons added by our superserviceable Legislative Assemblies, seems like a long time.

That reminds me that the Oregon Legislature is now in extra session. That word "extra" is good, for it involves a lot of extra work, extra pay, extra legislation, etc., hardly worth the candle. However, we have at last got a United States senator, a change in the fish and game protective laws and some needed modifications of the general game laws, which will doubtless be more fully referred to in next edition of "Game Laws in Brief."

Mr. F. H. Thurston (Kelpie), of Central Lake, Mich., paid me a nice visit the first of this month. If all the Kingfishers are like Kelpie, I can readily understand why these grand old fellows all look forward with so much pleasure to a gathering of the clan.

Corroborative of the statement so often made that the Mongolian pheasant cock is aggressive, bold and valiant, let me relate an incident that came under my own observation to-day. Billy Newman and I were strolling along near a meadow within the limits of the city of Portland, when we observed, not far away, a commotion among a flock of turkeys. Upon investigation we found the big bronze gobbler doing battle with a Mongolian cock, and, of course, became very interested spectators. I think, from the published account of the Sullivan-Corbett fight, that the tactics of the contestants in the two battles were much the same, and the result was the same, except (if my memory serves me) the big fellow didn't run away down at New Orleans. That ring-neck whipped the old gobbler in two rounds—or rather, they fought two rounds and the Mongolian licked the gobbler good and hard both rounds. It was a game fight, but science won.

Much fine sport with the salmon trout is reported from all over the State. John Haggett and Billy Newman have just returned from the Siletz country, just north of Yaquina Bay, and report that they found more big salmon trout than they knew what to do with.

As an indication of the vast numbers of salmon trout to be had at this season of the year, Grant Patton (now of Tillamook) was in my office last week and told me that in less than two hours he caught with hook and line in the Nehalem River forty-five salmon trout, runing from 1 to 3lbs., and I might add that I will swear to anything Grant tells me for the truth.

PORTLAND, Oregon, Oct. 14. S. H. GREENE.

The Rime of the Deer Hunters.

(Suggested by Rudyard Kipling's "Rime of the Three Sealers.")

Away by the home of the sidling lands,
Where the rifles are rusting red,
Since the blue game law of '97
Passed on to be three times read;
There, when the Hunters congregate,
They tell the tale anew,
How the Driver claimed the right to the hide,
When deer was dead and the Slayer's pride
Made him easy to hoodoo.

Now this is the law of the Mountaineer, which he proves by custom old,
And when they drove the deer in the fall, it no man need be told:
That the hunter, who started the hounds in the woods and climbed the mountain side,
Was to have his share of the meat allowed, as well as the horns and hide.
The hunters met in the early morn, when the white frost made it worth,
And the buck deer put on his Sunday clothes, and his forefoot smote the earth.
The hounds were loosed in the mountain top, the standers they must wait
Till the deer was killed or the driver came to relieve them soon or late.
And a man who shot and missed a deer—his shirt-tail then was cut,
And he suffered the gibes of all the camp—the Camp of the Hungry Gut.
But if a deer came through the stand, and was killed in passing it,
The hunters cut him into lots, dividing bit by bit,
And whether the meat was lost or won by shooting at mark or draw,
The Driver could claim his right to the hide, and his claim was good in Law.

Now this is the tale of two City Men, but one was Hillside born,
And his nature led him back to the woods when the Shirkar shucked the corn;
And so, one Fall, he brings to hunt at the place where the waters head,
His friend from among the Up Above, who was city born and bred,
In whom the blood of his ancestry made him mad to kill a deer,
And he loaded him down with cartridges and other hunting gear.
The first knew where to find a deer, and the other went in search
Of his place by the side of the noisy stream—the stand was the Leaning Birch.
A buck came down at the Leaning Birch, and around him the water swirled,
And the look that came in the Stander's face was the look of another world;
The look of the prehistoric man, "in the hocking in the night,
When he stood to the flank of the Aurock, when the red snow reeked of fight."
"The flame spurt red sprang out ahead" as the .44-90 spoke,
And the noble brute leaped and went down as by a thunder stroke.
The chase was done, the deer undressed, and the Driver claimed the hide,
But the Slayer wished the pelt for a rug, and such was his doom and pride,
For between the two was a poker debt of nine dollars and fifty cents,
Which the Driver swore the hide of the deer should go to recompense;
Firmly he stood and nothing else would induce or make him afraid,
And ere that hide graced the city home thus was the bargain made.

ANDREW PRICE.

MARLINTON, W. Va.

Boston and Maine.

BOSTON, Oct. 21.—Fallen leaves are troubling the Maine big game hunters a good deal just at present. Still snow has fallen in some of the northern sections of the State to the extent that some tracking has been done. Mr. G. H. Sperry, of Boston, has captured a big moose at Great Fish Lake, Aroostook county, Me. The monster is reported to have weighed 1,100lbs., and there is no use of disputing the weight till the returns of the American Express Company can be got at, when it is likely that the carcass weighed about 600lbs. The antlers had a spread of 59½in. Mr. Sperry was accompanied on the hunting trip by Byron Stark and Dr. Simpson, of New York. They got two deer, one an albino, and a black bear. Partridges they found very scarce. Three other moose came down on the same train with that of Mr. Sperry. Rev. B. C. Wentworth, of Waterville, Me., has returned from a hunting trip in the vicinity of Norcross, Me., with a fine buck deer. C. L. Cushman, of Auburn, Me., with a New York gentleman, brings from near the Canadian border the largest buck deer of the season, weighing about 200lbs. Some Lewiston, Me., hunters, including F. H. Packard, Henry O. Cutler, Edward Wakefield, and some Portland hunters, have returned from the Seboomook Cottage, Northeast Carry, where they killed a black bear, one of the largest ever taken in that section.

Deer are coming into the markets of every village in Maine, according to the newspapers, and the numbers and size must be great, even if the reports are only half true. Not satisfied with marketing the game in their own State, the hunters or dealers are sending a great many to Boston. I saw a large number of fresh arrivals to-day. They are coming some way, of which the Maine commissioners can readily be convinced, if they will take the trouble to investigate. Evidently somebody is killing Maine big game for market, and at an alarming rate.

OCT. 24.—Moose are coming into the Boston markets, notwithstanding they are, without doubt, unusually scarce this year. A gentleman who is on the road a good deal, and very frequently over the Bangor & Aroostook, stopping frequently at the city of Bangor, is just in from a trip, and tells me that not one-half of the number of moose have passed through Bangor this season, so far, as during the corresponding time a year ago. Still, Boston marketmen manage to get hold of the few there are. I saw one unloaded into the place of a market concern Saturday. Curiously enough it was unloaded from the wagon of an East Boston express company; a team that would be as little likely to have hold of it, if it was being openly and legally forwarded, as would a gentleman's carriage. There was no tag on it, as the Maine game laws require—tag of the owner. It excited some attention, and neither the marketmen nor the expressmen had anything to say. The moose was evidently a young one; not over three years old. One horn was peculiar in formation, making it really a horn rather than an antler. It was slender, and of nearly the same size for the whole length—11in. in diameter and at least 10in. long. The horn came down in front of the animal's face, something in the shape of the horn of a gnu, possibly that of a musk ox or domestic cow with crumpled horn. The other horn of the dead moose was a regular moose antler, though small in size. I will obtain a photograph of the head, for reproduction in the FOREST AND STREAM, if possible.

F. E. Whiting, of the Boston Herald, is out of the woods from a trip to Jo Merry Lake. He brings home the head of a fine buck. Among the other Boston hunters who have taken deer in Maine this season may be noted H. L. Wiggin, C. B. Seagrave, C. C. Foster, J. Foster, H. E. Gross, D. Sheehan, A. F. Kenney, W. H. Lougee, J. L. Towle, J. F. Richardson, W. G. Payson. Gunners outside of Boston are reported to have taken deer as follows: E. W. Prescott, C. M. Gould, A. H. Doble, G. E. Morrill, W. H. Priest, M. A. Head, M. A. T. Gail, H. T. Stansfield, O. W. Whittemore, A. W. Rogers, G. T. Freeman and C. B. Gudell. Mrs. H. B. Adams is reported to have killed two deer at Julian Viles' Tim Pond camps.

A Bangor daily paper report says that Fish and Game Commissioner L. T. Carlton has just been in that city, in the interest of the enforcement of the game laws. He has brought two men from Houlton to justice for killing a cow moose in April, 1897. One he fined $200 and the other $100. Well, I thought that the Maine game laws distinctly specified "imprisonment" for illegally killing moose, and "no fine about it." Has Commissioner Carlton again taken the interpretation of the game laws into his own hands, as in the case of the boy moose killers, whom he let off altogether? SPECIAL.

Notes from New Brunswick.

THE rush of American sportsmen into this Province appears to be nearly over for the present. A much larger number than usual, however, are coming to hunt on the snow, including some parties who did not secure their full complement of big game in September.

I have had occasion to remark heretofore that no 60in. moose heads have yet been taken on Miramichi waters, whereas they have quite frequently been found on the Tobique and the Restigouche. Mr. Gordon Parker, of Woburn, Mass., however, has shot a moose in the Crooked Deadwater country with a cross section of 58in. This is crowding the Tobique moose rather close, and Braithwaite maintains that "Tim Lynch," the king of all moose, is still at large on the head of Renous. Mr. Parker and his friend Mr. Fowle are expected out in a few days, when full details of their trip will be obtainable.

Carter H. Fitzhugh and Owen F. Aldis, of Chicago, who were out on a short hunt with William Griffin, of Stanley, saw both moose and caribou, but failed to take due cognizance of the fleeting element of time, and their trophies are still "on the hoof."

John Bodkin has returned from a hunting and camping trip of several weeks' duration on the Nepisiguit. Mr. Bodkin's feat of calling up and shooting a moose with a spread of over 60in. last season gave him a well-deserved reputation as one of the best of our amateur "callers." Mr. Bodkin did not have his usual luck this season. He brought home a nice caribou, but no moose. He thinks that the upper waters of the Nepisiguit have been overcrowded with hunting parties this fall.

A party composed of A. L. Powell, M. J. Nevins, E. J. Mullaley and George H. Davis went through Vanceboro the other day in a contented frame of mind. They were hunting near the Bathurst Lakes. They killed four bull moose in four successive days, and also shot a caribou.

It was a pleasure for local sportsmen to learn that Mr. Charles S. Bird and his friend, D. F. Fales, of East Walpole, Mass., had excellent luck on the Tobique. They secured two moose, the largest having a spread of 57½in. and twenty-six points. This party had George Armstrong, of Perth Centre, as guide. Mr. Fales also shot a large caribou.

The American sportsman is almost sure to be breaking some record or other. Mr. B. R. Houghten, of Boston, takes a pardonable pride in the fact that he arrived in camp on the Tobique Tuesday night, Oct. 4, and upon starting out after breakfast next morning had his moose down in thirty minutes.

Moose heads, most of them of wide spread, have lately gone through Vanceboro, shot by R. E. Gregg, C. L. Jackson, Moses Williams, W. H. Moses, Dr. Tuttle, W. L. Miller and M. Williamson. I was unable to learn particulars. Caribou were taken out by R. E. Gregg, Moses Williams, W. L. Pierce and W. F. Jenkins, and a deer by Dr. Cliff. Six other moose heads went through last week, of which the customs agent was unable to learn the owners.

W. H. Foster, of the editorial staff of the New York World, and his friend, John Hunt, came down the other day from the head of Tobique. Adam Moore, their guide, called up three moose, but our friends were not successful in locating the lead in a vital point. They secured, however, two caribou and a bear.

A party composed of J. S. Ehrich and wife, and S. W. Lehman, all of New York, returned on the 18th, after a fortnight's hunt on the Sisters Lakes. They had as guides W. H. Allen, Ed. Norred and Ed. Church. They brought out two heads of 48 and 50in. spreads. Mr. Ehrich wounded a much larger moose than either of these.

Mr. Z. H. Jarman and brother, of Brooklyn, brought a nice moose out of the Canaan country. Their guide was James H. Ryder. Mr. Jarman states that the party wounded and lost another bull. He speaks very highly of the Canaan region in regard to its moose supply, and also of Mr. Ryder as a skillful guide and caller.

Near the country in which Mr. Jarman hunted are the wild meadows of Lake Brook. George H. Woodburn, of Philadelphia, shot a bull moose there on the 8th inst., with a remarkable set of antlers. The points numbered thirty and the spread was 55in. Careful measurements were taken of this moose, which stood 7ft. 1in. high at the withers.

FRANK H. RISTEEN.

FREDERICTON, Oct. 21.

CHICAGO AND THE WEST.

The Methods of "Mr. Hicks."

CHICAGO, Ill., Oct. 22.—The FOREST AND STREAM of last week contained a mention of the mythical "Mr. Hicks," of Milwaukee, who has been acting as a blind for the covering of the continuous traffic in illegal Wisconsin game. "Mr. Hicks," as is now fully known in the cities of Chicago and Milwaukee, is no one but H. L. Brown & Son, of 225 South Water street, Chicago. This concern has been dealing in illegal game for a long time and had managed to get it in here under cover in one way or another. The firm was trapped by means of a decoy letter, written by a man in Wisconsin, who represented that he could send in a large number of partridges daily from his shipping point. The security which seems to have been felt by this concern in carrying on its illegal work, and its opinion of the chances of being caught for handling game illegal in Illinois, may best be seen by the following excerpts from the data collected by Warden August Zinn, of Milwaukee, who detected the real nature of "Mr. Hicks." The first letter read as follows:

Chicago, Ill., Sept. 29.—Your favor of Sept. 26 received. We inclose you private instructions for shipping game. Follow these instructions closely. Bill to Milwaukee and your game will reach us all right. We will send you some tags, and the initial letters on those tags will represent your name on our books. Partridges are worth $4.50 per dozen; venison 14 to 16 cents per pound. Try and have some with us the first of the week. Treat this matter confidentially. H. L. Brown & Son.

The tags inclosed are as follows:

L. H. HICKS.
Milwaukee, Wis.
E. E. E.

The shipping instructions by which the law of Wisconsin was to be broken were sent in this form:

Wisconsin shippers should follow the instructions given below and their shipments will reach us promptly and a great deal of annoyance in receiving unknown packages will be done away with. Bill all packages to L. H. Hicks, Milwaukee, Wis., putting a tag to that effect on outside of package and another inside. The outside tag is invariably torn off after shipment leaves Milwaukee, and unless you follow instructions and place a tag on inside you can easily see that it is impossible for us to determine from whom the shipment is, as all packages are billed from Milwaukee. The letter or letters at bottom or back of tags that we sent you stands for shipper's name on our books. Do not loan tags unless you thoroughly erase these letters, otherwise shipment is credited to the name that letter corresponds with here, and sales sent accordingly.

Do not fail to put invoice inside of package, being careful to give correctly the count of each variety, and sign your name on the back of each ticket.

We will take care of you all right at this end. We have now on our books a number of unknown packages which we will readily account to the shipper for upon receiving a correct invoice and name of owner, with post-office address.

Market steady, and we hope our shippers will observe above instructions to the letter, and we can do a good business together this fall. H. L. Brown & Son.

In case of any game being caught here in Chicago by the Illinois warden, this precious set of merchants declared themselves ready to stand good for the loss. They sent the following guarantee, which I should think would make Harry Loveday think a lot of them:

"We personally guarantee to make good to any shipper any consignment that might be interfered with by the game warden at this end, providing same are consigned to us in tight packages and the shipper follows our instructions as sent out heretofore."

Loveday Catches "Mr. Hicks."

Yesterday our State warden, Harry Loveday, came in and said he had a bit of news in regard to this end of the Wisconsin steal, carried on by the Brown concern. He had located a leak, and earlier made a seizure of a lot of game that had been shipped in to the outfit, via "Mr. Hicks." The lot was mostly partridges. It is a certainty that the firm of H. L. Brown & Son would better walk the track pretty close from now on, so far as the Chicago end is interested.

Where the Illegal Game came from.

It has been urged upon State Warden Ellarson, of Wisconsin, for a long time, that deer were being killed pretty much all summer and shipped to market from the neighborhood of Greenwood. This the warden denied, but proof was later found that the charges are only too correct. A great deal of such work has been done near Greenwood, Wis. From Neillsville, Wis., comes a protest of the citizens of better sort, who declare that buyers are shipping out 500 to 600 partridges per day. The men of that country who want some game left declare that at the present rate the deer and grouse will soon be gone. This is one of the supply points of "Mr. Hicks."

South Water Street.

Warden Loveday tells me to-day that he finds that this year the marketing of Illinois game has fallen off to almost nothing. He has caught only three packages so far this season. Last year at this time, as may perhaps be remembered, he found things very different, and had in the same number of days confiscated sixty-five different packages of Illinois game. He has this fall seized on South Water street and at the depots in all eighty-seven packages of game, coming into this market ahead of our open season. The contents of these packages were 918 prairie chickens, 424 partridges, 730 ducks,

93 quail and 3 deer. "Most of this game, said Mr. Loveday, "was rotten and unfit for use. Of the lot, five packages were directed to 'L. H. Hicks, Milwaukee.' Some had on them 'L. H. Brown,' and others had nothing to mark them but 'Hicks, Milwaukee.'" Mr. Loveday says some of the heavy dealers have told him they would turn over any illegal stuff they got. A few packages were turned in. How many duplicates of the methods of the Mr. Hicks outfit there may be I presume no one but the recording angel definitely knows.

The Northern Flight.

The bad storms of the past week have sent down the Northern birds all over the Wisconsin marshes. The birds have been abundant on the best of the grounds. I saw to-day Mr. John Roberts, of Neenah, who told me he has been shooting for a long while this fall on the Butte des Morts and Poygan marshes. At the latter lake he says there were more ducks than he had seen for a long time, though they did not work very well, rafting up and not moving till sundown. On Puckaway Lake much the same thing was reported; plenty of birds, but no very heavy shooting. Theodore Thomas and a party of friends, of Milwaukee, went to Fox Lake, Wis., where they had only fair sport. Other Milwaukee men have gone to Sullivan, Winneconne and other famous points. Koshkonong Lake has been favored with a heavy flight, both of shooters and of ducks. The past week has offered splendid canvasback weather, and some fine bags have been made around that standby of Wisconsin waters. Warden Johnson, of Winnebago fame, has been detailed and put on duty at Koshkonong, so that the sneak-box work will no doubt have at least temporary check.

It is thought that at the next session of the Wisconsin Legislature there will be a good fight made for a law stopping spring shooting. It is beginning to be realized that the spring shooting in the State drives away birds that would otherwise breed on the great marshes, and make good shooting in the fall.

The flight is in all over Minnesota also. I hear that Ottertail county, around Ashby, Minn., is very good this month. Lake Traverse is another good point, though much hunted. Many are going to Brown's Valley, and the returns are good from that point. Big Lake is another Minnesota point which is good this week. At Fosston, Minn., the sport on ducks has been reported very good for the past week. This is a great point for partridges also.

Duck shooting at the Caw Caw Club, on Puckaway Lake, Wis., has been improving. Major Cunningham and party bagged ninety ducks during their stay this week.

Two Milwaukee gentlemen, Messrs. W. H. Dodsworth and John W. Mariner, have returned from Bordulac, N. D. They brought out about 200 birds, ducks and geese, and report fine shooting. They say the heavy storms have started the flight in great shape.

The Minnewaukon Club, of Dubuque, Ia., have returned from their trip to the Devil's Lake country, of North Dakota. They brought back with them 100 geese and 300 ducks. They killed in all 200 geese and 650 ducks. They say the shooting was not quite what it should have been.

Shooting at Mitchell's Lake, near San Antonio, Texas, is excellent, and I understand a club will be formed to control that wonderful wildfowl resort.

The market hunters of Texas complain that the new non-export game law is ruining their business.

The Ascent of the Grand Teton.

Regarding the mooted question over the ascent of the Grand Teton peak, over which there has been some discussion in the FOREST AND STREAM, Prof. Langford writes to me that he has made an extended answer to Mr. Owen's article, which was printed in the New York Herald, and he goes on to say regarding his own claim of first ascent of this peak:

"I have had some correspondence with a few friends during the past few years relative to my ascent of the Teton. Some doubt has been expressed whether we reached the highest pinnacle. One suggestion was that the misty or smoky atmosphere may have rendered it difficult to determine the relative height of two pinnacles of nearly the same elevation. Another was that the cloud which usually hangs on the top of the Teton may, from the point we reached, have obscured our view of a higher peak. These suggestions have no significance, as the day was perfectly clear. Mr. Owen challenges my veracity, and seeks to make his challenge good by ridiculous arguments. He will fail to convince a hunter that a mountain sheep cannot climb to the top of the Teton, which he has himself reached."

White Deer.

A white deer was killed in the coast range of California this month by a party of woodland hunters, Messrs. Briggs, Brown and Taylor. I do not have particulars, but it is said the animal was the first of its kind seen in that country for very many years.

Wisconsin Deer Licenses.

One of the most remarkable phenomena of the non-resident deer license system of Wisconsin last year was the fact that the records showed less than a few score of non-resident hunters, whereas the resident licenses ran up into the thousands. I firmly believe that under the organized system of railroad hunting traffic solicitation there are at least half as many non-resident deer hunters in the States of Michigan, Wisconsin and Minnesota as there are resident hunters. To the man who is far away from a deer country it seems a very desirable thing to kill a deer. He brings back a pair of spike buck antlers, and hangs them up in his dining room, and his bosom swells as he looks at them and talks about them. To the man who lived fifty or a hundred miles from the place where this same deer was killed the matter of going out and killing deer perhaps seemed so simple and common an affair that he never troubled himself to do it. Of course, with actual residents in the deer country it is a little different. In the pine country there are not a great many cattle kept, and such meat as is shipped in by the transportation companies is mostly manufactured from the succulent hog. Fresh meat is easily obtained on the runway, and a great many deer are killed for food, to say nothing of the great numbers killed for shipping to Chicago, in spite of the eagle eye of the express companies, so reluctant to carry contraband game. Whatever the ratio of non-resident and resident deer hunters may actually be in the brief fall hunting season, there is no doubt whatever of the prevalence of the widely extended fraud in the matter of deer licenses in the State of Wisconsin. It is gratifying to learn that in the State of Wisconsin there is to be at least an attempt to correct this abuse. The licenses and applications issued last year have been recalled, and others sent in their stead to the county clerks. The license is void unless stamped by the seal of the county clerk, and under the new law, if the county clerk does not know the man who asks for the deer license, the latter must bring a certificate from the city or town clerk, telling who he is and where he comes from, the matter of personal identification being a necessity. Except under flagrant connivance of officials, this should put an end to the use of resident licenses by non-resident deer hunters, an abuse which last year was one of the most glaring shown in the all too common disregard of the public for the game laws.

The Executive.

It is an old saying that you cannot enforce a law which the people do not want. This ought to be true. Yet the people ought to reflect that the laws of America and the laws of each State of the United States are not arbitrary measures inflicted by the hand of despotism, but are measures which they themselves have asked for and secured. Game laws are no new things, but have been upon the statute books of our States for many years and many decades. As much thought and care and intelligence have been expended in this class of legislation as in any other class, and the result has been that our code of game laws is for the most part a good one. The fatally weak part in the chain is on the executive side. The system of local wardens in the regions where game is killed is notoriously weak all over the Western country, to say nothing of the inability of the whole machinery of the State commissions to break up the admitted lawlessness of the game markets. What we need, at least certainly in the West, is less time put into laws and more money put into wardens. We have sheriffs and deputies enough to arrest the murderers and thieves, the embezzlers and defaulters and swindlers. We can follow a man from New York to San Francisco and catch him and bring him back and have him tried and convicted and punished, supposing that his offense is one against individual property rights. How about it in case of a violation of the game law? It is likely that not one violation in a thousand is ever punished. To follow a man from New York to San Francisco for an offense against the game laws would be called a persecution, even if our laws tolerated his pursuit under the proper requisition. For the county warden to prosecute his neighbor is also called persecution under the laws as they are. Then why did the people make these laws? Why do they not wipe them from the statute books? Or else, if we are to regard these laws as the wish of the actual majority of the people, why can they not be enforced? It is only their enforcement which will ever bring them into respect. We would have plenty of theft and highway robberies and murder if it were not for the enforcement of the laws against those crimes. Weaken the executive and you weaken the whole law. Strengthen the executive of the game laws and you strengthen those laws.

These thoughts arise the more naturally as one reflects upon the undoubtedly increasing interest in the matters of fish and game protection in all parts of the Western country. Sometimes I am disposed to hope that there will some day really arrive a growth of popular sentiment which will set these matters right. I presume I have used as much newspaper space as almost any one in reporting and supporting game protection. It is the rarest thing that I ever have any one write to me and express the least interest in this sort of thing. Yet if perchance I learn of any new and game country and mention that, I have a great many inquiries regarding it.

The Panhandle of Texas.

A writer in the News, of Dallas, Texas, takes up the question of the complete change in the game supply of that State. He mentions more especially the practical extinction of the wild turkey in many regious, remarking, "Here and there a flock can be seen, but there is not one now to where there were once a thousand." He says that these birds were most easily killed off in the country where the timber was infrequent, as they took to the trees to roost and were easily located and killed on the roosts in the scarce timber patches. In regard to the present status of the game in the upper part of the State he has this to say:

"The prairie chickens and quail suffered from the hunters that came with the railroads from north and east into this part of the country. Thousands upon thousands were killed and shipped to St. Louis, Kansas City and Chicago. In some parts of the Panhandle the chickens are increasing very rapidly. In the first place the game laws are protecting them and the small stock-owner is doing the same. Besides this, the Kaffir corn is the finest food for them and they are doing well. Three kinds of quail are to be found in what is called northwest Texas. The Bob White, the old standby bird, is (in great numbers) on hand and around the farms of the eastern part of the district mentioned. On the plains, or rather around the breaks of the plains, the blue quail are in abundance. These are the topknots, a small variety of the California quail. They are not considered good hunting, from the fact that they do not 'stand' the dog well, their means of escape being in running away. But when they can be forced into the grass, they will lie well; and as they are very game, the dog will work on them quite as well as on the Bob White. I am told that in and around the Guadalupe Mountains the larger blue quail, or the California quail proper, are numerous. All these birds, as I have said, are now protected by law, and if the courts will enforce the law as it should be enforced, in time the old abundance of game in Texas will come again."

I do not think game protection is a popular topic, yet after a while it may become more so, and perhaps all in due course we shall see a change in affairs which will go toward justifying the pains taken by FOREST AND STREAM and other journals of its kind. In line with this, for instance, is the editorial mention in the Forest City Times, of Arkansas, which comes pat with the train of thought following on the open disregard of the license law in certain Northern States last year. The newspaper mentioned remarks, "We are glad to note the interest aroused throughout all parts of the State as to the protection of game. The passage of laws simply will not remedy the indiscriminate slaughter of game. We have laws enough, and what is needed is officers to define and enforce them. To prohibit the killing of game for five years, without special officers to enforce the law, would only increase the number of violators, and game would become extinct in less than the time prescribed for its protection. Give us a game warden in each county, with deputies and a grand jury to back them, and with the present laws game will always be plentiful."

That's it. It is deputies and a grand jury that we need.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

A Bohemian Field-Drive.

LET us suppose that a *feld-kreis*, or field-drive, is about to take place. From a certain point two lines of beaters, with a "shooter" every 300yds. or so, diverge right and left, and, walking in Indian file, each detachment describes a half-circle, thus forming a ring usually of some two miles in diameter. In the center of the circle waves a flag upon which the whole line is to converge.

And now the order to advance, passed from keeper to keeper by the aid of the ubiquitous horn, comes. Every now and then a hare rises from its form, and steals away, generally out of range. For the first quarter of an hour or so one hardly gets a shot. But wait! Gradually the circle lessens. Hares that have been roused on the other side of the ring begin to make their appearance —some with ears laid back, and body stretched out to its full extent, as they gallop for all they are worth; others coming slowly and quietly along, and sitting up, from time to time, to look round for a way of escape. Poor things! Sooner or later they almost all come to the guns. Now and then one will boldly charge the beaters —the best chance for safety, if only they all knew it. Sometimes a covey of partridges will flash down the wind, scattering right and left, and testing one's skill to the uttermost, as they rise high in the air to clear the line.

The firing grows fast and furious as the ring grows smaller, for the hares are literally in droves. Ten or a dozen hares are frequently lying dead in front of one at the same moment; and the guns become almost too hot to hold.

A blast from the horn of the head keeper at length checks the advance. The circle is by this time not much more than a hundred yards across, and firing within it would soon become dangerous, so the beaters open out, and form themselves in groups behind each gun, thus allowing the remaining animals egress and a run for life.

In one drive like this kind 500 or even more hares are frequently killed. There is something about it, though, not quite in accordance with one's notions of fair play, the animals being, as it were, caught in a trap from which there is no escape.

The most solemn function comes at the end of a day's shooting, when the slain are arranged in rows neatly on the ground, and the head keeper, hat in hand, reads out the number of each variety of game killed and the sum total, closing with a profound bow and a "*Waidmann's Heil*," to which the sportsmen reply with "*Waidmann's Dank*." On some estates it is customary to blow the death-song of the various beasts and birds, and also to announce what each hunter has himself shot.

Many Austrian hosts give what they consider to be the best place throughout the day to the guest of the highest social rank—a proceeding rather apt to lead to a certain amount of jealousy. Sometimes it happens, however, that the favored individual is by no means the best shot, and far from being the hunt-king (as the sportsman who kills the most is called), even fails to hold his own.

An amusing incident once occurred at the end of a day's covert shooting. A certain gentleman of high rank, who had enjoyed the best position throughout the day, had fired off a tremendous number of cartridges with but very poor results. This placed the head keeper in a very delicate position. To announce the decidedly meager score of the august sportsman was not to be thought of! Approaching one of the other guests, and drawing him aside, he whispered: "Pardon me, but have you any objection to my adding forty of your hares and thirty of your pheasants to ——'s total?" "Do it by all means," replied the other guest; and, as two or three more sportsmen were equally good-natured, the gentleman in question thus obtained the nominal title of the hunt-king!

Whether he fondly imagined that he had killed all the game that he was credited with, or whether he knew that the obliging keeper had "doctored" the figures, I cannot say.—Hodgson's Plain and Peak.

Hotel Advertising Pays.

Mr. E. B. Cobb, of Cobb's Island, Va., writes: "I have received quite a number of letters of inquiry from gunners since advertising in FOREST AND STREAM this year."

I am carrying an advertisement of the Camp Franklin Hotel and Cottages in the FOREST AND STREAM at the present time, and will say further that it is the only paper that I have ever gotten any results from.—C. J. Coon, Woodruff, Wis.

On Ottawa Marshes.

Cleveland, O., Oct. 21.—*Editor Forest and Stream:* One of the members of the Ottawa Shooting Club, Mr. John J. Flick, was up to the marsh last week, and he told me that he had a fine time. Arriving at the club house Monday night, in time to get all his traps ready for Tuesday morning, he got out about daybreak and rowed down the Sandusky River to the mouth of Green Creek, then pulling his boat over the dam at the mouth of Green Creek, he rowed up a large body of water we call "Goose Pond." As he neared the upper end of the pond quite a large number of ducks kept getting up, until having reached a large rice bed at the upper end, he decided that that was about the best place he could find to set out his decoys, so there he located. The ducks kept coming back and circling around over head, while he and his "punter" were getting his blind in shape. Having fixed everything to their satisfaction in a few minutes, they settled down to business. The wind was blowing hard from the southwest, so that the ducks coming right up the pond against the wind made nice shooting, as the wind was over the shooter's back. Some of the ducks, especially the widgeon and pintail, would swing right into the decoys, while the mallards and teal would pass on further, dropping into the rice. Well, the result was, after getting a single now and then, and once in a while a double on a pair of mallards trying to get by, and more often a clean miss with one or both barrels, by 4 o'clock in the afternoon he had thirty-six ducks. After picking up his decoys and a few ducks that had floated down the pond, he pulled over to Green Creek, then up the creek to "Rattlesnake" Cut, through the cut to the Sandusky River, and then with about a half-mile pull he reached the club house, in time for a good dinner.

On the following day, Wednesday, he located in Channel No. 1, and picked up seventeen ducks during the day, and then on Thursday he had a nice shoot again. He said that when he pulled in through Peach Island Cut and up Channel No. 1 and into the head of Channel No. 2, he put up a great flock of widgeons, and decided to locate in the upper end of Channel No. 2 and try the widgeon that day. After locating on a big muskrat cabin, pulling out the center and getting it nicely lined with dry flag, and setting out his decoys all around it, he put in the morning there, and by noon had just twenty ducks. As the shooting was poorer than he had expected, he pulled up and started up to the club house, but when opposite the "Mud Holes" just below "Dutch Gap" he saw an immense number of ducks getting up out of the "Mud Holes," and running his boat ashore, and he and his "punter" taking a box of decoys and his revolving chair, they went in and found one of the patrolmen feeding the ducks (in a number of places where the feed is not good we generally feed a few bushels of corn each fall). As he considered this a pretty good place to locate, they set out the decoys, and while they were thus occupied the ducks kept coming back and circling around, and wanted to come into the mud holes. The best shots at first seemed to be back of him, but after dropping three nice mallards in the tall flag, and the punter being able to find only one, he decided only to shoot at those flying over the pond. This decreased the number of shots, but by sundown the punter had picked up twenty-seven ducks, mallard, pintail, blue and green-winged teal and spoonbill. This made forty-seven ducks for the day's work, and was the nicest shoot of his visit. His total for the three days' shooting was just 100 ducks. He reports that the widgeon are just coming in.

The bulk of the mallards have not come down yet, the weather up north has been so mild that they still stay in that locality. I think about another week will see them here in full force. Frank B. Many.

Gunpowder in Brazil.

In reply to inquiries from a New York export association, Consul Furniss sends to the State Department the following from Bahia, under date of Aug. 24:

There is one factory in this consular district devoted to the manufacture of powder. This is situated in Cachoeira, a town of about 5,000 inhabitants, some twenty miles distant from here, and reached by daily boats. The town is on the Paraguazu River, a few miles above the head of the bay on which Bahia City is situated.

I understand that the annual output amounts to about 4,000 kegs of 25lbs. each, and that it retails at from 30 to 40 milreis per keg. As the milreis vary each day in value, a definite price in United States money can not be given; but to-day a milreis is worth 14.2 cents United States.

The greater part of the manufacture is common black sporting powder; a very little of a better grade is made. Much of the powder is used to manufacture native fireworks, consisting of poor roman candles, skyrockets, pin wheels, and the like, for which there is great demand, on account of the numerous church festivals and saint days, and the national and State holidays, to say nothing of the large amount daily and nightly used for private parties and receptions, or to celebrate the drawing of a prize at one of the many lotteries.

The powder produced here does not suit the requirements of the market, but, on account of the State restrictions, and more particularly the municipal restrictions of Bahia, and in view of the fact that this is the only port of entrance into this consular district, the people have to be content with that of local manufacture, and the Cachoeira powder is much used in the surrounding country.

There are no Government regulations prohibiting the importation of powder, but after it arrives in the harbor it is loaded on a Government boat and conveyed to the quay, whence it is removed to the Government magazine, about 4 miles distant; all this is at the expense of the importer. At this magazine the Government keeps a guard, and an importer making a sale is required to petition the chief of police of this city, who, at his discretion, gives license for the removal of part or all of the quantity petitioned for. For this service the fee amounts to about 50 milreis ($7.10), and the petitioner is compelled to tell the destination of the powder to be withdrawn. The license for the removal is presented to the custom house, the duty paid, a permit received, and upon presentation of this to the officer in charge of the magazine the powder is delivered. The party purchasing from the importer must sign the receipt attached to the permit issued by the police, swear to it before a notary, and return it to the police department under penalty of a heavy fine for non-compliance.

Powder, according to present regulations, may stay in the Government magazine until wanted; a charge of 1 per cent. being exacted for storage, which amount is payable upon withdrawal. Ample storage is provided for any amount that may be imported.

In the city of Bahia no powder is allowed to be kept, except in cartridges and shells for sportsmen's use; and, on account of the restrictions, there is only one store where these are handled. There are several places where powder can be purchased clandestinely, at prices sufficiently high to reimburse for risk run. This practice is indulged in by the smaller stores, where it is sold under the name "farinha prata," or black flour.

On Getting Lost in the Mountains.

Wells, Wyoming.—Several articles have lately appeared in Forest and Stream on woodcraft, getting lost, etc. While it is true that the ability to find one's way in all sorts of weather is rather an inborn than an acquired instinct, still by following a few simple rules no one should become badly lost.

In the first place, one should carry a general idea in one's head of the main streams, mountains and gulches. In a new or strange country this knowledge should be obtained at once. On the first day out of a new camp, keep on high ground as much as possible; look back frequently, so that the country will not appear strange when you turn back, and do not try to burden your mind with too many small details. Simply remember, for instance, that if you turn to the left from the divide on which you are, you will come into the valley of the stream on which you are camped, but that if you turn to the right you will come down onto a stream that flows in another direction. Also remember that your camp is near such and such a looking hill, or, better still, that it is in range with two mountain peaks. It is always better on the first day or two not to get out of the valley in which your camp is located, but if you should do so, go back the way that you came. Short cuts in a new country lose many a hunter.

Always carry a compass, as there is no way of telling the points of compass by means of bark or branches that can be relied on. Remember the direction in which your camp is, and then if you get really lost, sit down, build a fire, and make a big smoke. This is supposing that you have companions, as no greenhorn should be alone in camp. They will look you up the next day, and it is better to sit by a fire and take it easy than it is to run all over the country. Every year men are lost in the mountains, who, if they had kept cool and sat down and made a smoke, would have been in camp by noon the next day. Instead of this they lose their heads, travel clear out of the vicinity of camp, and sometimes suffer terribly or die of starvation before being found.

Wm. Wells.

Are Bull Bats Game?

Editor Forest and Stream:

I have just read some remarks by your correspondent, Didymus, on the subject of bull bats.

I have recently indulged in two different kinds of solid enjoyment, afforded by Bro. Bull Bat; the one, the sport afforded in shooting him—the other, that of eating him.

For gastronomic exercise, I don't believe any better material is furnished by any bird familiar to American shooters than the bull bat, with the possible exceptions of the woodcock and snipe.

As to his capacity as mosquito destroyer, I do not believe that any appreciable diminution in the mosquito supply would ensue if all the bull bats in the world should suddenly go out of existence. The great mass of the mosquito army remain under cover in dense swamps, where bull bats do not resort; and those that go out into the open remain near the ground. I once spent a night at the "Jetties," at the mouth of the Mississippi River, and finding it quite impossible to sleep under a mosquito bar full of holes, I climbed to the top of a rude observatory, 80ft. above the ground, and there enjoyed sweet repose, without any bar or other protection, until waked by the morning sun. Didymus found a night hawk's crop filled with flying ants; but what bearing has that discovery on the mosquito question? I once found a very large beetle in a bull bat's mouth.

I have invariably observed that when bull bats first make their appearance, shortly after sunset, they feed high up in the air, much too high to shoot, and gradually fly lower as the evening advances, always out in the open, where I failed to observe that there were any mosquitoes for them to feed on.

I do not believe that the bull bat is to any extent a factor in the great mosquito problem, and with all due respect to friend Didymus, in the street vernacular I think he is "off his base" on Bro. Bull Bat.

Coahoma.

Mississippi.

Cape May County Game.

Editor Forest and Stream:

Surely it must be unknown to the lovers of the gun and feathered game that within little more than an hour's journey by rail from Philadelphia some of the finest quail and rabbit shooting in this part of the country is to be had. In Cape May county, the most southerly of New Jersey, quail and partridges are plentiful.

A friend who has frequently visited Woodbine, N. J., gives an account of large bags made in a few hours' sport. Rabbits are equally plentiful, and offer first-class sport. Woodbine boasts a clean, comfortable and moderate-priced hotel.

Tea in Camp.

In his "Canoe and Camp Cookery," Seneca has the following about making tea:

"For most teas the right proportion is one teaspoonful of tea for every tea cup that is to be drawn, and one 'for the pot.' The simplest method of making it is to put cold water on the tea in the pot, set over the fire and let it almost boil. Just as it begins to steam, remove it to a place less hot, where it will simmer and not boil for five minutes. If it boils or simmers too long the tannin will be disolved, and the tea will have a disagreeable stringent taste. When the liquid is all used out of the pot, I do not throw away the grounds, but add one-half the quantity for the drawing, and so on till the pot is one-third full of grounds, when it is all emptied and the pot thoroughly washed."

A correspondent writes from Calcutta, India, commenting on this:

"We shall beg to correct your author of "Camp Cookery" as to the making of tea. Pour boiling water and let it steep for one minute, if, as often happens in the jungle here, no milk is at hand, and pour off. Sweeten extra if drunk without milk. If milk is added let it steep from five to seven minutes. Quantity, one teaspoonful if without milk, and say one and a quarter teaspoonfuls if with milk. Throw away the tea leaves after this, unless one is hard pushed and in the jungle, when, if the tea is Pekoe, or any other good quality, a second infusion might be made, using less water than the first time, say a half or two-thirds as much. Do not drink tea much on an empty stomach; hot, immediately after a meal, is the best."

Hunting and War.

An officer of the British army writes in a military journal in India, suggesting the value of big game hunting as a training for scouts in war:

"There can be no better training than that afforded by organized expeditions in pursuit of big game, combined with military exercises which could be carried out on the march.

"On these excursions the men would acquire the habit of shifting for themselves, and would learn all the expedients of camp life; while a genuine spirit of comradeship would be established during the chase, or when assembled in the evening to discuss the past day's adventures or the next day's prospects.

"For such expeditions India offers peculiar facilities, abounding as it does in wild animals and varied country. Whether amid the snows of the Himalayas, on the rugged mountains of the northwest frontier, or the burning plains and highlands of southern and central India, the scout would encounter danger and learn to be indifferent to it; he would become accustomed to take his rifle in one hand and his life in the other, and to look death in the face without flinching; while hard work and exposure would inure him to the vicissitudes of campaigning, give him an eye for country and a facility for overcoming obstacles and despising difficulties, and acquaint him with the inhabitants and the country over which he ranged."

Virginia Quail.

Chase City, Va., Oct. 12.—*Editor Forest and Stream:* I have hunted quail in Virginia for forty years, and in no section of the State is the hunting as good as in the county of Mecklenburg. I would recommend Chase City as a suitable place for Northern sportsmen to locate. Mr. W. D. Paxton, of the Mineral Hotel, is in touch with all the farmers, and he has personal friends among the local sportsmen who own dogs, and take special pleasure in piloting visitors to the best hunting grounds. There are more birds, turkeys and deer in the vicinity than ever before. Polk Miller,

President Field Sports Association, Richmond, Va.

Eastern Massachusetts.

Danvers, Mass., Oct. 22.—Good flight of snipe along; also the migration of woodcock seems to have commenced. Coot shooting is reported good along the coast. I have seen more dead raccoons hanging in the markets than for several seasons. Quail are reported plenty, but swamps are wet and leaves plenty, so not many are killed unless on the first rise.

J. W. Babbitt.

Indians as Runners.

Gen. Crook is credited with having declared that on one occasion he saw an Apache lope 1,500ft. up the side of a mountain without showing the first signs of fatigue, there being no perceptible sign of increase of respiration. Capt. H. L. Scott, of the Seventh Cavalry, has related some astonishing feats performed by the Chiracahua Apaches forming Troop L of his regiment. He tells how nine of these Indians, after a hard day's work, by way of recreation pursued a coyote for two hours, captured the nimble brute, and brought it into camp; how, on another occasion, the scouts gave chase to a deer, ran it down some nine miles from camp and fetched it in alive. Old-timers in the Rocky Mountains declare that in the days before the Atlantic & Pacific Railroad was built the Puma Indians of Arizona would recover settlers' stray horses along the overland trail by walking them down in the course of two or three days. After this one may begin to believe that "Lying Jim" Beckwourth, whose remarkable adventures early in this century are preserved in book form, was a much-maligned man, and that he spoke no more than the truth when he said he had known instances of Indian runners accomplishing upward of 110 miles in one day.—Chicago Chronicle.

Mr. Lawhead—"Why do you treat me so coldly? Why didn't you answer the note I wrote you last Thursday?" Miss Brushley—"Sir, I don't wish to have anything more to say to you. You began your note by saying you 'thought you would drop me a line.' I want you to understand that I'm not a fish!"—Chicago News.

Sea and River Fishing.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in Forest and Stream.

American Saibling or Golden Trout.

Salvelinus sunapee (Webber and Quackenbos, 1886); *Salvelinus aureolus* (Bean, 1888); *Salvelinus alpinus aureolus* (Jordan, 1891).

[From the Report of the New York Fisheries, Game and Forestry Commission.]

In the summer of 1882 anglers first began to hear of the capture of a large, silvery, deep-water trout at Lake Sunapee, New Hampshire. For several years this fish was known as the St. John River trout, on the presumption that it was descended from certain yearlings rumored to have been introduced into Sunapee from the St. John River, New Brunswick, in 1867, but which really came from Grand Lake, Maine, and were ouananiche. The conspicuous development of the under jaw in the males led to the local names of "hawk-bill" and "hook-bill;" the silvery sides of the fish in summer gave rise to that of "white trout."

In October, 1885, George F. Peabody, now of Sunapee, then a resident of the east shore, accidentally came upon a mid-lake spawning-bed, an acre or two in area, covered with hundreds of the new trout ranging from 3 to 10lbs. in weight. He promptly notified the Fish Commissioners of his find, and specimens were sent to Washington and Cambridge for identification. They proved to be representatives of a highly variable Alpine charr, distributed through the Dominion of Canada, Labrador, and Greenland, but whose presence in United States waters was unsuspected.

This charr is now believed to be aboriginal to Lake Sunapee, as well as to Flood's Pond, in the town of Otis, near Ellsworth, Maine. The water of both these lakes is deep and exceptionally pure and cold. Lake Sunapee is a true ancient rock-basin, as shown by the natural granite dam at the outlet. It now discharges into the Connecticut River; but until the receding ice of the last glacial epoch reached, in its sluggish melt toward the north, the lower valley of the Sugar River, the mighty inland sea of primeval times poured into the Merrimack over Newbury Summit, 60ft. higher than the level of the present effluent. Through the Merrimack watershed, while the valley of the Sugar River was as yet choked with glacial ice, the quarternary trout, if of marine ancestry, must have found their way into this mysterious lake, following, like man and the higher mammalia, but by watery channels, the retreating ice fields, and swarming into the basin of Sunapee, excavated anew for their reception by the erosive power of the glacier, and filled with its melting snows. This quarternary charr, or Alpine trout—represented in the saibling of the mountain lakes of Europe from Austria to Spitzbergen, in the Dolly Varden (*Malma*) on both sides of Bering Sea, in the pigmy blue-back of Maine (*Oquassa*), and in the large anadromous or sea-run blue-back of Labrador—is believed to be the ancestral type from which our common brook trout has differentiated. It has simply found in Lake Sunapee and Flood's Pond conditions for its survival—in the purity of the water (Sunapee, one and three-tenths grains of solid matter to the gallon), in the depth of the water (both lakes over 100ft.), in the character of the bottom (white sand and gravel), in the temperature of the lower layers (Sunapee, 38° Fahr. to 52° Fahr., according to depth and season), and in the abundance of crustacean and fish food.

The distinguishing features of the Sunapee charr are: The presence of a broad row of teeth on the hyoid bone, between the lower extremities of the first two gill arches; the absence of mottling on the dark sea-green back and excessively developed fins; inconspicuous yellow spots, without blue areola; a square or slightly emarginate tail; a small and delicately shaped head, diminutive aristocratic mouth, liquid planetary eyes, and a generally graceful build; a phenomenally brilliant nuptial coloration, recalling the foreign appellations of "blood-red charr," "gilt charr," and "golden saibling." As the October pairing time approaches, the Sunapee fish becomes illuminated with the flushes of maturing passion. The steel-green mantle of the back and shoulders now seems to dissolve into a veil of amethyst, through which the daffodil spots of mid-summer gleam out in points of flame, while below the lateral line all is dazzling orange. The fins catch the hue of the adjacent parts, and pectoral, ventral, anal, and lower lobe of caudal, are marked with a lustrous white band. It is a unique experience to watch this American saibling spawning on the Sunapee shallows. Here, in all the magnificence of their nuptial decoration flash schools of painted beauties, circling in proud sweeps about the submerged boulders they would select as the scenes of their loves—the poetry of an epithalamion in every motion—in one direction, uncovering to the sunbeams in amorous leaps their golden-tinctured sides, gemmed with the fire of rubies; in another, darting in little companies, the penciled margins of their fins seeming to trail behind them like white ribbons under the ripples. There are conspicuous differences in intensity of general coloration, and the gaudy dyes of the milter are tempered in the spawner to a dead-luster cadmium cream or olive chrome, with opal spots. The wedding garment nature has given to this charr is unparagoned. Those who have seen the bridal march of the glistering hordes, in all their glory of color and majesty of action, pronounce it a spectacle never to be forgotten. That so conspicuous a game and food fish could have been aboriginal to Lake Sunapee, and for one hundred years have escaped the notice alike of visiting and resident anglers, persistent poachers, and alert scientists, is accounted for:

First, by its habits, which protected it from observation and persecution. The white trout rarely approached the surface, except during the last week of October and the first week in November, when it appeared on the mid-lake reefs to spawn—a time of year when angling is out of season, and in localities dangerous or impossible of access in the old style, unseaworthy flat-bottoms during the autumnal wind-storms. The secluded habits of the European charrs explain in like manner the obscurity which has so long involved the life history of those fishes. Moreover, ordinary fishermen recognized no difference between the white and the brook trout, a thing not to be wondered at when ichthyologists failed at first to separate the forms.

Secondly, by the continuous exposure of the species to the ravages of the yellow perch and the miller's thumb. Before the introduction of black bass in 1868, both these enemies of trout were abundant in the lake and the connecting estuaries, and there being at that time no smelt food, subsisted largely on the eggs and fry of the lake-spawning charr. At the spring hatching season the perch held carnival among the helpless alevins, almost effecting, by their periodic havoc, the extermination of the white trout. But as the black bass increased in number, they fell upon the perch in turn, until the lake was virtually rid of this voracious pest. Thus the saibling, which had been reduced to the verge of annihilation, had a chance to multiply. The black bass do not interfere with it, for two reasons:

First, both bass and trout have an abundance of easily caught and tasteful food in the land-locked smelts, which have increased since their introduction, until now they literally school in millions.

Secondly, bass and trout are not found in the same sections of water at the same time, the trout keeping in a temperature of 42° Fahr. to 50° Fahr. (on the surface in May, 60ft. below in July and August); the bass preferring 65° Fahr. to 70° Fahr. in summer, and hibernating in winter and during the spring hatching time of the trout. Thus freed from persecution on the part of the *uranidea* and the *perca Americana*, the saibling has increased, until it is now present in myriads.

I have just received a most interesting confirmation of this theory—that the introduction of black bass into a trout lake may improve the trout fishing in that lake—from Mr. Arthur Merrill, of the Maine Inland Fisheries and Game Commission. Mr. Merrill writes from Monmouth, Maine, under date of Sept. 13, 1897:

"The theory that the introduction of black bass changed the natural conditions in Lake Sunapee, so that the saibling had a chance to increase, seems to be substantiated by well-known facts in the case of many Maine lakes, notably the Cobbosseecontee and Messalonshee chains, in Kennebec county. These lakes, twenty in number, with an area of 50,000 acres, formerly swarmed with trout; but the introduction of perch and pickerel so reduced the numbers of *fontinalis* that it was apparently exterminated. The introduction of black bass, however, has been followed by an unexpected increase in the number of trout, and now these lakes afford the best trout fishing obtainable in the settled area of the State. Lake Cobbosseecontee yielded over 500 brook trout this year, weighing from 2 to 7lbs. each, and the lake was not persistently fished, as its resources were known only to local fishermen."

The Sunapee saibling takes live bait readily, preferring a cast smelt in spring, when it pursues the spawning *osmerus* to the shores. As far as is known, it does not rise to the fly either at this season, or when on the shoals in autumn. Through the summer months it is angled for with a live minnow or smelt, in 60 to 70ft. of water, over a cold bottom, in localities that have been baited. While the smelt are inshore, trolling with a light fly-rod and fine tackle, either with a Skinner's fluted spoon, No. 1, or a small smelt on single hook, will sometimes yield superb sport, as the game qualities of the white trout are estimated to be double those of the *fontinalis*. The most exhilarating amusement to be had with this charr, after the first hot June days, is in trolling from a sailboat with a greenheart tarpon rod, 300ft. of copper wire of the smallest caliber on a heavy tarpon reel, and attached to this a 6ft. braided leader with a Buell's spinner, or a live minnow on a stiff gang. The weight of the wire sinks the bait to the requisite depth. When the sailboat is running across the wind at the maximum of her speed, the sensation experienced by the strike of a 4 or 5lb. fish bankrupts all description. A strong line under such a tension would part on the instant; but the ductility of the wire averts this accident, and the man at the reel end of the rod experiences a characteristic "give," quickly followed by the dead-weight strain of the frenzied salmonoid. To land a fish thus struck implies much greater patience and skill than a successful battle, under similar circumstances, with a 5oz. six-strip and delicate tackle. The pleasure is largely concentrated in the strike, and the perception of a big fish "fast." The watchfulness and labor involved in the subsequent struggle border closely on the confines of pain. The ductile wire is an essentially different means from a taut silk line. The fish holds the coign of vantage; when he stands back and with bulldog pertinacity wrenches savagely at the pliable metal—when he rises to the surface in a despairing leap for his life—the angler is at his mercy. But, brother of the sleave-silk and tinsel, when at last you gaze upon your captive lying asphyxiated on the surface, a synthesis of qualities that make a perfect fish—when you disengage him from the meshes of the net, and place his icy figure in your outstretched palms, and watch the tropæolin glow of his awakening loves soften into cream tints, and the cream tints pale into the pearl of moonstone, as the muscles of respiration grow feebler and more irregular in their contraction—you will experience a peculiar thrill that the capture neither of ouananiche, nor *fontinalis*, nor *namaycush* can ever excite. It is this after-glow of pleasure, this delight of contemplation and speculation, of which the scientific angler never wearies, that lends a charm all its own to the pursuit of the Alpine trout.

Finally there can be no doubt as to the economic value of the American saibling. It is one of the most prolific of our salmonoids, the female averaging 1,200 egs to the pound, and casting spawn when only 2oz. in weight. It is also a singularly rapid grower where smelt food abounds. The extreme weight proved to have been attained is about 12lbs., although accounts exist of much larger specimens weighing from 15 to 20lbs. As a rule, the greater the altitude, the smaller the fish, but the more intense their coloration. In some of the higher Swiss lakes the saibling run eight or nine to the pound. This charr is exceptionally hardy and easy to propagate. The eggs bear transportation over the roughest roads without injury. Superintendent Race, of the Green Lake Station, Maine, claims that in the percentage of eggs fertilized and fry hatched the saibling takes precedence of all congeners. As far as is known, however, it does not breed in confinement, nor under such circumstances affects a brilliant nuptial coloration. Ripe fish at Lake Sunapee can not be transferred to the State tanks, one mile from the spawning beds, without a long and serious delay in their sexual procedures. Instances occur in which females refuse to part with their eggs and carry them over to the next season. Adult saibling have been kept for three years in a cold spring at Holderness; but even when placed among spawning brook trout they remained passionless, manifesting no perceptible sexual appetite. At death the reproductive organs of these fish were found conspicuously atrophied.

In regard to the hardiness of the saibling, Mr. Merrill states: "At Green Lake the temperature of the water runs high in spring, and much loss has been occasioned thereby among the brook trout fry, but the saibling have in such cases remained perfectly healthy. My experience in rearing this fish has been extremely satisfactory, and I believe it to be one of the best subjects for the fish-culturist among our salmonidæ, especially where the fry are reared to the yearling stage, as is generally done in Maine. The eggs that I received last winter hatched well, and the fry, in the early stages of development, displayed wonderful hardiness under the most trying circumstances.

"The brook trout, during the spring, suffered from warm water, the temperature rising to 65° F. soon after they hatched. The loss was considerable, but the saibling fry were not affected by this high temperature. It would seem that at the time the saibling is hatching on the shoals, and is exposed to great variations of temperature, nature has rendered the fry immune. My young saibling are persistent hiders; any crevice in the bank or lump of clay on the bottom affords a hiding place. When fed, they will emerge and rise for their food, but will immediately hide again. Trout fed in similar ponds do not at any time hide, but school together, generally at the head of the pond. In feeding, the saibling remain near the bottom, darting up after their food and going back quickly. They are much cleaner feeders than either trout or salmon, picking up all the food that sinks, allowing none to waste. Although they will hide when opportunity offers, the young saibling are much tamer than trout or salmon, approaching more closely the person feeding them, and when in the troughs allowing themselves to be picked up with but little effort to escape. The adult saibling that I carried to the Lake Auburn hatchery from Flood's Pond last November have fed well in the stock ponds and have made a rapid growth. As in the case of my experience with the young fish, they grew very tame, and were the favorites to feed for the entertainment of visitors. Several were exhibited at the Maine State Fair this month, and have endured without appreciable injury the ordeal of river water and close confinement in a glass aquarium.

"In consideration of the experience which I have had with the American saibling, I would select it in preference to any other fish if I desired a salmonoid to rear from the fry, and obtain the best results in size and percentage matured."

I most heartily sustain Mr. Merrill in everything he says regarding the desirability of this charr, and confidently recommend it to the attention of State and national commissioners, who are presumably interested in placing a valuable and easily propagated food and game fish within reach of the American people. It is *facile princeps*, from its rush at the cast smelt to the finish at the breakfast table.

John Duncan Quackenbos.
Columbia University, New York.

Angling for the Namaycush.

Whether the namaycush, or lake trout, as he is commonly known, does or does not, when hungry, sometimes snap up one of his own species for food, he is a highly respectable fish, cleanly, trim, fair to look at and a happy addition to the feast. He is at home in the crystal waters of our Northern lakes—sweet water lakes lying in the picturesque basins of forest-clad hills—and when transplanted to weedy, muddy ponds he refuses to multiply, and eventually disappears.

After the spring migrations and spawnings of the various tribes that populate the lakes are over, and the waters become warmer, he settles into the deepest places. There he finds his favorite food, a delicate, silvery smelt, a fish seldom seen except when brought up from deep water in the maw of the trout. As a game fish he is inferior to the black bass, but it is a mistaken, although somewhat prevalent, idea that he is not a vigorous fighter, as when properly angled for he is an antagonist worthy the skill and patience of the best sportsman.

No doubt one reason why his fighting qualities are underestimated is that he is badly treated by many anglers. For instance, a common way of taking him is by attaching a huge block of lead to the line and dragging it on the bottom. What fair-minded sportsman would expect a trout to make a fight when every movement is checked and stopped by a pound or more of lead dangling on the line?

Another lure is the large "spoon" armed with three savage hooks, set back to back. When his mouth is once crammed with those three hooks it cannot be closed, and by the time the long trolling line is reeled in he is nearly drowned. What chance for a run or a leap?

Still another—and this one the unfairest and most unsportsmanlike device—is the "gang," usually constructed of nine hooks set in fearful array, baited, and used at the end of a trolling line. The trout snapping at the whirling bait will usually get half a dozen of the hooks in his mouth, and then he is expected to be fierce and display strength and agility for the gratification of the man using such an instrument of torture.

But if one really wishes to test the real character of the lake trout as a game fish, let him take a light rod, a reel holding 100yds. of the best fine silk line, lengthened

by a heavy casting trout leader 3ft. long, a slender, tough Aberdeen hook baited with a silvery minnow properly attached, a light, tapered lead sinker, and troll if it be mid-summer in the deepest waters of the lake.

When the strike comes and the fish is fastened, reel steadily until the line is nearly perpendicular, then stop and let the trout get his breath and take his time. The sport, nine times out of ten, will prove very satisfactory. Under such methods a 4lb. trout, in fairly cool water, will usually fight vigorously for at least fifteen minutes; and a 10lb. trout will demand and use a full half-hour of time, and test the skill of an expert.

When netted and stretched on the bottom of the boat, the lake trout is an attractive sight. His colors, markings, smooth skin and graceful shape indicate the aristocracy of the true trout family. J. W. HOWE.

LAURENTIAN CLUB, September, 1898.

A Sojourn in Canada.

LIKE all that great host who have laid the basis of vigorous manhood in cozy country homes, I, with the rest, won the esteem of every gurgling brook that laughed its way down to the sea, and found favor with every wild thing in the region. For miles around every craggy dell, rich in its rosy fruitage of wild plums, was fully explored, and more fully enjoyed. We knew, as only boys can know, the hidden ways of all wild things. Our early fancies were nurtured in all the romances of catching squirrels, gathering wild fruits and berries; and an occasional theft of an afternoon down to a shady pool under the hemlocks.

Grim destiny has long since substituted for tangled woods and shady dells, long, homely rows of brick and stone, and the trees are branchless affairs for the support of wires. Instead of dropping nuts and rustling leaves, one hears the crash of coupling cars and the tireless moans of machinery. It is an old and worthy maxim that our earliest impressions longest survive; hence my early longing for the delights of field and forest come with lusty vigor when the trailing arbutus and the wake robins come in the field.

When that subtle, magic influence that a vacation alone can call into being has set completely at naught the ravishes of "Old Father Time," I am a boy again raving in the delights that long, long ago charmed my childish heart. I diligently search out some wild region, that remains just as the Lord left it when He beheld everything He had created, and behold it was very good. If He saw some of it now this benediction might not be forthcoming.

In my wandering I have visited nearly every region in northern Ontario reached by the Grand Trunk Railway, and found this wild country rich in everything that delights the heart of the canoeist and camper. Woods and water and wild things everywhere, and all bathed in an atmosphere so pure, clear and bracing as to render old rusty lungs young again. I have spent several very delightful seasons in various localities, testing nearly all the woods and waters from Lakes Simcoe and Muskoka to the wilderness region north of Lake Nippissing, and found all full of delightful experiences. Especially pleasing were journeys down the Magnetawan River and up Lake Vernon to Hoodstown, and from Huntsville through Fairy and Peninsular lakes to Lake of Bays, where we caught plenty of great big speckled trout. All this vast region is a great public playground, full of pure delights to the hunter and angler, and no tourist can err in casting his lot in this lovely land.

Early in August about thirty of our party arrived at Severn Station, 100 miles due north of Toronto; here we were met by Elijah S. Bennett, of Hamlet Post-Office, Ontario, who drove us to his home, one-half mile from Sparrow Lake, where the real slaughter was to begin early next morning. We found our quarters comfortable, our boarding was indeed excellent, and a kinder hearted Canadian I have never met.

Early next morning a genial minister and the writer embarked for a swift current half a mile up the river. We found the most profitable way to fish these waters was to frequently troll with live minnow or small green frog for bait. We had our best luck while drifting down the current, keeping our baits close to a fringing reef of wild rice and rushes that grew along the shore.

Our first cruise down the current was rewarded by a very vigorous strike on my hook. I, to appear unselfish, turned my rod over to my very genial companion, that he might enjoy the electric thrills that bass was sending up the line from the inky waters of the Severn River. I was thus gracious because my friend had never before wet a line in these waters, and from my observation of his art of angling I don't think he had ever moistened many lines in any waters; so when he assayed to land the thing he unwittingly gave him some slack line, and that instant the sacred tie that binds was broken. Before we were out of the eddies at the foot of the current, a mighty tug on Sawhill's line converted a straight land Presbyterian into an old-time shouting Methodist, and when the struggling sinner in scales hove to it proved to be a 6lb. pickerel, an unusually good fish of this kind for these waters. On our next cruise down the current our Presbyterian again turned Methodist, and the vicious way he snatched a struggling bass into the boat was a caution. The fickle fates that control destinies of the angler again sided with Sawhill, and he ground out another jubilee of joy that would have done credit to a crack regiment in a Salvation Army, when his eyes feasted on the princely proportions of an 8lb. pickerel. I awkwardly assayed to gaff the thing with a huge hook an ardent friend of mine had forged himself. It was constructed on the lines of a navy anchor, and the first blow tore it loose and sent it skittering over the water.

Our exceptional luck soon attracted a host of others, and we soon had boats on starboard, port and beam. Wilder, the most enthusiastic and successful angler of the lot, to avoid the confusion of boats, ran the nose of his craft into the wild rice. He let his line float down the current, and great was his reward in bass, pickerel and channel cat. At length there came to his string a strike that was a glad surprise to us all. His silk line tightened with a swish that threw the waters into a spray. Fifty feet away arose, in the language of the Chippewa, Nahma-mische Nahma—the king of fishes. A monster muscallonge had hurled his ponderous body fully 5ft. out of the water and fell back with a resounding crash. Old Musky's shrewd maneuver had given him slack line; the arching rod straightened, telling us that the Goliath of this gorge was gone.

None of us dreamed that a monster big enough to bite off a man's leg prowled around in these waters. From that day it was the mission of every man in the party to take that 'lunge. The next afternoon Wilder thrice distinguished himself by hitching to the big one; but each time his snoods were wanting. In a frenzy of eagerness he used a soft copper wire snood, and found his line lacking. The next morning I shied my castor into the angling arena; having cut off about 20ft. of my line that had been wet too often to be safe. I had a wrapped wire snood and a strong hook, and my assurance was great. I had run the current several times, and was resting in a whirling eddy under the branches of an overhanging butternut. The sun was hot, and I enjoyed the shade. Boylike, I had to see if my bait was on. The line was fast, I fancied, to the roots of the butternut; but in an instant the line fairly zipped through the water, and twanged with the strain, as the noble fish fled to his lair to the lee of the rice bed. I hung to him, lessening the strain wherever I could, but was hampered by too little line. When my line had all played out, the fish headed straight up the channel, towing my boat with him. An old Scotchman, camped hard by, ran wildly up the shore, shouting directions how to handle him. "I'd gie twa pound for a sicht o' him. He'll gae at least 8 stone. I've fished here mony a year, but never saw a fight like thon." Well, up the channel there was a change of tactics, the noble fellow wheeled and dashed down the current. No sort of tackle could equal the strain, and I sat bitterly lamenting. For fully fifteen minutes the contest had lasted, and I was tired.

Next day Rev. Montgomery, as genial an apostle of the gentle art as ever wet a line, arrived from Pittsburg. In due season he was informed of the crocodile at the current. George was a classmate of mine in the early 80's, and one of those great, good-hearted fellows who had rendered my sojourn in that college an experience of pure delight. He had an unusual stock of self assurance, natural to men of great courage and ability. Brown, the Pittsburg tackle man, had fitted him out with a real gem of a fishing string for $2.50, strong enough to hold a bull, and guaranteed to land anything from the whale that had Jonah down to a sturgeon; and as George embarked for the scene of the recent riots, even the oarlocks caught his spirit of determination, and chuckled gleefully: "We'll git him. We'll git him yet." In an hour or so he got back; but a wheen of yards of his silken string is not back yet; and for ought I know, the old fellow still rules at the current. Thirty to fifty pounds was the estimate of the Scotchman.

A peculiarity we all noticed was that when the big fish carried away a hook and some line he usually ran into the wild rice bed, and fairly lashed the water into a foam. The old Scotch camper assured us the fish was trying to rid himself of the hooks.

I have read in FOREST AND STREAM Col. Mather's "Men I Have Fished With," and who, having read, did not enjoy them? But the man I fish with is a woman, and she knows to a nicety just how fishing ought to be fished. The angling is never so alluring as when my lady, in a gown of gray, graces the stern of the boat. On one of those most delightful Canadian evenings in August, all our party were out fishing from boats. Just as twilight began to fall, the guard in gray gleefully called out: "I have a big bite." She had. The reel fairly screamed, until all the line payed out and the fish began to tow us hither and thither. Everybody got excited, and I believe our party had reached the supreme point in angling where each enjoyed seeing his friend catch large fish almost as well as to catch them himself.

For full twenty minutes he kept up this gamy fight before he showed any signs of weakening. Thirty minutes after he was hooked I called to a friend on the shore to bring a lantern and a gaff. He came and lifted into his boat a mighty channel catfish. The postmaster weighed it—16½lbs., and it surely must have lost over half its flesh in its last battle. This was the largest catfish caught in the Severn last season. Several years ago I saw one caught of 19¾lbs.

In every neighborhood there is a type who seems to combine the best there is in each particular locality, and at Sparrow Lake Reeve Stanton answers the call. He runs the passenger boat to and from the station to the lake. Kind of heart, keen of eye, strong of hand and brain, he rules his little realm as completely as the Czar of Russia. On Thursday he brought his steamer around to tow us on our way down the Severn to the end of navigation at the first portage.

Here we carried our boats and baggage 100ft. or more over rock, and dropped them into the calm waters below the falls. This lower Severn region is as wild a country as one could wish to see. The river above the lake is prosaic enough; but down below, ah! down below things are different. At each succeeding bend the river outdoes all preceding efforts to enchant the tourist. At one place the river spreads its ebony waters out in broad and beautiful bays, whose long reaches of circular waters form delightful pictures framed with towering pines, hemlocks and balsams. At another place this romantic river gathers compactly its scattered trees for a mad flight down some gorge; thus in rounding bays, overhanging granite rocks, waterfalls and foamy rapids doth this noble river enchant its pathway down to the sea.

At 9 o'clock we reached McDonald's Falls, where we found the bass fishing excellent, and when bass fishing is good, could any fishing be better? Ingenious, the bass of this river, veritable Yankees among the other fish in vivacity, in cleverness, in the telegraphic movements of his body; his peer may nowhere be found.

We fished in circular pockets down along the shoot, and found bass waiting to take the bait almost as soon as it touched water. Just at the top of the rapids we could see dozens of bass as plainly as in an aquarium; I baited with minnow and cast above, letting the current bear the bait down to them. Several darted for it; but a large one cut it off at the head as neatly as a tailor snicks a bit of cloth; but didn't hook himself. Thrice was this performance repeated. I then hooked the bait in the back, and landed several fine bass and some pickerel.

Here was a splendid opportunity given to observe the methods these north country bass pursue in biting. They don't take the bait with a mad rush, as many suppose. If one fish is present he cautiously takes the bait and slowly moves off, and sometimes remains ruminating until the barbed hook causes pain, and then startled he begins his rushes. If numerous fish are present, the bait is greedily snapped up and made off with.

In the clear water at the falls I have caught many fish; most of which I saw take the bait. We fished just above where the water makes its bend down the steep declivity of the gorge, and the water fairly flies by, and the wonder is that fish could stay in such turbulent waters. We stood as entranced, watching the rushing, beating waters, although we knew each succeeding moment would bring the same eternal grind of rushing waters, still be stayed; reminded of the lines from Southey:

> "With splashing and dashing and clashing,
> And so never ending, but always descending,
> Sounds and motions forever are blending,
> All at once and all o'er, with a mighty uproar,
> This is the way the waters come down at Lodore."

Our party caught perhaps a hundred bass on this journey, most of which were carefully returned to the water. At 6 o'clock we heard the whistle of Capt. James O. Wood's yacht that had come down to tow us home; sorry to leave the angler's paradise, but glad to accept the hospitality of so genial and kindly a gentleman as Capt. Wood. In daily journeys into the woods for wild fruits and berries, we varied the delights of our sojourn on the Severn; but the most profitable and pleasant tour of my life was a trip through lakes Muskoka and Joseph to Port Cockburn, with stop overs at ports Carling and Sandfield. The cool, balmy, invigorating breezes put our whole being in tune to the harmony of nature. The steamer Nipissing carries us down long, delightful avenues of ebony waters, scalloped on either side with rocky castellated islands and bold promontories.

The many flags of campers, the profusion of ferns and flowers call to mind Browning's

> It was roses, roses, all the way,
> With myrtle mixed in my path like mad.
> The church spires flamed, such flags they had.

But the longest journey has its end, and the time came and all too soon when we were called to turn our faces from this north country Canaan and return to the daily treadmill of toil, and the call caused as much sadness as one that came long, long years ago.

My earliest friend of the angle, my father, had taken his treasure of six stout boys down to the nearest water to hunt and fish and gather a goodly store of rich, brown hazel nuts. All day long we reveled like mad in the delights of wood and water; and finally, when the low descending sun had burned a serene and shining pathway over the sea, we heard a gentle, kindly voice call: "Come on, boys, come on. It's time to go home."

JAMES M. NORRIS.

PENNSYLVANIA.

The Little Kanawha.

FOR the benefit of a correspondent asking about hunting and fishing on Little Kanawha, about forty miles from Parkersburg, W. Va., I would say, from information which I have been trying to obtain for some time, that squirrels and grouse are the only game of any considerable amount. The fishing is said to be good. There are green bass, lake bass and the striped or rock bass. As to the other kinds of fish I have not been informed.

N. D. E.

To Stock Greenwood and Hopatcong Lakes.

GAME WARDENS KERR AND RILEY, of New Jersey, will stock Lake Hopatcong and Greenwood Lake with 10,000 wall-eyed pike, the same number of white bass and 5,000 channel catfish.

Answers to Correspondents.

No notice taken of anonymous communications.

PUBLISHERS' DEPARTMENT.

Mr. W. J. Cummins, of Bishop Aukland, England, sends us his fishing tackle catalogue, which has, in addition to full descriptions of his extensive stock of anglers' supplies, numerous interesting half-tone illustrations of fishing waters in Great Britain and elsewhere. It is not all of fishing to fish; if one would know something of the charms of natural scenery which delight our angling cousins across the water he may find it here. The catalogue will be sent on application to the above address.

Publications Received.

Bob: Son of Battle. By Alfred Ollivant. New York: Doubleday & McClure.

A fox terrier broke loose from its cage in a Chicago bird store recently, and for more than three hours slaughtered the valuable and beautiful birds. Parrots, cockatoos, jays, finches and other screeching birds set up such a deafening chorus that a great crowd was attracted. Efforts were made to break into the store and stop the slaughter, but the door resisted all the attempts until the proprietor arrived at 7 o'clock. By this time the store was strewn with bodies of birds and plumage of every hue. Fifty canaries, a dozen parrots, a Japanese nightingale, a bird of paradise, mockingbirds, a dozen white and gray Java rice birds, strawberry and zebra finches and others, numbering between 100 and 200, were killed.

Field Trials of the Brunswick Fur Club.

THE tenth annual field trials of the Brunswick Fur Club, which were held at Barre, Mass., during the week of Oct. 17, furnished splendid sport to the lovers of New England fox hunting. The trials were highly successful. Scent was good, foxes were abundant, the hounds did their work well, and the attendance was large. Among those present during the week at Hotel Barre, the club's headquarters, were O. F. Joslin, Oxford, Mass.; Chas. P. Wendell, Dr. Lemuel Pope, Jr., Horace P. Kent, Dr. A. C. Heffenger, W. A. Bragdon, Portsmouth, N. H.; A. B. McGregor, Middleton, Mass.; Dr. Chas. Alfred Nichols, Urbana, Ill.; Bradford S. Turpin, Roxbury, Mass.; S. B. Mills, Needham, Mass.; H. V. Conant, F. H. French, Dedham, Mass.; E. L. Brooks, Vernon, Vt.; J. H. Van Dorn, Jersey City, N. J.; G. Mawhinney, New York, N. Y.; J. T. Flannelly, Boston, Mass.; R. D. Perry, Edgar J. Hill, Phillipston, Mass.; C. E. Taylor, Woburn, Mass.; W. R. Dean, Worcester, Mass.; W. B. Stone, Waltham, Mass.; E. H. Bragg, North Sidney, Me. The majority of the judges and many of the spectators were mounted, and the experiment of riding to the hounds must be considered a success. No one could ride straight, but a mounted man was able to keep in with the chase and see more of the pack than was possible for a man on foot. The decisions of the judges—S. B. Mills, E. L. Brooks, Bradford S. Turpin, Horace P. Kent, A. B. McGregor, and W. A. Bragdon—were well received.

While the work of all the winners in both Derby and all-age was excellent, that of Flash is especially worthy of notice. In the Derby she divided third, but in the all-age her form improved, and her dash and endurance won for her the highest honors of the year. She is a handsome, well-built hound, with a beautiful head and excellent body, feet and legs. She should do well on the bench. Dash, the winner of the Pope memorial cup, is a large, powerful hound. Very little fault can be found with his body, legs and feet, but his head is coarse.

Monday.

President Joslin presided at a business meeting of the club on Monday evening. Frederick H. French, Dedham, Mass.; James A. Rice, Barre, Mass., and Dr. Chas. A. Nichols, Urbana, Ill., were elected to active membership, and Col. John D. Rogers, Galveston, Texas, and Hayden C. Trigg, Glasgow, Ky., to honorary membership. Ten entries in the Derby were then made, and the meeting adjourned.

Derby Entries.

Snowflake—Dr. A. C. Heffenger's w. and lem. bitch, by Big Strive—Linda, Walker-English cross, 19mos. old.
Jack—Chas. P. Wendell's b. and t. dog, by Dock—Brownie, Kentucky strain, 22mos. old.
Baldy—J. Wm. Jones' b., w. and t. dog, by Minstrel—Lottie, English-Walker cross, 15mos. old.
Flash—Horace Fuller's b., w. and t. bitch, by Minstrel—Lottie, English-Walker cross, 15mos. old.
Sauk—H. V. Conant's b., w. and t. dog, by Minstrel—Lottie, English-Walker cross, 15mos. old.
Flirt—H. V. Conant's b., w. and t. bitch, by Minstrel—Lottie, English-Walker cross, 15mos. old.
Bal—Dr. L. Pope, Jr.'s, w., t. and b. dog, by Dash—Mischief, English-native cross, 19mos. old.
Gill—Dr. C. A. Nichols' w., t. and b. bitch, by Orator—Cheekie, native strain, 15mos. old.
Jupiter—R. D. Perry's b., w. and t. dog, by Orator—Cheekie, native strain, 15mos. old.
Lewis—W. A. Bragdon's b., w. and t. dog, by Sharper—Katy Decatur, July-Goodman cross, 13mos. old.

Tuesday—The Derby.

Morning broke clear, still and cold; hoar frost covered the ground, and the prospect for a day of exceptional sport was excellent. As usual, the hounds were started at the Rowell farm, and the sun was not yet up when the master of hounds, A. B. McGregor, ordered the pack cast off. One always expects more or less rioting among the Derby entries, but these youngsters went to work at once. A couple of thickets were drawn blank and then a track was found in the open pasture. Gill and Flirt were the first to tongue, the other hounds barked in at once and carried the trail along prettily for a mile or more, and jumped their fox. Reynard led away to the rough country northwest of the town reservoir. The pack was close behind him, pressing him hard, and the music rising and falling on the clear air was as fine as ever was heard at a New England hound trial. The country is broken by sharp, steep ridges, divided by narrow valleys, and here the fox played for an hour, constantly circling, crossing and recrossing his own track and trying in every way to throw off his eager pursuers. Scent, however, lay splendidly, and the pack followed close, with scarcely a break in their cry. The judges were unusually successful in getting into the chase, and had many opportunities to score the hounds. Jack and Bal were frequently seen in the lead, with Flirt and Flash close up, and the others near enough to get under the traditional blanket.

From start to finish the race was a grand one, and particularly exciting from the fact that the pack was out of hearing hardly for a moment, and the fox was seen time and again as he crossed the open pastures. The pace was a furious one, and for three hours the fox was hard pressed. During the first part of the run Jack was seen in the lead a number of times, but finally the pace began to tell on him, and Bal took his place in the run, and during the latter half of the morning made most of the running. But it must not be supposed for a moment that the other hounds were out of the race. They were all in till the finish, and almost all of them did work worthy of mention. Flash and Flirt were always well up, and Snowflake and Gill were close to the leaders. Most of the running was north and west of the reservoir, but the fox made one or two long circles to the brick schoolhouse and to the sawmill.

Finally, after three hours of as good sport as was ever seen at the club trials, the fox threw off the pack in a road. Throughout this great race the hounds ran well packed, and in their work showed gameness, endurance, speed and hunting sense.

But though that fox was lost, the sport for the day was not yet ended. Barre always has an apparently inexhaustible supply of foxes, and another was soon afoot, with all the hounds in full cry close at his heels. This chase was not as long as the first, but in other respects was almost a repetition of it. The same hounds did the best work, the fox ran in the same country in much the same way, but the chase ended after an hour's time. Whether the fox was lost or shot by an outsider was unknown.

The judges posted the awards in the afternoon, giving first prize to Dr. L. Pope, Jr.'s, Bal, second to Chas. P. Wendell's Jack, and dividing third between Horace Fuller's Flash and H. V. Conant's Flirt. The R. D. Perry cup and the L. H. Parsons medal were awarded to Bal.

Twelve all-age entries were made in the evening.

All-Age Entries.

Gamester—Dr. A. C. Heffenger's b., w. and t. dog, by Brooke—Primrose, Ky.-July cross, 2yrs. old.
Snowflake—Dr. A. C. Heffenger's w. and lem. bitch, by Big Strive—Linda, Walker-English cross, 1yr. 7mos. old.
Student—Chas. P. Wendell's b., w. and t. dog, by Dock—Linda, Walker-English cross, 2yrs. old.
Baldy—J. Wm. Jones' b., w and t. dog, by Minstrel—Lottie, English-Walker cross, 1yr. 3mos. old.
Flash—Horace Fuller's b., w. and t. bitch, by Minstrel—Lottie, English-Walker cross, 1yr. 3mos. old.
Ben Hur—O. F. Joslin's b., w. and t. dog, by Rock—Juliette, Ky.-July cross, 3yrs. 2mos. old.
Dash—O. F. Joslin's b., w. and t. dog, by Dock—Imported Snowdrop, Walker-English cross, 3yrs. old.
Bal—Dr. L. Pope, Jr.'s, w., t and b. dog, by Dash—Mischief, English-native cross, 1yr. 7mos. old.
Rice—J. H. van Dorn's b. and t. dog, Goodman strain, 4yrs. old.
Orator—R. D. Perry's b., w. and t. dog, native strain, 7yrs. old.
Flirt—H. V. Conant's b., w. and t. bitch, by Minstrel—Lottie, English-Walker cross, 1yr. 3mos. old.
Hunter—C. E. Taylor's w. and lem. dog, native strain, 5yrs. old.

A song recited in the hotel parlor by Miss Shumway brought the day to a pleasant close.

Wednesday—The All-Age Stake.

The first day of the running of the all-age stake opened inauspiciously. An easterly wind was blowing half a gale, there was no dew and the heavy clouds were growing thicker each moment. It was evident that one of New England's fierce autumn storms was close at hand, and it was with little hope of good sport that the hounds were cast off at the Rowell farm at sunrise. The pack went off at a dashing gait and were a bit riotous at first, but they soon got down to work and heading into the wind searched for a trail fresh enough to be carried. Several cold tracks were found, but none of them could be followed, though all the hounds worked hard and cast well in their endeavors to pick them along. It was not long before the pack was badly broken up. Rice and Bal were trailing far to the northeast of the starting point, somewhat nearer Flash, Baldy and Flirt were hard at work; Hunter, who seemed to be an independent worker, was away by himself, while Dash and Ben Hur were leading off toward the town reservoir. Snowflake and Gamester were prospecting in a distant field and others were scattered here and there.

The hunt was a most unpromising one and the cold wind added to the discomfort of the sportsmen. About 8 o'clock, however, a number of the hounds found a track in the woods east of the old reservoir which they were able to carry rapidly along. The scent which had been so poor in the open was fairly good in the cover and at 8 o'clock the fox was up. He ran to the westward and the wind was just right to bring the music of the chase to the large party of hunters who were scattered about the great rocky pasture near the reservoir. Nearer and nearer came the cry, and within ten minutes of the jump the fox dashed into view. He was hard pressed by Gamester, Rice, Bal and Snowflake, running beautifully packed and straining every muscle to overtake their quarry. The fox was but a short distance in the lead, and a good chase seemed certain. Just as the hounds came into view, however, a bunch of young cattle stampeded directly across the trail, and a bad check resulted. It was some little time before the line was recovered, and then the small pack went out of hearing in the direction of Hawes Hill. After the leaders had been gone for a number of minutes, Baldy, Flirt and Flash came slowly along on the track. Twice within the next half-hour the hounds were scored by the judges and on both occasions Gamester had a long lead over his mates. Scent lay badly and was constantly growing worse, and the fox easily escaped, finally throwing off the pack completely in a large plowed field. Rice, Orator, Gamester, Snowflake, Baldy, Flash, Bal, Hunter and Flirt came up on the track, but they were well strung out and had no semblance to a pack.

Dash, Student and Ben Hur meantime had been working independently, and had a chase in the vicinity of Sherman Hill, but how long it lasted, or how it resulted, is not known. It was late in the afternoon when their owners brought them home.

Rain fell in torrents soon after 10 o'clock, and continued during the rest of the day. In the evening Dr. Heffenger entertained the club with an interesting account of the Spanish prisoners at Portsmouth, and related a number of incidents of the destruction of Cervera's fleet, which he had learned from the officers on both sides.

Thursday.

Fortune favored the club. The storm was at an end. The sun rose in a cloudless sky. There was no wind, and the ground was in splendid condition for running. The hounds were thrown off in Glen Valley just after sunrise and went to work with a will. But either the foxes had not moved about much after the storm, or the scent had been washed away by a late shower, for a long stretch of promising country was drawn blank. Not a trail could be found for an hour. Then, however, in thick cover north of the old reservoir the hounds struck a track and carried it along at racing speed. After five minutes' sharp work the fox was jumped and a furious race began. Scent lay splendidly, and there was no break in the fierce, eager cry of the hounds. The deep, broad valley and the neighboring hills made a fitting theater for as fine a race as ever was seen. The fox did not lead away, but was content to circle through the valley and over the neighboring hills. The pack pressed him hard, and though he ran walls and swamps, and forced his way through the dead branches that covered an old wood lot, the hounds continued to cling to him.

The pack most of the time ran well bunched, and the lead was constantly changing. Rice, Bal, Gamester, Baldy, Flash, Flirt, Student, Dash and Snowflake were seen a number of times among the leading hounds, and all worked with a snap and dash that was a pleasure to witness.

After the race had continued for a couple of hours, a second fox was jumped, and the pack divided. The newcomer ran around the old reservoir, and then returned to the country where the first fox was being hotly pursued. Their tracks frequently crossed, with the result that some hounds drove one fox for a time and then pursued the other. This, of course, detracted from the interest of the race, and everybody was glad when one of the foxes was lost or driven into the ground, and all the hounds were again on one fox.

The fox was frequently headed, and the sharp turns that he made in dodging the hunters checked the hounds, and now and again gave him a lead over the pack. Once he was seen full twenty minutes ahead of the hounds, who picked the trail along with the greatest difficulty, and it would probably have been lost entirely had not Flirt and Flash succeeded in working out the loss where their mates seemed willing to abandon it. The fox had stopped to rest, and did not jump till the hounds were again close upon him. Then he was away with the pack in full cry once more.

But the long chase was telling upon him. He was now about exhausted, and no one was surprised when he went into the ground shortly after 11 o'clock. He took refuge in a cleft of a rocky ledge, and was easily bolted out with the aid of a long stick. His sudden exit was unexpected, and though all the hounds were close by, he escaped uninjured. Indeed he appeared to bear a charmed life, for about noon an outsider fired two shots at him in vain, and at last he went to ground without a scratch upon him.

This ended one of the best races in the history of the club. The driving was fast, the fox was frequently seen and the chase was never out of hearing. Notice was given in the evening that all the entries would be ordered out on Friday morning.

Friday.

The last day of the trials was the only dull one of the week. The wind was from the east, the sky was covered with heavy clouds and a fine, cold mist made the day a disagreeable one. The hounds were cast off south of the old reservoir at 6:23, and quickly worked into the country that had supplied the club with foxes through the week. It was not long before Orator and Rice had jumped a fox, and gone off with him to the northeast. But the chase was a short one. Reynard crossed the valley a couple of times, and then went to earth. Meantime another fox had been jumped by some of the other hounds, and after a time all the entries got on, but the pack was well strung out, and the chase lacked the excitement and dash of those of the previous days of the trials. This fox, too, refused to run, and quickly went to ground. It was now about 8:30, and the remainder of the morning was occupied in getting the hounds together and trying to find another fox. None was jumped, and at 12 o'clock the horns were sounded and the trials were over.

The judges held a long session in the afternoon and made the following awards:

The All-Age Winners.

Hunting Class.—First, O. F. Joslin's Dash; second, Horace Fuller's Flash; third, Dr. L. Pope, Jr.'s, Bal.
Trailing Class.—First, H. V. Conant's Flirt; second, C. P. Wendell's Student; third, O. F. Joslin's Dash.
Speed and Driving Class.—First, Dr. A. C. Heffenger's Gamester; second, O. F. Joslin's Dash; third, Dr. L. Pope, Jr.'s, Bal.
Endurance Class.—First, Horace Fuller's Flash; second, C. P. Wendell's Student; third, O. F. Joslin's Dash.
Tonguing Class.—First, Horace Fuller's Flash; second, Dr. L. Pope, Jr.'s, Bal; third, Dr. A. C. Heffenger's Gamester.

Special Prizes.

Speed and driving medal to Gamester.
Trailing medal to Flirt.

The Norton Q. Pope memorial cup and the hunting medal to Dash.

The American Field cup, the highest general average medal, the endurance medal and J. Gibb's special prize of $5 to Flash.

President Joslin presided at a meeting of the club in the evening. It was voted that the winter meet be held at Barre during the week of Jan. 12, 1899. After the distribution of the diplomas, medals and cups, the meeting adjourned.

Many of the hunters left on Friday night, and the early trains of Saturday morning carried the last of the party to their homes. J. A. B.

Western Massachussetts Fur Club.

The eleventh annual hunt of the Massachusetts Fur Club will be held on Wednesday and Thursday, Nov. 15 and 16.

Trap-Shooting.

Fixtures.

Oct. 25-27.—St. Louis, Mo.—Tournament at Dupont Park.

Oct. 27.—Dexter Park, Brooklyn.—Opening live-bird shoot of Greater New York Gun Club. H. S. Lippack, Sec'y.

Oct. 27-28.—Oakbrook, Pa.—Tournament of the Oakbrook Gun Club; targets and live birds. Arthur A. Fink, Manager.

Oct. 27-29.—Louisville, Ky.—Tournament of the Kentucy Gun Club. Championship of Kentucky on last day, 25 pigeons. Emile Pragoff, Secretary.

Nov. 2-3.—Indianapolis, Ind.—Tournament of the Limited Gun Club; targets only. John M. Lilly, Sec'y.

Nov. 2-4.—Cincinnati, O.—Cincinnati Gun Club's tournament; live birds and targets. J. A. Penn, Recording Secretary.

Nov. 12.—Princeton, N. J.—Intercollegiate match for cup, between teams from Harvard, Cornell, Yale, Pennsylvania and Princeton.

Nov. 16-17.—Sioux City, Ia.—Soo Gun Club's tournament; live birds and targets. E. R. Chapman, Sec'y.

Nov. 15-17.—Eau Claire, Wis.—Dan R. Scammon's tournament; two days at targets; one at live birds.

Nov. 21-22.—Ottumwa, Ia.—Annual tournament of the Ottumwa Gun Club; targets. Walter Gephart, Sec'y.

Nov. 23.—Hackensack, N. J.—All-day target tournament. C. O. Gardner, Jr., Sec'y.

Nov. 24.—Dansville, N. Y.—All-day shoot of the Dansville Gun Club.

Dec. 3-4.—Milwaukee, Wis.—Tournament of Milwaukee Gun Club; live birds and targets.

Dec. 5-9.—Indianapolis, Ind.—Grand Central Handicap; targets first day; sparrows two days; pigeons two days. H. T. Hearsey, Sec'y.

Dec. 7-8.—Kewanee, Ill.—Tournament; live birds and targets. E. E. Baker, Manager.

Dec. 13.—Burnside Crossing, Ill.—John Watson's tournament; live birds only.

1899.

April 4-7.—Baltimore, Md.—Tournament of Baltimore shooting Association; targets and live birds; money added. Geo. L. Harrison, Sec'y.

April 11-13.—Elkwood Park, Long Branch, N. J.—The Interstate Association's seventh annual Grand American Handicap tournament.

April 18-21.—Baltimore, Md.—Prospect Park Shooting Association's tournament; added money. H. A. Brehm, Pres.

May 24-25.—Greenwood, S. C.—Annual live-bird tournament of the Greenwood Gun Club; 25-bird Southern Handicap. R. G. McCants, Sec'y.

June 7-9.—Columbus, O.—Tournament of the Ohio Trap-Shooters' League, under the auspices of the Sherman Rod and Gun Club. J. C. Porterfield, Sec'y, O. T. S. L.

DRIVERS AND TWISTERS.

Mr. Milt F. Lindsley, superintendent of the Smokeless department of the King Smokeless Powder Co., writes us as follows concerning the Cincinnati Gun Club's tournament and other matters: "You will see that we have one day targets and two days at live birds; the target events I have tried to make equitable for all. I don't believe in handicaps, as I consider it an impossibility to classify the shooters in their proper classes; and handicaps, if properly carried out, as in the case of horses, will eventually handicap the crackerjack out of the shooting world, the same as the best horses are handicapped out of all races. But when you have a programme of short events and equitable division of the money it doesn't make any difference to the 80 per cent. shooter haw many 95 per cent. shooters are competing in the event. I have read your "Confabulations of the Cadi," and with a great deal of interest, and I think that you have the right idea of the matter; and I believe the solution is short events and the equitable system of dividing moneys, with perhaps one or two long events with class shooting thrown in as a sop to the experts. You notice I used the word "experts" and not "professionals"; all experts are not professionals, and all professionals are not experts, as I have learned to my sorrow. I as captain of the club will probably have the running of the tournament, and will be assisted by Jack Parker. From present indications we are looking for a large turnout, and expect to have a very enjoyable time."

The contest for the Cast Iron Medal, between Mr. Rolla O. Heikes and Mr. W. R. Elliston, resulted in a victory for the former by a score of 96 to 94, a very close finish. At times the piece of stove metal was in grave danger of having a new custodian, as Mr. Elliston gave Mr. Heikes a great race, one first class in every respect. Heikes shot his Winchester, using a Winchester Leader shell and Schultze powder. Elliston shot a Greener, using a Winchester metal-lined shell and Schultze powder.

Mr. Paul R. Litzke writes us as follows: "In my report of the Dayton shoot the name of Jim Elliott was inadvertently omitted among the list of average prize winners. He got seventh average prize, a very fine cut-glass bottle of cologne. This, however, he exchanged with Fanning for his cigars."

There were rumors at the recent Baltimore tournament, which had a stamp of authority, that any one with a craving for a match at either live birds or targets could be accommodated by sportsmen of that city, with anywhere from $100 to $1,000 on the side, merely to give the matter some interest.

Mr. Edward Banks, of the American E. C. & Schultze Powder Co., flies northward as far as Dover Plains, N. Y., this week. He will be the guest of the well-known sportsman Mr. Horatio Nelson, and their purpose will be to establish a familiar footing with the ruffed grouse and woodcock.

The Montgomery Ward & Co. handicap badge was an interesting event in the trap-shooting competition of last week. Seventeen contested for it. Mr. J. H. Amberg won it. This was the fifth contest. The details are fully set forth in "Western Traps."

Fred Gilbert's run of 53 straight in the live-bird events at the Belle Meade tournament of the third day was an excellent performance. On the fourth day Fred was unfortunate in losing a bird dead out of bounds, which placed him in the ties on 24.

The annual tournament of the Ottumwa Gun Club, Ottumwa, Ia., will be held on the club grounds, South Side Ball Park, Nov. 21 and 22. The programme is alike for each day, ten 15-target events, each $1.50 entrance. Shooting commences at 9 o'clock.

Dr. S. Shaw and Mr. S. Palmer contested for the Chicago challenge trophy on Oct. 18, the latter winning by one bird. Score, 23 to 22. Both stood at 30yds.

The scores of the New Utrecht Rod and Gun Club's shoot, Oct. 15, as published in the daily press, were faked and false. The correct scores will be found in our columns this week.

The live-bird match arranged to take place between Capt. A. W. Money and Mr. L. Finletter has been declared off.

Mr. D. Upson, of Cleveland, was in New York last Wednesday and Thursday, stopping over en route to Riverton.

Bernard Waters.

Confabulations of the Cadi.—X.

Happy Domestic Life.

It was a hot day, near the noon hour. Hopie Jane, with her swarm of children, was swinging an axe manfully at the edge of the woods, cutting in two a dead tree that it might the better be dragged to the house for fire wood. This was a part of the cooking labors, a preface to them morning, noon and night.

The Cadi's skinny horse grazed comfortably in the pasture close by, betimes holding his head contemplatively over the rail fence, imperturbably gazing at the group which toiled and spun while he was as the lily of the field. The Cadi's health was so delicate that he did not feel equal to the task of harnessing up the horse for Hopie Jane, nor was it prudent that he should do so: for first of all the Cadi was of such high mettle that, if he once began, common gallantry would demand at least that he manage the horse while Hopie Jane chopped up the wood and hitched the load to the horse; and second, when Hopie Jane managed the horse herself, her skill was of such an order that she guided him at eccentric angles in every direction but the one which she wished to follow, pulling on the wrong rein with great resolution, thereby imperiling the lives and limbs of the prides and hopes of the family as they swarmed in consternation around her. There were thus good reasons why Hopie Jane should chop wood and drag it to the home, while horse and man reposed to their liking.

On this particular morning things had gone wrong. The children were fretful and exacting, and all things seemed to be contrary. In the hurry of the time she had not tied her shoes, and her stockings hung in negligee furls about her ankles, with the unfortunate result that she had lost her rabbit foot from one of them. The most diligent search failed to find it. As Hopie was a great believer in signs and omens, the incident cast a further gloom over the morning. A rooster crowing on the doorstep, a lizard crossing the path, a moon seen over the left shoulder, voodoos, ghosts, dreams, fairy tales—each in its way was portentous to her, but to lose a rabbit foot filled her bosom with vague fears of evil.

Nevertheless, she had attempted a little at personal adornment by tying a knot of bright ribbons in her back hair, the elegance of Mrs. Le Loup, as displayed at the birthday dinner of the Cadi, having aroused a spirit of emulative coquetry. She paused a moment in her work, and unconscious that the Cadi and his companions could observe her from the shadow of the lodge, drew a piece of broken glass from her pocket, held it in front, to the right, to the left, almost dislocating her neck in an effort to see how the ribbons looked on the back of it. As she picked out each detail of pleasing beauty, an expression of coy, smiling pleasure spread over her face, care and drudgery were forgotten and the day then seemed to be of fairyland.

"It's a peculiar thing," remarked the Cadi, as he noted Hopie Jane's movements, "that the salvation of the human race could have been insured if Adam had had a reasonable degree of forethought."

"How?" queried Moke, with lazy effort.

"If Adam had only bought a little hand mirror, Eve never would have eaten the forbidden fruit, for in the first place she never would have had time, as the greater part of the day would have been occupied in adjusting her costume by the mirror, and the rest of the day would have been none too much in which to admire herself after her costume was completed. Even if by any unforeseen happening they had been evicted, Eve would have broken in again to be with the mirror."

"Bother," said Moke, contemptuously. "All you need do is to stand on the street of any big city and watch the well dressed gentlemen pass the big plate glass windows. They slacken their walk a bit and steal a look out of the corners of their eyes at their own reflected elegance. Some of them even stop and preen themselves with a care that no lady could imitate. To me it seems to be a virtue rather than a weakness, for if we had no vanity nor pride we could not admire the beauties in ourselves or in others, or the beauties of the world at large, to say nothing of shaving ourselves and washing our faces. It is true that some people may be more observant of those matters than you and I, good friend, but even at that there is a difference between washing our faces twice a month and not washing them at all."

In the Matter of Scratch.

"That may be true too," replied the Cadi. "Every woman had a father, and no doubt but what she came by her character by just heredity. The meeting will now come to order, and we will proceed with the business of the tournament. Will there be any handicap or will the journeyman wolves and the apprentice wolves all stand at the same scratch?"

"I move you, Mr. Chairman," said Le Loup, "that we all stand at the same scratch and shoot under the same conditions. I don't want any handicap. I can't shoot as well as some others, but it suits me to shoot with the best on even terms, whether I am beaten or not. I am glad to see the boys come and take our money if they can do the trick."

"Don't second that any of you for a minute or two," said the Cadi, as he yawned, unwound his legs and stretched himself. He walked into the house and returned soon with a bucket of cider. "Take a bath, Le Loup, and pass it along."

Le Loup drank till he was forced to stop for breath. He gave two giant sighs, then drank again. "Pretty good vinegar," he remarked, "but it beats no cider by a long ways." After all had partaken of refreshments—as we of the Four Hundred say—there seemed to be a general air of contentment enveloping the group.

"Concerning your motion, which has no standing because it was not seconded, Le Loup, there are quite a number who say the same thing," said the Cadi. "Now, whether they are posing for admiration for their gameness and broad liberality, or whether they are genuinely sincere, I will not attempt to pass upon. But it is a mistaken notion, for it is not based on good sense that the weaker should oppose the stronger on equal terms. Granting that there are men here and there who are willing to meet all comers on equal terms and lose their money for the pleasure of the losing, there are hundreds more who do not care to do so, and still more who cannot afford to do so. Now, which shall we consider as being of paramount importance—the one who is rather pleased to lose his money to the stars, or the hundred or more who wish to compete with a chance to win?

"Handicaps are spoken of as a matter pertaining to sport. They have a broader significance and a broader application. They are called by different names and have widely different adjustments to fit the peculiar circumstances to which they refer. For instance, we have a protective tariff, which simply is a handicap on foreign competition, and which gives our home contestants a chance in the sweepstakes.

"Railroads pool their interests, and allow weaker roads to charge a lesser rate, which in a way is the adjustment of a handicap.

"Last year, when there was a big fox hunt, our town officers imposed a license of $5 on all men who kept horses for hire. Its purpose was to keep farmers from bringing their horses into town to compete with the liverymen. That was a handicap.

"In wars, the troops in a fort withstand the attack of a superior force which is in the open. One has a handicap, the other shoots at the scratch. On equal terms in the open, the weaker force runs away. That is what has happened in the trap world, but you do not seem to have discovered it; my astute Le Loup."

"I am talking of shooting matters, and not of wars and commerce. In talking of shooting, I do not need to roam through the fields of earth and sky. When I shoot at the trap, there is no interest in matters of war or tariff," retorted Le Loup.

"Where men strive to excel or conquer," said the Cadi, "there are certain universal principles which are recognized by every race in every clime. The weaker cannot cope with the stronger in sport, commerce or war; that is, if the contests are on equal terms.

"In matters of sport, running horses carry weight; trotting horses have their classification on arbitrary time limits; yachts have an intricate system of handicaps; bicycle racing, sprinting, etc., also have their handicaps.

"A handicap, in the wisdom of the sporting world, has been found to be a necessity from time immemorial, except in the matter of target shooting. That, however, will be no exception to the rule, for the imperative necessities of the case will work its own cure. It makes me very dry to talk. Pass the cannikin, good Moke," said the Cadi, as he dusted the debris out of his eyelashes with a red cotton handkerchief, which had been washed the previous spring.

"Whoopie," said Ephraim, jumping into the air and cracking his heels together, "I make a motion that we adjourn and go fishing."

"Meeting adjourned," said the Cadi. Bernard Waters.

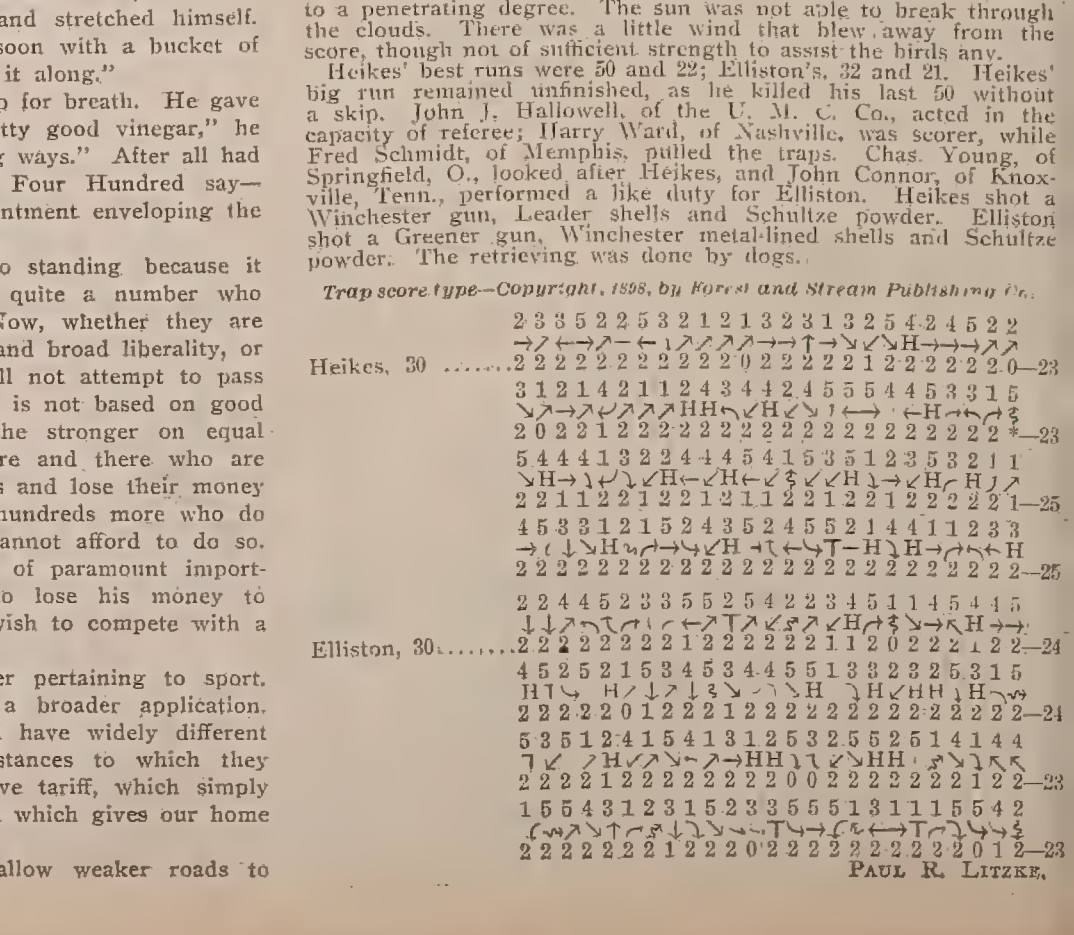
Heikes vs. Elliston.

Nashville, Tenn., Oct. 22.—Rolla O. Heikes, of Dayton, O., and W. R. Elliston, of Nashville, met here to-day to settle their little differences concerning the Cast Iron Medal. This, as the conditions require, was a 100-bird race, and the boy Elliston proved to be a little the hardest proposition that Heikes has had to contend with since he came into possession of that old iron plate. No one need imagine that this was not a shooting match, for in none of his previous contests with Grimm, Budd or Gilbert were his honors ever so much in jeopardy. This star, which has so lately flashed over the shooting firmament, had the big Dayton shooter guessing right up to the finish, for it was not until the 98th round that the latter could breathe easy and feel confident that the trophy would remain in his possession. The race began at 1:50, and everything moved nicely until the 11th round, when the big man lost a clipping outgoer from No. 1 trap. Elliston killed all kinds of birds in brilliant style up to the 19th round, when he too lost one similar to that of Heikes, and from the same trap. If anything, this one was a faster bird. It was hit with both loads, but kept on.

The race remained a tie until the 25th round, when Heikes again lost a left-quarterer that would always be classed good. Thus the little man was one bird ahead at the end of the first quarter. the score now stood: Elliston 24, Heikes 23.

On the next string Heikes lost his 2d bird, or rather his 27th, a bird much alike in flight to the one he had missed previously. This gave Elliston a lead of 2, which, however, was soon reduced to 1 by his loss of the 31st, a screamer that twisted a little and then quartered off to the right. For some time the contest remained even, for both contestants were now doing the finest of shooting on very fast birds. The second string was just drawing to a close when Heikes had a twisting outgoer from No. 5 trap go out of bounds. This put the boy 2 ahead, and the race was half-finished. The score then stood: Elliston 48, Heikes 46. Thus matters stood up to the 64th round, when Elliston lost a circling incomer after having made a run of 32 straight. He followed this up by losing his next bird from No. 3 trap. This bird had a puzzling flight, though it was not a very fast one. Apparently it was uninjured. The third string was finished without the loss of any more birds to either, so that at this juncture it was a tie, each having scored 61 birds.

Elliston, who was not in the best of health, appeared to be tiring somewhat at this juncture, as he was certainly much slower, his time being not near so good. Through sheer pluck and grit he maintained his position until the 87th round, when he lost another circling incomer. This put the Dayton man one in the lead, and his prospects became correspondingly brighter. He had not made a skip since the 50th round, cutting down all kinds of birds with deadly precision. It became more and more evident that the distance was too great for the youth, as he lost another circling incomer on the 98th round, which made 3 of this kind that he lost during the race. Evidently this was his weak bird.



This landed Heikes a winner by 2 birds. There will be no smoke in the Heikes household, as the cover will remain on the furnace, and thereby keep the E. C. cup from tarnishing, to say nothing of the other similar silverware that now adorns the parlor. Taking it all in all, it was a great shooting match, one worth going miles to see. With the exception of the Gilbert-Deiter match, it was the most interesting it has been my lot to witness. Each of the principals shot in capital style, and it is no discredit to Elliston to be defeated by such a score; then too it is well to remember that he gave Heikes the closest race for the medal of any aspirant who has attempted to wrest it from him. Three birds is the nearest that any of the other contestants came to it. This occurred at Dayton, when Grimm made an attempt to retrieve his lost laurels. The score on this occasion was: Heikes 93, Grimm 90.

The birds were a very good lot, especially the first 100, most of which were corkers, being far superior to any trapped here during the shoot.

The weather again was of that mean, nasty nature—raw and cold to a penetrating degree. The sun was not able to break through the clouds. There was a little wind that blew away from the score, though not of sufficient strength to assist the birds any.

Heikes' best runs were 50 and 22; Elliston's, 32 and 21. Heikes' big run remained unfinished, as he killed his last 50 without a skip. John J. Hallowell, of the U. M. C. Co., acted in the capacity of referee; Harry Ward, of Nashville, was scorer, while Fred Schmidt, of Memphis, pulled the traps. Chas. Young, of Springfield, O., looked after Heikes, and John Connor, of Knoxville, Tenn., performed a like duty for Elliston. Heikes shot a Winchester gun, Leader shells and Schultze powder. Elliston shot a Greener gun, Winchester metal-lined shells and Schultze powder. The retrieving was done by dogs.

Paul R. Litzke.

Belle Meade Tournament.

NASHVILLE, Tenn., Oct. 21.—The initial effort of the Belle Meade Gun Club in the conducting of tournaments was crowned with success. The object of the promoters of this shooting meeting was to bring to Nashville all the famous shooters of the country. In this respect it must be admitted that they succeeded admirably, for there were few of the good ones whose names do not appear on the entry book of the club.

However, while the crackerjacks were all in the scramble, there were therein few of the simon-pure class in evidence. One is led to infer that the sucker man, who also ran, has learned wisdom by experience, and that the so-called amateur will refuse longer to shy his castor in the same ring with his more expert competitor, the trade representative, where the old system of dividing the purses prevails. In order to come anywhere near breaking even, he must of necessity outshoot himself, which rarely occurs when he is pitted against the very acme of the shooting talent. True, there were some of the rank and file on hand, but few of these went the entire distance, while the majority were content with a day's experience, for this is what most of them got.

I am led to believe that the club erred in adopting this method of dividing the money, as I have been informed that a number of those who were expected remained away, believing this would be too hard a proposition. Had the Rose system prevailed in the target events, it is more than probable that the attendance of amateur shooters would have been much larger, while at the same time it is also safe to add none of the trade representatives would have remained away. It is my opinion that it is impossible to draw a large attendance to a tournament conducted on these lines. I have always contended for the more equitable system, and have yet to see one which gives more satisfaction than that known as the Rose system, with the ratio of 7, 5, 4, 3 and 2. This partitions the money among a greater number, and not to a few fortunate ones, as has been the case. Of course it would have been impossible for Gilbert to win $97 under this system, as he did here the first day, but it is well to bear in mind that where there are big winners there must be correspondingly more losers, and all are aware that it is invariably the 80 per cent. men who are the producers. Understand that I do not want to criticise the management, only wishing to indicate points whereby it is possible to materially increase its attendance at its next tournament, for I understand that the Belle Meade tournaments are to become a fixture and to be repeated from year to year.

The programme was a most liberal one, and the treatment accorded all visiting shooters was indeed a hospitable one. The latter was of that broad-gauge, Southern kind, where nothing is too good for the visitors. The writer has attended most of the tournaments in the South that are noted for the treatment accorded visiting sportsmen, and that received by those in attendance here was equal to the very best of them.

The local contingent was loyal to a degree seldom equaled anywhere, in that they entered freely in the competition, and in addition were untiring in their efforts to show the visiting shooters every attention. When the delegation from Dayton arrived they were met at the depot by a committee of the club and were conveyed in tally-hos to the Duncan Hotel. Notwithstanding the fact that it was raining very hard the party proceeded along the way to the blast of the horn. Evidently the unsophisticated formed a rather vague opinion of the sanity of the individuals who would essay such a ride in weather of this nature. This was again repeated on Thursday, when a number of shooters drove to the shooting grounds in a tally-ho and were forced to make the return trip in a drenching rain.

The appointments at these grounds are the most complete I have ever seen, and easily surpass anything that has come under my observation. The club house was originally the Cincinnati building at the Nashville Exposition, and was moved to its present site by Gen. Jackson for the very purpose that it now serves. This building is a neat structure, containing three rooms, two 16x20 and another one 16x30, the center one being the largest and is used for a lounging place, and the cashier's office was located here, while the one to the right contains the shooters' lockers and gun racks. This room is set aside for the gentlemen. The one to the left was reserved for the ladies. Each contain toilet rooms and have water connection, while windows of great dimensions permit one to view the shooting from the inside, should the weather be unfavorable.

A spacious veranda encircles the entire building, and at convenient places gun racks are to be found, thus enabling the shooter to have his gun handy to the score, while at the same time obviating any possibility of it being injured. The clover leaf field is here also in evidence. There are a set of live-bird traps to the right and left of the club house, while directly to the rear is situated the magautrap. There are also another set of target traps to the left of the building, arranged on the Sergeant system, but these are invisible, for though they are in the live-bird grounds that are located here, they in no way interfere with the shooting, being so arranged that the surface is perfectly level. Apparently the target starts right from the ground.

This arrangement found much favor with the shooters, as it always does, for it is much easier to get on to a target thrown in this manner than where blinds are used. The target events were over both sets of traps, and Paul North looked after the magautrap, while W. Fred Quimby acted as guardian over the other. Everything moved along like clock-work, and the events were shot off with much rapidity.

The live birds were shot in similar manner. The two sets of traps were almost constantly in use. The shooter would fire at a bird on the one set and then immediately proceed to the next and shoot again. In this way a great many birds were trapped during the day. The shooting was further facilitated by dogs doing the retrieving.

The management had engaged Mr. Fred Erb, Jr., of Lafayette, Ind., and his string of dogs to look after this department. All the dogs performed admirably, and it frequently occurred that they would jump high up in the air and catch a bird on the wing which had perhaps been only slightly hit. This always brought cheers from the spectators. Another feature of the tournament was the barbecue dinner that was served each day free to the shooters in a tent just in front of the club house, across the road. This was always well patronized, and partaken with a keen relish. To many it was an entirely new way of serving meat. Not only this, but the coffee could not be excelled anywhere.

Entries.

During the tournament the following names of out-of-town shooters appeared on the entry book: Harvey McMurchy, of the Hunter Arms Co., Fulton, N. Y.; Col. A. G. Courtney, Remington Arms Co. representative, Syracuse, N. Y.; W. Fred Quimby, American E. C. & Schultze Powder Co. representative; E. D. Fulford, shooting Schultze powder in U. M. C. shells with his Remington gun; J. S. Fanning, Batavia, N. Y., who so ably represents the Gold Dust powder; Irby Bennett, Memphis, Tenn.; R. O. Heikes, Dayton, O., and J. A. R. Elliott, of Kansas City, Mo., all representing the Winchester Arms Co.; John J. Hallowell and U. M. C. Thomas, of Bridgeport, the two popular representatives of the U. M. C. Co.; Herman Hirschy, St. Paul, Minn., of the Western Cartridge & Target Co.; the ever popular Jack Parker, Detroit, Mich., looking after the interests of the Peters Cartridge and King Smokeless Powder companies; the Du Pont and Hazard powder companies were strongly and ably represented by E. S. Rice, Western agent at Chicago, Ill.; R. S. Waddell, who occupies a similar position at Cincinnati, O. Then there were those three able shooting representatives, Chas. W. Budd, Des Moines, Ia.; Fred Gilbert, Spirit Lake, Ia.; Ralph Trimble, Covington, Ky.; Paul North, Cleveland, O., of magautrap fame; A. W. du Bray, of the Parker gun, Cincinnati, O. There were also present John W. Connor, Knoxville, Tenn.; Col. J. T. Anthony, Charlotte, N. C.; John Avery, J. L. Alston and E. L. Crabb, of Atlanta, Ga.; F. P. Poston, W. H. Thompson and Fred Schmidt, Memphis, Tenn.; J. B. Duncan, Lucy, Tenn.; J. W. and O. V. Eblesisor (Rattle), New Albany, Ind.; Lee Ridley, Franklyn, Tenn.; W. M. Tally, Henderson, Ky.; W. J. Gooch, Franklyn, Ky.; Harry Lyons, Dr. R. G. Fallis and W. A. Fawcett, Louisville, Ky.; J. W. Campbell, Franklyn, Tenn.; W. G. Harris, Gallatin, Tenn.; Chas. Young, Springfield, O.; Chase, St. Louis, Mo.

First Day, Tuesday, Oct. 18.

THE opening day of the shoot was a most favorable one, the weather being all that could be desired. Most of the time the sun shone out bright and clear, though now and then a few clouds would drift across the horizon, but these did not affect the light to any perceptible degree. The wind too was in evidence, and it was quite a problem to judge the targets accurately. There was a chill in the air that made the stove in the club house a very desirable article, and it was well patronized.

Under the varying conditions, Gilbert's shooting was the feature of the day, for he lost but nine targets out of 160, finishing with the excellent average of .943. This netted him quite a sum, as he received the first average money, $10, and his total renumeration for this performance amounted to a trifle over $97. Heikes, with .918, landed second average, $5, though he did not receive near so much as Gilbert. Quaker Gay, of Pine Ridge, Ky., is third, though in regard to winnings he came next to Gilbert, as he landed a number of lucky places. The three aforesaid have each two straight scores of 20 to their credit. Budd and McMurchy are respectively fourth and fifth in the average. Young set them all a hot pace by scoring his first 39 straight, losing his last target in the second event. This also proved to be the best run of the day. Then, too, he was fortunate to win the largest purse, as his straight score in the first event netted him just $28. The entry in this event being the largest of the day, there were none of the other straight scores that paid as well as this, though Gilbert, Gay and Hallowell were each fortunate enough to win a first without a tie. In the first event a rather singular thing occurred for this class of shooters. Young, Fanning and Anthony scored 20, 19 and 18 respectively, and in this instance they took first, second and third moneys without a tie, which paid a tidy sum to each. In event 8 Gay scored the only 19, and scooped second by himself. Singularly enough, there was a flood of straights in this event, as Gilbert, Heikes, Fanning and Trimble each got their quota. Thirty-five was the largest entry, while all told thirty-six participated, and of this number twenty-seven shot through.

The programme consisted of eight 20-target events, and as these were run off by 1 o'clock, there were also two extra target events shot at a like number of birds. In these the money was pretty well cut up.

Elliston had made a match with Elliott at 50 live birds, for $25. This was originally scheduled for Monday afternoon, though rain on this day prevented it from being shot. Therefore, as soon as the target programme was disposed of, this match was shot.

This proved to be a very close race, though by no means interesting, as the birds were of a very ordinary lot, being slow and loggy, which can perhaps be attributed to the fact that they had been fed recently, for apparently they should have proved fast. The weather conditions were all in their favor, and the wind was blowing away from the score. Notwithstanding, the majority were hoverers and incomers, while 58 of the 100 were sitters. These were almost equally divided among the contestants, Elliott having 28 and Elliston 30. Elliston's 18th bird was a twister, which he lost, and with it also the race. For though he killed out straight he was never able to overtake his more experienced opponent, who ran his 50 straight without a skip, while Elliston finished with 49. After the conclusion of the race a miss-and-out was shot; this had 22 entries at $2 each. At the end of the second round Hallowell, Gay, Gilbert, Heikes, Young, Elliston, Chase, Cullom and Fulford were still in, and as the birds had about exhausted the purse, they decided to declare it off without reaching a decision.

The target events were $2.50 entrance, five moneys, 30, 25, 20, 15 and 10 per cent.

Events:	1	2	3	4	5	6	7	8	Shot		
Targets:	20	20	20	20	20	20	20	20	at.	Broke.	Av.
Gilbert	17	20	19	19	18	19	19	20	160	151	.943
Heikes	16	19	18	19	16	20	19	20	160	147	.918
Gay	17	13	16	20	18	20	19	19	160	142	.887
Budd	17	19	18	18	16	18	17	17	160	140	.875
McMurchy	17	17	19	18	17	17	16	18	160	139	.868
Fanning	19	16	18	17	19	14	15	20	160	138	.862
Young	20	19	15	16	16	16	17	17	160	136	.850
Trimble	17	13	18	16	17	16	18	20	160	135	.843
Elliott	16	17	13	17	18	16	18	17	160	132	.825
Legler	14	18	16	17	17	19	15	15	160	131	.817
Rattle	16	17	14	18	17	17	14	17	160	130	.812
Hallowell	17	16	11	14	19	16	20	14	160	127	.793
Connor	17	16	18	16	18	13	16	13	160	127	.793

Second Day, Wednesday, Oct. 19.

The chief feature of to-day's shooting was the extraordinary streak that Gilbert developed. He ran his first 66 targets straight, when he faltered once, repeating this again when he dropped his 99th. This sums up his misses for the day, and he finished with the magnificent average of .987. This, of course, is high average, and entitles him to the $10 that go with the honors. Perhaps one of the most remarkable reversals of form is that of Hirschey, who is second with an average of .950, scoring just 30 more birds than on the previous day. Five dollars are set aside for second average. After Hirschey comes Gay, who has also been shooting in fine form, landing only one bird short of second average, with .943. The averages are much better than on the previous day, and the target grinding machines of the expert are apparently in perfect working order, with perhaps the possible exception of Heikes, who is seldom seen so far down the list. To what this can be attributed to will be mentioned in another paragraph. However, he can find some solace in the fact that he was the only lucky shooter of the day, as his 19 in the eighth event netted him $18.10, while the straights received just $3.10. Straights were common enough, two being the least scored in any event. This occurred in No. 4, when Fanning and Young cut up first money.

The target programme was precisely like that of the previous day. The entries, however, were not so large, thirty being the top number, twenty-five of them shooting through. When the targets were disposed of, an extra at 20 live birds was run off. The entrance to this being $15, four moneys, 40, 30, 20, and 10 per cent., the purse was pretty well cut up, as a glance at the score will tell. The birds were an improvement over those of yesterday, though even at this they were only fair. The weather was perfect, and in this respect nothing could be asked for. The sun shone bright and clear, and there was very little wind; in addition to this it was so pleasant that the fire in the club house stove could be dispensed with. Surely the participants must have enjoyed the sport.

Courtney, Elliott, Meaders, Fanning and Gay killed straight in the live bird event.

Events:	1	2	3	4	5	6	7	8	Shot

General Averages.

Two days at saucers is all the programme called for, the total number amounting to 320. For the best average in the two days there is a special prize, a gold medal. Naturally Gilbert takes this, as on each of the two days he has been at the head of the procession. Gay, by his fine work on the final day, is second, having passed Heikes, who, on conclusion of the first day's events, led him 5 targets, he having beaten Heikes 7 birds in the finish. There are no other prizes for general average, but the standing of each contestant who went the entire distance is shown in the table below:

	1st day.	2d day.	Shot at.	Broke.	Av.
Gilbert	151	158	320	309	.965
Gay	142	151	320	293	.915
Heikes	147	144	320	291	.909
McMurchy	139	149	320	288	.900
Budd	140	147	320	287	.896
Young	136	149	320	285	.890
Trimble	135	148	320	283	.885
Fanning	138	142	320	280	.875
Elliott	132	148	320	280	.875
Hirschey	122	152	320	274	.856
Fulford	126	148	320	274	.856
Legler	131	143	320	274	.856

U M C	104	115	320	219	.683

Third Day, Thursday, Oct. 20.

Gilbert again did the best shooting, as he accounted for all the birds he shot, 52 in round numbers. The weather was cloudy, though favorable for shooting, as most of the time a strong wind blew, which sometimes approached the velocity of a gale; toward evening several heavy showers fell, though these did not interfere with the shooting, but managed to wet quite a number of the shooters, who drove home from the shooting grounds in open vehicles. The birds again were only fair, notwithstanding the wind. However, there were some fast ones, and these invariably caused trouble to those who were unfortunate to draw them. The chief failing of the birds were their sitting propensities. Once on the wing, they were not so easy. The traps are located to the right and left of the club house, so that at one set the wind was from the score, while on the other hand it blew directly in the face of the shooter. This made incomers or quarterers of most of the pigeons on the one set, while on the other hand it did not seem to affect them very much, as the building apparently broke the force of the wind, for the birds were not near so fast as they should have been in such a wind. They were all fine, sleek, healthy looking, but for some reason they did not start promptly.

This day was given over exclusively to live-bird shooting, so therefore no crockery was shattered. With two sets of live-bird traps and the underground system of trapping, the events were rapidly disposed of. The first was a 7-bird miss-and-out, or otherwise straight scores divided all the money. Of thirty-four entries no less than twenty scored straight, and these received $5.90, just 90 cents over their entrance.

Budd, 30	1212122—7	McMurchy, 30	2212221—7
Hallowell, 30	1222222—7	Fanning, 30	1112112—7
Rattle, 28	1121121—7	Cullom, 28	1212211—7
Gay, 28	2121222—7	Heikes, 30	2222120—6
Fallis, 28	2111222—7	Dupont, 28	1111120—6
Fulford, 30	2111122—7	Thompson, 28	211120 —5
Chase, 28	1211121—7	Marks, 28	12220 —4
Young, 30	2211122—7	Hirchy, 28	22202 —4
Gilbert, 30	2112112—7	Fawcett, 28	11210 —4
Lyons, 28	2222222—7	Courtney, 28	1120 —3
Quimby, 28	2121211—7	Jackson, 28	1210 —3
Duncan, 28	2222111—7	Meaders, 28	10 —1
Crabb, 28	2121122—7	Elliott, 30	20 —1
Anthony, 28	2112111—7	Harris, 28	0 —0
Gerst, 28	1111211—7	Rice, 28	0 —0
Legler, 28	1211111—7	Du Bray, 28	0 —0
Norton, 28	2222222—7	Elliston, 28	0 —0

The chief event was the Gerst Handicap, 15 birds, entrance $15, three moneys, 50, 30 and 20 per cent., class shooting:

In this seven—Fanning, Anthony, Fawcett, Gilbert, Quimby, De Bow and Rattle—scored straights, for which they received $34 each. Fourteens were most numerous, eleven getting in this hole. This paid $13. The last money was divided by ten, and amounted to $9.50 each. Thus it will be seen that of thirty-eight entries only ten were out of the money:

Fanning, 31	1221211222211112—15	Meaders, 29	011*22211221212—13
Anthony, 30	1122212111122211—15	Norton, 27	2022212022222212—13
Fawcett, 28	1222212221221211—15	Gay, 30	2202212102222221—13
Gilbert, 31	1222222221222222—15	Dupont, 28	1220112112111120—13

Gerst, 28	1122222212201121—14	Elliott, 31	22212*212220202—12
Lyons, 29	2222222222222202—14	Elliston, 29	2222220020122222—12
Legler, 28	1212110211112222—14	Marks, 28	2*22222220202222—12
Budd, 31	1122212*222222—14	Duncan, 28	1112210121101*1—12
Acklen, 29	1012221121111121—14	Rice, 27	11212012*110011—11
Crabb, 27	2222120112111121—14	Cullom, 27	1001221101202221—11
Jonnard, 28	2012111121212122—14	Gray, 26	11120*1210222210—11
Du Bray, 28	2122102222*2211—13	U M C, 27	2022202220*0211—10

The third event was 10 birds, miss-and-out. Only nine—Fanning, Aklen, Fallis, McMurchy, Gay, Young, Gilbert, Budd and Heikes—of the twenty-seven starters went the entire distance. These were fairly well compensated, as it netted them just $16.25 apiece. This

concluded the programme, but as it was then only 2:30 another miss-and-out was started.

Fanning, 30	2222221222—10	Du Bray, 28	111120 — 5
Acklen, 28	2111111212—10	Hallowell, 30	22220 — 4
Fallis, 28	1112221211—10	Elliston, 28	2220 — 3
McMurchy, 30	1212112222—10	Dupont, 28	120 — 2
Gay, 28	2222222221—10	Fawcett, 28	220 — 2
Young, 30	2222222212—10	Meaders, 28	110 — 2
Gilbert, 30	1222222222—10	Fulford, 30	210 — 2
Rudd, 30	2111111122—10	Rattle, 28	20 — 1
Heikes, 30	2222222222—10	De Bow, 28	20 — 1
Cullom, 28	1212221120— 9	Elliott, 30	20 — 1
Chase, 28	1 1212222 — 9	Gray, 28	0 — 0
Courtney, 28	22112110 — 7	Harris, 28	0 — 0
Anthony, 28	1222220 — 6	Marks, 27	2120 — 3
Norton, 28	222220 — 5		

This proved to be a long-drawn-out affair, for when it was decided to declare it off on the 10 h round, Elliston, Du Bray, Heikes, Anthony, Budd, Gilbert and Rattle had not made a skip. As the entrance in this was only $3, there was not much left in the purse; the straight men receiving only $2.25:

Elliston, 28	22221212212222121121—20
Du Bray, 28	21212112212211111111—20

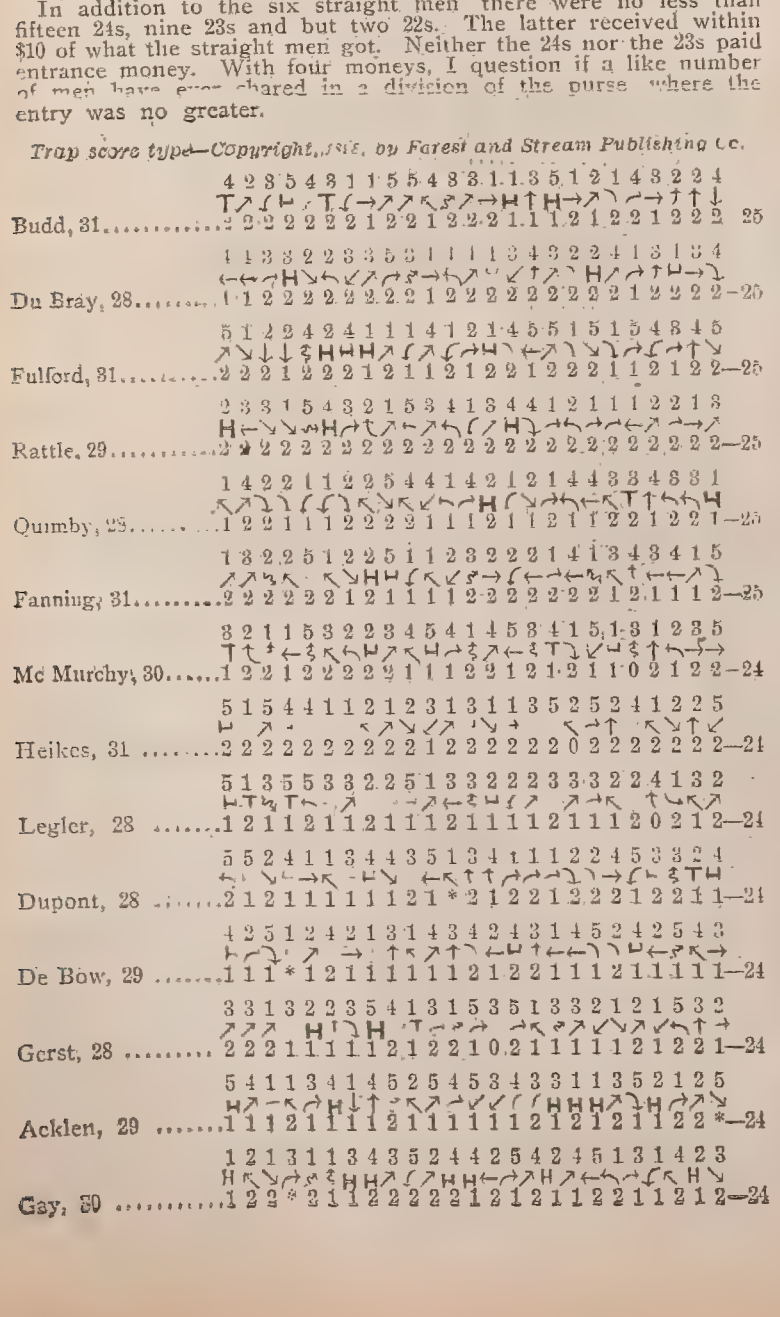
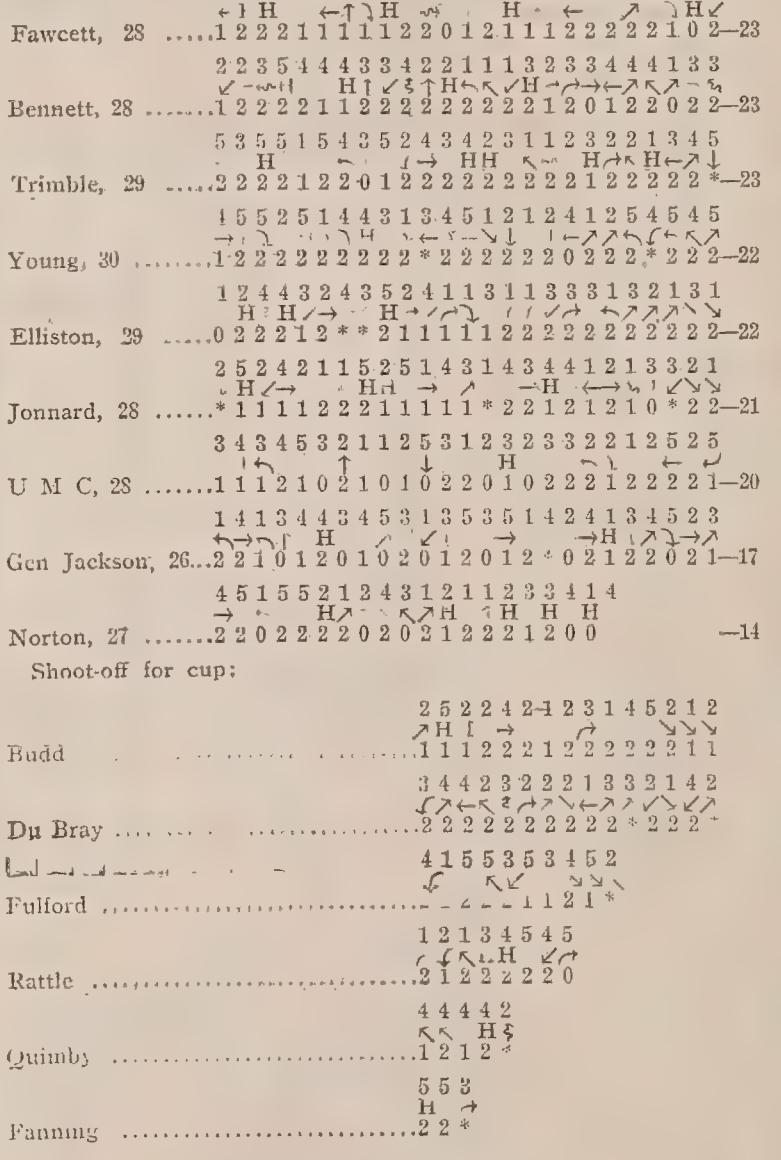
Jonnard, 28	20 — 1
Chase, 28	10 — 1
Norton, 28	20 — 1
Crabb, 28	10 — 1

Marks, Porter and Fawcett fell out on the first round.

Fourth Day, Friday, Oct. 21.

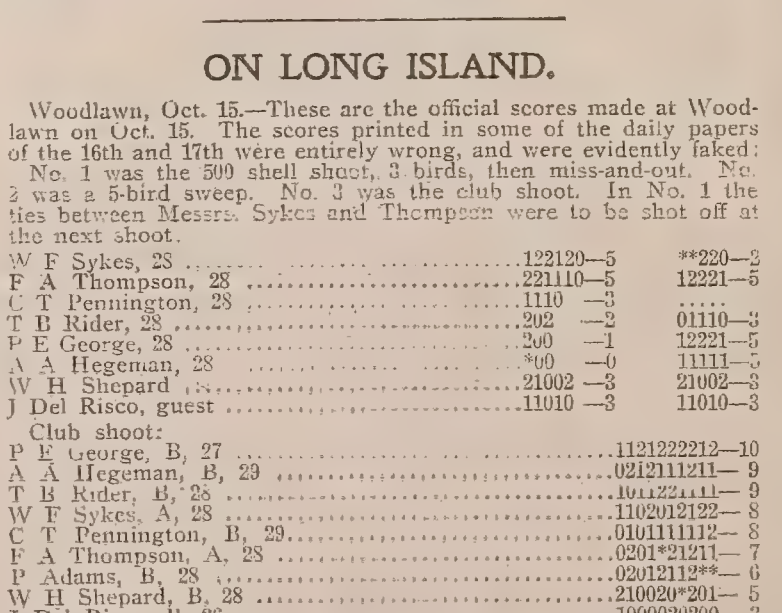


The Belle Meade Handicap, the event of the tournament, was decided to-day—the one in which the most interest centered. This was a 25-bird race, handicap rise, entrance $25; birds included, class shooting, four moneys, 40, 30, 20 and 10 per cent. The event was not commenced until about 12 o'clock, as previous to this a 10-bird extra was run off, so as to enable those to participate who might perhaps be late on account of the inclement weather, for it would be an easy matter to finish it before dark with two sets of traps.



When once the race was begun everything ran along smoothly, so that it was all over by 4:30. At the finish it was found that six—Budd, Du Bray, Fulford, Rattle, Quimby and Fanning—had killed straight. As a very handsome loving cup went to the winner it was evident that there must be a shoot-off. This was at once gotten under way, and was shot off at 5 birds. Fanning was a hot favorite, as he has always been fortunate in events of this kind. However, this time he failed to have his luck with him, as he was the first to drop out on a very good bird that, though hit with both barrels, went out of bounds. Quimby managed to stay until the 5th round, when he met a similar fate to that of Fanning on a fast twisting driver. Rattle had the sympathies of the crowd, as he is a cripple, and therefore much handicapped. The eighth was fatal to him, and he was forced to retire after having run 62 straight, 20 of them on the previous day. It now looked very much as though there was going to be a shooting match, as the remaining three were killing their birds in good time. Fulford slipped up on his 10th, a slow one, whose speed had probably been overestimated; it was hit, but went out. Du Bray only survived a round longer, when he too failed on a bird that carried out a lot of shot. It now remained only for Budd to kill his 5 straight, a task he was equal to. Thus he has reversed the decision Fanning obtained over him at St. Louis last November, when, it will be remembered, Fanning had to kill 40 straight to win the watch charm that was involved in that handicap. Budd made quite a record to-day, as he went down the line without a skip.

In addition to the 40 he killed in this race, he has also 10 more to his credit, he being one of the straight men in the extra event that was shot, while on the previous day he had finished with 35 straight. This made his total 85 straight for the two days, and 50 for the day, just 2 less than Fred Gilbert had to his credit yesterday. Nevertheless some people have been cruel enough to say that Mr. Budd has seen his best days. It is a popular win, and Charley deserves all the honors that go with the trophy. Du Bray, the runner up, is worthy of special mention, for he too has been shooting very consistently. He had a run of 45 for the day, when he lost that one dead out of bounds. Thus, too, he had finished with 20 to his credit in the last miss-and-out of the day previous. This should be glory enough for one day for the old reliable Parker, as both he and Budd shoot this make of guns. The weather was of the most unpleasant nature. During the morning it rained part of the time, and while it ceased about 10 o'clock, it left a mean, nasty atmosphere, that was penetrating to such a degree that it soon chilled all the vim out of the shooters. Few ventured out to watch the race. Most were content to sit by the fire in the club house. The birds were only an ordinary lot, with some few good ones. At times there was a good wind, and while it prevailed it caused some trouble for the shooters. The referees, scorers, pullers and trappers had a very cold, disagreeable job on their hands.



In addition to the six straight men there were no less than fifteen 24s, nine 23s and but two 22s. The latter received within $10 of what the straight men got. Neither the 24s nor the 23s paid entrance money. With four moneys, I question if a like number of men have ever shared in a division of the purse where the entry was no greater.

Shoot-off for cup:

ON LONG ISLAND.

Woodlawn, Oct. 15.—These are the official scores made at Woodlawn on Oct. 15. The scores printed in some of the daily papers of the 16th and 17th were entirely wrong, and were evidently faked:

No. 1 was the 500 shell shoot, 3 birds, then miss-and-out. No. 2 was a 5-bird sweep. No. 3 was the club shoot. In No. 1 the ties between Messrs. Sykes and Thompson were to be shot off at the next shoot.

W F Sykes, 28	122120—5	**220—2
F A Thompson, 28	221110—5	12221—5
C T Pennington, 28	1110 —3	.....
T B Rider, 28	202 —2	01110—3
P E George, 28	200 —1	12221—5
A A Hegeman, 28	*00 —0	11111—5

J Del Risco, B, 26	1000020200— 3

Oct. 22.—A high wind made good scores impossible at to-day's shoot. P. E. George shot in very fair form, he winning the Troisdorf cup for the fourth time. Thus it becomes his personal property. Live birds on Saturday, Oct. 29.

E. G. Frost, Sec'y.

Mr. Joe George, of San Antonio, Tex., who has been spending the summer in the North, contemplates returning to his Southern home in the early part of November.

Acklin vs. Elliott.

The two engaged in a one-barrel race, which was shot just prior to the Elliston-Heikes match. This was equally as interesting as the main event, and was won by Elliott in the shoot-off, as they tied on the original number of birds, each scoring 20 out of 25. Acklin should have won this, and only the hardest kind of luck prevented him from doing so. He lost 2 birds dead out of bounds, and one of these was chased out by the dog, who was afraid to walk on the tin that covered the point over the live-bird traps, and therefore did not retrieve it promptly, which enabled the bird to gather strength and fly out of bounds. This too was a good lot of birds, and each made some very fine stops. Elliott was the first to miss, for his 2d, an incomer, flew away. Then he lost his 9th, a hoverer, that lit just as he shot. The 14th just got out of bounds, while the 16th was missed sitting on the ground. His 23d, a good one, beat him out. Acklin lost his 3d, a very fast one; then his 4th fell dead out of bounds just over the wire. The 7th, a driver, was too fast, and the 10th, which was also a very good one. Later on he lost the 20th under conditions described above. In the shoot-off Acklin missed his very first bird, while Elliott killed straight. The conditions of the race were 25 birds per, for $25 a side, loser to pay for the birds, use of one barrel gun below the elbow, 28yds. rise. Mr. J. D. B. De Bow was chosen referee. Acklin shot a 11½lb. Purdy gun, U. M. C. Trap shells and 52grs. of Schultze powder. Elliott shot his Winchester gun, Leader shells and 3½drs. of Hazard powder:

Trap score type Copyright, 1898, by Forest and Stream Publishing Co.

Elliott ..... 1 1 1 1 1—5 Acklin ..... 0 1 1 1 1—4

Glover—Hawkins.

The 100-target race, for $100 a side, arranged at the Baltimore tournament between Messrs. Sim Glover, of Rochester, and Mr. J. M. Hawkins, of Baltimore, was shot on Tuesday, Oct. 18, at the Monumental Shooting Park, Baltimore.

The weather was stormy. There was a heavy wind and a driving rain—conditions as unfavorable to good scores as cou'd exist.

At the end of the first 25 Hawkins was the leader by 2 targets. The relative standing at the end of the second 25 was unchanged, the score standing 40 to 38. Glover broke straight on his third 25, which put him 3 birds in the lead. This lead he held to the close. It was a very close and well contested race.

A banquet after the race made a pleasing conclusion to a friendly and interesting competition. The scores:

Glover	1011110101110111111101101—19
	0011101111011011111111011—19

Smith	4	..	..	..	..	..	5	4
Moore	..	..	..	..	13	13	..	..

John S. Wright.

At Belle Meade, Oct. 21, the Belle Meade handicap proved to be a great contest, both in number and quality of contestants, with great performance to add a proper setting. Many of the star performers, great in the history of skillful shotgunnery, were in the competition. Six killed 25 straight, namely, Budd, Du Bray, Fulford, Rattle, Quimby and Fanning. There were fifteen who tied on 24—McMurchy, Heikes, Legler, Dupont, De Bow, Gerst, Acklin, Gay, Elliott, Anthony, Courtney, Meadows, Cullom, Parker and Gilbert. In the shoot-off for the cup Budd was the only one to kill straight, Du Bray remaining in next longest, his 11th bird falling dead out of bounds.

WESTERN TRAPS.

Palmer—Shaw.

Chicago, Ill., Oct. 22.—Dr. Shaw and Silas Palmer shot their race for the Chicago challenge trophy last Tuesday in bad weather, the day being gloomy and chilly. The birds flew fairly well. Only one spectator was on hand, beside two newspaper men. The wind came in from right to left. Both men shot a good gait, Palmer doing fine single-barrel work. Dr. Shaw lost a couple of his birds by a too hasty second barrel, though his [illegible] and rapid. Both men shot at scratch, 30yds., and no birds. Score:

Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

Mr. T. P. Hicks and Mr. A. C. Paterson have both challenged Mr. Palmer for the trophy, which he has now twice held. Mr. Hicks is about fifteen minutes ahead of Mr. Paterson, and will no doubt be next to shoot. Mr. Hicks is one of the trustees. Mr. Shepard, another trustee, is out of town. Mr. Mussey, the third trustee, has resigned, but is serving along temporarily, so that there may be some one to keep the business going.

Montgomery Ward & Co. Handicap Badge.

The fifth contest of the Montgomery Ward & Co. diamond badge series was shot yesterday, Friday, and brought out seventeen contestants and a good crowd of shooters and spectators in spite of the inclement weather to which Chicago has been treated this week. The day was strictly Highlandish, now cloudy and dull, now bright, with rifts of sunshine. The cooler weather begins to show effect on the birds, which are flying keener. In spite of this fact there were six men who landed in the 20 hole, and the tie was no man's till the end. Barto, who has won this trophy once (not twice, as erroneously reported by a Chicago paper), was favorite for a long time in the tie. He lost his 5th tie bird by tough luck, it striking the top of the wire and bounding over dead. Amberg meantime was slugging along in fine shape, and though he needed the handicap of 1 bird allowed him in the tie, he landed safe with 10 and carried off the badge, his victory being received with acclamation. This makes the fifth winner of this interesting trophy, and it seems as though the hopes of the donors, for twelve different winners, may be realized.

The usual surprises turned up. Comly, the first winner of the badge, did not get further along than the 10 hole. Mike Eich had to stop at 15 scored in his 20. F. B. Stone, winner of the C. A. A. badge this week, ran out with 20, and so did Silas Palmer, who was shooting a good clip. Barto was shooting in earnest, and only missed 1 bird of his 21. Amberg, Fletcher and Hyde came in by virtue of good work and the bird allowance. Miss Porter was forced to withdraw after shooting only 10 birds, having used up her handicap. Eddie Steck fell by the wayside, and Geo. Roll could only carry off 19, tieing Alabaster. Lef-

fingwell had 3 birds, and went out with 18 this time, and Geo. Thorne packed his gun at the 10 hole. Fletcher, the big Blue Island shooter, looked dangerous, and Hyde was a problem for them all when the six straight men stepped to the score for the tie. Stone was shooting a light gun, and it is said he is practically a beginner at the traps, though a good field shot. He was in at the last row, though needing his handicap. Barto was scratch in the tie, conceding 10 to 20 birds in the 100 to the others. The finish was not made till nearly 5 P. M., though the sky brightened, so that the light was good. Tie on second was shot between Roll and Alabaster, Roll winning, 5 to 4. Scores:

Shoot-off of 19:
Alabaster, 29, 1.....01122 Roll, 29, 0.....21111

Audubon Club.

Bad weather prevailed at Audubon Club shoot this week, only two men appearing for the medal contest, Messrs. Amberg and Gillespie. These two opened the house none the less. Both shot at scratch. Amberg won, scoring 17 to Mr. Gillespie's 15. This made the first win of the week for Mr. Amberg, though in this case the field was not so large as in the Montgomery Ward badge event.

Chicago Athletic Association.

The regular medal shoot of the C. A. A. brought out only five members last Thursday. Mr. F. B. Stone, 26yds., 3 birds, won, scoring 14. Mr. Geo. Thorne shot at scratch, scoring 12. Scores:

J H Turrill, 3	112210220200001—12
G A Thorne, 0	22222222020122*—12
E A Russell, 3	2000211222210 20—13
E W Miller, 3	021222220022010—13
F B Stone, 3	012120220112110—14

The wind and rain were against high scores.

Chicago—Milwaukee.

The second team shoot between Chicago and Milwaukee live-bird teams came off Oct. 16 on the grounds of the Milwaukee Gun Club, at the Cream City, and this time the Chicago men won decisively, in measure retrieving the defeat of the first race. The rubber will be played at Chicago, Nov. 26. The invaders of Milwaukee are members of the Sheridan Gun Club, of Chicago, of which Sheriff Pease is a warm member. The Milwaukee Gun Club is headed by Mr. W. D. Cantillon, a railroad man, assistant superintendent of the Northwestern R. R., who is one of the cracks of his city, and has been doing some good work with the birds. Following are the scores of the contest:

Milwaukee.

W D Cantillon, 30	1210221210222222112021222 12222—26
A L Kiefer, 29	2002022212002210211220202022—20

R S Mott, 30	1111221012211222211201112022 11—27—160

At the Sycamore, Ill., shoot last week Dr. Pankhurst, of Grand Detour, was high gun the first day, .919 per cent.; Simpson, of Sycamore, second, .886. On the second day Woodford, of Dixon, was first, .900 per cent.; Simpson a fraction back.

St. Louis Trap-Shooters' League will hold its tournament at Du Pont Park, Oct. 25-27, and it is expected that the old guard and some of the young guard will be on hand.

Ottumwa Gun Club, of Ottumwa, Ia., will hold its annual tournament Nov. 21-22. Magautrap. Equitable. Open.

Final Date of Limited Gun Club Shoot.

Limited Gun Club, of Indianapolis, has had difficulty with its dates. I have earlier mentioned changes. Oct. 16 they wrote, changing date from Dec. 5-9 to Dec. 19-21, having discovered a conflict. Under date of Oct. 19, their secretary, Mr. H. T. Hearsey, writes to announce another and final change of this date, the earlier date being again taken. Mr. Hearsey says: "We are compelled to ask your kind indulgence once more. The directors of the Limited Gun Club have again changed the date for the Grand Central handicap. They claim the dates first decided upon, Dec. 5-9. If you will kindly make mention of these dates in your paper, you will more than oblige."

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

Eureka Gun Club.

The Eureka Gun Club held its regular weekly contest Oct. 22. Many of the club members were away, duck and chicken shooting. The next shoot will be the last regular target contest for the season of 1898, after which the medals will be awarded in the various classes. The club contemplate giving some merchandise prizes for high scores of the stock on hand, which has been won by the club during the year, and it is expected that a goodly number will be in attendance.

Following are the scores in the practice events, all of which were shot from the magautrap:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	25	10	25	10	Targets:	25	10	25	10
A C Paterson	21	6	..	..	Pollard	13	5	18	..
W D Stannard	18	8	19	8	Dr Morton	11	..	11	5
Walters	13	2	..	..	Mattheson	..	1	..	..

In the trophy contest, 25 targets, Class A was won by W. D. Stannard, Class B by J. Walters, and Class C was uncontested for. The scores:

Class A: W. D. Stannard 22, A. C. Paterson 20.
Class B: Walters 16.
Class C: Pollard (visitor) 12.

Milwaukee Gun Club.

Following the team race of the Milwaukee Gun Club was a sweep at 10 live birds, which resulted as follows: Lemon 7, Cantillon 10, Wulf 8, Barto 10, Mott 8, Kiefer 8, Flanigan 9, Moy 8, Pease 9. Barto and Cantillon divided first money, Flanigan and Pease divided second.

Watson's Park.

On Oct. 19 a few shooters of the Garfield and Eureka gun clubs spent the afternoon at Watson's Park in live-bird shooting. Sweeps and practice was indulged in. The first was a practice shoot at 30 live birds, 30yds. rise, the Carsons (father and son) being for first, with Nusley second. The scores were: H. F. Carson 24, Nusley 17, R. B. Carson 24, Wilks 15.

A. C. PATERSON.

IN NEW JERSEY.

Bad Weather at Lyndhurst.

Oct. 19.—The heavy rain in the early part of the day put an end to all hopes of a good attendance in the 25-bird handicap Association. Four shooters only put in an appearance—Tom Morscheduled for to-day on the grounds of the Lyndhurst Shooting fey, the proprietor of the grounds, making a fifth when it came to sweepstakes. As so few entries were present, it was decided to postpone the main event until Tuesday, Oct. 25. As those on hand wanted to shoot a few birds, the following sweepstakes were decided:

	No. 1.	No. 2.	No. 3.	No. 4.
Class, 31	1102112—6	1222122—7	2121121220— 9	221*112210— 8
Sanders, 26	010121*—4	2021012—5	1221210100— 7	12*11101*2— 7
Packard, 28	0012110—4	1221011—6	1011102110— 7	1011122202— 8

Bumi, 32		2222122—7	2212211221—10	1212122122—10

Hackensack River Gun Club.

Hoboken, N. J., Oct. 22.—The scores made at H. R. G. C. shoot Friday, Oct. 14, at Schuetzen Park, Union Hill, are appended. The grounds proved very unsatisfactory, and we have concluded to hold our next regular shoots at our old grounds, Heflich's Hotel. All shooting was done in a driving rain storm, and while it greatly impeded the flight of the birds it was by no means beneficial to the shooter:

Ten-bird sweep, $5 entrance, 28yds. rise:

Biemer	1122111221—10	Fry	1122210222— 9
J Little	12*1112122— 9	Kleber	*020212220— 6
W Hexamer	0221222222— 9	Engel	0021201000— 4
Stelze	0202022*10— 7	Hoops	2222102020— 7

Match at 10 birds, 28yds. rise, $10 a side:

Chartrand	2102202220— 7	Kramer	0*10202000— 3

Team race, for price of birds:

H Thorout	12222—5	Capt Jack	12122—5
Hoops	02022—3— 8	Young	00200—1—6

JOHN L. CHARTRAND, Sec'y.

Vermilion County Medal Shoot.

SIDELL, Ill., Oct. 19.—The medal shoot of Vermilion county, held at Sidell, brought out a few shooters, and some fair scores were made. H. J. Sconce, who has won the medal twice, was challenged by Mr. Jackson and Mr. H. W. Cadwallader, of Danville, to shoot the winner. Mr. Sconce won the first match from Mr. Jackson by the score of 45 to 44, and then shot Mr. Cadwallader, and lost to him by the score of 46 to 44. The wind was heavy, and it had been raining the two days previous, and with a dull sky, which made the targets difficult to see. Below are the scores:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	15	10	15	10	15	20	10	10	10
Cad	5	13	8	11	5	14	16	6	8	7
Gray	4	14	9	12	..	..	..	..	..	..
Jackson	10	9	..	13	8	10	19	10	8	7

Yachting.

As the yachting journal of America, the FOREST AND STREAM is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.

FROM the programme published this week, the coming meeting of the Society of Naval Architects promises to be quite as interesting as any that have preceded it. Several of the papers have a direct application to the exciting events of the past summer, and the discussions should be very profitable. A new feature of the meeting is the topical discussion of various questions. The organization of this young but prosperous society came at an opportune time, when the revival of American shipbuilding was just under way. At the present time it is in a condition to lend material aid to that development of the art of shipbuilding which promises in the near future to rival even the successes of the past.

THE first attempt at the exclusion of the Dominion type by special legislation was made last week by the Y. R. A. of Massachusetts. The amendment, as reported, is inadequate and ineffective, and fails to meet the conditions of the case. In order to be of any value, it must be supplemented by a comprehensive definition of the vague and meaningless expression, "yachts of the ordinary type." There is now nothing to indicate whether or no such an extreme freak as Cartoon, a fin-keel scow, is of the "ordinary" or of extraordinary type. If she and others of her kind, the modern scow, are recognized as legitimate, it is certainly most unfair and unreasonable to bar the sharpie, the more primitive embodiment of the same idea, and much closer in general features to the older yachts. It is all well enough to bar the double-hull boat, but it must be done justly and reasonably, on a sound scientific basis.

MR. JOHN HYSLOP, the well-known measurer of the New York, Larchmont and Seawanhaka Yacht Clubs, was one of the few fortunate survivors of the terrible wreck of the steamship Mohegan, on Oct. 14. The vessel, bound down Channel, after sailing from London at noon on Oct. 13, went far off her course for some reason as yet unknown, and instead of keeping clear of the Lizards by some miles, she ran ashore on the Manacles, very dangerous rocks in the deep bay between Falmouth and the Lizards. Only fifty persons, out of a total of nearly 200, were saved by the ship's boats and lifeboats, Mr. Hyslop being one of the eleven passengers saved out of fifty. No particulars of his escape are yet known. After an absence of twenty-seven years from England, Mr. Hyslop sailed from New York last July, and since then has traveled in England and Scotland, using a wheel where convenient. He had planned to return on the steamer Manitou, but a change of sailing dates placed him on her sister ship instead.

AT a meeting on Oct. 18 the Chicago Y. C. instructed the secretary to notify the Royal Canadian Y. C. of the club's intention to challenge for the Canada cup for 1899. A committee will be appointed to arrange the details as soon as the class is decided on.

The 20ft. Racing Class.

Editor Forest and Stream:

Permit me to trespass further on your space and courtesy to develop my suggestion for the restrictions for a 20ft. class next year, as given in FOREST AND STREAM of Sept. 24.

The professed aim of S. C. Y. C. is to encourage Corinthian sailing in a safe, seaworthy and speedy yacht, and it seems to me that the present opportunity is a golden one for so doing by securing through mutual agreement such restrictions for the '99 racing as will compel the production of such a yacht and afford an opportunity for testing the value of restrictions such as I propose, which have the advantage of being new, never discredited, and of universal applicability, since all of the elements can be fixed by reference to our past experience in yachts of good type.

My suggestion is:

Extreme L.W.L. when yacht is heeled to gunwale, 20ft.; limit of draft when erect, 4½ft.; actual sail area, 500sq.ft. in two sails (80 per cent. in mainsail); area of spinaker, 250sq.ft.; displacement, 3,000lbs. ballast, exclusive of crew, 1,000lbs. freeboard, 16in.; crew, three men.

The effect of such an agreement would be the following:

First.—The relegation to innocuous desuetude of yachts of the Glencairn-Dominion type; this would be accomplished by limiting the gain in length from the use of a form having a flat floor and long overhangs, or through a double hull, to a reasonable amount by measuring L.W.L. when inclined in conjunction with the requirements of displacement; together securing either a full-bodied yacht of moderate midship section or a finely lined yacht of large midship section. The effect can be immediately seen by reference to your discussion of Oct. 15. All of the yachts there mentioned have about 1,750lbs. displacement, with the inclined waterline limited and 3,000lbs. displacement the area of midship section would be increased; the actual beam when inclined would be increased or the depth of body increased, and in consequence the excessive over all length would be useless; at the same time there would be enough length to afford a large above-water body to assist in preventing the undue burying of the yacht in a seaway. The inclined L.W.L. when applied generally would be given as a maximum, the designer being permitted, if desired, to decrease it.

Second.—The cost of construction of the yacht to meet these requirements would be very much less than the present cost of a racing 20-footer. I am ready now to make a contract for the type shown (Fig. 1) for $650 for one yacht, and for a proportionately less amount for a greater number, this to include the yacht ready to race with a tender 8ft. long of the bateau model. This cheapening of cost is rendered possible by requiring a good displacement and limiting the amount of fixed ballast, thereby allowing an adequate weight for a solidly and inexpensively constructed hull and spars, using practically the conventional sizes for framing. An incidental advantage is that the hull is thus left free from trussing, and thereby makes the room in the hull available for other purposes. Though intended as an open class I show what can be expected from a summer cabin.

Third.—With a roomy hull and cheapened cost of construction the cost of racing is also decreased. The yachts can be fitted with a summer cabin and used for sailing throughout the entire season, their period of usefulness is greatly lengthened and consequently it is probable that a larger number of yachts will be built for the trial races, and racing thereby stimulated, interest in the class revived and interest in yachting also revived.

Fourth.—With the amount of ballast, displacement and limit of load waterline length fixed, a smaller crew can race the yacht, its influence on the righting moment is decreased and the injurious influence of the moving of the crew to handle sails on the trim of the yacht is diminished, and consequently seamanship and not beef will be the governing qualifications in selecting the crew.

Fifth.—Any yacht built to the requirements as laid down must be safe and seaworthy, and may be fast. It is my belief that such a yacht could attain a speed of from 5¼ to 5½ knots in comparison with the 5 8-10 knots of the present 20, with 500sq.ft. of sail, and from 5 to 5¼ knots with 450sq.ft. of sail. This is said with a full knowledge of the performances of the S. C. Y. C. 21ft. knockabouts.

Sixth.—The designer would have absolute liberty of choice to use either the fin, centerboard, a modified fin keel or some new and more perfect type than any of them, and would be absolutely assured that the speed of the yacht would be dependent upon the perfection of form, rig and handling; since the driving power would be the same, the displacement would be the same and the other retarding elements would all be functions of the form, thus demonstrating the best form for wholesome yachts. This would be a very distinct gain to the science of naval architecture.

Seventh.—Many good yachts, endeared to their owners by their sterling qualities as demonstrated by miles of cruising in both fair and foul weather, would have an opportunity to compete with but slight alterations to their rig and ballast.

Eighth.—The limit of draft to 4ft. 6in. is intended to place a limit to the righting moment and to make entrance to small harbors possible. If it is desired to favor a centerboard type, this restriction might be altered so as to limit the draft of a keel yacht to 4ft. 6in., making the draft of a centerboard unlimited except by the condition that the center of gravity of lateral plane shall not be more than 2ft. 3in. below the surface when the yacht is erect.

Ninth.—As first stated, the limit of sail area was 600sq.ft.; this is a large rig for a yacht, but will of course drive it faster, and if speed is a vital consideration there is a sufficient righting moment to carry it in moderate weather. My own belief is that 500sq.ft. is better, not only because it can be carried longer and more comfortably, but also because it requires more careful trimming and management to get a high average speed, thereby developing a greater skill in sailing, and requiring a more perfect form, emphasizing the difference in form more than it would emphasize with a more powerful rig.

Tenth.—The limit of displacement is placed at 3,000lbs., the division of weight being 1,000lbs. ballast, 450lbs. crew, 1,200lbs. hull and rig, and the balance reserved for the anchors, lines, cushions, etc. This limit of displacement is the minimum that can be adopted and have anything like a wholesome yacht. It might be advantageous to increase the displacement by 500lbs., and the ballast by 200lbs., but this would necessarily slightly decrease the speed, at the same time increasing the righting moment and consequent sail-carrying power. This limit would always be a minimum.

Eleventh.—Limiting the freeboard to 16in. secures a sufficient amount to render the yacht properly dry and seaworthy; the designer would of course be at liberty to use a greater freeboard if desired.

Twelfth.—These various elements taken together may be made to produce any style of yacht, from the purely freak racing machine down to the most serviceable and seaworthy of cruisers, depending on their relative amounts, as I have said before, but they always allow liberty of choice in the selection of form; and they are the fewest elements which can be used to secure good racing in a class; no substitution for any of them through so-called equivalents is possible without disastrous results, so far as it is possible for me to see. Next to the pleasure of seeing an actual trial made would be the pleasure of having some one point out a means of evading these restrictions, just as I have pointed out how easy it is to evade the restrictions of any of the rules heretofore proposed.

Thirteenth.—It may be urged that there are practical difficulties in the way of determining the above-mentioned elements. To this it may be answered that these difficulties have been overcome in England, that the affidavits of the designer that the yacht measures within a class should be sufficient evidence except in a case of palpable dishonesty, when it would be but a small matter to check his designs and prove it. For international racing, the character of the men engaged therein should be sufficient to warrant the acceptance of their statements; should this be objected to, it would be easy to verify the measurements on the actual yacht. If the present practice of making a noticeable separation in the classes of yachts, rating them at the maximum length of the class with a one-gun start, a slight discrepancy or a slight excess of racing length over the class limits would have so trifling an influence on the speed as compared with the personal influence of the skipper and crew that the question of an inch or two on one side or other of the line could be neglected.

Fourteenth.—The above is all predicated on the desire of the committee for a desirable type of yacht, and the precedents already established by the committee. I would suggest that if speed be considered of paramount importance then the logical comparison is by sail area alone, permitting the designer to build anything under the sun which can carry the sail and make the time, including single hull, double hull, proas or anything else that the ingenuity of man can devise, sacrificing absolutely everything to the one consideration of speed.

Fifteenth.—I send herewith sketches of several different types which are possible under the rule. They are not worked out in great detail, but are suggestive of the possibilities. Some of them are more like racing machines than others, but all are seaworthy and can be used for sailing and single-handed cruising advantageously.

The following is worthy of note:

A double-hull like Dominion must sail on a form similar to Fig. 3 or a modification of Fig. 1.

An extension of the overhangs will result in increased windage, and would only be of occasional use. A study of the photos of the 20s will further emphasize this point.

The majority of the forms will be fast, and as the conditions of racing change will have a chance to win prizes.

GEO. HILL.

POSSIBLE TYPES OF RESTRICTED TWENTY-FOOTERS.

Y. R. A. of Massachusetts.

THE annual meeting of the Y. R. A. of Massachusetts was held on Oct. 20, at Young's Hotel, Boston, with Pres. L. M. Clark in the chair; twenty-four clubs being represented. The amendment prohibiting the cutting of notches in stem or stern at the L.W.L., to evade measurement, was rejected, also the amendment providing for measurement with actual crew on board. After discussion, the rig allowance to schooners and yawls was left unchanged, but the executive committee was authorized to draw up definitions of the two rigs, to exclude nominal rigs intended merely to profit by the rule. The following was added to this rule: "These races are intended for yachts of the ordinary type, and any evasions in the shape of double-hull, catamaran, sharpie, etc., cannot be entered."

The following amendment was adopted:

"A deposit of $2 must accompany a protest on measurement. The fee for measurement shall be paid for by the party in the wrong. The measurement of the official measurer shall be final."

The following was adopted:

"All cabin yachts must be measured and raced in accordance with the restrictions mentioned in the 'definition of a cabin yacht.'"

The amendment prohibiting the carrying of ballast in bags was not adopted.

The following was also adopted:

"Amendments to these racing rules must be submitted to the executive committee at least seven days before the meeting at which they are to be acted upon."

Society of Naval Architects and Marine Engineers.

The sixth general meeting of the Society of Naval Architects and Marine Engineers will take place in New York city at 10 A. M., Thursday, Nov. 10, 1898. Through the courtesy of the president and managers of the American Society of Mechanical Engineers, the meetings will be held in the auditorium of No. 12 West Thirty-first street, the sessions continuing through Thursday and Friday, Nov. 10 and 11.

There will be a banquet at Delmonico's at 7 P. M., Nov. 11, to which members and their guests are cordially invited. Tickets, exclusive of wine, will be $5 each; and they can be obtained at the Society's office on Nov. 9, 10 and 11.

Notice is given that in general seats will not be reserved, and tickets must be presented. It is requested that members obtain tickets as early as practicable.

Members intending to propose candidates for membership are requested to notify the secretary in order that the necessary blank forms of application may be forwarded and properly filled out.

The Council will meet at No. 12 West Thirty-first street, New York, on Wednesday, Nov. 9, at 3 P. M.

Following is a list of papers to be read before the Society of Naval Architects and Marine Engineers at its sixth annual meeting:

Thursday, Nov. 10.

1. Torpedo Boat Destroyers for Sea Service, with Special Reference to the Conditions that Prevail on the Pacific Coast. By G. W. Dickie, Esq., member.
2. The Standard Navy Boats. By Arthur B. Cassidy, Esq., member.
3. Bilge Keels and Rolling Experiments U. S. S. Oregon. By Asst. Naval Constructor Lawrence Spear, U. S. N., member.
4. Steam Economy Test of a Unique Form of Feed Pump. By F. M. Wheeler, Esq., member.
5. Portable Pneumatic Riveters in Shipbuilding. By W. I. Babcock, Esq., member.

Topical discussion of the following questions:

First.—The utility of torpedo boats, and has the submarine boat a place?

Second.—In what respects have the recent naval engagements affected opinion as to the value and best distribution or armor for warships?

Friday, Nov. 11.

6. The Steam Yacht as a Naval Auxiliary. By William P. Stephens, Esq., associate.
7. Designs of the New Vessels for the U. S. Navy. By Chief Constructor Philip Hichborn, U. S. N., Vice-President.
8. Methods of Securing Watertight Work. By Asst. Naval Constructor H. G. Smith, U. S. N., associate.
9. Tests of the Strength of a Longitudinal Bulkhead Separating Two Engine Rooms. By Naval Constructor J. J. Woodward, U. S. N., member.
10. An Electrically Operated 150-ton Revolving Derrick. By Walter A. Post, Esq., associate.
11. Stability of a Battleship under Damaged Conditions. By Prof. Cecil H. Peabody, member.

Topical discussions of the following questions:

First.—Under the circumstances of the blockade at Santiago, which was the more economical method of maintaining the boilers in readiness for immediate action—banking the fires or keeping them spread, but very thin?

Second.—Can you give any data as to the cost in coal of maintaining the engines and boilers in readiness for immediate service?

Third.—What, if any, difficulty was there in maintaining the supply of fresh water for the boilers; and if there was any difficulty to what do you attribute it?

Fourth.—As a result of experience on the blockade, what particular points about the machinery were most likely to give trouble, and what could be done to prevent a recurrence of such trouble?

Rules for Debate

In the Discussion of Papers and Subjects.

1. Guests of the Society are cordially invited to take part.
2. Each speaker is allowed one period of ten minutes for each paper or subject.
3. Rejoinders are in order only by writers of papers to answer questions in closing the discussion.

Tonnage Tax on British Yachts.

Under date of Oct. 11, 1898, the following circular has been issued by the Treasury Department:

To Collectors of Customs and Others:

Your attention is invited to the following provisions of Section 4,216 of the Revised Statutes re-enacted Feb. 1, 1897, with amendment:

"Yachts, belonging to a regularly organized yacht club of any foreign nation which shall extend like privileges to the yachts of the United States, shall have the privilege of entering or leaving any port of the United States without entering or clearing at the custom house thereof, or paying tonnage tax; provided, that the privilege of this section shall not extend to any yacht built outside of the United States, and owned, chartered, or used by a citizen of the United States, unless such ownership or charter was acquired prior to the passage of this act."

By Chapter 44, 61 and 62 Victoria, on and after April 1, 1899, American pleasure yachts will become subject in the ports of Great Britain to an annual charge of one shilling per ton as light dues.

As the British Government has thus declined to extend to American yachts in British ports the privilege now extended to British yachts in American ports, you are instructed, on and after April 1, 1899, to require British yachts visiting your port to enter and clear at the custom house, and to pay tonnage tax as imposed by law on merchant vessels. Eugene T. Chamberlain,

Approved: Commissioner.

O. L. Spaulding,
Acting Secretary.

Canoeing.

American Canoe Association.

Annual Meeting, Executive Committee.

Buffalo, N. Y., Monday, Oct. 17, 1898.

The annual meeting of the executive committee of the American Canoe Association was held this year at Buffalo, the home of the incoming officers, Com. Thorn and Sec'y-Treas. Forbush. Invitations were sent out by the Buffalo C. C. to the members of the committee for the three days, from Saturday to Monday, and those who accepted were entertained as the guests of the club, the first two days being spent at the club house, Point Albino. The meeting was called to order by Com. Thorn at 9:50 on Monday morning in a parlor of the Iroquois Hotel, with nineteen members present or represented by proxy. The full list of officers for 1898-9 is as follows: Com., F. S. Thorn; Sec'y-Treas., C. P. Forbush; Librarian, W. P. Stephens.

Atlantic Division.—Vice-Com., F. C. Moore; Rear-Com., H. C. Allen; Purser, J. C. Mowbray; Executive Committee, Wm. C. Lawrence, Nathaniel Hyatt.

Central Division.—Vice-Com., H. C. Morse; Rear-Com., L. W. Woodworth; Purser C. H. Williams; Executive Committee, W. R. Huntington, F. G. Mather.

Eastern Division.—Vice-Com., J. W. Brown; Rear-Com., J. B. Waterbury; Purser, W. W. Crosby; Executive Committee, R. H. Hammond, F. A. Wallace, Raymond Appolonio.

Northern Division.—Vice-Com., George R. Howell; Rear-Com., A. G. Bowie; Purser, G. Walton Regg; Executive Committee, W. J. English, E. C. Woolsey; Board of Governors, R. J. Wilkin, Pres.; Paul Butler, J. N. Mackendrick, C. V. Winne, Recorder.

Those present were Messrs. Thorn, Forbush, Stephens, More, Morse, Williams, Huntington, Mather, Howell, Begg, English and Wilkin. The proxies were: P. F. Hogan, for Rear-Com. Allen; H. H. Smythe, for Purser Mowbray; R. J. Wilkin, for N. Hyatt; J. S. Wright, for Rear-Com. Woodworth; J. N. Mackendrick, for Rear-Com. Bowie; J. W. Sparrow, for E. C. Woolsey, and L. S. Drake, for Vice-Com. Brown. On the Board of Governors Vice-Com. Moore represented Mr. Winne, and L. S. Drake represented Paul Putler. There was practically a full representation from every division except the Eastern. The election of Vice-Com. Forbush as Sec'y-Treas., in August, left the Central Division without a head; a meeting of the executive committee of the division was held on Oct. 15, and H. C. Morse, of Peoria, Ill., was elected Vice-Com. Mr. A. T. Brown, of Rochester, was elected a member of the executive committee in Mr. Morse's place; but the present membership of the division only allows two members on the committee.

After some introductory remarks by Com. Thorn the roll was called and the minutes of the meetings of Aug. 13-15, at camp, were read and accepted. The following reports were then read and accepted, that of the board of governors being subject to audit. The pursers' reports of the Northern and Central divisions were ordered returned for addition of membership list, and those of the Atlantic and Central divisions for audit. The camp site committee made a verbal report, the accounts not yet being closed.

Official Reports of Officers and Committees, 1897-8.

REPORT OF SECRETARY-TREASURER, OCT. 1, 1898.

Receipts.

Report of the Regatta Committee.

Sept. 5.—Com. F. L. Dunnell, New York City.—Dear Sir: Having been appointed by you chairman of your regatta committee for the season of 1898, I beg to report as follows:

Early in the season your committee prepared and later decided upon a schedule of races to be held at the annual meet at Stave Island. A copy of this schedule is hereto attached. Your committee also provided prizes for the events, a list of which is also hereto attached. At the meet the races were called, and with few exceptions successfully run off.

Your committee made a contract with A. B. Chaffee for the use of his alleged yacht for the entire period of the meet, the total expenses to be $108. Mr. Chaffee's allegation that it was a yacht has been successfully combated and refuted, and a substantial reduction in the price of same effected. It was demonstrated that instead of being a yacht the Sweetheart, of Stave Island, was an official death trap, but your committee is happy to say that it was returned to Mr. Chaffee in much better condition than it was received from him.

Your committee have received from the various clubs in the American Canoe Association donations to a prize fund, in amounts as follows:

Buffalo C. C.	$10.00	
Brooklyn C. C.	5.00	
Hartford C. C.	5.00	
Ianthe C. C.	5.00	
New York C. C.	5.00	
Rochester C. C.	5.00	
Red Dragon C. C.	5.00	
Shattemuc C. C.	5.00	
Shuh Shuh Gah C. C.	5.00	
Skating Club	5.05	
Toronto C. C.	5.00	
Vesper C. C.	5.00	
Yonkers C. C.	5.00	
	$70.05	
Received for rent of launch	6.00	
		$76.05

We have expended as follows:

For polishing A. C. A. and Dolphin cups, and insurance and express charges on same	$7.55	
For prizes	110.00	
For rent of launch	93.00	
For blanks, numbers and incidentals	9.66	
		$220.21
Total net expenses of regatta committee.		$144.16

Your committee have the following recommendations to make:

It having been demonstrated that the modern decked sailing canoe is not adapted for paddling, we recommend that no paddling races be provided for this type of canoe. Inasmuch as the trial race for the selection of contestants for the A. C. A. trophy race has become unnecessary by reason of the fact that for some years there have not been more entries for the trial races than were allowed to enter the trophy race, we recommend that the trial race be dropped.

We strongly recommend the abolition of the one-man one-canoe rule, as there will be more interest taken in the races if a man can borrow a canoe with which to enter.

It has been demonstrated that the present limitations as regards open paddling canoes are very good, that the canoe built under the new rules is a good serviceable canoe for either paddling or sailing.

The trophy paddling race this season was participated in by seven men, all of whom used open canoes. This race was paddled down the wind, the water being quite rough, and there were no accidents of any kind. It was also demonstrated that these open canoes, with 40ft. of sail, were quite able in rough water.

The A. C. A. sailing trophy was delivered to H. H. Smyth, Esq., and the A. C. A. paddling trophy to H. C. Allen, of Trenton, N. J. The bonds required by the rule please find herewith.

The Dolphin sailing trophy was won by Mr. J. C. Mowbray, but as he refused to furnish the required bond the trophy was delivered to Com. F. L. Dunnell for safekeeping.

The thanks of the committee are extended to all those members of the American Canoe Association who lent their assistance.

The annexed schedule shows the results of the races.
Respectfully submitted,
The Regatta Committee,
Percy F. Hogan, Chairman,
Raymond Apollonio,
C. Howard Williams.

The schedule of races has already appeared in the Forest and Stream.

Report of the Board of Governors.

Brooklyn, N. Y., Oct. 1.—The board of governors since the last report to the executive committee have held two meetings, one at Brooklyn, Oct. 16, 1897, and one at the A. C. A. camp, Aug. 13, 1898. At the meeting at Brooklyn the report showed a balance in the treasury of $1,025.13, a decrease from last year of $211.86. This decrease in the reserve fund was explained at that time, and in pursuance with that explanation the following resolution was passed by the board:

Resolved, That as the board of governors have estimated the net receipts of the funds of the A. C. A. for this year, 1897-98, to be as follows:

Atlantic Division	$200.00
Central Division	80.00
Eastern Division	90.00
Northern Division	30.00
Camp dues	150.00
Total	$550.00

that the commodore must limit his excess of expenditures of receipts to 80 per cent. of the above amount, and in case an exigency arises in his judgment for a further expenditure, he must obtain the consent of the board of governors.

The following resolution was also passed:

Resolved, That the sum of $100 be advanced to the general officers of the Association to meet the current expenses for the coming year, pending the receipt of money from the several divisions, with the understanding that the same be refunded as soon as practicable, or by Sept. 15.

In relation to the second resolution, the board report that no call was made for the money by the administration, it being the first time that the general officers have never called upon the reserve fund for temporary loans at the beginning of the administration. The amount for carrying on the business earlier in the year by the general officers was obtained, we are informed, from the purser of the Atlantic Division, who credited the amount to the account that would be due the Association later in the year.

In relation to the first resolution, the matter was simplified by the general officers earlier in the year; in fact, as soon as the money had been collected from the several divisions, by turning over to the board of governors, to be placed with the reserve fund, the 20 per cent. required by the board from the estimated net receipts, namely $110.

It is proper for us to report that this is also the first time that the general officers of the Association have paid this money over before the camp opened, and we wish to recognize thus publicly and commend the business sagacity thus shown by the general officers.

Attached to this report is the financial statement, from which it will be discovered that there is a balance in the reserve fund at the present time of $1,172.49.

The status of the reserve fund of the Association does not seem to be fully understood by the members, and notably by some of the older members of the Association. The reserve fund is, as its name indicates, a reserve, and should not under ordinary circumstances be drawn upon for current expenses.

There is no disposition to increase this reserve from the present amount, but during the past several years the increase has not been uniform or continuous. In 1895 it was found necessary to expend over 80 per cent. of the gross receipts of the Association to carry it on, and in 1896 it was impossible, owing to the conditions then existing and extraordinary expenditures, to return to the fund the amount of money advanced to the general officers.

Consequently, had there been in 1895 and 1896 no reserve fund, the incoming general officers in the years following would have been compelled to have begun their administration with a deficit, such as the Association in the other years had suffered from.

To meet such contingency is the purpose of the fund, and any disposition on the part of the members to reduce this fund from its present amount should be very carefully considered before being acted upon by the executive committee.

All of which is respectfully submitted,
(Signed) Robert J. Wilkin,
President Board of Governors A. C. A.

Brooklyn, N. Y., Oct. 1, 1898.—The Board of Governors in account with the American Canoe Association:

1897.

F. C. Moore.

After the reports were read Com. Thorn spoke of the desirability of extending the membership and influence of the Association, especially in the West. This gave rise to a lengthy discussion of the general interests of the Association, the character of the meets, the question of dress in camp, etc. While it was the universal opinion that something was needed to stimulate a new interest in canoeing, no one was able to suggest definite plans. During the course of the discussion Mr. Williams made an interruption in order to present to the commodore and secretary-treasurer, in the name of the Buffalo C. C., yacht caps with the emblems of their rank in the Association.

At 12:40 a recess was taken for luncheon, the meeting being called to order again at 1:30. The report on the ladies' camp was read, showing an attendance of thirty-two ladies. The following associate members were elected: Mrs. J. M. Carpenter, Mrs. H. M. Carpenter, Mrs. Wm. M. Carpenter, Miss E. M. Wattles. Mr. Wilkin moved that a committee of three be appointed to revise the honorary list, but the revision was finally made by the dropping of the names of C. G. Y. King and Francesco Garguilio.

Mr. Stephens called attention to the omission from the Year Book of the name of the Forest and Stream as the official organ of the Association, and asked for the reason. No one present was able to give any information, though it was brought out in the course of the discussion that no authorization for the omission had been given by the executive committee. On motion of Mr. Wilkin, Com. Thorn appointed a committee of three—Sec'y-Treas. Forbush, Mr. Mackendrick and Mr. F. L. Dunnell—to ascertain the exact position of the matter and to report to the committee. Mr. Wilkin proposed an amendment to Art. 5, Sec. 6, of the constitution, but the amendment was withdrawn, as it was shown that no notice by publication had been given.

The question of the site of the 1899 meet was then taken up, Com. Thorn describing a trip made by him last August, in company with Vice-Com. Morse, to Lake George and Lake Champlain, visiting many sites, among them Long Island, the 1888 meet; Bow Arrow Point, 1887, and some new places. Com. Thorn favored Long Island for next year, but a lengthy discussion developed a feeling against both Lake George and Lake Champlain. Mr. Drake stated that the Eastern Division found Clayton practically as convenient as the Lake Champlain ports, and the New York men made the same statement. The Northern Division men promised to come to Lake Champlain in as large numbers as possible, but stated that it was very difficult to induce their men to make the long and difficult trip around Lake Ontario. Vice-Com. Morse suggested Seneca Lake, which he visited this fall. After a long discussion Mr. Wilkin moved that a ballot be taken on the choice of four localities, and this was done, the result being:

	1st.	2d.	3d.	4th.
St. Lawrence River	10	4	0	2
Seneca Lake	2	7	6	1
Lake George	4	3	3	2
Lake Champlain	0	3	2	6

Mr. Wilkin moved that Lake Champlain be selected, there being no votes in the affirmative. Mr. Hogan then moved that Seneca Lake be chosen, the vote being 7 for and 8 against. Mr. Stephens made a similar motion in favor of Lake George, the vote being 7 for and 10 against. Vice-Com. Howell moved that the meet be held on the St. Lawrence River, which was carried by a vote of 10 to 6. Mr. Wilkin then moved that the location of the camp among the Thousand Islands be left to the commodore and secretary-treasurer, which was carried.

Mr. Wilkin then moved that the date of the meet be so arranged as to permit members to remain for a third week if they wished. It was decided to hold the meet from Aug. 4 to Aug. 18, with the transportation arrangements continued for an extra week if possible. Mr. Wilkin moved that the recommendations of the regatta committee be carried out, but it was shown that the new committee had full power in the arrangement of the programme.

Mr. Wilkin then moved that it was the sense of the meeting that all races be held during the second week of the meet, and that they should, if possible, be limited to three days, the war canoe race being on a fixed date. This was carried, after discussion. As no notice of amendment of any of the rules had been given in advance, for the first time in the history of the Association no changes of the constitution, by-laws or racing rules were made.

Com. Thorn asked that all members would make it their business to see that correct names and addresses were furnished to the secretary-treasurer, and also that correct lists of club officers were furnished. After a motion of thanks to the Buffalo C. C., made by Mr. Hogan, and responded to by Mr. Forbush, the meeting adjourned at 4:55 P. M. The members dined early in the evening, departing by the night trains. The meeting resulted satisfactorily, all the necessary business of the Association being carried out.

"Manual of the Canvas Canoe."

With the present week a new volume is added to the nautical department of the Forest and Stream Library; the "Manual of the Canvas Canoe," by F. R. Webb, Commodore of the Shenandoah Canoe Club. Mr. Webb is well known to our readers as a practical cruising canoeist, and a ready writer on both cruising and construction, as we have frequently published logs of his cruises, and descriptions of the canoes built and used by him. The canvas canoe as developed and perfected by him after years of trial is by no means the flimsy and dangerous combination of hoops and muslin too often associated with the name, but a thoroughly staunch and serviceable boat, capable of standing the roughest usage.

Starting with the standard model of the best cedar cruising canoes, Mr. Webb has adapted to it a strong and simple system of canvas construction that is inexpensive and at the same time requires no special skill on the part of the builder. The book is written for those having no knowledge whatever of designing or canoe building, and presupposes merely a moderate amount of skill in the use of the saw, hammer and simpler tools. The necessary moulds for two different sizes of canoe are given full size in a supplemental plate, ready to be transferred directly to the boards. A complete list of the necessary materials is also given. The instructions are plain and definite, describing thoroughly every detail of the work to the final painting and finishing. The completed canoe is suitable not only for mere summer cruising, but for hard service in hunting or exploring, quite equaling in strength and durability any ordinary wooden boat. The system described is well adapted for the building of cheap and strong boats for other purposes than canoeing.

Not only the canoe, but the complete camping and cruising outfit is described in detail, with special chapters on canoe cruising and cooking. The book is liberally illustrated with over seventy diagrams and pictures, in addition to the large supplemental plate folded in a pocket in the cover. The price is $1.25.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, NOVEMBER 5, 1898.

VOL. LI.—No. 19. No. 346 BROADWAY, NEW YOR

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

The Forest and Stream Platform Plank.

"The sale of game should be forbidden at all seasons."
—FOREST AND STREAM, Feb. 3, 1894.

AMATEUR PHOTOGRAPHY.

THE FOREST AND STREAM'S announcement of prizes for amateur photography will be found in our issue of last week and that of next week.

But because I speake so much of fishing, if any take mee for such a devote fisher, as I dreame of nought else, they mistake mee. I know a ring of golde from a graine of barley, as well as a goldsmith: and nothing is there to bee had which fishing doth hinder, but furder us to obtaine.

Captain John Smith, 1615.

THE GOLDEN RULE.

THE notes of personal relation of experience contributed to our shooting columns by Mr. Means constitute an effective half-column homily on the beauty and rewards of the Golden Rule. We all know from infancy that it is the right thing to do unto others as we would have others do unto us; but as a matter of fact the rule does not hold first place among those which we prescribe for ourselves in the field. If consideration for others were uniformly the controlling principle in our shooting and fishing excursions, and if every gunner who entered upon the property of another for shooting would put himself in the place of the landowner and treat that owner as he would himself wish to be treated, there would no longer exist a disagreeable friction between farmers and sportsmen. To ask this of all gunners would, of course, be demanding too much of human nature; for it would be with respect to some men to look for a more exalted standing of conduct in their shooting trips than they observe at home amid daily surroundings. But it should be practicable for the person who usually considers the rights of others to carry that same spirit into his sport. For, at worst, the disregard of social amenities so often manifested by the game shooter is due to sheer thoughtlessness, rather than to any deliberate or studied intention to act the part of a boor.

There is some occult influence which frequently causes well-bred and well-intentioned people to forget their breeding and their manners directly they have a gun in hand and find themselves on another person's land looking for game. Yet there is surely nothing inherent in a taste for field sports which involves such disregard of others. On the contrary, as is demonstrated by shining examples in great multitude, there are sportsmen who show themselves in the field as at home and everywhere thoughtful of their fellow men, and whose pleasant fellowship is sought not only by the companions with whom they go shooting, but by the residents among whom they shoot, and to whose courtesy they are indebted for their opportunities of sport. Every shooter who thus treats a landowner as he would be treated in turn by him will have no difficulty in finding in this country to-day an abundance of good shooting. Even if he shall at first be warned off and debarred by trespass notices, he has to thank for this, in all probability, the gunners who have preceded him, and who have made their invasion of the fields so intolerable that they have put a brand and stigma upon all of the craft. But even the most hostile and bitter misanthrope of a Northern or Western farmer or Southern plantation owner, will gradually relent and make himself agreeable if the sportsman who covets his game will but persevere in the pursuit of it according to the Golden Rule.

THE SITUATION IN NEW JERSEY.

A PECULIAR situation holds in New Jersey, where the machinery which the State has provided to enforce the fish and game laws finds itself balked in the accomplishment of this purpose by the hostile attitude of the chief executive toward the protectors and his sympathy for those who violate the laws. We recently commented upon the proclamation of Governor Voorhees, that he would promptly pardon all persons convicted of violation of one of the game laws; and a recent case in which he interfered indicates that he is bent upon making good in practice his public declaration that he does not believe in punishing people who kill birds or other game or fish out of season, as he believes in more liberty for the people. The instance in point is that of a young fellow named Teeple, who was detected spearing fish with a pitchfork in a stream in Middlesex county, the outlet of Brooklyn Pond, which has recently been stocked by the fish commission. A man named George Newman warned him to desist, telling him that he was acting contrary to the law, to which Teeple made reply: "To —— with the law; I have always speared fish whenever I wanted to, and I am now going home to get my spear to get more fish." Newman thereupon informed Warden Brown, who apprehended Teeple with the speared bass in his possession. He was promptly convicted, but refusing to pay the fine was sent to jail; Governor Voorhees, although fully informed of the circumstances of the case by the warden who made the arrest, at once pardoned the spearer and left the commissioners to pay the costs. Mr. Voorhees thus gives notice to every fish-spearing Teeple in New Jersey that he will stand between him and the penalty. He is by his official actions giving emphasis to his frequently expressed disapproval of all game and fish legislation; and making plain a deliberate intention on his part to keep open the door of assured immunity for those who have a mind to violate these statutes.

At the last session at Trenton a number of amendments of the game laws were enacted, but of these the Governor vetoed everything which did not extend an open season or give greater license to fish netters. In this he was, of course, acting wholly within his prerogative, and did only what rightly belonged to his official activities. A Governor might veto legislative acts which he disapproves, and yet escape censure. But when it comes to a question of leaguing himself with law breakers and to openly encouraging contempt and violation of the statutes, an executive who does this is recreant to his duty, violates his oath of office and menaces the very foundation of the social system. It matters not what the particular statutes may be, whether game law or what-not, the principle involved is the same; the executive who refuses to execute the law, and gives notice in advance that he will not permit it to be enforced, gives direct incitement to crime and anarchy. Some people do not regard the game laws as of great moment one way or the other; but when a Governor takes the oath of office he binds himself with a sworn obligation to execute the laws, all the laws; and he is no more at liberty to proclaim that the fish and game laws are to be ignored because he personally does not approve them than he would have because believing in polygamy to give free rein to bigamists; or because believing in a readjustment of wealth and a general divide-up to pardon the thief who takes his share now.

The situation in New Jersey is one that may well command attention, and excite the concern of all who appreciate its real aspect and the principles involved. The outlook for the immediate future of fish and game protection in the State is not promising if Governor Voorhees shall continue to put in practice his peculiar views. On the other hand, we believe that it is the sober conviction of the thoughtful portion of the community that the natural resources of New Jersey's fields and streams should be preserved from extermination; we believe that intelligent public opinion in New Jersey demands protection for the birds, both the game birds and the song and insectivorous birds of village, farm and garden. We believe that the statutes embodying this public opinion and providing this protection are so firmly established in right and reason and justice, and in the approval and respect of the people at large, that they will withstand the assault, even of an executive who because he does not personally approve of them uses his official position to stimulate contempt and defiance of them among the ignorant and criminally inclined. Game laws will prevail in New Jersey long after it shall have passed from the minds of men that there ever was a Governor at Trenton who did not believe in fish and game protection, but was solicitous for "more liberty for the people." Governor Voorhees' game law policy is reactionary; but the whole trend of legislation in this field in the United States today is progressive. We are as a people adjusting ourselves to the new conditions; and in the movement New Jersey will keep in line; he who believes to the contrary does not read aright the signs of the times.

There is a special reason why at this juncture the friends of protection in New Jersey should exert all their influence in support of the cause. That reason is found in the attack on the system inspired by the recent killing of an Italian gunner by a game warden. As we have already recorded, the incident has been made the occasion of a newspaper demand for the repeal of all the game laws, on the ground that "a man's life is worth more than a robin's." Writers who should and do know better have echoed this sentiment simply because of its sensational value. They understand perfectly well, as every one who reflects must, that a person who resists arrest and threatens with deadly weapons the officer seeking to arrest him thereby invites active self-defense on the part of the officer; and that if as a result death follows it is not to be charged to the original offense for which the arrest was attempted, but to the resistance and murderous assault on the officer. If, however, the sensational newspaper writers will insist on going back of this immediate cause to those which were more remote in the chain of circumstances leading to the final result, they might logically determine that the lawlessness and resistance on the part of this Italian shooter and his assault on the warden were all remotely, if not directly, provoked by the published statements of Governor Voorhees, that he did not believe in the game laws, but did believe in more liberty for the people. That is just the kind of talk to encourage Italian gunners to disregard the game law, and to shoot, as they have repeatedly shot, at the game wardens who interfere with them.

SNAP SHOTS.

When we shall come to build monuments to those who have been instrumental in preserving the game resources in this country, let us not forget the moonshiner of the West Virginia mountains and contiguous regions roundabout, who because of a well-known proclivity to bush unsuspecting invaders of his wilderness realm has exerted a decidedly deterrent influence on hunting excursions. To bush means to shoot at from ambush, and the reason for bushing is found in the suspicion commonly entertained by the natives that a stranger in the country may be an agent of the internal revenue bent on seizing moonshine whisky stills and distillers. Bushing is a mode of battle in which the busher manifestly holds decided advantage over the bushee; and no matter how brave one may be in the face of peril which he can see and defend himself against, it is quite a different thing to be shot at from behind by a foe concealed in the woods; and the deer hunter who cares enough for venison and antlers to quest them in the bushing districts is not likely, if he comes out alive, to repeat the adventure. In other days the Indian had a wide influence in discouragement of hunting expeditions in the West; and even just now he has made a brief re-entry on the scene in the Minnesota deer country; but the part was not played in a way deeply to impress the spectators, and it was probably his last final farewell appearance in the character. The hostile red man as a sportsman's bogie has passed from the stage. But the moonshiner is still alert and active and in full possession of his ancestral strongholds. In his peculiar office of game protector he will continue to be a factor in maintaining the venison supply of the mountain ranges.

We publish to-day communications from Messrs. Owen and Langford respecting the claim of each to the credit of having been the first to achieve the ascent of the Grand Teton. The public has here both sides of the controversy set forth in conjunction, and with such fulness that the statement of each party may be considered an authoritative and final presentation of his case.

The Sportsman Tourist.

"Mascots."

HOME they come from Cuba Libre;
And they march with hastening feet
Underneath the floating banners,
Up the thronged and ringing street.

When you cheer your sunburnt heroes,
Don't forget their pensioners small,
Led along, or perched on shoulder,
Four-foot, furry "mascots" all!

Comrades of the march and bivouac,
Sharers of the cup and can,
All unconscious of their portion
In the drama played by man—

All unconscious, did they bring good fortune
(As they brought their owner joy)?
Ask the youth who owns the "mascot"—
For a soldier's but a boy!

EDITH M. THOMAS.

Pet Life in Camp.

THE keeping of pets in the army was almost entirely confined to the privates. Once in a while, perhaps, a general or even a colonel might have a captive bear, or a paddock deer; but these were rather trophies to be sent home, for the enjoyment and wonder of relatives and friends. The real vital interest in recently tamed wild animals could be found in its perfection only in the younger soldiers of the rank and file. Prominent among these were the drummer boys, almost every one of whom managed to possess himself, during campaign, of some small and inconspicuous pet, such as a flying squirrel, which he could quarter upon his person, and whose transportation caused no embarrassment.

It has been suggested that many of the characteristics of the private soldier, as distinguished from the officer, were mainly due to the youth of the soldier. Our army consisted, for the most part, of country boys, fresh from farm and village; boys whose homesickness was wont to be assuaged by any incident or habit which might recall the life at home. Domestic animals were as a rule out of the questions. Cats or monkeys do not take willingly to travel; and while a few stray dogs might be seen in camp or on the march, these were usually to be found at the heels of some officer, who had adopted them on the road (or, still more likely, whom they had adopted). Then again, so often were these canine pets not to be found when wanted, inasmuch as any search for the missing quadruped would be fraught with much danger in a hostile country, that the numbers of these four-footed camp followers were diminished as the campaign advanced.

But when we went into winter quarters, the soldiers, after building themselves habitations resembling those of the beavers, would naturally fall back upon the habits which they left at home when they donned the uniform. One of the prime delights of this kind of life was the forming of a domestic family out of the local fauna. The coon occupied a prominent place in this category. There was something in the owlish wisdom of his expression, something in the conscious grotesquery of his moments, which would set the boys laughing with the ready merriment that greets a comic actor or clown before he has opened his mouth. I have seen whole groups of young fellows following a coon, and shouting with laughter at the originality and eccentricity of his performances. The coon seems to have no habits; and thus every action was a delighted surprise to the youthful eyes which followed his antics. A prominent characteristic of the coon, which gave great delights in times of plenty, was his appetite. I have often been reminded of the famous guardsman who, at the mask ball, astonished the feasters at supper by his prowess in eating, until it turned out that the whole regiment had been passed in one by one. In similar manner would Mr. Coon go from tent to tent, appearing with new hunger and virgin appetite to each group; while his gusto in devouring whatever was set before him seemed to make good his hungry pretensions. The coon is a sociable animal; and the boys had a theory that his multiple feastings came less from mere gluttony than the desire to be sociable; and I well remember that, on the return of the First Regiment, after the initial campaign, the public were surprised and delighted by the goodly assortment of coons and foxes perched on the shoulders of their masters, and being fed afresh from every peanut stand.

Field mice, which were often caught in the neighboring pastures, were loving and docile favorites of the boys. There is something in the fact of minuteness which appeals to many natures; and the bright-eyed "cunning" little mouse often found his way to the heart of a drummer boy when that heart would have been impervious to coons and foxes. Even rats, objectionable as they are, were sometimes tamed; though they suffered a degree of ostracism due to the prejudice in the minds of the neighbors—a condition which must have made their young lives dark. Rabbits were genial pets, and were highly esteemed by the more sedate youngsters, but there was such frequent allusion to rabbits in other capacities (mainly of a culinary description) that their owners would become frightened, and attribute every absence to an untimely taking off.

Then we had some carrier pigeons, followed by base imitations, which were not carriers. These latter gladdened the hearts of their owners until an order from headquarters declared these private messengers to be illegal, inasmuch as carrier pigeons were beginning to be used in the service; and these amateur carriers in their unofficial capacity were found to promote confusion. For instance, the adjutant-general, awaiting an important order, received instead a maudlin love letter signed Jerusha, and coming from a remote country.

Among the various experts of an infantry regiment was one individual who had been a bee hunter. For some reason, which he declined to state, bees would never sting him. So, one Sunday morning—at Centerville—in the presence of General Sherman, he captured a large old-fashioned bee hive, like those we see in pictures. This was made of twisted straw, and was literally crammed with honeycomb. He bore the hive triumphantly on his head. "Let him go," said General Sherman, who had just issued an order against all marauding; "he has taken his punishment into his own hands!" And, sure enough, the bees followed in angry swarm. But such was the magic of our bee-tamer that the hive arrived in safety; and its contents were divided among the company; while not a sting bore out the prophecy of the general.

On the morning of the battle of South Mountain, a bevy of quail were started by a regiment advancing in line. Many were caught, and several of the birds flew for refuge to the breasts of the soldiers, hiding under the blouse. I trembled for their future; but so strong is the petting instinct in the young soldiers that these quail were all tamed and kept as household pensioners in the rude huts which were to be our winter quarters. I was greatly shocked, however, to learn that the cock birds were often pitted against each other in fight, following a well-known (Chinese) custom, which prefers quail to game cocks.

One of the most extraordinary incidents that I remember of pet life in camp was the infatuation which our big California Major inspired in the fluffy bosom of a young rooster (or cockerel, as they called him in Virginia). This ungainly bird, with waddling gait and ragged plumage, would follow the object of his devotion with an assiduity as absurd as it seems incredible. One night, an alarm of pickets having awakened the camp—we were in bivouac, and General Early was in front of us—this young rooster was discovered sitting on the toe of the Major's boot, head under his wing, fast asleep. It was the famous attack by Gordon's division at Cedar Creek, when Sheridan was "twenty miles away." All who were aware of the chaos and confusion of that day, which made Sheridan famous, can realize how that little cockerel was lost in the fray, and doubtless fell into the ruthless hands of the Confederates.

The reader will bear in mind that what we have to say about pets must necessarily refer to the wild creatures our boys succeeded in taming, and among so many thousand men it was not remarkable that occasional peculiar aptitude in dealing with the local fauna should have been found. Our bee-tamer, for instance, had all his life been a specialist in that line. A yet more dangerous style of pet, and requiring for its subjection certain inherent qualities of temperament, is the snake. It is well understood that certain families in snake-infected districts possess the gift of immunity, much of which is doubtless derived from long association with these creatures, and familiarity with their habits. Captain McGrath belonged to no such family. He was a city-bred Irishman, whose love of snakes was an eccentricity developed only during campaign. He gathered from time to time a considerable assortment of the more dangerous varieties. But these specimens were usually scattered in the hurry and stress of campaign life. It was his fortune to be stationed at a 100lb. battery at the top of the Blue Ridge. And here, besides reveling in the abundance and novelty of his writhing predilections, he made special conquest of a large and handsome rock snake, deemed peculiarly poisonous in that mountin region. The snake could coil itself about the Captain's neck of his own playful motion; would wind in and out, around and between his ankles, making a display like that known among soldiers as counter marching, and perform other feats of a like hazardous character—all which constituted the favorite amusement for Sunday afternoon callers, as well as for the officers and men of the post. The snake was confined in a wooden cage, built like a chicken coop, with the bars just close enough together to prevent him from escaping. One Sabbath day the commander-in-chief was visiting the out-of-the-way posts with his staff. Having heard of the snake-charming achievements of Captain McGrath, he asked if he could see something of them. The Captain, in response, drew the slide through which the snake usually came out to its master. This time, for some reason, the serpent, like a naughty child, refused to be exhibited before company; and not appearing, the Captain stooped down and looked in, to see what was the matter. At a glance he saw that something had gone wrong with his pet, who was coiled up in a fighting attitude, quite unusual with this good-humored contortionist. The Captain was on his mettle; the eyes of his chief were upon him; he hesitated a moment; then thrust his hand in, intending to draw the beast out. Before he could reach the creature it had turned and struck him on the hand, after which it uncoiled and slowly glided out to the open air, where it proceeded to make its way down the mountain side. The Captain had a dog, a collie, with the intelligence and devotion common to that species. Seeing that his master was hurt, he sprang with a yelp to his assailant, when the snake again turned and struck its fangs into the dog's throat. The effect seemed to paralyze the dog, which rolled over as though struck by lightning. The Captain started in pursuit, and pausing long enough for some words of sympathy with the dog, now in convulsions, he overtook and actually caught the dangerous reptile by the tail, and brought it back to its cage. The snake was completely cowed, and an hour later went through the performance for which it had been cast, meekly and without a fault. But the poor dog had been struck in a vital place, and died during the night. The redoubted Captain declined to have his own wound dressed by the army surgeon, and contented himself with drinking something over a pint of what the medical officer called hydrated oxide of ethyl, and which the obliging dealer had translated into whisky. After this he lay down and slept for some hours. When he awoke the commander-in-chief and his staff were gone, having seen more than they bargained for; and on some one asking why he did not kill the snake after it had bitten him and his dog, he replied: "It was all my fault. I shouldn't have monkeyed with Jim when he's out of sorts. Snakes has the dyspepsy as well as men and don't feel like foolin'." "Yes, but the dog?" "Self-defense," briefly ejaculated the Captain. "The dog would certainly have killed him, an' I always like to be fair."

Captain McGrath always did see both sides of every question; and there may indeed have been something in his utter reasonableness, which commended him to the good will of all wild creatures, even snakes.

(DR.) S. R. ELLIOTT.

WEST NEW BRIGHTON, Staten Island.

Lost.

SPORTSMAN friend, did you ever lose a chum—one whom you have had the companionship of for years in your tramps through the woods and over the fields; one who has been at your side in a duck blind on the nor'-west point at Chadwicks many a time, and in a double battery on the Great South Bay, and has camped with you on the seashore, cooked by day and lulled to sleep at night by the wash of the waves of the grand old Atlantic Ocean?

We met first in a gun shop, or store, where we had both gone to see a new pattern of breechloading gun. This was about the year 1868. Whew! that figures almost thirty years ago! We were about of the same age; he of a quiet disposition, saying but little, but taking notes in his mind of the good points of the new weapon, and deliberate in all his actions. We were introduced by the salesman. The next day, after business hours, found us again at the same place. Our acquaintance ripened into friendship. I was not much of a hand to visit, so my friend came to visit me. We sailed on the waters of Long Island Sound; we fished and shot pistols and rifles at a target, and took our shotguns and made targets for patterns and penetration. Hundreds of shots were fired, and at last we became satisfied that we had found the load for our respective guns that would be sure to bring down all the wildfowl that should come within range of us in our contemplated trip after ducks at Barnagat the next fall.

At this time center-fire breechloading guns were just beginning to take among the shooters. We both had muzzleloaders. My friend had a .10 bore 32in. that weighed 11lbs., made by the finest gun workman in the country, the late Patrick Mullen, then at No. 95 Fulton street, New York City. I had a .10 bore 32in., weight 10½lbs., made by a foreign maker. Five drams of Curtis & Haney powder, No. 6 grain, was though to be the proper caper in those days, with 1¼ or 1⅜oz. of No. 3 shot, for point shooting, and double W. P. caps of Ely's make, and felt wads with a Baldwin wad over shot. At that time our American make of powder, wads and caps was not thought to be as good as the foreign make.

We waited patiently for the day to arrive for our start for "Bill's" at Squan Beach. Then you could not go to Sandy Hook on fast steamer and take rail down the Jersey beach as you can now, but we had to take the Pennsylvania Railroad at Jersey City for Monmouth Junction, then a branch road to Farmingdale, then by team on the sandy roads through the pines to Charley Maxim's, at Point Pleasant, at the head of Barnagat Bay; got dinned there—how good it did taste—and after a good smoke the team was hitched up and a long drive over the hard sandy beach for about seven miles brought us to Billy Chadwick's gunning house about sundown.

We had a royal welcome, as all good gunners do that go to that place. After a good supper, we adjourned to the bar room, sitting room, office—all in one—to hear about how many ducks had been brought down by this and that gunner. After the reports were in, the "bay men" would begin to spin yarns about the hard storms they had experienced, and the wrecks that had come on shore. When it was time for bed, the names of the different points and blinds would be marked on a card and all the cards put in a hat. The drawing took place. We got the nor'west point. This was good luck, as it was one of the best stands. James Loveland was our guide, and a good one at that. After putting our shooting togs where we could find them handy in the morning, into the feather beds we got—feather beds so soft and deep that when in them you could see nothing but the ceiling of the room. After talking of what we expected to do in the way of slaughtering the wildfowl, we fell asleep, and in a few minutes, as it seemed to us, we were awakened and told to turn out for breakfast. Jumping out of the warm beds, we found it to be 3:45 A. M. After a wash in good, eold water, we were soon dressed warmly and down to breakfast. Buckwheat cakes 6in. in diameter, done brown, with old-fashioned New Orleans molasses, country sausages from Toms River, and a plenty of good strong coffee, made us a breakfast fit for a ducker, after which we got into our shooting toggery and left for the nor'west point. Arriving there, the blind was overhauled a bit, and spreading our rubber blankets we lay down to wait for the first ducks to arrive.

A faint tinge of gray was showing in the eastern horizon. Squan Beach lay to our left; it was blowing northeast, and old ocean was pounding its billows on the shore as if to wash the beach away and to travel on to the mainland. To the south'ard Barnegat Light was flashing, on our right was the smooth bay. Our gunner had placed about forty decoy ducks at a distance of about 30yds. away, and was now reclining on some sedge grass back of our blind. Bang went a big gun to the south of us. The birds are on the move. Now, look sharp. Here come two from the south. I say, "Take them, chum." "No, you take them." "No, you take them." "We'll both take them." Bang! bang! rang out our guns at once, and down they came, two redheads, and as the wind was off shore, our gunner went and picked them up. Mark left, here come three more. Bang! bang! bang! One down, a clear miss with both barrels by the writer. After the last shot I thought I could not miss, but by over-confidence and carelessness got nothing.

The sun was now up, but wallowing in a bank of thick clouds. Just the morning for ducks to fly well, so we shot with varying success until about 9 or 10 o'clock, when the birds came to our decoys at long intervals. About 11 o'clock we went to the house and walked up and down the beach; at 3 P. M. we went back to the

blind and had fine sport until sundown, when we took up our decoys and returned to the house. After getting out of our long boots and taking off some of our thick clothing, we were ready for dinner or supper, whichever you call it—it was both, I think. We were both tired and hungry and put away a large dish of fried eels. We had had good luck, and counted up as follows: 3 black ducks, 7 broadbills, 13 coots, 2 dippers and 5 redheads; total, 30 head. My chum got two or three more birds than myself. Well, he ought to, he is a good shot, but I was satisfied.

The next day was about the same, and the next day was Sunday—no shooting. Monday we had but the morning shooting, the team coming for us at 9 o'clock. We had two bags of ducks—about 58 or 60 in all. We had a good time. We did not punish much whisky, although we had it for proper use, and we did not sit up late over cards.

We met at that time one of the old school sportsmen—a gentleman in every sense of the word, and an agreeable companion, it was Francis Endicott. We did not come across any of the things that you see once in a while at a gunning resort nowadays. One of the things with a single eye glass screwed in one corner of his eye, a lackey to carry his gun for him, and who, when he tries to talk, imitates a foreigner, for the English language, as spoken by the American citizen, is not known to him. We see too many of these now. Once in a while we hear of one pulling a loaded gun by the muzzle, and there is one thing less.

We went back over the same route as we came, arriving at Jersey City about 8 P. M.

This is a poor account of one trip. We have had many, but I will not impose any more on the reader. A few years ago my partner moved away, and we do not now live close enough, so that we can enjoy the hunting and fishing together. I am lonesome for a partner.

B. B. B.

In the Louisiana Lowlands.—VII.

BY FRED MATHER.

[*Continued from last week.*]

Low voices in the next room wove into dreams, and the dreams were of guns, filling shot pouches and preparations for a day with birds, sometimes with the ducks, which suddenly changed into plover, and then with turkeys, which somehow vanished before they were fairly sighted. One peculiarity of my dreams has been persistent from boyhood; when I dream of shooting, and the game is there, I pull the trigger, but the gun does not go off. I have often wondered if this happens to other dreamers. It is the day of the muzzle-loader that I am writing about, and as I was thirty-five years old before I ever saw a breech-loader, and have but little experience with them, it is natural that there should be a cap to miss fire in my dreams.

The voices became louder and the dream more indistinct.

"The fisher droppeth his net in the stream,
And a hundred streams are the same as one;
And the maiden dreameth her love-lit dream,
And what is it all, when all is done?
The net of the fisher the burden breaks,
And always the dreaming the dreamer wakes."

So it was; the dreaming came to a point when I was conscious, and then a voice said: "I don't care if I wake the whole house up, you took more'n half of the powder and shot when you filled your flasks and turned over what was left to me; here are about a dozen wads left for me, while you have your pockets full, and I'll make you even up on the whole lot before we start."

Surely that was the voice of my young friend Jack, talking to his older brother. Something in his tone indicated that he considered himself imposed upon. By the light of a match my watch said that the night had just turned three, and daylight was more than an hour away. Wondering why boys were so enthusiastic, and in my sleepy condition forgetting that I had passed through that same embryonic stage, I tapped on their door and told Jack to go to bed and I would see that he had a proper outfit in the morning, but that if he should wake his grandfather it might anger him so that the boys would not be allowed to go with us. After that the stars could not have moved with more silence, and sleep came, only to be roused by its enemy, the sun.

At breakfast those boys bolted their food without tasting it. How I envy the stomach of a boy. He does not know that he has such an organ, or that he is abusing it in ways that will present claims for damages in the time to come, when he will scan the advertisements of dyspepsia cures which bring promise to his eye, but break it to his hope.

The Start.

The setters, Bob and Dan, who were with us on the woodcock trip, and who had retired in disgust when the horn sounded to assemble all the plantation curs for a bear hunt, were on the porch with the boys, licking their hands and wagging their tails as if to say: "Why do you wait? We are ready; let's start now." When the Doctor and I appeared, the intelligent dogs reasoned that the wait was past, and we were greeted with an effusiveness that plainly said: "So you have come at last. We've been waiting for you, but it's all right now."

We mounted our horses; I had ceased to wonder why men in the South preferred to mount a horse and have their inwards churned into chaos instead of quietly riding in some sort of wheeled vehicle, as do all the farmers in the North. They liked it because they were not accustomed to the "effete" luxury of the "buggy" or the "coach." And then a saddle is cheaper than a buggy, and in early times this was an object, but let me prophecy: A century hence a saddle will not be in use in the United States, except in regions remote from the great centers of civilization, in the army and among those who take to horseback riding as an athletic sport. It is an acquired taste that is easily lost by a sportsman who once shoots plover or other game from a buggy. The horse I rode on this occasion was one of those gentle-gaited Kentucky horses, and I got along well; but if I had choice of a journey through Hades over the house tops, or a trotting horse on a level road, the horse would be left behind. If the verdict be that I am no horseman I will not appeal. Few Northern men are brought up in the saddle, and that was the reason that the Confederate cavalry were our superiors in that branch of the service during the first two years of our Civil War.

In the Berry Patch.

Years before a fire had run through a patch of timber, and some 200 acres of stubs, stumps and dead trees bore witness to it, but dame nature will not permit a rich soil to remain unproductive, and with the sunlight came the berries, few at first from the droppings of birds, and next year there was a struggle for life among different kinds of weeds, vines and young trees. Here was a spot where the cat briers, called "bamboo" in the South, had the ascendency, and neither man nor dog could pass their stronghold. There the different edible berries of the brier kind had possession, and held on to the sportsman as death is said to detain a deceased African. But there were arches of these vines here and there that the dogs could pass under, and might stand on game until Cuba froze over, and the sportsman would never know it. Then there were something like avenues of weeds which wound about these patches, and through which a man could pass, the taller ones kindly yielding to him and shedding their seeds between his shirt and skin, where they seemed to feel no discomfort if he did. The day was warm, for it was November, the still air and the exercise induced perspiration, and the seeds down both front and back on a moist skin are still held in memory's locker.

Jack was with me, and George with the Doctor, as before. We had killed a few quail out of many that the dogs found, and had a fair proportion of birds killed, considering the conditions. The lay of the brier patches forced us together, and the Doctor said: "Really, I don't care much for this work. What do you think of it?"

"My dear Doctor," I answered, "you don't care much for it; the boys may like it, for boys are easily pleased; the dogs are enthusiastic, although their hides are pricked and torn; but since you ask me for an opinion, I will say that if this is the only place in Lousiana where quail can be found, I am content to leave it to them. I have known men who were as enthusiastic as the dogs, and who would suffer to be frozen in a sink box to kill a few ducks or to wade a cold stream up to their waists to kill a trout, or a salmon. We can never measure the mind of another man in our quart cup; if I think they do these things to brag about, I may be mistaken, because my brain is not theirs. I would not do them now, but once would. To me sport means pleasure, and there is no pleasure in physical suffering, from my point of view; yet men have sought the musk ox when they had to give their scanty supply of food to their dogs as their only hope of reaching civilization alive. They deliberately put their lives in the balance before starting."

As we took the nearest route out of the brier patch the Doctor said: "Arctic explorers go with a full knowledge of the dangers before them, and so do other men. There is an old maxim, 'The greater the danger the greater the sport.' Did you ever risk your life for any reason?"

"Never mind; all these questions which you bring up a man will answer differently at different ages. Consult Shakespeare on that subject: In the fourth of man's seven ages he depicts him as 'seeking the bubble reputation even in the cannon's mouth,' but in later years he seldom cares for that kind of thing, and life, which he was ready to throw away at twenty, becomes the dearest thing on earth at four times that age."

"From this," rejoined the Doctor, "it would appear that you study man as well as fishes, and your observations coincide with mine. You know that Swift said: 'Every man desires to live long; but no man would be old.' See! our boys have the dogs across the road and into the corn stubble, while we are philosophizing; we must catch up, yet it does me more good to see one of those eager boys down a partridge than to do it myself."

An Accident.

We spread out again, and I took my position on the right of Jack just as he brought down a quail over Dan's point, and the setter yelled; his "ki-yis" rent the air, and the trouble with the dog was not apparent. No gash of cat brier, cutting an inch deep, would extort such a yell from a well-bred dog in pursuit of game; no shot at a bird in the air could have struck him, but there he was at our feet, cowed and trembling. The Doctor and George rushed over; the dog still yelled, and the Doctor examined its feet for thorns or porcupine quills. Jack had gone off to look for his bird, and a minute later fired a shot and rushed in with a big rattlesnake, shouting: "The snake bit him!"

The dog was in agony, but was licking our hands as if to say: "The trouble is not in my feet, why can't you understand?" We understood only after Jack had found the angry snake, and had killed it. Then the Doctor looked elsewhere, and found the wound. We held poor Dan down while the Doctor cut out a piece from his leg, and then cauterized it and put a ligature above the wound, for he was the kind of doctor who always had a few things in his saddle bags to meet ordinary emergencies, and had slung them over his shoulder when he left his horse to enter the berry patch.

A Sick Dog.

The day's sport was over, one of our party had been bitten by a snake, and we must go home. The poor dog was weak and nauseated, and we carried him on a piece of bark to the road, where the Doctor took him in his saddle, a most uncomfortable way, but the best that offered. A short cut brought us home in twenty minutes, or about half an hour after Dan was bitten. He no longer vomited, but was very sick. As we laid our suffering companion on the porch, he was too feeble to acknowledge our attentions in his usual way, but his eyes beamed kindly on us. The Doctor had rushed up the stairs two steps at a time, and came down without noticing that steps were there. He gave the patient some whisky to arouse the heart action, took off the ligature and made another incision in the leg and applied some fluid to the new wound.

All this was of great interest to me, for it was the first case of snake bite that I had seen, and as such a thing might come my way some time, it was worth while to study it, so for the benefit of others who may be exposed to this danger I give the details.

"Will Dan die?" Jack asked the Doctor.

"Not if I can help it, but much depends on his condition and the amount of poison he received. These are the main things on which his life depends. How old is he?"

"Four years old next month," George answered.

The Doctor looked the dog over and said, partly to himself and partly to us: "He is in his prime, and his physical condition is excellent; pulse a little better since he had the whisky, the general depression seems to be passing." Then arousing from his meditation he continued: "The next two hours will tell the story."

"Pardon me, Doctor," I ventured to ask, "that last incision and liquid application was puzzling to me; would it be impertinent to ask the nature of it? My apology for asking is that such an accident might happen to myself or any companion, canine or human, when no physician was at hand, and life was hanging in the balance. Of course, I know that there is a popular belief that unlimited quantities of whisky will cure snake poison,, you used but little on the dog. Will you be good enough to tell us all about this matter?"

"Certainly; we have no secret nostrums, but here is the Colonel's messenger, who says that dinner will be served in fifteen minutes, and we must prepare for that event. Poor Dan is lying quietly on his rug, and will remain there. We will talk about snake bites in the Colonel's room to-night."

"Well, Jack," the Colonel asked, after the soup was served, "how were the partridges to-day?"

"They were plenty in the brier patches, but the dogs couldn't follow 'em, and they ran off, but we got eleven brace and lost a lot in the thickets. Then we crossed the road, and had just got nicely to work in the corn stubble, when Dan was struck by a rattlesnake, and we had to quit and get him home. It was too bad. We couldn't see Dan die, but the birds were plenty, and we might have killed fifty brace if the snake had let Dan alone."

The Colonel told his grandson that he did not want fifty brace of partridges brought in, as he did not intend to feed his negroes on them. "Bring Dan to my room to-night," said he, "and we two invalids will console each other."

Dan, the setter, had not seen the Colonel since the bear hunt, and feebly tried to recognize him as he was brought into his room. Dr. Gordon gave the dog another small dose of whisky, which gave him strength, and he licked the Doctor's hand as soon as the fiery liquid allowed him to do so. That action decided the case: Dan would live.

Treating Snake Poisoning.

"Now, Doctor," said I, "redeem your promise and tell us about poisoning from snake bite. Don't be so technical that we can't follow you, but give it to us in a way to be of use." His talk on this subject was so full and interesting that I make no apology for giving it here as memory retains it, and I was wide awake on this subject, for, while most of the harmless snakes are kindly treated by me and often made pets, the poisonous ones have ever been dreaded.

The Colonel lay upon his bed, and the snake-bitten dog was lying by his side, with his head on the Colonel's arm. Two crippled companions; one deprived of speech, but fuller of intelligence than many a man, and as we gathered there the Doctor said: "Snake poison acts in different ways, but there is no internal antidote that is efficient. The quart of whisky theory has believers because men have taken it and recovered, but they would have recovered without it; for rattlesnake bite is seldom fatal to man, while a small portion of the poison will kill a dog. The bite of the cobra, of India, is often fatal, for the reason that they are generally larger than our venomous serpents, and their poison is more potent. It has been proved that any animal can be rendered immune to snake poison by being subjected to small and increasing injections of it, but this form of poison is harmless when taken into the stomach, therefore you need never fear to suck the poison from a wound unless the skin of your lips is abraded. A quarter of a drop of rattlesnake poison in the veins of a pigeon will kill it, but pigeons have been fed twenty drops of it a day for a week, and have been unharmed.

"The effects of snake bite are divided into local and general, the local being immediate and the other remote. In the case of Dan it was local, perhaps because I was present and confined the trouble to his leg as far as it was possible to do so. He was depressed and his heart action was feeble, that's why I gave him a ½oz. of whisky just to increase the heart action and give him strength to resist the poison, and the ligature above the wound prevented a clot from reaching the heart, for that would be fatal, and snake poison tends to form a clot. If the early depression passes quickly the animal either recovers soon or passes into the second stage, in which the blood cannot clot, and every tissue is degraded, and bleeding from the mucous membranes begins and foreshadows a fatal end.

"You will notice that I first bandaged the leg above the wound, then enlarged the cuts to promote bleeding in order to get rid of such venom as might not have passed into the circulation, and then cauterized the wound. That was the best I could do in the field, where my supplies were limited, but when we reached the mansion I reopened the wound, took off the ligature and applied a solution of permanganate of potassium, which destroys the poison and is the best of all remedies.

"Woodsmen have faith in tobacco, but, like the whisky, the man would have recovered without it. If no remedy is at hand, all local dressings are useless. Open the wound to encourage bleeding by washing, or soaking in

hot water, and give a little alcohol to stimulate the heart. Snake bite is dangerous in proportion to the size of the snake, its condition, and in the South, where the reptiles are more active, they are more deadly than at the North."

Dan was lying with his head on the Colonel's arm during this lecture, apparently sleeping, but when the Doctor had finished and went to see if the bleeding still continued under the loose bandage, placed to receive the blood, Dan raised his head and licked the Doctor's hand; the hand that had cut, burned, and had dosed him with burning whisky. A wild animal would have resented such treatment, and would have bitten the hand that had caused it pain, but great-hearted Dan knew that his friends would only do what was best for him, and he trusted them. Was this instinct? Let those answer who believe that a high-bred dog cannot reason because his vocal chords are not developed sufficiently to speak our languages. That they understand such parts of our speech as are addressed to them needs no argument, but they go further, they reason. This thing is being argued now in FOREST AND STREAM, and I long to get into the fray, but will stop now and perhaps take up the question by itself. A poor, stricken dog, possessing great intelligence, provoked these remarks.

When Dan licked the Doctor's hand while he was looking at the bandaged leg, the dog had to raise up and bend over, showing that he had some strength. We all noted it, and as the Doctor patted Dan's head, rubbed his ears, and said: "Dan, old boy, you'll be all right in the morning!" every one in the room stood in line to put a hand on his head and give him a rub at the base of an ear, a spot where it always pleases a dog to have a man's hand. Jack came last. He had never taken his eyes from the Doctor's face while the poison lecture was in progress, and we had not paid much attention to the boy. When he put his hand on Dan's head he broke down; he kissed the dog and cried, and then broke from the room, with Dan up on his forefeet trying to return the kisses. George followed Jack, and somehow I had need of a handkerchief, while the Colonel rolled over with his face to the wall, and the Doctor turned to the window to see what the night was like.

Some minutes elapsed before the Colonel broke the silence with: "Doctor, my heart action is feeble, there are lemons and hot water, if you will be good enough to compound for all of us, as you have done for Dan. When I mentioned his name just now he began thrashing the bed with his tail, the first time he has used that appendage since his injury. If he is able to do it, please call him from the bed and show him the rug he is to sleep on, and then I will be ready to have my ankle dressed for the night."

The Doctor busied himself with the preparation of his heart vibrator for a while, and when it was blended to his satisfaction he called loudly: "Dan, come down here!" The dog got up from the Colonel's arm, looked over the bed to the floor, and leaped down. "There's your bed," said the Doctor, pointing to a bear skin rug, and Dan curled up on it for the night. If the dog obeyed from "instinct," I must confess to being ignorant of the difference between intelligence and what is called "instinct."

In the morning Dan greeted us all in the good old way. The Doctor and I had everything packed for our trip to the rice country, promises to write and to come again mingled with the good-byes, the carry-all was at the door and we started to meet the steamer on Red River.

[TO BE CONTINUED.]

The Ascent of the Grand Teton.

I.—Statement of William O. Owen.

Editor Forest and Stream:

Capt. Langford and his friends are insisting that Messrs. Spalding and Owen are not the first to reach the summit of the Grand Teton, claiming that the first ascent was made by Messrs. Stevenson and Langford in 1872.

They point to the official report of the U. S. Geological Survey and an article by Capt. Langford which appeared in Scribner's Magazine for June, 1873, as evidence of their successful climb.

And this is the only evidence (?) they have in support of their claim. I maintain that the first ascent of the Grand Teton was made by the Rev. Frank Spalding and myself, accompanied by Frank Petersen and John Shive, on Aug. 11, 1898, and I submit herewith the statements and affidavits on which this claim is based.

I further contend that Messrs. Stevenson and Langford in their alleged ascent did not reach the true summit of the peak, but stopped about 600ft. below it. And I have the testimony to prove it.

In support of the above I send you:

First.—The affidavit of Thomas Cooper, who was with the Hayden survey for years, and who is at present an honored resident of Cheyenne, Wyo.

Second.—Extract from a letter written by Mr. Henry Gannett, Chief Geographer U. S. Geological Survey, and a close friend of Mr. Langford.

Third.—An affidavit of Gov. Richards, of Wyoming, as to the statement made to him by Richard Leigh, who was with the Langford party when they attempted the ascent.

Fourth.—My own statement as to the condition of things on the summit of the peak as we found them, and deductions from Capt. Langford's narrative in Scribner's Magazine of 1873, and in various letters to me in the past few years.

Richard Leigh's statement to Gov. Richards was made only two years after Langford's alleged ascent, and as he was with the party it is of great value.

He is commonly known as Beaver Dick, and was the guide of the Hayden party for years. He is still living, and can be reached by mail at St. Anthony, Idaho. Thomas Cooper is one of our best citizens, and is still living in Cheyenne, where mail will find him at any time.

I send you letter from Judge C. N. Potter, Chief Justice of our Supreme Court, as to Mr. Cooper's veracity and character, which please publish with this article.

In the first place, I desire to place especial emphasis on the fact that the most critical, conscientious and thorough search by our entire party failed to reveal the slightest shadow of evidence of a former ascent. Not a stone was turned over, no cairn or monument erected; nor could we find can or bottle of any description containing the customary record of ascent. Five minutes would have sufficed to erect a suitable monument, which would have completely set at rest all questions as to the first ascent, and yet Stevenson and Langford failed to build it. One stone piled on another would have answered, but even this was not done. And still Capt. Langford informs us that several days were devoted to the ascent and necessary preparation for it. Is it in the realm of probability that men would make such heroic efforts to climb this mighty peak, a mountain known the world over, and then, having reached the summit, return without so much as turning a stone over, or leaving their names to tell the story to subsequent climbers? And the Captain very wisely refrains from mentioning anything bearing on such record of an ascent.

In all his published articles, and letters to me, not the slightest allusion to this all-important matter can be found. Of course there are the best of reasons for this silence. Not having reached the true summit, it was impossible to place a record there; and the Captain believing that the ascent might be made at some future day chose to leave the question open for speculation, rather than make a statement which the first successful climber could positively disprove.

Langford's Scribner article (June, 1873) is replete with statements that the Captain would never have made had he actually reached the summit of the peak.

"Mosquitoes attacked us even on the very summit," Mr. Langford says; but this statement was not enough, and the Captain adds the following, which are still more wonderful: "Above the ice belt, over which we had made such a perilous ascent, we saw in the debris the fresh track of that American ibex—the mountain sheep—the only animal known to clamber up the sides of our loftiest peaks."

"Flowers also, of beauteous hue and delicate fragrance, peeped through the snow wherever a rocky jut had penetrated the icy surface."

Now let it be understood that this point where the mountain sheep tracks and flowers were seen is only 125ft. below the summit of the peak, taking the Captain's own figures for it. It would be just as easy for the sheep to climb to the top of the Washington monument as to scale the last 600ft. of the Teton. As for the flowers, there isn't a semblance of vegetable life, except lichens, on the Grand Teton, above the artificial inclosure. Concerning mosquitoes, it would be folly to dignify this assertion by discussing it. It is simply too ridiculous to dwell upon.

Continuing, Mr. Langford says: "The main summit, separated by erosions from the surrounding knobs, embraced an irregular area of 30 by 40ft. Exposure to the winds kept it free from snow and ice, and its bald, denuded head was worn smooth by the elemental warfare waged around it."

This statement proves beyond the shadow of a doubt that Capt. Langford has never seen the summit of the Grand Teton. There are no "surrounding knobs" there in any sense of the word. When one reaches the true summit of this noble mountain the "other knobs" have all disappeared. The actual summit measured with a steel tape (U. S. standard) is just 14 by 27ft.—the 14 being the greatest thickness of the comb. Most of it is about 3ft. wide, and in several places narrows down to a single foot!

No man probably is better qualified to estimate size and distance than Capt. Langford, and his dimensions of 30 by 40ft. are quite amusing to one who has actually seen the summit. Another very instructive statement is as follows: "With the unshorn beams of a summer sun shining full upon us, we were obliged to *don our overcoats* for protection against the cold mountain breeze." (The italics are mine.) Of course they would have their overcoats along climbing that last 600ft., where it was necessary to scale a sheet of ice 175ft. long, with a slope of only 20 degrees from the vertical, and where the climbers *kicked steps with the toes* of their boots in the blue ice, as hard as granite! An ideal trip for overcoats, most certainly. And this also bears unimpeachable testimony to the hardihood and vigor of our native mosquitoes. When it comes to mosquitoes, Wyoming is hard to beat!

After reaching the summit, Mr. Langford, among other things, says: "On the top of an adjoining pinnacle, but *little lower* than the one we occupied, we found a circular inclosure 6ft. in diameter, composed of granite slabs. It was evidently intended as a protection against the wind, and we were only too glad to avail ourselves of it while we finished our luncheon."

After luncheon he continues his description of what could be seen from the summit, conveying the impression that this inclosure is readily accessible from the summit, and that to run from one to the other is but the work of a few seconds, whereas it is the most difficult part of the ascent by all odds. The pictures in the Scribner article are extremely fanciful, that of the summit of the mountain being no more like the actual apex than Trinity Church is like a man-of-war. Our photographs show this conclusively.

Now, would Capt. Langford have published such a drawing as this if he had had the material from which to make an accurate and correct one? Under date of Sept. 15, 1898, Capt. Langford wrote to me as follows: "I feel sure that no one can reach the summit from that side when the mountain side is bare of ice and snow. We never could have reached the summit but for the aid of the sheet of ice, which formed our ladder." The fact is that no living man would attempt the ascent on this side were he compelled to climb over an ice sheet, and the Captain's statement that an ascent would be impossible without this ice is disproved by our own ascent, which was made over naked granite.

Mr. Langford says the ice sheet lay at an angle of 20 degrees from the vertical, and he and Stevenson climbed over it for a distance of 175ft. by *kicking steps* with their feet in *this hard, blue ice.* This statement might be passed over unnoticed by the ordinary reader who has had no experience in mountain climbing, but the man who has been through the mill cannot stomach it. It requires a steel ice axe, and a good one too, to cut steps in such ice, and every mountaineer knows it. A slope of only 20 degrees from the vertical is frightfully steep; in fact, it is practically as bad as vertical, and when a man says that he climbed 175ft. over a field of ice having such inclination, by *gouging steps with his boot toes*, it seems to me it is going a step too far.

Let your readers picture to themselves this last 600ft. of the Grand Teton, which rises almost vertically. If the climber loses his footing at any stage of the ascent he must inevitably be precipitated to the bottom of the cañon, a distance of 3,000ft.! It is, under the most favorable conditions, a hand and toe climb over glassy granite. Now, over this granite steepness lay a coating of blue, hard ice, and make the ascent by kicking steps in the ice with your boot toes, and you will realize what Mr. Langford's statement means.

The Captain would never have made such statements as the above if he could have known what an awful climb that last 600ft. is. The mountain sheep, the flowers, that picture of the summit, the overcoats and mosquitoes are too much for human nature to stand. And to crown it all, they ran away after making the ascent (?), and didn't so much as leave their card to prove their visit. They couldn't even spare the time to chisel their names in the granite, build a small monument of rock, leave a can with their names in, anything, however simple, to prove to subsequent climbers that man had been there before them.

The mountaineering fraternity will understand this statement; and it will be interesting to hear the Captain's explanation of their failure to leave some little shadow of a record on the summit of the grandest peak in the United States.

In closing I will say that I understand Capt. Langford's position in this controversy, and appreciate the fact that he has but one course open to him. He must insist that he reached the top of the peak, no matter what may come of it. He so published it in the official report of the U. S. Geological Survey, and it would be a great concession at this time to come out squarely and admit to the world that what this report says is not true. Capt. Langford, at the time of his alleged ascent, was chief of a division of the Hayden Survey, and it cannot be expected that he will admit that a wrong statement was willfully incorporated in his report. This is too much to ask, and I appreciate the Captain's difficult position at this time and make due allowance for it. But aside from this there is the fact that neither this official report nor Capt. Langford's delicate position cuts any figure in this proposition, as far as the world at large is concerned. The question is: Who made the first ascent of the Grand Teton?

And on the above statement of facts and the accompanying affidavits we rest our case. If Capt. Langford failed to leave a record of his ascent on the summit of the peak, Spalding and Owen certainly did not, and subsequent explorers will verify every word of our narrative of the first ascent of the Grand Teton. Our names are chiseled in the granite, a large monument of stone is erected on the highest point, and a metal banner of red, white and blue, bearing the Rocky Mountain Club's insignia, waves upon the Teton's mighty brow, where foot of man never trod previous to Aug. 11, 1898.

WILLIAM O. OWEN.

II.—Affidavit of Thomas Cooper.

STATE OF WYOMING, } ss.
County of Laramie, }

I, Thomas Cooper, of Cheyenne, Wyo., being first duly sworn, do depose and say that I was connected with the U. S. Geological Survey in the years 1872-73-74-75-77 and 78, in the years 1872 and 1873 being with the Wheeler expedition, and am personally acquainted with the several gentlemen who had charge of the various divisions at that time, including Mr. Henry Gannett, Mr. James Stevenson, Messrs. N. P. Langford, Chittenden, Holmes, Bechler and many others.

I was also intimately acquainted with Mr. F. V. Hayden, the director-in-chief of the survey.

I well remember the accounts of Messrs. Stevenson and Langford's attempt to climb the Grand Teton; and their published narrative of the trip provoked a prolonged and heated discussion between Lieut. Wheeler's party (of the War Department) and the friends of Stevenson and Langford.

The former persistently insisted that these gentlemen had never reached the actual summit of the peak, while the latter as strenuously insisted that they did.

All members of the Geological Survey were, to a greater or less extent, drawn into this controversy; and I can say positively, from personal talks with Prof. Hayden, that he was one of the liveliest doubters of the lot, for he frequently said to me that he did not believe that Stevenson and Langford had ever reached the summit.

My own personal knowledge of this ascent is embraced in the following statement:

In the summer of 1877 the Geological Survey outfitted at N. R. Davis' ranch, near Cheyenne, and shipped thence to Ogden. From Ogden we went to Port Neuf Cañon, thence to Fort Hall, Idaho, and thence to Market Lake. From Market Lake we proceeded to Henry's Fork of Snake River, thence to Fall River, and finally recrossed the divide to the Teton Basin, making camp on a small branch of Teton River, Idaho, near the Teton Range.

While outfitting at Davis' ranch, as mentioned above, Prof. Hayden called me aside and said: "Tom, I have a little special work for you this season. I want you, as soon as possible, to visit the Grand Teton, ascend it as far as you possibly can, and ascertain for me how high a point was reached by Stevenson and Langford. I want you also to bring back some specimens of the rock from the peak at the highest point you reach, and also some samples from the rocks forming the inclosure described by Stevenson and Langford." Prof. Hayden then gave me an aneroid barometer, telling me carefully to note the altitude at the highest point attained. He subsequently gave orders to Mr. Bechler, chief topographer, to assist me in every way possible, to camp wherever I should direct, and remain with me until this work was accomplished. In pursuance of these instruc-

tions from Prof. Hayden, having reached the camp on a branch of Teton River, described above, and finding it a fairly convenient point from which to attempt the ascent, I told Mr. Bechler that we would remain here until I had carried out Prof. Hayden's instructions.

Accordingly, permanent camp was made at this point some time in the month of July, 1877—I do not remember the exact date.

On the following morning at 3 o'clock, accompanied by Peter Pollock and Louis McKean, I set out for the peak, riding to a point about ten miles from camp. Here we tied our mules to stone monuments and proceeded thence afoot, traveling over snow for a distance of perhaps five miles, reaching finally the well-known large amphitheater lying at the west base of the Grand Teton.

We ascended along the northwest slope of the mountain to a shoulder where we found a circular inclosure of rocks, which, from their nature, had evidently been carried there by some person or persons, for their character geologically was entirely different from the stone constituting the peak. In this circle we left a can containing a slip of paper which bore our names.

I made an attempt to ascend beyond this point, but was absolutely unable to proceed, owing to the precipitousness of the wall, which at this point was all but straight up and down.

The aneroid given me by Prof. Hayden especially for this trip showed an altitude slightly in excess of 13,000ft.—the exact figures I cannot recall, but I made a careful note of them at the time, and subsequently gave them to Prof. Hayden.

We remained at this point about an hour, and then set out on the return trip, reaching our camp about 12 o'clock that night.

The following day we crossed Teton Pass into Jackson's Hole, proceeding up the Gros Ventre River to Union Peak. Here I left the party to get mail at Fort Washakie, rejoining them at the North Fork of Big Wind River a short time after.

Ending the season's work near Fort Washakie, we returned to the railway at Rawlins, Wyo., in October, 1877.

Here I met Mr. James Stevenson, Mr. Langford's partner in the alleged ascent of the Teton, and he, knowing of the trip I had taken, and its purpose, said: "Well, Tom, did you get to the top of the Teton?" I jokingly told him "Yes." "Did you get clear to the top?" he asked. I said I had gotten as far as he and Mr. Langford had, and that that was a long way from the top. Mr. Stevenson then and there acknowledged to me that I was right; that the granite inclosure on the western pinnacle is the highest point reached by him and Langford, and that they did not reach the summit of the peak.

In the month of October, shortly after our return to Rawlins, as described above, I met Prof. Hayden at Cheyenne, Wyo., and he asked me what the aneroid showed. From my memorandum I gave him the exact figures. I cannot, of course, remember what these figures were; but I am positive of two things—that they were very close to 13,000ft., and that they were slightly above that number.

In the summer of 1878, being still in the service of the U. S. Geological Survey, and in Mr. Henry Gannett's party, I again met Prof. Hayden at the Upper Fire Hole Basin in the Yellowstone National Park. He e the alleged ascent of the Grand Teton by Stevenson and Langford was again referred to and discussed; and in the course of our conversation, in which I stated that these gentlemen had never reached the top of the Teton, Prof. Hayden said: "I knew their statements were not correct; I knew Stevenson and Langford had never been on top of the peak."

I have to say further that I have frequently talked this matter over with Mr. Henry Gannett, whom I know very well, and have often told him that Stevenson and Langford did not reach the summit; and it was a fact of common notoriety at that time among members of the Geological Survey that these two gentlemen did not get to the top.

And I do also repeat that, on the date and at the place named above, Mr. James Stevenson stated to me that he and Langford did not reach the summit of the Grand Teton, but that they reached a point no higher than the inclosure of granite slabs described by Mr. Langford in his narrative of the alleged ascent.

THOMAS COOPER.

Subscribed and sworn to before me, F. B. Sheldon, a Notary Public within and for the county of Laramie, State of Wyoming, this 21st day of October, 1898; and I do hereby certify that I am personally acquainted with this deponent, Thomas Cooper, and know him to be a person of veracity and one to whose testimony full faith and credence should be given. My commission expires Sept. 5, 1899. F. B. Sheldon, Notary Public.

[Seal.]

III.—Statement of Chief Justice Charles N. Potter.

OFFICE OF THE CLERK OF THE SUPREME COURT, WYOMING.

CHEYENNE, Wyo., Oct. 21, 1898.—*Editor Forest and Stream:* I have been long personally acquainted with Thomas Cooper, who has made an affidavit as to the alleged ascent of the Grand Teton by Messrs. Stevenson and Langford, which has been furnished you by Hon. W. O. Owen in connection with an article prepared by him.

Mr. Cooper has resided in this city and vicinity for many years, more recently being in the employ of the Union Pacific Railway Company. He has at all times sustained a reputation for good citizenship and integrity, and is, without question, a gentleman of absolute truthfulness and veracity. I would have no hesitation whatever in accepting implicitly any statement made by him. His reputation in this country, where he is well known, fully accords with my opinion of his character. That opinion has not been acquired from observation only, but partly from personal dealings with him. Yours truly,

CHARLES N. POTTER,
Chief Justice Supreme Court of Wyoming.

IV.—Extract from a Letter of Mr. Henry Gannett, Chief Geographer U. S. Geological Survey, of Date Dec. 4, 1896.

"The Grand Teton has, to my knowledge, been climbed twice, although in neither case did the parties reach the exact summit. The first is probably the one to which you refer, composed of Messrs. Langford and Stevenson in 1872. The second was composed of Mr. A. D. Wilson and his assistant in 1878.

"The situation is this: From the saddle between the peaks south of the Grand Teton there runs up the mountain a crevice with a sheer wall upon either side. This crevice, the only way up, goes on up over the summit of the mountain, and at the summit from the crevice the wall rises on the right 40ft. sheer; upon the left it is broken down. Both these parties went up this crevice and turned to the left, and so reached a point which is about 200ft. distant from the main summit and about 50ft. below it. From this point in 1878 Mr. Wilson measured angles for primary triangulation with a large theodolite, which he succeeded in transporting to this point. The distance and difference in height here given are the result of computations for position and altitude, and are therefore stated definitely. Sincerely yours,

(Signed) "HENRY GANNETT,
"Geographer."

V.—Affidavit of Gov. Wm. A. Richards.

STATE OF WYOMING, } ss.
County of Laramie, }

William A. Richards, being first duly sworn, deposes and says: that at the present time he is Governor of Wyoming; that by profession he is a civil engineer and surveyor; that in the year 1874 he was employed in surveying and establishing the western boundary of the State of Wyoming; that on or about June 30, 1874, he met a hunter and trapper known as Beaver Dick at a point on Salt River near where said stream joins Snake River; that at that time he submitted to said Beaver Dick an article written by one Nathaniel P. Langford entitled "The Ascent of Mount Hayden," and printed in the Scribner's Magazine for June, 1873; that after reading said article, descriptive of an alleged ascent of Mount Hayden, said Beaver Dick emphatically stated that the assertion therein made that Langford and Stevenson had ascended to the summit of Mount Hayden, properly called the Grand Teton, was not true; that he was one of the party, and knew just how far up the mountain said Langford and Stevenson had gone, and knew that they had not reached the summit thereof.

WM. A. RICHARDS.

Subscribed and sworn to before me, a Notary Public in and for the county of Laramie, State of Wyoming, this 4th day of October, A.D. 1898. My commission expires Sept. 5, 1899.
F. B. Sheldon, Notary Public.

[Seal.]

VI.—Letter from Mr. Nathaniel P. Langford.

ST. PAUL, Minn., Oct. 24.—*Editor Forest and Stream:* In the New York Herald of Sept. 18 Mr. W. O. Owen, State Auditor of Wyoming, published an account of his ascent of the Grand Teton, in which he says that he is compelled "to make the clean-cut statement that our party was the first to reach the summit of the peak." Mr. Owen here states what is not true. On July 29, 1872, Mr. James Stevenson, of the United States Geological Survey, and I climbed the Grand Teton and stood upon the summit of its highest pinnacle. This fact is noted with little detail in the 1872 report of Dr. Hayden, director of the United States Geological Survey—and a detailed account of our ascent was published by me in Scribner's (now Century) Magazine for June, 1873. On a lower or secondary summit of the mountain we found an inclosure about 6ft. high, made by granite slabs set up on edge. This appeared to be the work of human beings—but whether of white men or Indians is not easy to determine. Various discussions of the subject by the members of the United States Geological Survey seem to have left the impression upon the minds of some of them that the pinnacle or buttress upon which we found the granite slab inclosure was the highest pinnacle of the mountain. Dr. Hayden himself fell into this error. He does not so state in his report proper, where on page 85 he notices the fact that Stevenson and I reached the summit—the erroneous statement appears only in his note to the Secretary of the Interior advising him of the transmittal of his report. In this separate note he says:

"Yet on the summit of this peak there were indications that human beings had made the ascent at some period in the past. On the top of the Grand Teton and for 300ft. below are great quantities of granite blocks or slabs of different sizes. Those blocks had been placed on end, forming a breastwork about 3ft. high, inclosing a circular space 6 or 7ft. in diameter."

Doubtless Hayden was led into this error by the confusing discussions of the various members of the Survey, and their uses therein of the word "summit." Strictly speaking, there is but one summit of a mountain; but it is not unusual for explorers to speak of two or more summits of the same mountain. Thus in a recent letter to me a prominent member of the United States Geological Survey, in referring to A. D. Wilson's report of his climb of the Teton in 1878, says: "Wilson speaks of reaching the summit in this crevice. On his right rose a smooth wall 50ft., going up to the main summit." And again he says: "On this secondary summit which he reached he found a wall of rocks," etc. These quotations show that among the members of the United States Geological Survey the word "summit" did not always signify the highest point of a mountain. Mr. Edward Whymper, one of the most renowned of all mountain climbers, in his fascinating book "Scrambles Among the Alps" repeatedly uses the word in this double sense.

And herein lies the origin of the doubt which some persons may have once entertained that Stevenson and I reached the actual summit. Having in mind the impression that the slab inclosure was on the highest point we reached, and learning subsequently that the true summit was above the slab inclosure, they have thought that we did not reach the summit.

Mr. Stevenson and I did not say that the slab inclosure was on the summit. The record made and published by me at that time shows the facts. In a brief report made by me and published in Hayden's general report for 1872, I say: "We found on one of the buttresses a little lower than the extreme top of the mountain evidence that at some former period it had been visited by human beings. There was a circular inclosure about 7ft. in diameter formed by vertical slabs of rough granite."

And in my Scribner article for June, 1873, I say on page 145: "On the top of an adjacent pinnacle, but little lower than the one we occupied, we found a circular inclosure 6ft. in diameter, composed of granite slabs, set up edgewise."

Mr. Owen now challenges the truth of my report, and declares that we did reach the summit of the Teton; and he seeks to support his challenge by evidence of the flimsiest character, but which he declares "unimpeachable." This evidence consists of a statement in a letter of Henry Gannett, Chief Geographer of the United States Geological Survey, written before Mr. Gannett's attention had been called to the erroneous and misleading statement of Dr. Hayden.

Second.—Owen's declaration that the tracks of the American ibex, or mountain sheep, could not have been seen where I found them—above a belt of ice which we clambered.

Third.—That we left no mound or monument to furnish evidence of our visit; and,

Fourth.—The affidavit of one Thomas Cooper that Stevenson acknowledged to him before he died that we did not reach the summit.

Since the time when Mr. Gannett wrote to Mr. Owen I have had a conversation with Mr. Gannett, in which he said that any opinion he had expressed had been formed from what he had learned from Hayden's report, and that he could now see that Hayden's erroneous statement had been misleading. Mr. Owen quotes from Mr. Gannett's letter to him the expressed belief that Stevenson and I "reached a point which is about 200ft. distant from the main summit, and about 50ft. below it"; and then Owen has the effrontery to assume that Mr. Gannett did not know what he was talking about; for he rejects Mr. Gannett's estimate, and says: "It was 500 instead of 50ft." Mr. Owen's idea seems to be that if the facts as Mr. Gannett believed them to be do not accord with Owen's theory then the facts are inadmissible.

Concerning my statement that we found the tracks of the American ibex, or mountain sheep, on the summit above the snow belt over which we clambered, Mr. Owen says: "If there were no other evidence in the world on this one question that one statement would convict. * * * A cat might crawl up that slope, but the mountain sheep would stop 600ft or 700ft. below."

If Mr. Owen's knowledge of the habits of the mountain sheep had been as complete as that of hundreds of men who have hunted both mountain sheep and mountain cats in Montana, or of the learned compilers of our cyclopedias, or of zoologists, he would have known that a mountain sheep or ibex can scale a mountain slope that neither man nor a mountain cat can crawl up. Prof. Richard Harlan, author of "Fauna Americana," says of the mountain sheep: "They are exceedingly active, and are able to ascend precipices inaccessible to other animals; they leap from rock to rock at great distances and with incredible velocity."

For Mr. Owen, who reached the summit, to say that a mountain sheep cannot reach the summit of the Grand Teton, above the ice belt which Stevenson and I climbed, is to affirm that he (Owen) can climb where mountain sheep cannot climb. This argument is too absurd to merit attention.

Third.—It would appear that Mr. Owen did not think that the affidavit of his employee, Cooper (which will be referred to later), was the best evidence to establish his contention, for he says: "The last and very convincing proof that these gentlemen did not reach the summit lies in the fact that we found not the shadow of a mound or other evidence of man's having been there before."

He also says: "We chiseled our names in the granite and planted the Rocky Mountain Club's colors to wave where flag never waved before."

Mr. Owen made an unsuccessful attempt to reach the summit in 1891, and again in 1897. It is reasonable to believe that his knowledge of the mountain and the difficulties to be overcome which this experience gave him was turned to profitable account this year, and that before starting he regarded his success as reasonably assured, for he carried with him a chisel and other appliances for carving his name on the granite.

Mr. Owen concludes that because we did not chisel our names on the granite at the summit, nor build a monument such as he built—in short, because we did not do in all things just as he did—therefore we could not have reached the spot he reached. To such an absurd proposition I may answer that if, before leaving civilization, we had supplied ourselves with all the appliances which failures in two previous attempts would suggest as necessary to success and to complete the record in a way Owen deems indispensable we might have included in our equipment the chisel and mallet necessary to carve our names and deeds on the imperishable granite. But as we had nothing better adapted to granite cutting than our pocket knives we failed to do that which Mr. Owen did, and which he regards as so essential to complete the proof that we reached the summit. It seems, however, that Mr. Owen did not find time to build his monument on the day of his ascent, as will be seen from a letter in FOREST AND STREAM, written from Cheyenne by one of his champions, who, over the signature of Wyoming, says: "The time on the mountain top was so short on the 11th that on the day following Messrs. Spaulding, Peterson and Shive made another ascent to finish the work of building the monument and to complete the record of the climb."

If Mr. Owen's party of four men, with a home camp much nearer to the Teton than our 1872 camp was, had not time to build a monument and return to their camp before night, why should it be thought that our party of two men only had ample time to erect a monument? Owen's argument is that as we left undone the things which he did, or did not do them after the manner he chose to adopt, therefore we were not there to do them at all. I recall a case in point. Mount Rainier was ascended by Gen. Hazard Stevens and P. V. Van Trump on Aug. 17, 1870. During the following twenty-four years the summit of that mountain was reached by no less than thirty persons. I have the names of seventeen of these mountain climbers. The list includes the name of Olin D. Wheeler, the well-known author of the interesting and attractive Wonderland series of annual publications issued by the Northern Pacific Rail-

way. Mr. Wheeler informs me that when his party reached the summit of Mount Rainier in 1894 there was neither mound nor monument of any description to indicate that any human being had ever set foot on the summit. Under the application of the rule of evidence which Mr. Owen declares is "convincing and "unimpeachable," Mr. Wheeler and his comrades may claim the honor of being the first men to reach the summit of Mount Rainier. Mr. Whymper had an analogous experience on his return from his ascent of the Aiguille Verte. He says: "Chamounix stood on its rights," and he relates that the jealous inhabitants, incensed because a stranger had come in and borne off the honors which they had hoped to claim some time for themselves, denounced him and his guides as liars, because he left no flag on the summit of the mountain.

I have devoted more time and space to the answer to these last two arguments of Mr. Owen than their insignificance deserves. They are hardly entitled to respectful consideration, but they indicate to what length Mr. Owen is willing to go in his anxiety to claim the honor belonging to another.

The remaining point of Mr. Owen's "unimpeachable evidence" is thus stated by him: "Thomas Cooper swears that Stevenson admitted to him that he and Langford did not reach the summit."

There can be nothing more certain than that such a declaration was never made by Mr. Stevenson. He often said that the slab inclosure was not on the summit, and Mr. Cooper may have heard him say this, and so concluded that we did not reach the summit, but every circumstance, apart from Mr. Cooper's bare words, points to the fact that Mr. Stevenson never made any such statement. I do not know who this man Cooper is. Mr. Owen says that Cooper "is personally acquainted with Langford, and knew Stevenson during his lifetime." Mr. Cooper seemingly seeks, by this claim, to make it appear that he was in a position to know all the facts and to interpret motives. I have no recollection that I ever met Mr. Cooper. If so, that fact made no impression upon my mind, and he was in no sense acquainted with me. I do not know whether he is or is not a man of honest intentions—whether he is or is not one of the class of men whose imaginations have such unrestrained play that they are ready to say as well as do all that their employers desire of them. I do not know whether he may or may not be classed among those men who deem it necessary to ratify with an oath any statement they may make in order that it may be believed, and who do not realize that the affidavit of such a man rather increases than diminishes the doubt. If he does not belong in one or the other of these classes then he has made a grievous mistake—for there is nothing more true than that Mr. Stevenson never made the statement attributed to him by Mr. Cooper.

I spent portions of each winter from 1872 to 1884 in Washington, and I frequently talked with Mrs. Stevenson and her husband, in the presence of friends, concerning our achievement. She was proud of her husband's part in it. Stevenson was well acquainted with many members of Congress, and in the course of the few years following he introduced me to probably as many as one hundred members and friends as the man who went with him to the top of the Grand Teton.

The Snake River branch of the United States Geological Survey in 1872 was in charge of Mr. Stevenson. Excepting the special and scientific reports of the professors, all the general information concerning the expedition was given to Dr. Hayden by Mr. Stevenson. Hayden knew nothing of the general work of that branch of the Survey except what Stevenson reported to him. Hayden's report for that year declares the fact that Stevenson and I ascended the highest pinnacle of the Teton. This fact was part of the report of Stevenson to Hayden. Does anybody believe that a man of Stevenson's character would for sensational purposes make such a statement as this and have it published in the geological report if it were not true? The one thing that gives value to such a report is its truthfulness. Is it probable that Mr. Stevenson, who owed his position in the Survey to his integrity and capacity, and who was noted for his straightforwardness—a man trusted in these respects to an extraordinary degree—a man who had been connected with the Survey in a position of responsibility for many years, ever made such a report knowing it to be untrue? And is it probable that he looked upon a falsehood of that kind as such a trivial matter that he afterward shamelessly confessed it? Such a confession would have been his utter ruin. If Mr. Stevenson acknowledged to Mr. Cooper or to any other man that he had been guilty of a falsehood in making his report to Hayden, why was not that fact given publicity while Mr. Stevenson was living? Mr. Cooper seems to have regarded the publication of a deliberate lie in an important Government report as a matter of so little moment that he did not feel called upon to express an opinion concerning the falsehood or to call attention to it while Stevenson was living. If his statement is true, why did he wait till Stevenson was in his grave, powerless to defend his reputation? If Stevenson ever made such a statement, why did not other members of the Survey know of it? I am sure that I would have heard of it during some of the twelve following winters that I was in Washington, had such a thing ever occurred. To whom would Stevenson sooner have made such a statement before he died than to his wife, between whom and himself there existed the most devoted attachment and sympathy? During the latter years of Mr. Stevenson's life, and long after Mr. Cooper had an opportunity to see him, the ascent of the Teton by us was the subject of frequent conversation by Mr. Stevenson and myself in the presence of his wife and many friends, not one of whom will now credit this statement of Mr. Cooper.

In a letter written to me since the appearance in the Herald of Mr. Owen's article, Mrs. Stevenson says: "I was his companion in everything, and we always discussed all matters of interest to him."

Concerning Mr. Cooper's attempt to defame her husband's name, she says: "In stating that Mr. Stevenson admitted to his packer, Cooper, that he did not reach the summit of the Grand Teton, Mr. Cooper has sworn falsely. I know that Mr. Stevenson never intimated to any person that he did not reach the summit of the mountain. An honorable man would have expressed his doubts to the living, and would not have waited till years had elapsed after Mr. Stevenson's death."

When Mr. Owen accepts as his own and indorses such testimony as this offered by Mr. Cooper, he seeks to impeach and discredit his own witness by trying to prove that witness to have been a liar.

In April, 1897, Mr. Henry Gannett wrote me: "Owen maintains that the summit is some 700ft. higher than our measurements make it."

In making this statement Owen overreached himself. He now states that his aneroid barometer recorded the elevation of the summit as 13,800ft. In 1872 my aneroid recorded 13,762ft., and it is so given in my Scribner article for 1873, on page 148, line 13. This is an extremely close approximation for aneroid registrations. It indicates that Mr. Owen reached no higher elevation than Mr. Stevenson and I did.

The endeavor to discredit the statements of Stevenson and myself, and especially the attempt to prove by arguments such as Mr. Owen has presented that Mr. Stevenson was a self-confessed liar, and this at a time when Stevenson is powerless to make a defense, is dastardly, and discreditable to those who have attempted it.

While all the attempts to reach the summit of the Grand Teton made during the twenty-five years prior to 1898 have eventuated in failure, Mr. Owen's party may now rightfully claim to be the second to reach the summit; but the avouchment made by James Stevenson and myself that on July 29, 1872, we stood upon the summit of the highest pinnacle of that grand mountain, will, needing neither oath nor monument to prove or establish it, stand as the absolute and incontrovertible truth.

NATHANIEL P. LANGFORD.

From the New York Herald, Oct. 23.

To the Editor of the Herald:

Having been until recently out of the world, it was only yesterday that I had the pleasure of reading W. O. Owen's account of his ascent of the Grand Teton, in Wyoming, as published in the Herald of September 18. He is to be congratulated upon his success.

Although he quotes me in support of his position that he is the first to reach the summit of the mountain, I cannot agree with him, having, as I believe, good reasons for my conclusion that Messrs. Langford and Stevenson in 1872 succeeded in reaching the actual summit.

The fact that Mr. Owen found no monument upon the summit is no evidence whatever that the mountain had not been climbed. Does he imagine for a moment that men who were in the habit of climbing big mountains nearly every day in the course of their work exhausted themselves by building cairns of rock upon every summit reached?

HENRY GANNETT.

William G. Sargeant.

A Tribute.

MEADVILLE, Pa., Oct. 24.—Many readers of FOREST AND STREAM will regret to learn of the death of William G. Sargeant, of Meadville, Pa. Mr. Sargeant and a small party of friends were spending a few days at Waterford Lake, in Erie county, Pa., hunting and fishing. He retired on the evening of Oct. 21, after a day on the lake, feeling a little out of sorts. In the morning he was dead, heart failure being attributed as the cause. William Gaston Sargeant was born in Somerville, N. Y., Nov. 25, 1837, and his home in Madison, where he leaves a widow and son, dates from 1844. He was a member of Company F, of the old Ninth Pennsylvania Reserves, and after the war he was for fifteen years paymaster on the A. & G. W. Railway, now the N. Y., P. & O. branch of the Erie, during which period he handled over $20,000,000. From 1890 to '97 he was general passenger agent on the Pittsburg, Shenango & Lake Erie Railway.

Mr. Sargeant was a sportsman of the old school, and has hunted or fished in every State and Territory in the Union. He loved nature as God made it. He loved the songs of the trees and brooks, the whirring of wings and the click of his reel—these were his sweetest music, as a beautiful sunset was the sublimest picture his eyes could behold. He knew the call of every bird in the forest, the habits of every fish in the streams, and at sixty-one he was as much a boy in the woods or on the streams as forty years ago—with the difference that his riper years had taught him to feel more eloquently and reverence more deeply the true grandeur of nature. He was a sportsman of that class which has made the title honored, and being such, he was a genial, free-hearted, entertaining companion, a steadfast friend, and under all circumstances a gentleman. He loved his friends and they loved him. His death is mourned by all who knew him.

H. S. P.

Proctor Knott's Rabbit.

EX-GOV. PROCTOR KNOTT and a distinguished professional gentleman, of Danville, were discussing the claims of Sampson and Schley to the credit of smashing Cervera at Santiago. The professional gentleman took the ground that all the honor of that memorable conflict belonged to Admiral Sampson, and was inclined to ignore entirely Commodore Schley's part in the affair. The Governor listened until his companion had finished, and then, with that characteristic twinkle in his eye, said:

"My dear sir, it is exceedingly gratifying to me to hear you take the position you have in this matter. It is like a balm to my conscience and settles a point that has worried me many a day.

"I was walking through the woods with a boy friend of mine when we saw a rabbit run into a sinkhole. We stood around the hole a while; then I told the boy to keep watch while I went to get some fire to smoke the rabbit out. When I returned the boy had the rabbit. I promptly took it away from him, claiming that it belonged to me, because I had told him to catch him if he came out.

"That was over fifty years ago, and you are the first man who has ever agreed with me that the rabbit was mine. I feel now that I was right in taking it, and my conscience is at rest."—Danville (Ky.) Advocate.

Natural History.

The Crowing Snake of Samoa.

AT the outset of any account of serpents, either of well-known neighborhoods or of the remoter regions of the earth, the question of veracity must be met and disposed of. Speaking of snakes, it is just as well to give authorities and references as to character, for more often than not some listeners will say rude things. The writer does not vouch for the actual and physical existence in Samoa of large serpents which crow like roosters. But it is a fact that all the Samoans believe that there are such snakes, that they attain great size, and that they move about the tree tops with terrifying speed. Furthermore, it is just as much a fact that more than half the white people living in Samoa believe in the existence of these marvelous serpents quite as implicitly as the natives.

The question of snakes in a tropical country is one of much interest to a woman. It forces itself on the attention just as soon as one discovers how close the jungle or bush is to the ordinary places of residence. In Samoa this distance is but a step. Along the beach is a narrow strip of cocoanut grove, with bread fruit filling the spaces in between the loftier trees. But just behind the shore orchards the bush is as tangled and trackless as it would be if human habitations were miles away instead of yards. From cultivated ground you plunge instantly into the soggy shade of forest timber, lacing boughs blocking out the rays of the sun and steadily dripping the waters stored from frequent and copious rains. In every crotch of limb and branch grow orchids and clusters of the bird's-nest fern. Every vista between the trunks is tangled with swaying lianas, which in the obscure lights might be taken for almost any fearsome thing. Under foot is a thick mat of coarse grasses and aromatic ginger, and many tall succulent herbs, which shut out from sight the real surface of the saturated, spongy soil. Such scenery may be all very well for an artist hunting after color effects and atmosphere, but it has too much the look of good snake country to make one at all comfortable when making a trip through such bush. It comes as a positive relief to learn that there are no venomous snakes in Samoa, always excepting the snake which crows.

All of the eastern archipelagoes of the South Sea from Hawaii to New Zealand are devoid of snakes and frogs. Samoa seems to be right on the line where the snakes begin. The eastern islands of the archipelago, the three islands of Manu'a and Tutuila, have no snakes at all. In Upolu they are rare. In Savaii, the westernmost of the lot, they are abundant. Still their harmlessness becomes a matter of easy belief after seeing one of the native dances in which the girls deck themselves out with bright red snakes on arms and neck, and a cluster of spare ones in each hand.

The rarity of snakes in the Island of Upolu is well established. Many of the white people have never seen a single specimen. One resident of Apia camped out for two months of every year on the mountain behind the town, and kept that up for six years before seeing his first snake, and his camp was in about as snaky looking a place as could be found. Just because Upolu has so few snakes of any kind, the story of its serpent marvel becomes all the more conspicuous. According to all accounts, the crowing snake is restricted to Upolu, the Upolu people say so, and the Savaii people, while confessing to the abundance of snakes of all other kinds on their island, declare that this serpent is a terror only of the Upolu forests.

Naturally enough, one gets the story first from native sources. If you go through the bush with them along any of the few and poorly-marked trails which lead away from the beach, you soon notice that they frequently stop and listen. Except for the long roll note of the Samoan pigeon, and the distant cooing of the manutangi, the bird-that-cries, the woods are very silent. Yet every now and then your native guides and bearers listen and whisper and listen again. It is no good asking what they hear; they may tell you they think they hear pigeon, they may say it is the dash of some distant cataract, they may impose silence and then neglect to answer. In their way of thinking there are still the old gods back in the bush, and it is just as well to refrain from calling their attention to purely human affairs. Afterward, if you remember to repeat the question in the full light of day, when back again on the open beach, where the trade wind sweeps away all such things of evil, then perhaps you may learn what it was they thought they heard at intervals along the bush trail. Perhaps you still get some evasive answer. It all depends on what reputation you have made among the islanders for insisting on the real facts of every case. If you are known to insist on the truth, they will tell you just a few lies as a concession to custom, and then will tell you that the thing which scared them was the crowing serpent. Samoans are scandalous cowards, one and all, and as densely ignorant of woodcraft as though they had been living in populous cities all their lives, but they might well be afraid if they were in any danger of encountering such a snake as they describe under the name of the crowing serpent.

In proof of the existence of this reptile, there may be offered the testimony of witnesses, eye-witnesses, ear-witnesses.

Any quantity of Samoans, and white people as well, will give you detailed accounts of how they heard the snake in the dense recesses of the bush. They tell how their ears caught the sound of stealthy movements in the tree tops overhead, and how the faint sound stopped when they halted to listen closer, or how it began as soon as they resumed the march; of how their invisible pursuer was betrayed through the miles of his fellow traveling by the rustling of leaves and twigs in the forest canopy. Inevitably the narrator closes his account by a description of his escape; he either overtook some other wanderer in the bush and found security in numbers, or else he made particularly good time homeward, or he remembered a charm which had much power. When, for any of these reasons, the snake found that he was to lose his victim, he altered his

silent tactics. He could be heard thrashing the trees and crowing like any rooster, only many times as loud, and as he noisily sought some other part of the forest the crowing was frequently repeated, until at last it vanished in the distance. When asked more particularly as to his crowing, the Samoans say that it is exactly like the crowing of roosters. They are positive that it is not the sound of some runaway domestic fowl. For two reasons they are satisfied of this; for one thing the sound is far louder than any mere fowl could produce, and the repetitions of the note until it vanishes are at a rate of progress quite beyond the powers of the bird; the other reason is that it is a well-known fact that runaway fowl cannot live in the bush. This latter is a point very well taken, for between the field rats and the dampness fowl soon perish after they leave the settled ground.

There is an equal host of eye-witnesses, men who have seen crowing snakes. They never vary from one another in their descriptions of what they have seen. Except for one spot of special conditions it is never seen on the ground, but always on the tops of the highest trees, either stretched out along a branch or gliding from tree to tree with remarkable rapidity. It is long and slender, rarely is one spoken of as under two arm spans, or 12ft., seldom is one described as exceeding twice that measurement. Its color is spoken of as uniform, a steel blue or slate, and free from spots or other markings. When at rest it is difficult to distinguish it from the branch on which it may be stretched out, when in motion it goes far too fast for any detail to be observed. The only exception to its arboreal habit is in many accounts reported from a particular spot in the mountains at the rear of Apia. This is on the Ala Sopo, the trail from Apia to Siumu, on the other coast of the island. Shortly before this difficult trail enters the Tuasivi morass on the mountain top it touches the bank of one of the many small streams which unite to form the Vaisingano River. On the very bank of the stream there is a small open place about as large as an ordinary room. It is a well marked feature, for it is one of the very few resting spots in the whole journey. On the other side of the brook the bank is very nearly straight up and down, a miniature cliff of about 6ft. in height. At one spot in this cliff is a smoothly-worn trough, about a foot wide, and reaching back from the water at an easy angle. Here the Samoans say they sometimes surprise the great serpents drinking at the stream. As soon as they become aware of the presence of men they dart with great rapidity up the runway, and up the trunk of the tree at which it ends. As soon as they have reached a place of safety, the crowing of the rooster rings out through the forest, where no rooster ever goes. The runway is very smooth, as though packed hard by frequent use, and the trunk of the tree mentioned as affording the avenue of escape is certainly stained with soil for some distance from the ground.

White people are more chary about mentioning this remarkable reptile. Yet there are many reliable people who say that they have either heard it or have seen it.

This is about as much as can be said. The ear-witnesses have heard the crowing, the eye-witnesses have seen an arboreal serpent of large size. The proof will not be complete until some one shall be both eye-witness and ear-witness, shall see the snake in the very act of a crowing which shall reach his ears. Until that combination is made there will always be those who are in doubt as to the crowing snakes of Upolu, but it is safe to say that proof or no proof the Samoans will always believe in the animal as a peril of the jungle.

LLEWELLA PIERCE CHURCHILL.

About Trees.

IN a recent paper on the "Louisiana Lowlands" Col. Mather speaks of the leaves having changed to the colors of autumn, although there had been no frost. While there is no doubt that in the North the frost increases the brilliancy of the leaves, Col. Mather is perfectly correct in attributing the autumnal colors to the maturing of the leaves and the drying up of the sap, instead of the action of frost; but still at least three people in four will dispute this, and they will do it because their father or some one else has told them so, and they have never taken pains to observe for themselves. There are many other popular errors regarding the circulation of sap, and the growth of trees, which are so firmly believed that no one ever takes pains to investigate, as they think that what has been believed so long must be true.

Probably nearly nine out of every ten believe that sap ascends in the spring and returns in the fall. Although I have never been able to find anything to the contrary in any book I have ever seen, I know from long and careful observation that this is not so. The sap never descends. It fulfills its office in causing the growth of the leaves and adding another to the rings, which indicate the annual growth of the tree. So soon as the leaves fall, the sap begins to reascend. This can be proved in various ways. Any farmer who has cut a pile of hardwood in November has noticed the sap flies gathering around the ends of the sticks on warm days. They are attracted by the sap, which can be seen issuing from the ends of the sticks, which sap had already begun to ascend before the sticks were cut. Any hunter who has set a line of log traps for sable has noticed the sap flowing from maple sticks in warm days in November. Partridges begin to bud in November, and find something besides dry twigs or they would not bud. But a still more convincing proof is that in some warm falls I have known maple syrup to be made and sold in quantities of several gallons at a time. Pussy willows, where growing in wet places, often bloom in warm November and December. One can see that the buds on the horse chestnuts are swelling in January. The sap which is proved to be present in all these cases is not the sap which went up in the spring descending, but new sap, which is going up. No one ever speaks of the sap in a corn stalk going down in the fall. It has fed the leaves and matured the corn, and its work ended there, so in the tree each year the sap has finished its work when the leaves have matured, and a new crop of sap at once begins to take its place. Of course, this sap cannot ascend when the wood is frozen, but whenever the wood is thawed it keeps ascending.

Another popular error is that trees in growing carry their branches up with them as they grow; or to make it plainer, that a limb which is 5ft. from the ground will in time be 10ft. The fact is that limbs grow as much lower on the lower side as they do higher on the upper side, and no more. A limb which is an inch in diameter, if it grows to be 3in., will be an inch further from the ground on the upper side and an inch nearer on the under side. The forks or crotches in trees often get to be considerable higher, from the two branches which form it growing together as they increase in size. The top of the tree grows up, but limbs do not rise above where they are when they first start out.

Few people realize what an immense pressure is required to send the sap up through the solid wood. If any one will try to force water through only a foot of just such wood, they will begin to understand this. Besides the upward pressure, there is a great lateral pressure. I once tried plugging a bit hole with a piece of dry poplar which projected an inch beyond the tree. In a few minutes the sap was flowing as freely as if there were a gimlet hole through it. I then tried a piece 2in. long, and soon it began to run freely through that. Three inches was tried with like result, except that it took longer, and it was not till I tried a piece 4in. long that the sap ceased to force its way through to the end, and began to creep out at the sides about half an inch from the end.

I once saw a great curiosity, which I wish some of your readers could explain. At the Outlet House, at Moosehead Lake, was a clearing made by Henry T. Wilson, the proprietor. In this clearing was a small juniper tree, which he had left, from which some one had removed a section of bark 4in. in length entirely around it. The wood in this part was not only dry, but was sun-cracked, so that I inserted a knife blade one-fourth of an inch. The tree was green and thrifty, and by actual recorded measurement measured 1½in. both sides of where the bark had been removed, and only 1in. where there was no bark. Can any of your readers tell me how sufficient nourishment passed through this section, which was denuded and dry, to cause the part above the wound to increase in growth as fast as that below?

Many are in error as to the rate of growth of trees. I heard a professor in what is now called the University of Maine, in a lecture before a forestry association, state that "under the most favorable circumstances" it required 100 years for a white pine to grow to be a foot in diameter; 115 years for a spruce, and 125 for a juniper to attain the same size. A few years after I had occasion to cut a piece of timber which I could prove had been but sixty-five years in growing since the land was in pasture. I took accurate measurement of many of the trees. I found one 32in. in diameter a foot above the ground, another 30in., and scores 24 and upward. Also many spruce 24 to 25in. This land was extremely rocky and the soil very poor. There was a great difference in the size of trees of the same age—those on the edge of the cleared land being in some instances twice the size of those further back, which were crowded.

There are many things about the growth of trees which I should like to know, as, for instance, is the sap in the same tree all of same quality in every particular? If so, how does part make bark, part leaves, and in case of nut and fruit-bearing trees the fruit? In case of a nut-bearing tree, if the sap is all the same, how does part form the shell and part the meat of the nut? Also if the sap is all the same, how is it that some kinds of apples, like the Baldwin, only bear in any quantity on alternate years? If it is the same sap and the quantity is sufficient, why is not the same effect produced every year, instead of regularly on each alternate year, while in other varieties it is done nearly every year? If anyone is able to answer any of these questions from actual knowledge (not theory), I should be greatly obliged to them if they would state the facts. If no one knows, then there is room for a good deal of study.

M. HARDY.

The Crow as a Nest Robber.

MILTON, Vt., Oct. 24.—*Editor Forest and Stream:* While the Vermont legislators are passing laws on wolves and panthers (animals that probably do not exist within the borders of the State), they are overlooking a bird that is all too common within our borders, and does far more damage indirectly than any other furred or feathered denizen of our forests. This bird is the common crow. From personal observation I have found it to be one of the greatest enemies of bird life we have. I am willing to admit that to a certain extent the crow is an insectivorous bird, and destroys many injurious insects, but on the other hand the harm that this black brigand of the woods does in destroying by wholesale the eggs and young of our insectivorous birds is enormous, and is, I think, one of the reasons of the diminishing numbers of our songsters.

One morning in the summer of 1897 a pair of crows raided a row of maples near my residence, and before they were discovered had disposed of the contents of nine birds' nests, all containing eggs. The species were as follows: Four robins, two purple linnets, two chipping sparrows, and one least fly-catcher. Assuming that each nest contained four eggs and that all the eggs hatched it would seem that thirty-six birds had been destroyed, and all these are birds which live almost wholly on insects, and which, if they had been suffered to live, would have done much to rid us of insect pests. The incident I have related is by no means an uncommon one, as during the nesting season I frequently find nests of all species of birds with the crushed remains of the eggs within, remnants of a crow repast, and dozens of times have I surprised them in their depredations, which many times, I am glad to say, I forever ended with a charge of shot. Nor do they confine themselves to eggs, for to their palates the young nestlings are choice titbits, and are either at once gobbled or carried home for the refreshment of the young crows. The damage a pair of these birds do in destroying eggs and young during a season must be enormous, and as the insectivorous birds that are the best friends the agriculturist has are the chief sufferers, he that would check the insect pests that threaten his crops should, as the first move, get out his gun and kill all the crows he finds, and in the increasing numbers of birds that benefit the farm and garden he will reap a rich reward.

If State Legislatures would find out for themselves how much the crow is responsible for, instead of voting bounties for animals that do not exist, they would provide a small bounty for crows, and the result would materially lessen at no distant day the appropriations that are made from time to time for fighting such noxious insects as the forest worm, the tent caterpillar and many others equally harmful.

The game birds also suffer from the crow's depredations, for in the broken eggs strewn about the nests of the ruffed grouse I have in several instances recognized the crow's work, and on one occasion I caught the thief making off with one of the eggs impaled on his bill. No doubt many of FOREST AND STREAM readers will disagree with me on this subject, but from careful observation for the past fifteen years I have found the crow to be one of the most persistent enemies of bird life, and fit only to be classed with the pot and plume hunters as pests that can only be coped with through immediate and effective legislation, and the State that will add the name of the crow to its bounty list will have taken a great step in bird protection.

KENEWAH.

Pennsylvania Elk Horns.

MORGANTOWN, W. Va., Oct. 22.—*Editor Forest and Stream:* From my earliest recollections I have heard old-timers speak of the elk horns that used to be found in Pennsylvania in early days; and in describing the size they invariably said: "By standing them on their points a large man could walk under them straight."

I have killed many elk in the Rocky Mountains, and I think I have seen some of the largest antlers that grow on elk in that locality, but I have never seen any that would come near comparing in size with the above described. Were the elk of Pennsylvania and the East the same as those in Wyoming and the West? Is it probable that the sizes as given by the venerable forfathers are overdrawn? EMERSON CARNEY.

[The Pennsylvania elk was of the same species now found in the West. The horns are enlarged as seen through the halo of time.]

Game Bag and Gun.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

The "Brief's" Pictures.

THE illustrations in the current edition of Game Laws in Brief, Mr. Charles Hallock says, well represent America's wilderness sports. The Brief gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

Buck Fever.

WHO is there that loves to roam the woods with a gun, and like all good men and true has inherited from savage ancestors in the distant past a fair share of the hunting instinct, who has not at some time or other suffered from that most annoying complaint known as "buck fever?"

For a well-developed case of the disease it is only necessary for the patient to have a loaded gun in his hand, and be within easy range of some wild animal that he is very anxious to slay. The first attacks are generally the most violent, and by degrees the sufferer, if he still persists in hunting, becomes as it were inoculated and to a greater or less extent fever proof.

The symptoms of the disease are somewhat as follows: Having found a deer feeding and undisturbed, some little distance away, the patient crawls carefully through the bush, becoming more and more excited the nearer he gets to his game, and at last finds that he is in a position for a good shot, and can get no nearer. As soon as he realizes this, his heart begins to rattle against his ribs, making a noise that he feels certain can be heard for a quarter of a mile at least; he also finds that, although he has been moving with the utmost caution, he is very much out of breath, his mouth and throat are as dry as the inside of a limekiln, and a sort of mist forms in front of his eyes, so that the deer before him appears indistinct and shapeless. On putting the stock of his rifle to his shoulder, the muzzle describes a series of uncertain circles in the air, and the foresight will not dwell for an instant on the spot where the bullet ought to go; perhaps he takes his rifle down for a second or two, gives a futile little gasp for breath, and tries again, with the same result; at last, in despair, he pulls the trigger with a jerk, and gives a sigh of unutterable relief as the deer bounds off untouched. After a moment's rest, devoted to steadying his shattered nerves, he begins to think that he may not have missed, and goes to examine the tracks and look for blood; he now finds that he has a very uncertain idea as to where the deer was standing when he shot at it, and so, if he is wise, he gives it up and goes back to camp, thinking the matter over and resolving to do better next time. If he is not wise, which is sometimes the case, he arrives in camp with a long story of a wounded buck, and tries to persuade some more experienced hunter to go back with him and help him to trail it up.

Sometimes, but very seldom, even when suffering from the fever, one makes a lucky shot, and I killed my first deer in a rather remarkable way. We had just come out, and had been at the ranch for about three weeks, and being unaccustomed to such luxuries, had become most heartily tired of a diet of bacon and beans for breakfast and dinner, with the same delectable dish warmed up in the frying pan for supper; and so one evening I took my

Winchester and strolled out in the hope of finding something that would change the bill of fare a little. I had been out some time and had found nothing to shoot at, and was prowling home with my back to the setting sun, when I suddenly discovered an old doe standing in some low bush about 50yds. ahead of me. She was standing broadside to me and looking straight at me, trying to make out what I was, for deer can't see well against the light, and she had probably never seen a real live tenderfoot before.

Now I had never before been face to face with a real live deer when I had happened to have a gun in my hand, and so a violent attack of buck fever came upon me instantly; however, I realized that there was no time to wait till the attack abated, so when I thought that the foresight of the rifle covered her shoulder I pulled the trigger. The smoke hung for a moment before my face, and when it cleared off there was not a sign of a deer to be seen. I went forward, and to my great surprise and delight found her lying stretched out behind a low clump of shin oak. My delight was somewhat checked by a violent kick I received as I rushed forward and grabbed her by one of her hindlegs. This was her last move, however, and for some moments I stood joyously contemplating the first deer that had ever fallen to my rifle. It was only an old doe, and I am sorry to say out of season and by no means fat, but all the same it was undoubtedly a deer, and I had killed it all by myself.

The next move was to look for the bullet hole, so as to be able to congratulate myself on my good shooting. I looked at her shoulder, where I fondly expected to find it, but there was no bullet hole there. I looked further back, there was not a scratch on her; I rolled her over, not a hair was out of place. At last, just as I was beginning to think that she had died of freight, I discovered that the bullet had broken her neck, high up, just where it joined the head. Not a very good shot, considering the distance was so short. It was with a sort of chastened humble joy that I went back to the ranch for help to get her home. We tied her legs together and ran a pole through them and brought her in in triumph, and for the next few days we feasted on venison, and we fried no bacon and boiled no beans at our little log cabin till that venison was no longer fit for human food.

Older hunters than I was in those days sometimes, under exceptional circumstances, suffer from buck fever. Our friend and neighbor, "Long Joe," came by the ranch one day last summer, riding his old sorrel mare and followed by a mule colt and a couple of hound pups, and while resting his long legs and smoking the pipe of peace on the gallery after dinner, he told us the following tale of woe:

He had about an acre planted in sweet potatoes in the far end of his field. Now deer are exceedingly fond of sweet potato vines, and if they once find a patch of them that is not too close to a house they will come into the field for them night after night, till they have destroyed the whole crop.

Well, a small herd of deer discovered Joe's potatoes, as he found by their tracks in the field, and, as, of course, they only came in after dark and left again before daylight, he determined to hide under the fence some night and wait for them to come in. And so one evening, just as it was getting dark, having armed himself with an old double-barreled shotgun and half-filled each barrel with buckshot, he took up a position in a corner of the old snake fence, near where the deer were in the habit of jumping in. He next proceeded to arrange his long limbs in as comfortable a position as circumstances permitted, propped up the old gun in easy reach of his right hand, stuck about a cubic inch of tobacco into his mouth, and made up his mind that he would spend the night where he was, or get venison and revenge for his sweet potatoes.

A young moon gave just enough light to enable him to see indistinctly anything that was in the immediate neighborhood; behind him a long, rocky and bush-covered point came right down to the field fence, and before him his field lay spread out across the narrow valley to another steep and bushy hillside, surmounted by a gray limestone bluff and fringed by the dark cedar brake that stretched away over the hills for miles to the westward. It was a nice warm night, with hardly any wind, but every now and then a little gust would sigh through the Spanish oak bush, and unfortunately it did not always come out of the same quarter.

Slowly the minutes passed for Joe crouched in the fence cover, his cramped limbs had to be carefully rearranged at intervals, and a few energetic mosquitoes had found him out and were paying him a good deal of attention. The moon sank toward the black fringe of cedar on the opposite hill, and he was on the point of giving up and going home, when something moved a loose rock on the hill behind him. In an instant he was on the alert, and carefully reached out his hand for the old gun and listened again. This time he could plainly hear two or three animals moving about in the brush behind him, and every instant he expected to see the deer jump the fence into the field close to him. Presently they were just behind the brush, not more than ten steps from him, and he could hear them sniffing inquisitively, but, of course, he could not see through the thicket, and had still to wait patiently. About this time he began to feel a little uncomfortable, and he could hardly keep his teeth from chattering; the deer too were evidently not quite satisfied with their surroundings, for they began stamping with their forefeet on the ground. This was altogether too much for Joe's nerves, and he spent the next few minutes, which seemed like so many hours, in a state of most abject misery. At last he began to shake so violently that he hit the fence with the barrel of his gun, and the deer, snorting ridicule and defiance at him, loped off up the point into darkness and security. He assured us that he felt so relieved when they had gone that he almost cried; he also told us that he had shivered so violently that on going to inspect the scene of his sufferings the next morning he found that he had shaken the top logs off the fence for five panels on each side of the corner where he had been hiding; but he exaggerates a little sometimes, and this last part of his story may not be quite true.

PURBECK.

A Hudson Bay Flintlock.

"SOUND the trumpet, beat the drums!" I've got it! It came to me. And, true to the adage, it was the unexpected.

While on a business trip down the Colville Valley I called at a house located on one of the old-time ranches of the county, where a family of people of mixed white and Indian blood had lived for more than twenty-five years, and who had left the place some years before the coming of its present tenant; and out in the chip yard, where the slops from the kitchen were thrown, I stumbled upon one of the old Hudson Bay flintlock shotguns.

So bleached by exposure was the stock of the old fusee that it was necessary to remove the brass breech plate, held in place by five screws (so honest and thorough was the old-time handwork), to prove that it was really walnut. It was at first mistaken for curly maple.

I called the rancher's attention to it, when he told me that among the old traps left by the former occupants of the place had been about a dozen antiquated guns of the percussion type. "Look here," he said, "I'll show you something I plowed up in the field a while ago." And he brought out a spur that might have been worn by the Conquistador himself. It was a massive iron affair, with a wheel a trifle over 3½in. in diameter, and heavy enough to have been made of the saw of an old-time sawmill.

He was easily induced to sell them; and after a hard day's work in overhauling and cleaning up the old gun, during which it took all the tools in the shop of the village blacksmith, including the big power drill with which to start the screw which went through the breech pin into the guard plate, the lock was found to be of splendid mechanism, able to defy successfully the tooth of time and a quarter-inch coating of solid rust.

After all these years of neglect it was surprising to see it come out in such really fine order, and in perfect fettle for shooting to-day. I should judge the bore to be about .20 gauge.

The first shot sent twenty pellets of its little charge of No. 6's through a page of FOREST AND STREAM at 32yds.

The trouble which now confronts me is the lack of gun flints.

I found a piece of volcanic rock, which does poor service in lieu of the regular flint, but I want the genuine article. Where on the planet, save in the Smithsonian Institution or the British Museum, can the old-time gun flint now be found, is the problem which perplexes. And where can I turn for help save to the members of our own family?

Can't Schultze scratch up a handful from the old stamping ground of the Blackfeet? How many has Ransacker hidden away in the chinks of his cabin in the Sierras? And surely Kingfisher has used that old flint sinker for his fish line long enough, and should now "pony up" like a little man.

There may be another Grand American Handicap some day, and I hereby give Mr. Fulford fair warning, that the old uncle is on his trail.

ORIN BELKNAP.

VALLEY, Washington.

Maryland Ducks.

BALTIMORE, Md., Oct. 29.—Several captains of gunning craft, who charter to sportsmen for duck shooting on the Susquehanna flats, have visited Baltimore the past week. They say there are now numbers of ducks feeding in these waters; also good reports come from Back, Middle, Gunpowder and Bush rivers. Another week will open the season, and the prospects are of the very best. Havre de Grace residents say there are many bald pate ducks there. These ducks do not make good box shooting, but flocks of red-headed ducks, which make the best of shooting, are on hand, as well as some black-heads, which have prevailed in late years. Captain Holly, one of the best-known of the experts, was in Baltimore the past week. He said he had observed more coots lately than he had seen for several previous years at this time, and on this assertion the gunners are predicting great sport. A few years ago few sportsmen paid attention to coots, and they flew within range without being shot at. They are delicious little ducks, but the shooters wanted bigger ones. In the last few years they have been very scarce. The gunners and epicures then showed their appreciation of them, and wondered why they had not done so when they were plentiful. The coot is as choice in his feeding as a red-head or even a canvasback. His late scarcity has been so marked that the gunners now claim that his reappearance in numbers means that plenty of good food is in the river. Hence, they predict that there will be more ducks in general this year than for several seasons, and they do not use the regular annual reason of "more grass since the Johnstown flood."

There was to have been a sale of game, confiscated under the new law of 1898 from a prominent commission merchant, at the office of the Baltimore City Cold Storage Company, one day last week, but it failed to materialize. The game confiscated consisted of sixty-three red-head ducks, which had been placed in storage by the said commission man, labeled "poultry," and which were found after a search by a deputy game warden. The ducks were in such condition, however, that no one made a bid.

Representatives of the cold storage company and the commission merchant were before the magistrate, charged with having the game in their possession. It was shown that the ducks were shipped from South Dakota, and were not killed in Maryland, hence, it was contended, it was not a violation of the law of Maryland to have the ducks in possession, as the law was plainly intended to protect Maryland game, and not the game of South Dakota. The magistrate held, however, that the law was violated in this case, and after valuing them at $20 ordered the confiscation of the ducks and their sale under the law, the proceeds to go into the school fund, after deducting payment for cold storage.

The chief game warden was present, but did not seem to think the commission man possession of the game came under the State law. If the law can be so construed, it is claimed, then Maryland is practically making laws for other States, and seriously interfering with interstate commerce, as game killed in season in another State could not be sold or owned out of season in Maryland. Both parties' representatives talked of appealing from the decision of the magistrate to make a test case, but after consultation it was agreed that the amount at stake would not justify such action. The law of 1898, regulating the killing of game in Maryland, is much more general than that of 1896, which it is intended to strengthen. It provides a fine of from one to ten dollars for each of several species of game out of season found in possession of any person. The season openings vary from Nov. 1 to Dec. 24. As applied to ducks, the season opens on Nov. 1. Heretofore certain species of ducks called in a general sense the "summer duck" have been openly exhibited and sold during the early fall or late summer, but the new law brings these ducks under the ban. A peculiarity of the new law is the provision that, although it is a violation of the law to have game in one's possesion out of season, game confiscated by the warden or his deputies may be sold at public auction, the proceeds to go to the school fund. Possession of game bought under such circumstances does not render the owner liable for violating the game law.

By this curious provision of the new law the purchaser of the confiscated ducks will incur no risk of arrest or having the ducks seized, and may place the ducks right back in the cold storage warehouse and use them as he pleases. This seems the only safe way to secure ducks out of season, i. e., buy at auction such as have been confiscated. The agents of the Maryland Game and Fish Protective Association have been working more effectively this fall than ever before, and while the officers do not pretend that the Association has anything like succeeded in stopping the unlawful slaughter and sale of game, they say they are doing more in that direction than ever before, and are making the traffic in game much less safe than formerly. Within the last week or so most of the leading hotels and restaurants have been visited in search of prohibited game, and some proprietors were caught in violations of the law and have suffered accordingly. It cost one of the city's most prominent hotels more than $10, because two ducks were found there and seized, and a well-known restaurant lost $20 in fines and costs, besides the four big wild turkeys that caused the trouble.

JOHN T. HIGGINS.

Boston Hunters in Maine.

BOSTON, Oct. 28.—Again the big game has been coming in at Bangor at a great rate. Late newspaper dispatches say that all previous records of big game receipts were broken on Monday, when 127 deer, 9 moose and 2 bears were noted at the railway stations. The largest previous record was noted on Friday, Oct. 22, 1897, when 109 deer, 8 moose and 5 caribou were listed at Bangor. The total shipments over the Bangor & Aroostook Railroad so far this season have been 801 deer, 30 moose, 14 caribou and 4 bears.

Mr. Howard W. Wheeler, of Boston, has shot a big bull moose in the Dead River region, in Maine. In the party were also C. H. Fosgate, of Cambridge; M. H. Gray and H. Hewitt, of Boston. On the team that brought the hunters to the station at Dead River they had, besides the moose, four buck deer, one doe and a big string of partridges. Mr. Wheeler is reported to have said that after the second shot the moose charged at him, but was stopped by other shots left in the magazine of his rifle. The party report partridges thick in the Dead River region, but they are the only hunters that bring that report from Maine. It is claimed by the Boston marketmen, however, that they are getting an unusual number of partridges from New Hampshire. Mr. L. P. Young, of Faneuil Hall Market, brings out six deer from his Maine hunting trip; two for himself, two for his wife and two for his wife's sister. The claim is made that the ladies shot the deer assigned to them. H. B. Hatch, of this city, has secured his two deer in the vicinity of Stacy Dam, Me. F. B. Parker, of Lynn, and W. H. Parker, of Boston, are out of the woods after hunting thirteen days in the section of Passagomoc Lake, Me., they bring out two deer apiece. G. W. Shattuck, of Boston, and J. H. Shattuck, of New York, have been hunting at Big Machias Lake, Me. They stopped at Reed's camps, getting all the deer they cared for, which was what they wanted to eat in camp, and one each to take home. They saw moose, but did not get a shot at them. W. D. Wright, of this city, has been hunting in the neighborhood of Sebois Lake. He brings out two buck deer. E. A. Newbegin and A. F. Stevens, of Haverhill, have been hunting in the same vicinity, each taking a fine deer.

Oct. 31.—The quail season is open in Massachusetts, and the local gunners are trying for them, with the general verdict that the birds are rather scarce. A few have been seen in the markets, but though the open season begun Oct. 15, the marketmen complain that they are not getting the usual quantity of quail—are getting about as many woodcock as quail of late. In Byfield the gunners have taken a small number, and in Reading there are reports of a few being secured. J. H. Jones, with Ed. Killam, a crack shot, went up to Topsfield the other day. They struck good weather, and had one of the best dogs in the country. Jones hired a gun, his own not being at hand, and entered the field with some doubts as to what he could do. On the first flush of quail, however, he satisfied himself that the gun fitted him almost exactly, and he brought down his bird at nearly every shot. They soon found the quail to be wild, and generally the coveys would take wing without giving them anything but snap shots, and scattering, so that the birds had to be hunted down singly afterward. Under these difficulties they got fourteen quail in their day's shoot, and naturally feel very proud of their success.

The weather has been hard for the shore bird gunners of late, and though coot and other ducks have been flying plentifully, it has been so rough a good deal of the time that boating has been very difficult. The

Plum Island boys were considerably disappointed on their trip there last week. Mr. L. W. de Pass says that there were plenty of coot flying, and even on the water, but not within gunshot, while the water was too rough each day to go out in a boat. They will try again very soon. The Gloucester, Rockport and Annisquam gunners have not obtained great numbers of coot thus far, but November is the month for duck shooting at those locations. Reports from Chatham and all the south shore say that it has been an off week for duck shooting, owing to rain and high winds. Still some good bags have been made. S. Nickerson and party, of Chatham, got twenty-eight birds in one morning last week. Boston sportsmen at the Rogers' Camp, at Orange, are reported to have lately taken over forty black ducks. The lower section of Cape Cod is covered with gunners. The railroad people say that the baggage car of nearly every train is crowded with hunters and sporting dogs. Some quail and partridge are obtained, but the birds are scarcely more than one for each sportsman.

To the list of successful Maine big game hunters may be added R. H. Nickerson, Boston, two deer; C. E. Harrison, Pawtucket, R. I., one moose, from Northeast Carry; R. L. Lufkin, Gloucester, Mass., two deer, from Patten; C. W. Whitman, of Troy, N. Y., and C. A. Hubbard, Newton, Mass., one deer each, from near Katahdin Iron Works; Geo. H. Houltham, Lynn, Mass., one moose, from the Katahdin Mountains; E. C. A. Becker, of Worcester, Mass., one moose, from the West Branch; Fred Hubbard, East Berlin, Conn., John Towne, of Amherst, Mass., and J. N. Ackerman, of Worcester, Mass., two deer each, one a beautifully mottled and spotted buck; Mrs. S. Boothby, Portland, Me., one deer, actually shot by herself; E. L. Millett, of Beverly, Mass., one moose and two deer, from the Aroostook River; Mr. Garrison Reed, wife and son, Boston, two deer, from Katahdin Iron Works region; R. Brooks, Newport, R. I., two deer, from Pratt Lake; J. W. Penniman, H. A. Penniman and E. A. Snow, two deer each, from the region of Bowlin Falls, East Branch.

SPECIAL.

"Hitting vs. Missing."

"HITTING VS. MISSING" is the title of a new work written by Mr. S. T. Hammond (Shadow), author of "Training vs. Breaking," "Nursing vs. Dosing," etc., this one being the third of the "Versus" series from his pen, all of which are published by the Forest and Stream Publishing Company.

Mr. Hammond is a master of the shotgun in theoretical and practical field work, but writes entirely from the standpoint of the man behind the gun. He gives minute directions in the necessary elementary schooling for the novice, and there is also much sage advice of value, both to expert and beginner.

The work contains 170 pages, which are subdivided into ten chapters, which treat respectively of "Choosing the gun," "The All-Round Gun," "Ammunition," "Loading Shells," "Practice at a Mark," "Practice at a Moving Mark," "Shooting Companions," "Among the Birds," "Skipping Stones and Flying Birds" and "In the Field."

Besides the practical information which abounds throughout the work, there are delightful reminiscent veins. The peculiar idiosyncrasies of shooters are well illustrated in an anecdote of a Western experience which he relates in Chapter X.

"My friend, Mr. J. M. Cannon, one of the lumber kings of the West, and myself were shooting chickens near Davenport, Ia., when we saw this man some distance away also hunting chickens, but without a dog. Mr. Cannon was acquainted with him, and proposed that we go over and invite him to join us, adding that he thought he could show me something in the way of shooting that would please me. Thankfully accepting our invitation, he informed us that there was a scattered covey near us that he had been unable to find, and the dogs were at once sent on, and in a short time both of them were on point. As we went to them, our friend was given the post of honor, while we took position on each flank. Now I was a quick shot, even in the open, and had seen others do good work in this line, but this man fairly took my breath away. As Mr. Cannon well expressed it, he was more than sudden; for his birds were not fairly out of the grass before they were doubled up, and so well did he shoot that it was seldom he scored a miss.

"After we had worked out the open prairie for a couple of hours, and had lots of shooting, Mr. Cannon proposed that we beat out an extensive cornfield, into which we had driven a large number of birds, and we at once started toward it. I could see that our friend did not quite like this arrangement, but he said nothing, and we entered the corn abreast and about a gunshot apart, with our friend in the center. Mr. Cannon and I were soon dropping them right and left; but our 'sudden' friend was out of his element, and after several shots with only two or three birds to show for them he gave it up, saying that he never could shoot in corn. I was greatly surprised, as, until I witnessed his failure, I had supposed that this was just the place to bring out to perfection the wonderful skill he had displayed in the open, and this reversal of the usual order of things bothered me not a little, especially when I learned upon inquiry that his failure was not owing to lack of practice, as he told me that he had persistently tried to get there, but somehow he could not do it.

"I ruminated over this for several days, but could not arrive at a satisfactory conclusion, until one day, when shooting in corn, a bird rose in front of me, and as I pitched the gun into position the bird swerved to the right and disappeared from sight behind the dense growth. Although it did not go 3ft. before I again caught sight of it, and I at once pulled trigger, I missed it clean. I did not regret the miss, as, at the very instant I had pulled to what I instinctively knew would be a miss, it flashed into my mind that here was the solution of the problem that had so bothered me in relation to the shooting of our 'sudden' friend. His nerves were keyed up to just the right tension to do their proper work in the very fraction of the instant that the music of the fluttering wings in the grass vibrated along the sensitive strings; but when, from any cause, there was even an infinitesimal break in the connection, those nerves collapsed and could not recover their proper form quickly enough to accomplish their mission on time. On the open prairie, when his nerves responded to the call of the slightest rustle in the grass, the gun was mechanically pitched to his shoulder; his eye, unobstructed, found the bird; the connection was complete and everything worked in harmony. But in the corn the surroundings were entirely different; some little time elapsed after these nerves were ready before the eye could make the circuit complete by sighting the bird, and owing to the delay the collapse came, and when the time for action arrived the sensitive tissues had not fully recovered, and hence their work was bunglingly performed."

The book abounds with anecdotes equally interesting and equally forceful in bringing home a point of practical value. What is commonly taught in dry technical detail is in this volume taught in simple and entertaining descriptive happenings which cover a vast field of sportsmanship.

As Longus wrote of his pastoral of Paphnis and Chloe, that "it would refresh the memory of him who had once loved, and instruct him who was as yet ignorant of love," so Mr. Hammond well might say that his new book will both prompt the memory of the experienced sportsman and teach the beginner the veteran's art.

Alabama to Have a Law.

GREENBRIER, Ala.—*Editor Forest and Stream:* The Alabama Legislature convenes Nov. 15, and we of the Alabama Field Trial Club are preparing to make a desperate effort to have first-class game laws enacted. Up to this time our game protection has been farcical, owing principally to the fact of there being no general law under which offenders could be brought to account. Some of our counties, it is true, have had statutes enacted that would have resulted in much good if properly enforced; but even in these instances, so far as my information extends, but little has been accomplished, owing to the laxity with which offenders have been brought to justice.

The success attending the meets of the Alabama Field Trial Club has created great interest and much enthusiasm in game protection throughout the State. The club membership is large and embraces numbers of influential men, a combined effort from whom will undoubtedly result in a law that will meet the exigencies that at present confront us. Among other things that we hope to embrace in the statute is that glorious platform plank of FOREST AND STREAM: "The sale of game shall be forbidden at all seasons."

Proper legislation, backed up by the determination of our club, assisted by the moral support which sportsmen in the State will give us, we hope and believe will wheel Alabama into the front rank with States that appreciate and protect their game and fishes.

Anent the Alabama Field Trial Club, it may be of interest to sportsmen in other States to know that since its formation, three years ago, it has done more to promote interest in game protection and distribution, and for improvement in breeding and developing high class shooting dogs, than all other combined inducements prior to that time. Among other things it has conclusively proven that State trials are superior in these respects to open or national events, and afford an opportunity for the development of good dogs in far greater numbers than open trials may possibly do.

The Alabama Club has been especially fortunate in securing splendid grounds upon which to hold its trials; and in obtaining the services of progressive, energetic sportsmen as officers. Too much praise cannot be bestowed upon Messrs. T. T. Ashford, President, and T. M. Spencer, Secretary, for the masterly manner with which they have guided the club to successful issue. The trials for 1899 promise large increase in entries, attendance and interest over the splendid meet of the present year.

WM. M. HUNTLEY.

In Nebraska Bottom Lands.

IN what more enjoyable situation could a sportsman be placed than to be dumped out of a train, bag and baggage, in some of the finest shooting ground of the mid-West? We had hardly stepped off the train since leaving New York, except in changing at Chicago and again at Omaha. Our friend C., an old New Yorker, was at the station to meet us with a dilapidated carryall, but any old thing proved welcome enough after the severe jolting of the train from Omaha. As we started off toward C.'s home a cool breeze from the west wafted to our nostrils an indescribably sweet odor of prairie grass—off toward the timber lining the banks of the Elkhorn the liquid notes of Bob White reminded us of the prime sport to be had for the seeking

As the sun dropped below the horizon the wind shifted around, blowing from the north in such icy gusts that we were very glad to turn up our coat collars and snug up close together on the seats. C., who had been discoursing upon crops, cattle, etc., suddenly switched off upon the duck outlook as augured by the north wind, to the effect that we should be in readiness for a flight of mallards and teal, which prediction from such an old hunter aroused our keenest anticipations.

At 3 o'clock in the morning we were aroused by C., and after partaking of a fragrant cup of coffee and sundry good things from the cupboard, we hitched up the team and were soon bowling along over a six-mile route of level prairie. Just as the first streak of dawn showed itself in the East, C. pulled the horses up, jumped out and led them into what turned out to be a perfectly wind proof bower of wild plum trees. Decoys were raked out of a brush patch, and in a short time we were stationed in our blinds waiting for all comers. Two of us covered the decoys, while C. and H., both fine shots, stationed themselves further up stream, intending to cut off stray pairs and stragglers.

We hadn't long to wait. A flock of mallards following on down the bend of the river swept in toward our decoys. I took the leader, a big drake, and cut him down clean with the No. 4s of my left, and in echo with the No. 2s of my right dropped another plump one. I glanced at B., who seemed to be making some uncomplimentary remarks about himself, and looking into the empty breech of his gun. Just then our friends of the other blind spoke three times in quick succession, and B. just finished loading up in time to drop a solitary teal screaming along with the wind at a 120-mile pace. The birds kept coming down first in bunches, then in straggling out pairs, till about 9 o'clock, when the flight ceased. We rowed out in a little skiff and picked up our birds, most of which had collected in a dead-water swirl below the point, together with those of our companions. Between us we had shot away forty-eight shells; we collected thirty-one mallards, pintails and teal, losing probably eight or ten down stream.

We took our birds and decoys back to the wagon, and after exchanging our duck loads for lighter loads of 8s spread out and waded through a partially submerged piece of prairie bottom along the river bank. The grass was literally alive with golden and ring-neck plover. We bagged about twenty in short order; and considering that we had taken our share of game for the day, started back to the wagon. C., to spoil his record of seven straight, tried a pot-shot at five golden plover strung out in almost a straight line from him. He squatted down; there was a bang and splash. A duck charge shot by mistake was his undoing. Five very much surprised and alarmed plover flew away to more congenial feeding grounds.

In three days our stock of game entirely disappeared, so we sallied off after quail and chickens. Some time later I may send in an account of our success with the chickens.

CHARLES G. BLANDFORD.

Why Plantations are Posted.

Editor Forest and Stream:

Within the next few weeks many of us who are fond of quail shooting will be off for the Southern States. Those who have been shooting the past two or three years must have noticed that the annoying sign "Posted" is rapidly diminishing the available shooting territory. As this is due largely to the abominable discourtesy or thoughtlessness of Northern gunners, I think it would be wise for you to call attention to the abuses which the plantation owners are obliged to suffer from those who shoot over their premises.

From what I have learned from the farmers, and have noticed myself, I am surprised that the signs are not more numerous than they are. I have known sportsmen to shoot all day over a plantation, even going into the field where the owner was at work with a green colt, which was much frightened by the constant firing, without speaking to him or even "passing the time of day." Can any one blame a man for posting his land after such shabby treatment?

At our hotel one evening a gunner told of a bevy of quail that had taken refuge in a garden patch 50ft. from a man's house, where he had had splendid single-bird shooting. I asked him if he spoke to the people, to which he laughingly replied that he only saw a few children, who rushed into the house like scared cats when the sport commenced. I could cite more examples of this outrageous abuse of shooting privileges. These are, however, sufficient for the purpose.

Now as a rule the owners of plantations are very pleasant people, and they would be glad to see sportsmen if they were treated decently. The life they lead is a circumscribed one, however, consequently they do thoroughly appreciate and enjoy any social attention. If all gunners who read this will this autumn make a point of looking up the owner of the plantations upon which they trespass, and chatting with him for five or ten minutes, giving him a few birds if the bag is a good one, the result will be that the prohibitive signs will not increase, and the advent of the sociable sportsman will be welcomed as a pleasant incident in a somewhat monotonous day.

Last spring, after a five days' shoot on a large plantation in North Carolina, I drove half a mile out of my way to visit the owner. I told him of our sport, presenting him with a bunch of fifteen birds, which he received with evident pleasure and surprise. A few days later we arrived at —— to take the train for the North. The hotel proprietor told us that he was chatting with Mr. —— as we drove into the town, who pointed us out, saying that gunners had tramped over his land for twenty years, but that we were the first to present him with any birds. Later he turned up at the hotel, and told us that we had not seen one-quarter of his plantation, adding that he should plant many acres with peas this year, which would attract the quail and give us great sport in November, which he urgently invited us to enjoy. I cite this incident simply to show that a thought of the Golden Rule in connection with our treatment of land owners will give us all plenty of shooting ground for many years, which we shall not have if present abuses are continued.

CHARLES J. MEANS.

BOSTON, Mass., October, 1898.

THE farmers of Maquoketa, Iowa, have combined in a movement thus noted by the Telegram of that town:

The farmers living about Maquoketa have made frequent complaint of the depredations of certain hunters who disregard notices posted up on various parts of their land, and enter the same, destroying the game and endangering the lives of both stock and human beings in that vicinity. A number of them have determined to put a stop to such proceedings and have organized for that purpose. They are very much in earnest, as can be seen by the resolution and names appearing below. It is without malice toward any particular person that this action is taken, but it is their intention to live up to the terms of their agreement and enforce the law with strict impartiality.

Most of our hunters are perfect gentlemen, who appreciate the circumstances, and, we are certain, will not attempt to hunt on any one's land against his expressed desire:

Whereas, the laws of the State of Iowa prohibit hunting by any person with dog or gun upon the cultivated

or enclosed lands of another, without permission; and

Whereas, such hunting has become an intolerable nuisance, endangering human life, disturbing stock and animals, breaking down fences, etc.,

Therefore, we, the undersigned owners and proprietors of cultivated and enclosed lands in Jackson county, Iowa, for the object and purpose of putting a stop to this nuisance, do hereby mutually agree to no longer grant to any person or persons the privilege of hunting on our premises; and do agree to prosecute to the full extent of the law all persons hunting on our premises, from and after this date, with dog or gun. And we and each of us do hereby mutually agree to assist one another in the enforcement of said law; and do further agree to share equally the expense that may be incurred by any of the persons signing this agreement, and who shall hereafter institute suit under the provisions of the statute in relation to the subject aforesaid; and in all things aid and assist such prosecution to the best of our ability in any manner, not in violation of law and consistent with good citizenship.

Dated this 10th day of September, A. D. 1898.

CHICAGO AND THE WEST.

Deer.

CHICAGO, Ill., Oct. 29.—From all accounts the deer crop in Michigan, Wisconsin and Minnesota this fall is a good one. The number of licenses taken out in Michigan and Wisconsin this week would appear to indicate that there will be at least the usual number of hunters who will go out after deer this season. At Waukesha, Wis., twenty-one applications for licenses have been taken out this fall. At West Superior, Wis., a large number of licenses have been issued. At Green Bay, Wis., twenty-seven licenses have been issued. Other towns on the borders of the deer country report numbers equally large or larger. In Michigan there will hardly be so large a number of deer hunters as in Wisconsin, though the license law is practically the same. At Ann Arbor, Mich., eleven licenses had been issued this week. At Saginaw five licenses had been taken out at date of last report. One Michigan man, by name of Leon Reynolds, of Augusta, a man past seventy-five years of age, has taken out his license, and will go into the woods this fall for his favorite sport of deer hunting. It is safe to say that Mr. Reynolds has seen many changes in deer hunting methods in his time.

Out in Minnesota the influx of non-resident hunters has already begun. It is estimated that 200 strange hunters have gone in through Duluth. The crop of deer and moose bids fair to be a good one. Near Bagley and near Bemidji Lake moose sign has been reported abundant.

Ducks.

We have had a good flight of Northern birds in Wisconsin the past week, but the flight seems to be composed of highly educated fowl. On Lake Winnebago there have been large bodies of ducks, but they have been pursued steadily by boats of all descriptions, until they have become very wild and difficult to work. At Puckaway Lake much the same state of affairs has prevailed, though the birds have not been disturbed so much in the open. At Pewaukee Lake bags of 30 and 40 ducks have been made. At Poygan Lake one party of four Appleton gunners bagged 60 ducks, but reported the shooting uncertain and difficult. On Lake Koshkonong the flight has been heavy, the feed in this lake being the best to be found in the State of Wisconsin; yet the hammering has been so steady that the birds raft up in the open water, and do not work very well. This state of affairs would be a picnic for the sneakboat hunters, but the latter are still wary, owing to the recent visit of Warden Johnson, who is commonly known to be a bad man with violators.

The flight, of course, is scattered over a thousand miles of country now. Duck shooting is good in Texas and has been for some weeks, a part of the first flight seeming to go clear through to the Gulf without stop. In Arkansas and Missouri, more especially on the better club preserves, the birds have been in for some time, and the shooting has been fair. During the past week there has been a good flight in on Lake Senachwine and Swan Lake, of the Illinois River country, and a number of Chicago and Peoria shooters have had sport.

The Minnesota duck season is not yet over, but the edge is worn off. From all I can learn I am inclined to think that it was quite up to the average. In North Dakota, of course, the great waterways of the Devil's Lake and Dawson countries have produced their myriad of fowl in much the usual abundance. A good many Dakota canvasbacks go to the markets in Baltimore, Md., once the center of the canvasback cult of the world. Thereby hangs a tale. Last week a lot of these Dakota ducks were seized in Baltimore ahead of the Maryland season, and it is gratifying to state that the judge before whom the case was tried upheld the Maryland law, which runs to the effect that illegal game cannot be held in possession, no matter where it comes from.

Another bit of export news comes from Minnesota. Messrs. A. F. Stolt, Fred La Barre and Ben Froelich, of Waterloo, Iowa, went hunting in Minnesota and had good luck. They started back home with a nice bunch of birds, but happened to meet one of Sam Fullerton's wardens, who relieved them of their game. They returned empty handed to their homes. Expressing game is not a safe industry in Minnesota.

The State's Attorney's office of Texas hands down an opinion on the construction of the Texas game law, which runs to the effect that a man may not ship game by any transportation company, though he may carry game out of the country upon his own person. This covers deer, antelope, turkeys, geese, prairie chickens, quail, plover and jacksnipe. The ruling states that the law is not intended to prevent a man from taking home some game, but is meant to prevent his shipping game.

Quail.

This is a good quail year in Ohio, Indiana and Illinois. Take your dog and go south 100 miles in Indiana or Illinois. Get off at any town. Go to the barber shop and borrow the barber's dog, leaving your own dog at the livery barn, then go out almost anywhere, and you can kill a bunch of quail. Or, at least, the barber can.

Colorado Game Law.

The mooted game law of Colorado, earlier attacked as unconstitutional, has been sustained in every particular.

Ways that are Dark.

They are having fun with the sparrow law in Michigan this fall. The law itself is proving a boon to a good many poor fellows who would otherwise have to work for $2 a head on election day. Down in Indiana they have a way of putting out doctored grain for sparrows and catching about a thousand at a clatter. The State line between Indiana and Michigan is but an imaginary thing. You do not stub your toe against it as you walk from one State to the other. With unstubbed toes, men have walked from Indiana into Michigan, bearing with them 50,000 head of sparrows, for which much gold can be obtained under the Michigan sparrow bounty. Sparrow hunting has become a fine art. When the expert sparrow bounty man goes into town to collect his hard earned wealth, he nearly always manages to arrive at the house of the town clerk just about dark. He has his birds in a large pail, and he has taken care that these birds are none too fresh. The town clerk is supposed to count these birds, but he doesn't. "Take 'em away," he says, "and keep the change." Thus the sparrow hunter gets an O. K. practically on his own statement. This would seem to be shrewd enough, but does not mark the limit of the hunter's ingenuity. Sometimes he appears with a bucket of birds which in reality is a bucket of sawdust, with a few layers of malodorous birds on top. The clerk usually accepts the count without question. Nor is this all. Not satisfied with robbing the State of Michigan of sums probably aggregating several thousand dollars, the sparrow hunters have now taken to forging orders. Several arrests have been made on the latter head, and more are expected to follow. As showing the boldness of some of the hunters, it may be stated that one of them asked for an order of $35.80, for 1,790 dead sparrows. This was at Sandstone, Mich. The clerk asked to see the birds, and the most that could be produced was one pail of sawdust that contained ten sparrow heads. He refused to accept this doctrine of sparrowtorial expansion. Thus is the frugal and hard working man crushed down under the heel of an imperial government.

A MAINE HARVEST HOME EXHIBIT.

Snipe.

Does anybody know where there are any jacksnipe? I have heard that around the duck marshes of Wisconsin some snipe were in, and I have reports from Lake Minnetonka stating that a good flight is in there this week. I have, however, heard nothing from Indiana marshes which would lead one to suppose that a trip for snipe would yield any decent returns, and can not say that the snipe situation is altogether satisfactory.

Mongolian Pheasants in Wisconsin.

In several of the Western States a very interesting and important work in acclimatization has been going on, one of great interest to sportsmen, though perhaps not fully appreciated. In this importation and rearing of the Mongolian pheasant the State of Ohio has taken a most intelligent and advanced position. In Wisconsin also equal strides have been made. I have from time to time made mention of the pheasantry of Mr. Howard Bosworth, of Milwaukee, whom I take to be the pioneer in the Mongolian pheasant industry in that State; or at least I heard of him most frequently some years ago. Mr. Bosworth is, however, by no means alone in this good work in Wisconsin. The breeding of these birds has been carried on successfully at Tomah, and I have often had occasion to mention the turning out of some of the birds to take their chances in the woods. Readers of FOREST AND STREAM will be interested in the information contained in a letter, kindly sent me by Mr. James A. Wells, of Tomah, Wis., in which he says:

"I should like to give you a short history of what Tomah has been doing, and is now doing, for game birds in the State of Wisconsin.

"In 1896 the Legislature of the State of Wisconsin appropriated $500 for the purpose of breeding and rearing pheasants, and to stock the uplands and breeding grounds of the State with these noted game birds. The money was placed in the hands of the State fish and game wardens, and under the supervision of Superintendent Nevins, and we learn that several pairs were put out in the Lake Superior region last fall, whereas they should have been kept until spring before being set out. We have not learned that much if any increase or benefit has been realized from this fall planting in a region altogether too far north, with sparse feeding grounds, deep snows and extremely cold weather.

"Here in Tomah we have a pheasantry under the management of Mr. J. F. Blome, which has proven successful, and this spring there was formed the Tomah Fish and Game Protection Club, with about fifty members, who purchased from the above-named gentleman seven pairs of the English ring-necked varieties, which were put out in this immediate vicinity last spring, great care being taken to place them in close proximity to the creeks and feeding grounds, and the pledge of adjacent farmers to look after and protect them was easily secured. Most of them have been seen, and so far as heard from have hatched out from ten to twenty young to each pair, which are now nearly full grown, mature birds, and strong flyers.

"This club has also purchased ten pairs more of the young birds, which it will set out the coming spring of 1899, and by 1901, the protection limit set on them by the State, we think this will be a neighborhood well stocked with these noted game birds.

"Without the aid of any of the State funds, this club, organized last spring, and composed of fifty of Tomah's leading sportsmen and business men, have made a beginning that shows that these birds can be successfully raised in Wisconsin, with proper protection. They have also made a determined effort to see that the game laws are properly enforced.

"The officers of the club are as follows: Editor J. A. Wells, President; G. A. Altenberg, Vice-President; C. J. Wells, Secretary; L. W. Earle, Treasurer.

"The pheasants put out last spring were placed in suitable locations, from two to five miles from the city, and the club intends to extend the supply next spring to the extreme limits of the grounds Tomah's sports hunt over in the open season.

"Mr. Blome intends to raise from 1,000 to 1,500 birds next spring, and the club will have no trouble in securing the birds they want for future planting. Mr. Blome has been in the pheasant business for several years, and has met with good success. He is an ardent sportsman and a true lover of birds, hence his unparalleled success.

"Next spring we shall endeavor to inform you how our birds came through the winter. One thing, however, is evident, and that is that old birds set out in the spring, and hatching their young in the fields, will be better prepared for winter protection than birds set out in the fall, wholly unacquainted with the nature of the country, and the location of water and feeding grounds."

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

Told Just as it Happened.

MORGANTOWN, W. Va., Oct. 18.—The autumn evening was fine. It was generally known that coons did abound in goodly numbers in the surrounding forest, but not a coon dog of satisfactory reputation was in all the land. A coal-black dog with a white spot in the center of his breast, belonging to one of our number, had all the visible qualities of a coon dog. "Boys, let's go coon hunting to-night with our dog! I believe he'll put 'em up all right." Agreed! Guns, axes and lanterns were hustled out, and as darkness enveloped the surroundings we stole forth with every prospect of fun. Deep and yet deeper into the forest we went, seldom seeing the dog—because he was behind in the dark.

"Well, doesn't it beat all how the old fellow searches?"

"Yes; I always thought a chance was all he needed to make a good coon dog."

"Suppose we stop and wait; he may have found a trail."

We stop and sit down, miles from home, in a likely place for coons. We wait fifteen minutes.

"I'm only afraid he has treed one away out of hearing."

"I thought I heard him bark away over on that ridge across the creek."

The oppressive stillness makes everything weird and lonely. Our imaginations are busy picturing the noble and fearless old dog away in the depths of the lonely woods, faithfully striving to unravel a crooked coon track and run it to tree, or barking and viciously tear-

ing the bark from a tree in which are a whole family of coons, so far away that we can't hear him.

In half an hour we are almost desperate with suspense and loud in praise of our coon dog.

"Suppose we call him?"

"No, that won't do; it might spoil him."

"What's that white spot over there in the dark?"

We swing the lantern round to see, and there, not 30ft. away, is the faithful old dog, where he has been patiently waiting for us to start. And we did start—home.

EMERSON CARNEY.

A Pacific Coast Instance.

SAN FRANCISCO, Oct. 18.—*Editor Forest and Stream:* Apropos of your recent articles on mankilling sportsmen, I send a pat instance of criminal carelessness which occurred a few weeks ago about forty miles from this city. An account of the occurrence was published in the local papers at the time, but the incident had slipped my mind until a few days ago, when an old medical friend, who lives near the scene of the "accident," while paying me a visit gave me a more explicit account of the affair.

One evening two well-grown lads, one of whom had had some experience in hunting, set out for a night hunt for deer in a thickly-wooded section of the country. After a time they discovered a small, bright light shining through the tangled undergrowth. Aha! that is the eye of a big buck. A .44-40 Winchester is aimed at the buck's head, the trigger is pulled and—a loud human cry of agony breaks the stillness. Shortly afterward my medical friend was summoned to the little summer cabin of a gentleman in a secluded part of the hills. Arriving, he found two bright young misses each lying suffering from a fresh bullet wound, with their stricken parents benumbed with brief and anxiety. Calling other medical assistance, my friend found the .44 bullet, fired by one of the foregoing lads, had passed through the shoulder of the elder daughter and had then pierced the breast bone of the younger. After a severe surgical operation the flattened bullet was found lying against the heart sack (pericardium) and was removed. A little more *vis a tergo* and the bullet would have penetrated the heart cavity, with a quickly fatal result. The children are recovering.

The perpetrators of this and of all such "accidents" should be permitted to meditate for many moons on a clarifying diet of bread and water, in the hope and belief that they might emerge from such seclusion possessed of at least a glimmering of prudence and caution.

ROEEL.

The Repeating Shotgun.

Editor Forest and Stream:

In your issue of Oct. 1 a correspondent argues in favor of the use of this gun on the score of economy and shooting quality.

As to the first: I recently saw in a dealer's window a very attractive double hammerless at $21, and another, a hammer gun, at $22, both standard makes. So evidently his first point is not well established.

And as to the other: What, with the superb quality of the modern gun, supplemented by the great strength of our powders, making them far more effective than those in use a few years ago, when game was plentiful, it would seem as if any reasonable person should be satisfied with their shooting qualities.

There are times when the use of this gun would lead not only to slaughter, but to waste. I saw a friend hunting quail recently in a marsh where the reeds were as high as his head. Under slightly more favorable circumstances and with a repeating gun he might have killed four birds; as it was, he killed one, which his dog retrieved, but it is doubtful if he could have found the others had they been there. With a rapidly diminishing supply, it is manifestly time for sportsmen to show some consideration for the game, and incidentally themselves and others, in matter of sport for future years.

"After us the deluge," is a bad principle to work on, and your columns bear evidence as to how much it is deprecated by thinking sportsmen. Notwithstanding what your correspondent says, I believe it is the general impression that four of every five of these guns purchased go into the hands of persons who desire to kill all the game in sight.

G. H. B.

SCRANTON, Oct. 28.

New Jersey Game Interests.

THE following letter was written by Mr. J. L. Robertson, a New York business man, whose home is in New Jersey. "I feel," says Mr. Robertson, "that at my time of life, when my greatest pleasure is to go up to my shanty on Lake Culver and have fairly good fishing during the summer, and in fall with my dog and gun find some game in the woods and bush, I cannot feel satisfied to sacrifice these pleasure." Up to this time, we understand, Mr. Robertson has not received any response to his letter:

NEW YORK, Oct. 10.—Honorable Foster W. Voorhees—Dear sir: It is quite generally understood by sportsmen in New Jersey that you are antagonistic to the prevailing game laws, and if elected Governor would favor making such a change that our woods and streams would soon become depopulated. I represent a large contingency, and feel just as is indicated above, and although a Republican and resident of New Jersey, would hardly feel satisfied to support you or advise my friends to do so without some definite word from you as to your course in this respect if elected. Game protection is more dear to sportsmen than the question of State politics, and it would be a matter of much regret to me to openly advise that large element to vote otherwise.

I trust you will consider this of sufficient importance to plainly define in writing your views and the course you would pursue if elected. Respectfully yours,

(Signed) JAMES L. ROBERTSON.

"Every kind word you say to a dumb animal or bird will make you happier." The wheelman should remember this when a big dog seeks to sample his calf.

Two Deer.

CORNISH, Me., Oct. 28.—The people of this vicinity, especially the sporting contingent, were greatly excited last night over the shooting of two deer by G. W. Adams, these probably being the first animals of this species to be killed in the immediate vicinity within the memory of any but the oldest inhabitants.

Deer have frequently been seen through the summer in this and adjoining towns, and at the opening of the shooting season a doe and two fawns were located in a tract of plains land on the Hiram side of the Ossipee, where they seemed determined to remain in spite of the most persistent hunting, in which about everybody joined who could carry a gun.

Yesterday morning, however, Mr. Adams tracked them down the valley to a similar tract, by the river, where he succeeded in finding them late in the afternoon, with the above fortunate result. The spot was not a mile from the village.

The singular part of Mr. Adams' achievement lies in the fact that he has hitherto taken no interest in hunting for years; yet, notwithstanding his inexperience, but three shots were required to dispatch his game, all of which took effect, and the old doe, which was one of the pair, being dropped in its tracks at a single shot. The old heads frankly admit that George has "wiped their eye" this time.

Both deer were in good condition, the fawn weighing 109lbs. and the doe 185lbs. The other fawn was shot early this morning by Mr. Ira Clemons, also of this village.

TEMPLAR.

A Maine Deer Hunting Case.

WEST LEBANON, Me., Oct. 17.—*Editor Forest and Stream:* Mr. Samuel Shapleigh told me yesterday that in August last he saw a large buck come running up through his field, and the pasture in front of the house I am now writing in; and after two or three attempts it succeeded in getting over the stone fence along the road, which it crossed and stepped on the lawn within 50ft. from where I am now sitting. There it stood for some time looking around, and finally seeing Mr. Shapleigh (who was standing in front of his house, less than twenty rods away), started off down the road. Fifteen minutes later Mr. Shapleigh saw two hounds coming through the fields on the deer track. When they came into the road Mr. S. caught one of them and tied it up, but could not get the other. The Maine farmhouses and barns are so connected that there is a lawn surrounded on three sides and open to the road. The deer was inside of this enclosure, which in this case was 50 by 80ft. There is a driveway through the intermediate building between house and barn, but as the house was not occupied at the time the driveway was closed; had it been open, Mr. Shapleigh thinks the deer would have gone through, as the back door opens in an orchard on rising ground from the building.

This house was for many years the summer residence of the late Ole Bull, the famous Norwegian violinist. Gov. Black, of New York, lived in it when a boy, and attended the academy in the nearby hamlet of West Lebanon.

J. L. DAVISON.

Currituck Game.

CURRITUCK, N. C., Oct. 24.—Our opening day for ducks, geese and swans is Nov. 1, and unless all signs fail we shall have the finest shooting we have had for many years. Currituck Sound is literally filled with wild celery; the ducks and geese are here in countless thousands, and the swans always arrive about the first day, mostly all arriving in two or three days. Our quail crop is also a good one. For the benefit of any one wishing to come to Currituck and not knowing where to go, would advise for both quail and ducks to write to Mr. W. H. Bray, Currituck Court House, N. C.; for ducks, geese and swans, O. Ewell, Virginia Beach, Va., for his grounds are about twenty miles south of the Princess Anne Hotel. These are the only places in this section where sportsmen can be accommodated, unless they belong or are invited to some of the numerous clubs.

MORE ANON.

The Game Hung Up.

NEW. YORK, Oct. 8.—*Editor Forest and Stream:* So many of my friends have been interested in the photograph which I send herewith, it occurred to me that FOREST AND STREAM might like to reproduce it. It was taken at Norcross, Maine, the point on the Bangor & Aroostook Railroad, where sportsmen who visit Mount Katahdin by way of the west branch of the Penobscot begin their canoe trip.

I recently made the trip in company with Mr. Arnold R. Weber, of this city, and it far exceeded our expectations. There were numberless pretty views along the route, while the outlook from the summit of Katahdin was grand beyond description. We made our camp on the junction of Katahdin Stream with the West Branch and almost on the spot where Chase painted his famous picture of Katahdin. From there it is a tramp of five miles through the woods to the base of the mountain, and the ascent is about a mile more. We saw a number of deer, and on one occasion, while on our way up the West Branch, a big cow moose came out of the woods and waded across the river not more than 50yds. ahead of the leading canoe.

WALTER K. BARTON.

Connecticut Covers.

THE rail bird season that has just closed has been one of the best in a number of years, owing to the fact that the wild oats on which the birds feed were very plenty. It was a common thing for a man to bag from fifty to sixty in a tide, which means about two hours' shooting. This sport is growing more in favor every year, and has brought up the question among sportsmen in the State of limiting the number of birds to be shot by one man on a tide. This with the true sportsman would be unnecessary in my mind, but we have a class of men that come here to shoot these birds that only kill them for practice, and then throw them away, and as they are a very fine bird to eat, it seems too bad that they should be wasted in that manner. If the same men were put into a field of white birches after woodcock, I don't think there would be any need of putting a limit on the number they were to kill, for if there was not a meat market within a short distance of camp they would be very apt to go hungry a good many times.

The quail and partridge shooting has opened up very good, and now that the leaves are getting off the trees I expect to see some fine lots of birds.

B. A. R.

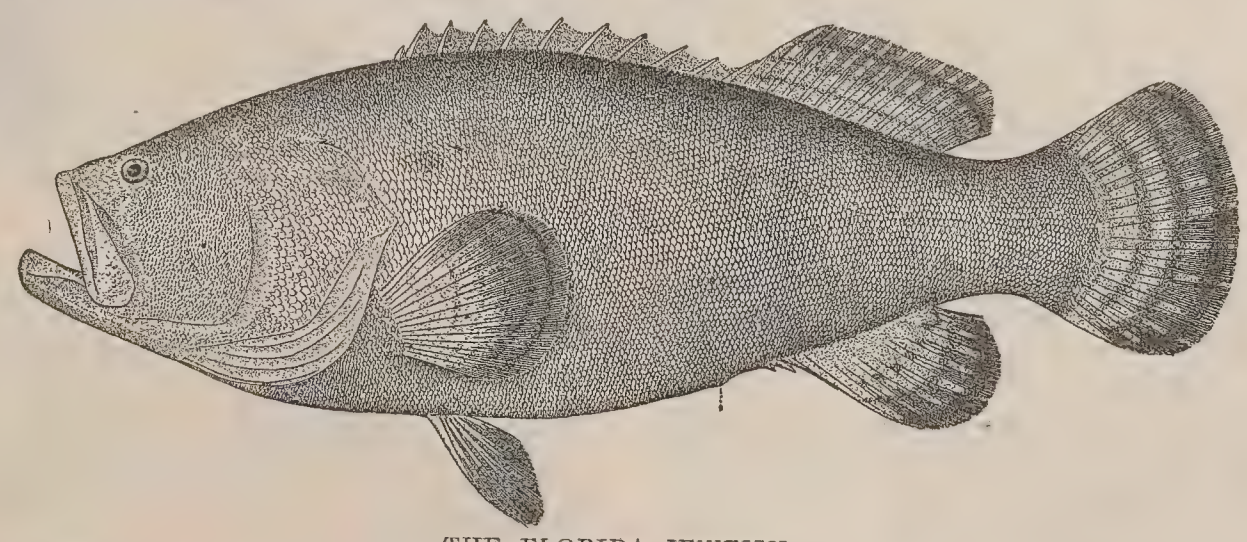
Long Island Ducks and Deer.

DUCKS, including red-heads, canvasbacks and others, are reported in big flights on the Great South Bay, Long Island. The best shooting is from Sayville east. We shall be glad to give specific directions to intending shooters.

As was said last week, Long Island deer shooting is practically entirely prevented this year by the posting of all the deer country against trespass by hunters, including the closing of the Long Island Railroad track shooting points.

Texas Wildfowl.

HIGH ISLAND, Texas, Oct. 20.—I have no doubt that some of your readers would be glad to know that at High Island the hunting season has commenced, with good sport on plenty of game of all kinds. Teal, mallards and chickens are in abundance; brant are coming in large quantities; snipe are making their appearance, and there is every prospect of a grand time for hunters.



OLD SPORTSMAN.

Sea and River Fishing.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

The Black Grouper or Jewfish.

NEW SMYRNA, Fla., Oct. 21.—*Editor Forest and Stream:* It is not generally known that the fish commonly called jewfish, warsaw and black grouper are frequently caught at the New Smyrna bridge on the North Indian River. The depth of water (23ft.), the velocity of the tide, and the protective facilities afforded by the numerous piles composing the foundation of the draw, together with the enormous numbers of sheepshead which frequent that locality and vicinity, and which appear to be among its choicest food, render this place its favorite feeding ground.

THE FLORIDA JEWFISH.

The beginning of the present season for sheepshead fishing demonstrated by the number of lines, sinkers and hooks lost that some unweildy denizen of the deep was entering a vigorous protest against relinquishing its share of the sheepshead supply. After exhausting his patience in renewing his fishing outfit, Capt. Alf. Sharp, of the sharpie Coronado, resolved to capture the voracious monster. Having a line specially prepared, baited with a live sheephead, after an entire day of patient waiting he hooked the fish, and while laboring to bring it to shore the line fouled round a spile covered with barnacles, cutting it, allowing the fish to escape, not, however, without revealing itself to be over 5ft. in length and heavy in proportion. Not to be discouraged, the next day found him patiently awaiting the convenience of the fish to take the bait provided, when late in the evening his perseverance was rewarded by a successful strike, and with the combined efforts of several men the fish was by main strength pulled to the surface of the water, thence over the railway of the bridge, thereby preventing the repetition of the experience of the day previous. On being weighed, it was

found to tip the beam at 110lbs., and was over 5ft. long and nearly 20in. in diameter.

During the past season a number of the same variety of fish were taken, one colored man coming with his wheelbarrow in regular anticipation of his catch.

The following, from the "Fisheries and Fishing Industries of the United States," published by the United States Fish Commission, relative to the above-mentioned fish, may be of interest:

"A very large jewfish will follow and finally swallow a hooked fish, usually a red snapper, with hooks, lead, line and all. If the line then does not break, the fish may be hauled in with gaffs. The jewfish attains an enormous size, and specimens weighing from 80 to 100lbs. have been caught. The smaller fish are quite choice, but large ones are too coarse and tough to be salable."

Nowhere on the East Coast of Florida are there better facilities for obtaining sport of a piscatorial nature than in the vicinity of New Smyrna. With suitable lines and reel the varieties of fish to be taken may be anticipated by the use of bait. Fiddlers or shrimp are commonly used for sheepshead, and cut bait or mullet for the majority of the other varieties of fish. Of the size of the strings taken in one day by one person, 125lbs. have been recorded. Sheepshead range from 1 to 7lbs. in weight. Other fish, consisting of choper, cavally, sea bass, trout, whiting and bluefish, are commonly caught by our winter visitors. Fishing parties in launches and sail boats from Daytona frequently visit these celebrated fishing grounds. Suitable accommodations for sojourning fishermen can be had in New Smyrna and near the fishing grounds at reasonable rates. The most desirable method for those who can afford the time and expense is to engage a boat with suitable cabin accommodations and cruise about the waters adjacent, breathing the pure salt atmosphere and enjoying nature free from the unhealthful and contaminating influences of city life.

JOHN Y. DETWILER.

CHICAGO AND THE WEST.

Bayfield Hatchery.

CHICAGO, Ill., Oct. 29.—The State hatchery at Bayfield, Wis., has been largely improved this season, though the ponds will hardly all be finished within a couple of years. This is a well-equipped and valuable hatchery and will do grand work. About $40,000 has been spent there so far.

Bozeman Hatchery.

Out at Bozeman, Mont., Dr. Henshall is grinding out fish by the million. This fall he has been shipping fish to Melrose, Red Rock, Dillon, Lombard, Dorsey, Leadboro and many others points. Shipments to points on the Great Northern and Northern Pacific roads will be kept up late this fall. Some of Dr. Henshall's fish go to the waters of the Yellowstone Park.

Minnesota Fishways.

Minnesota Fish Commission is out after the dam owners at Fergus Falls. Deputy J. H. Jones has had an executive session with a good many of the mill owners, and they have agreed to put in fishways, with one exception. The city council of Fergus Falls, being haughty, as all city councils should be, refused to put in a fishway in the electric light power dam. Warden Jones has gone right ahead and asked for bids on a nice new fishway, which he will put in himself for the city council. He will then send the council a bill. I have shot chickens with this same Warden Jones, and he is a peach.

Saving Young Bass.

CHICAGO, Ill., Oct. 22.—Here is more good news about the young bass of the upper Mississippi. Lately I mentioned the work at La Crosse, by which so many young bass were being seined out of the drying pockets and restored to the main water. Details are at hand regarding work of the same sort at Winona, Minn., further up the same stream. The sportsmen of Winona, under the lead of Dr. R. C. Mason, raised the little sum of $40 for this work. Two men were engaged. In four days they seined out twenty-four pockets and restored in all 33,000 young bass to the river. Earlier in the season they worked ten days in the same manner and restored 40,000 bass. In all, 147,620 food fish have been saved. It would seem that the money invested in this work bore about the biggest interest that ever money did. The work is something which can be prosecuted with equal cheapness and a similar success in any one of a thousand localities in the West, and the tip should be a valuable one to all anglers.

Birch Bark and Big Trout.

Mr. Jo Cover, of Ashland, Wis., is a specialist in birch bark, having written a volume of poems called "Birch Bark Ballads." Referring to the mounting of a trout skin on birch bark, which I described recently in FOREST AND STREAM, Mr. Cover goes on to say something about his own experience with big trout out in Colorado, where once upon a time he was a tenderfoot. He says:

"I can't help but reminisce as I strike the South Fork. I got out of the buckboard a mile this side of the fork, intending to fish along up to the fork, where the boys intended to camp. H. J. Caldwell, Esq., who was then secretary for Gov. Oglesby, now an attorney in Chicago, was one of the party. He diplomatically remained in the wagon. In making a cast (after I caught two or three trout of ordinary size), a big fellow showed his side as he made a snap at the hook. Whew! but I was sorry I missed him! I made another cast, and sure enough I got him. He was a big fellow. I should say about as long as my arm, and to my astonishment came out as easy as a sucker. I was so elated that I immediately struck for camp. As I came within sight of the tent I found the boys still driving tent pins, while another was arranging the fire. Striking an attitude and holding up my big trout, I said: 'Boys, how's this?' They went on driving stake pins and arranging the fire, while I held up my fish, and instead of the astonishment I had anticipated they apparently did not see the fish. Finally one of the boys remarked: 'Oh, Cover's got a fish.' Another said: 'Yes, didn't notice it before—hardly up to the average, though.' I said: 'Well, what is the matter with you fellows—don't ye know a big fish even when you see one?' The boys all laughed. 'Oh, go over there and see some big fish,'—they indicated a place under a tree. I went there and found, arranged neatly on a board, lying side by side, sixteen trout, and all but one or two bigger than mine."

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

Judge Hickey's Famous Shot.

LOCKPORT, N. Y.—Last March three Lockport men, County Judge Hickey, Sheriff Kenney and Editor M. H. Hoover, of the Lockport Union-Sun, went to Cayuga Lake duck hunting. They put up with the famous guide, Clint Martin, at his hospitable ranch, three miles down the Seneca River. The quartette were up with the dawn ready for ducks, and soon the live decoys were set in likely places in the marsh back from the river 300yds. The flight of birds was light, as compared with the previous fall, and very few were bagged. During the middle of the day none came their way at all, and the four hunters fell asleep. The judge and sheriff were in a boat 400yds. away from the guide and the newspaper man. Presently a shot was heard, and the party was all activity in a moment. The sheriff called: "Come over

here and see the prettiest set of triplets you ever laid eyes on; three pickerel that will weigh 40lbs."

We were duck hunting, and besides that sounded awful fishy, but he persisted in his iniquitous story, so the guide rowed over. Sure enough, there in the boat, nearly filling it, lay two enormous pickerel and a small one.

This is the veracious judge's story, as he told it on the spot, and a thousand times later, including his address to the jury of forty-seven at the Lockport market, where he exhibited the two pickerel shown in the accompanying photograph.

"I was awakened from a doze by hearing a ripple in the water, and arose to a sitting posture. The water stirred again near the boat, and thinking it was a muskrat, I elevated my gun and fired at the water when it stirred the third time. To my astonishment three fish came to the surface, and we hauled them into the boat, where they soon recovered from the shock and made things lively for us."

This was corroborated by the sheriff. Three pickerel at one shot. The female weighed over 17lbs., the male over 12lbs., and the little fellow 2½lbs. M. H. H.

More about the Montana Grayling.

Editor Forest and Stream:

I was very much pleased with Mr. L. V. Pirrson's article on the Montana grayling in your issue of Oct. 22. It is a valuable addition to the literature of the subject. He criticises, very justly, my statement in FOREST AND STREAM of July 23, that the grayling of Montana "exists only in the three forks of the Missouri River." It was a slip of the pen, for in FOREST AND STREAM of Sept. 10, in an article written about the same time, I say: "The grayling of Montana exists not only in the tributaries of the Missouri River, above the falls, but principally in the three forks of that river," etc. I know of its being in several tributaries of the Missouri below the three forks, as mentioned by Mr. Pirrson, and in one that he does not notice, but where good grayling fishing may be found—Tenderfoot Creek, a tributary of Smith River. I agree with Mr. Pirrson as to the best flies for grayling fishing, and two black flies that he does not particularize, Lord Baltimore and the oriole, are both good ones.

JAMES A. HENSHALL.

OCT. 28.

New York League.

Editor Forest and Stream:

Pursuant to call a meeting of the board of trustees of the New York State Fish, Game and Forest League was held in the assembly room at the Yates Hotel, Syracuse, Wednesday, Oct. 26. The board is composed of President W. S. Gavitt, of Lyons; Vice-President, R. P. Grant, Clayton; Secretary, Ernest P. Gould, Seneca Falls; Treasurer, A. C. Cornwall, Alexandria Bay. The legislative and law committee, consisting of Cornelius W. Smith, Syracuse; Percy S. Lansdowne, Buffalo; C. B. Lapham, Canadaigua; George R. Peck, Auburn, and W. E. Wolcott, Utica; and the auditing committee, the members of which are Aaron Mather, Honeoye Falls; J. E. Emerson, Lockport; Thomas D. Lunt, Dunkirk. All of the trustees were present, excepting Messrs. Cornwall, Lansdowne, Emerson and Lunt.

The meeting was called for the consideration of the introductory and preliminary work of the annual meeting of the League, which will occur at the same place on Dec. 8. President Gavitt stated that the League had been duly incorporated, and that 500 copies of the constitution and by-laws had been printed. Chairman Smith, of the legislative and law committee, President Gavitt and others spoke of the good work which was done at Albany during the last session of the Legislature. The repeal of Section 249 of the game laws, which allowed the sale of game the entire year, was considered to be a great victory for the cause of protection. The amendments to the game laws, limiting the size of black bass to be taken to not less than 10in. in length, and making a uniform season for hunting grouse, woodcock and squirrels, were also deemed steps in the right direction. The trustees admitted to membership the Saratoga Sportsmen's Association and Canandaigua Fly-Fishing Club. It was thought best not to recommend many changes in the game laws next year, although a few are believed to be desirable. The trustees favored abolishing the spring shooting of wildfowl, and making the closed season from Jan. 1 to Sept. 1; making the open season for black bass end Nov. 15, except on the St. Lawrence River; the repeal of Sections 149 and 151, and that Section 34 be amended so as to reduce the amount of the bounty on nets.

The subject of net fishing in Oneida Lake was discussed at some length, and resolutions were adopted expressing unqualified disapproval of the act of the Fisheries, Game and Forest Commissioners in granting licenses for the netting of fish in Oneida Lake or any other inland waters; requesting the immediate cancellation and withdrawal of all such licenses, and instructing the secretary to at once forward a copy of the resolutions to the commissioners.

C. H. Mowry, of Syracuse, was present at the meeting, and being extended the privileges of the floor, made some valuable suggestions in regard to protective matters.

Feb. 6.—Madison, Ala.—Alabama Field Trial Club's third annual trials. T. H. Spencer, Sec'y.

National Beagle Club's Field Trials.

THIS enterprising club held its ninth annual field trials at Hillsdale, N. J., Oct. 24-29. The attendance was large, the headquarters at Mr. Schulke's excellent, the entry list was never approached in numbers and quality, and the grounds selected for the meet gave an excellent opportunity to view the work of the beagles. Everything indeed conspired to make the week a notable one in beagle history, except the rabbits. They were hard to find, and their scarcity marred what would otherwise have been a most successful trial.

The judges were Bradford S. Turpin and Chas. W. Quynn. They worked hard from Monday morning till Saturday night, in fair weather and foul. Their task was a difficult one, as the competition in all classes was very close. Their decisions appeared to be satisfactory.

Among the many sportsmen present at the trials were A. J. Purinton, Waterbury, Conn.; Dr. R. L. Bohannan, Stamford, Conn.; D. F. Summers, Thorndale, Pa.; J. H. Van Dorn, Jersey City, N. J.; G. M. Wharton, Islip, N. Y.; J. B. Lozier, Oradell, N. J.; J. W. Appleton, H.

F. Schellhass, New York, N. Y.; John Bateman, Gravesend Beach, N. Y.; J. L. Kernochan, Hempstead, N. Y.; Geo. B. Post, Bernardsville, N. J.; Staley Doub, Frederick, Md.; Homer S. Joslin, Oxford, Mass.; H. L. Kreuder, Nanuet, N. Y.; Joe Lewis, Moodus, Conn.; H. T. Peters, Islip, N. Y.; Dr. W. E. Johnson, Etna, Pa.; Jas. McAleer, Emsworth, Pa.; Geo. F. Reed, Barton, Vt.; N. A. Baldwin, East Orange, N. J.

Monday.

The judges measured the hounds on Monday morning. All the entries were present except Brownwydd, Merry Boy, Beautiful and Nell S. After the measuring was completed the Futurity stake was started.

The Futurity.

There were but three starters in the stake. N. A. Baldwin's Rocket, by Bumper—Ada B., was drawn to run with Geo. A. Clark's Murry, by Bumper—Summer's Fly. The bye was drawn by Geo. F. Reed's Fancy, by Harker—Nell R.

First Series.

Rocket—Murry.—Put down at 10:48 in the outskirts of the village. Murry hunted a trifle better than Rocket, but scent was bad, and neither hound could drive, though two rabbits were put up. Up at 12 for lunch, and in the afternoon they were cast off again on the Stanton estate, three miles from the village. Murry showed a better nose than Rocket, and was a more energetic hunter. Up at 2:55.

Fancy—Murry.—The former was handicapped by her size, being much smaller than Murry. She ran a game race, but was inclined to be tonguey, and was not so quick in picking up a loss as her rival. Up at 4:30, having been down an hour and a half.

Second Series.

Rocket—Fancy.—The former ran indifferently, and the latter had the race much her own way. Up at 4:43, after a run of eight minutes.

First prize was awarded to Murry, second to Fancy and third to Rocket.

Two braces in Class A were then run, but they are reported below for convenience.

Annual Meeting.

President Post presided at the annual meeting. After routine business was completed the committee on revision of the beagle standard made its report, and it was ordered printed and sent to all members. It was voted to give three medals to the Westminster Kennel Club show. R. L. Stevens, H. B. Duryea and C. R. Stevenson were elected to membership. The election of officers for '99 resulted as follows: President, Geo. B. Post; First Vice-President, H. F. Schellhass; Second Vice-President, J. W. Appleton; Third Vice-President, A. J. Purinton; Secretary-Treasurer, G. Mifflin Wharton; Executive Committee, J. L. Kernochan, John Bateman, Wm. G. Rockefeller; Official Judges, Geo. B. Post, Geo. F. Reed, H. F. Schellhass, J. L. Kernochan, J. W. Appleton, Bradford S. Turpin. Adjourned.

Tuesday.

There was a thick fog in the morning, but by 10 o'clock the sun came out, and the rest of the day was warm and pleasant.

The Pack Stakes.

This stake was open to packs of four beagles. The fee to start was $5, and the first prize was 60 per cent. and the second 30 per cent. of the entry fees. There were six starters.

The Reed Pack.—In this pack were Snifter R. D., Pride, Fancy and Reed's Belle of Barton. They were handled by their owner, Geo. F. Reed, and were cast off at 7:20 in a cornfield. They were under poor control and in a long hunt for game became widely separated. When a rabbit was at last started they failed to pack, only two of the hounds being in the drive. Up at 9:45.

Hempstead Beagles.—Bellman, Bashful, Rusty and Fearless made up the pack, which was handled by J. L. Kernochan. They hunted prettily, packed well and ran a good race. Down forty-five minutes.

The Peters Pack.—The hounds in the pack were Buckshot, Buckshot, Jr., Windholme's Growler and Windholme's Flute. C. R. Grover had them under good control. They hunted their ground well, but after the game was up they drove unsteadily, overrunning badly and casting too wide at a loss. Down forty-five minutes.

The Guyasuta Pack.—The pack was made up of Panic, Guyasuta, Winona and Little Hornet, and was hunted by James McAleer. They drove at a great pace, but overrun badly and did not pack up. Down twenty minutes.

The Summers Pack.—Summers' Sailor, Belle Summers, Minnie S. II., and Summers' Bess were in the pack, which was hunted by D. F. Summers. The hounds worked well, packed nicely and ran a sharp, snappy race. Drove one hour.

The Kreuder Pack.—The pack was composed of Pilot, June, Blanche and Kitty. H. L. Kreuder hunted them and had them under excellent control. They packed splendidly, drew their ground well, harked quickly and drove steadily. Down thirty-five minutes.

The judges gave first prize to the Kreuder pack, second to the Summers pack and reserve to Hempstead beagles.

All-Age Dogs, 15in. and Under.—This stake was open to all beagle dogs 15in. and under. The fee to start was $10, and the first prize was $40, second $25 and third $10. There were eleven entries, and the drawing resulted in running A. J. Purinton's Millard R., by Millard—Haida, with D. F. Summers' Summers' Jim, by Fearnaught—Luce; Windholme Kennels' Windholme's Growler, by Directum—Fanny, with Hempstead Beagles' Nimrod, by Noble—Countess II.; Somerset Kennels' Somerset, by Pulboro Crafty—Garnet, with J. B. Lozier's Cry Baby, by Racer, Jr.—Beastie; H. L. Kreuder's Roy K., by Rattler III.—Dora, with H. S. Joslin's Trick, by Clyde Lady—Novice; D. F. Summers' Summers' Sailor, by Sailor—Summers' Fly, with N. A. Baldwin's Rocket, by Bumper—Ada B.; Geo. F. Reed's Reed's Tom, by Harker—Scorcher, drew the bye.

First Series.

Millard R.—Summers' Jim.—This brace was handled by Geo. F. Reed and D. F. Summers, and was down forty-five minutes. Jim was timid and refused to leave his handler till the rabbit was up. Then he entered into the sport in a half-hearted way, Millard doing all the work.

Windholme's Growler—Nimrod.—Growler was hunted by C. R. Grover, and Nimrod by Geo. F. Reed. They were twice put down, and on the second occasion ran a long, fast race in thick cover. Only a little of the run could be seen, but both hounds worked well.

Somerset—Cry Baby.—The former was hunted by Geo. F. Reed and the latter by his owner. They were down an hour and twenty minutes, and two rabbits were put up. The first was lost after a short run in thick briers. The second led a long chase in timber, Baby having a trifle the better of the race.

Wednesday.

Hard rain fell almost all day. The trials were continued notwithstanding the storm, as there was no time to be wasted.

Somerset—Cry Baby.—This brace was cast off on the Lozier estate at 8.10. Rabbits were hard to find, but at last one was put up and led a good chase, much of it being viewed by the hunting party, who had sought refuge from the storm under a hay rick. Up at 8:45.

Roy K.—Trick.—The latter was handled by his owner and the former by A. E. Keen. Roy hunted indifferently, waiting for Trick to find. After the game was afoot Roy took more interest in the race, but the honors in both hunting and driving went to Trick. Down forty-five minutes.

Summers' Sailor—Rocket.—These hounds were in charge of their owners, and there was a long, tedious hunt before game was found. Then a cottontail was jumped that led a fast race in cover so thick that the judges could not keep in with the chase. Little of the work could be seen. Down half an hour.

Reed's Tom—Windholme's Growler.—This brace was hunted by Geo. F. Reed and C. R. Grover. For nearly two hours they were worked through a promising country, but without result.

This ended the day's work, and in the middle of the afternoon a thoroughly drenched and not very enthusiastic crowd of rabbit hunters returned to the club's headquarters.

Thursday.

A cool, clear morning was a welcome change from the disagreeable weather of yesterday. The scene of the day's hunt was West Ironsburg, just over the New York State line.

Reed's Tom—Windholme's Growler.—This brace was cast off at 7:40, to finish their undecided race of yesterday. Two rabbits were started, but both were lost after short drives. Growler ran riot and Tom appeared to be off in nose. Up at 8:45.

Second Series.

Trick—Rocket.—They were put down at 8:50, and ran a long, dashing race in cover and open. Trick was quicker in catching the turns than Rocket, though the latter was faster on a straightaway drive. In hunting Trick was far superior. Up at 10:40, while driving.

Summers' Sailor—Nimrod.—This brace was put down at 10:43 where the last brace was taken off. Nimrod caught a couple of turns and then the chase was abruptly ended by a sight chase, after which the game was lost. Then another cottontail was started in a thicket of locust trees, and here Nimrod had things much his own way, Sailor leading off at great speed after his mate had caught the turn. Up at 11:17.

Millard R.—Cry Baby.—This brace was put down at 11:17, and at lunch time nothing had been accomplished. After lunch they were again cast off and ran two races in thick cover on the Verdon farm. Their cry was musical, and the chase a good one. In driving the hounds were about equal, but in hunting Millard was the better. Up at 2:18.

Third Series.

Millard R.—Trick.—This fine couple ran a beautiful race in open fields, where every movement of both rabbit and beagles could be seen. Trick caught the majority of the turns and was a better hunter than Millard. Up at 2:45.

Cry Baby—Nimrod.—Down at 2:50, and drove at good speed to a culvert, where the game went to ground.

The judges then ran a formal heat between Millard R. and Nimrod, and announced the winners: First, Trick; second, Millard R.; third, Nimrod; reserve, Rocket.

All-Age Bitches, 15in. and Under.—This stake was open to all bitches 15in. and under. The first prize was $40, the second $25 and the third $10.

The drawing resulted in running Waldingfield Beagles' Dahlia, by Pulboro Crafty—Boundy, with D. F. Summers' Summers' Bess, by Hooker—Belle S.; Guyasuta Kennels' Winona, by Sailor—Lucy S., with Hempstead Beagles' Rusty; D. F. Summers' Minnie S. II., by Sailor—Minnie S., with Guyasuta Kennels' Maywood, by ch. Lee II.—Panic; H. L. Kreuder's Blanche, by Frank Forest—Ina, with Geo. F. Reed's Belle of Barton, by Col. Lee—Haida R.; H. L. Kreuder's June, by Lee II.—Panic, with John G. Reed's Splitter, by Wanderer—Triumph; Hempstead Beagles' Bashful, by Brawler—Languish, drew the bye.

First Series.

Dahlia—Summers' Bess.—Handled by Geo. F. Reed and D. F. Summers respectively, they were put down at 3:45. The race was a poor one. Dahlia was under no control and Bess was almost too timid to run in a field trial. Two rabbits were started and Dahlia had the best of what little run there was. Up at 4:30.

Blanche—Belle of Barton.—This couple was laid on at 4:45. The former was hunted by H. L. Kreuder, and the latter by Geo. F. Reed. At 5 o'clock they were taken up, no start having been made.

Friday.

It was a perfect autumn day, and rabbits were found in plenty during the morning's hunt. Scent was fairly good in the morning, but in the afternoon it was very bad. It was the most enjoyable day of the trials thus far. Class AA was finished and Class B begun.

Winona—Rusty.—This brace was put down at 6:40, in charge of Jas. McAleer and Geo. F. Reed. They hunted well and put up two rabbits, both of which were driven short distances and lost. Up at 7:27.

Minnie S. II.—Maywood.—This brace was cast off at 7:30. Minnie was hunted by D. F. Summers and Maywood by Jas. McAleer. Maywood was easily the better of the couple. She took the lead in a fine piece of trailing, and when the rabbit was up showed Minnie the way to a culvert where the cottontail had taken refuge. Up at 8:25.

Blanche—Belle of Barton.—Geo. F. Reed had Belle in charge, while Blanche, the heroine of many a hard fought race, was hunted by H. L. Kreuder. The first rabbit put up had been making his home under a farm house, and the race was a laughable one, when hounds, handlers and rabbit were all in the door yard together. The rabbit escaped with his life. A second rabbit was jumped in a weed field, and after a long and exciting race he was driven to earth. In this run Blanche had a little advantage over Belle. Both are fine, speedy hounds, and it was nip and tuck from jump to finish. Up at 9:18.

June—Splitter.—This lively pair was put down at 9:20. H. L. Kreuder and Geo. F. Reed were the handlers. They ran a fine race, Splitter catching most of the turns. June is very speedy, but she did not press for the lead, being content to follow Splitter. This was as fast a race as was seen during the week. Up at 9:50.

Bashful—Minnie S. II.—J. L. Kernochan hunted the former and D. F. Summers the latter. Neither hound was in form. Both ran heel and Minnie was very excitable and tonguey. Two rabbits were started, and one was lost after a short run, while the other was not driven at all. Up at 10:30.

Second Series.

Splitter—Maywood.—Handled as in the first series, they were put down at 10:40. Field after field that ought to have held rabbits was drawn blank, and a more tedious hunt for game never occurred at a field trial. Lunch time was a welcome relief, and then the party crowded into the barges and went to the Stanton estate. Here at last a rabbit was put up. The first burst was up a steep side hill, and bunny's heart was nearly broken when he reached the top. He narrowly escaped with his life, for the beagles cast within a few feet of him as he squatted in a grass field. The bad scenting saved him and he at last escaped. In this chase Splitter showed a level head and keen nose. Maywood was tonguey and not always true. Up at 2:00.

Blanche—Maywood.—Scent was very bad, and though two rabbits were started, neither could be driven far. Up at 3:05.

The judges then announced their decision: First prize to Splitter, second to Blanche, third to Maywood, and reserve to Belle of Barton.

Class B—All-Age Beagles, 13in. and Under.—This class was open to all beagles 13in. and under. The forfeit was $4, and $4 additional to start. The first prize was $35, second $20 and third $10.

The drawing resulted in running Geo. F. Reed's Snifter R. D., by Wanderer—Triumph, with Waldingfield Beagles' w., b. and t. dog Orator, by Pulboro Crafty—Cinderella; Guyasuta Kennels' w., b. and t. bitch Betty Zane, by Buckshot, Jr.—Minnie S., with Windholme Kennels' b., w. and t. bitch Windholme's Flute, by Raffler—Rowetta; Hempstead Beagles' w., b. and t. bitch Fearless, by Tyrant—Frantic, with G. B. Kerr's w., b. and t. dog Staley, by Hooker—Belle Summers; Chas. P. Post's w., b. and t. dog Frankie P., by Frank Forest—Bady, with Geo. F. Reed's w., b. and t. bitch Fancy, by Harker—Nell R.; Wharton Beagles' w., b. and t. bitch Wharton's Bashful, by Bumper—Bessy, with Somerset Kennels' b., w. and t. bitch, Teckla, by Pulboro Crafty—Cinderella; Dr. R. L. Bohannan's b., w. and t. bitch Style, by Little Corporal—Cornforth's Gypsy Maid, drew the bye.

First Series.

Snifter R. D.—Orator.—G. F. Reed hunted Snifter and J. W. Appleton Orator. They were cast off at 3:22, and were so well matched that it was difficult to distinguish one from the other. They were energetic hunters, and ran two short races without great advantage to either hound. Up at 4:20.

Betty Zane—Windholme's Flute.—The former was in charge of Jas. McAleer and the latter of H. T. Peters. Neither beagle was under control, and at 5:00 they were ordered up, nothing having been accomplished.

The field trial committee held a meeting in the evening, and it was voted to call the Derby off.

Saturday.

The last day of the trials was cloudy and chilly. A heavy mist fell in the morning, but ceased in the afternoon.

Fearless—Staley.—This fine brace was put down at 6:45. Fearless was handled by Jas. L. Kernochan and Staley by D. F. Summers. The first rabbit put up was a small one and furnished no sport. The second one led a splendid chase that tried the running powers of the judges and handlers to the utmost. The race was a very close one, now one and then the other catching the turns, but Staley appeared to have a little advantage over Fearless. Up at 7:24.

Betty Zane—Windholme's Flute.—This wild brace was put down at 7:26, handled by Dr. Johnson and C. R. Grover. It was exceedingly difficult to keep track of either beagle, as they refused to obey their handlers at all. Finally at 9:05 they were ordered up, Flute having disappeared. She was later found at the kennels.

Frankie P.—Fancy.—The former is one of the smallest beagles that ever ran at a field trial. He was hunted by C. P. Post and Fancy by Geo. F. Reed. After a long, discouraging hunt for game, a rabbit was found, but

almost before the chase had begun the party were warned off for trespassing. Down at 9:20 and up at 10:20.

Wharton's Bashful—Teckla.—This brace was down at 10:30, and was worked by J. M. Wharton and D. F. Summers. The first rabbit put up was quickly driven to earth. The second ran well and made a good chase. Teckla proved herself more level headed and also faster than Bashful. Bashful is very small, but ran a game race.

Style.—The bye was handled by Dr. Bohannan, and Betty Zane ran with her. Betty was steadier, and with a better nose than her mate. Down at 11:10 and up at 11:42.

Second Series.

Fearless—Betty Zane.—They were cast off at 12:35 and a rabbit was found at once. Fearless led the chase, catching the losses quickly. Up at 12:50.

Staley—Snifter R. D.—Put down at 12:55. At first the advantage in the chase lay with Snifter, but later Staley did some cold trailing that won the race for him. Up at 1:30.

Orator—Frankie P.—This brace was ordered down at 1:34. Orator was too fast for Frankie, but the little fellow kept close at his heels, and now and then caught a turn. Up at 2:15.

Third Series.

Fearless—Orator.—This brace ran a dashing race, in which Orator had the advantage in nose and speed. Down fifteen minutes.

Orator—Staley.—The couple was cast off at 2:48, and the last race of the trials proved to be one of the best. A check just in time was all that saved the rabbit's life. The beagles ran at a great pace, and there was little difference in their merits. Up at 3:42, and the trials were over.

The judges gave first prize to Staley, second to Orator, third to Fearless, and reserve to Snifter R. D.

J. A. B.

Central Beagle Trials.

PITTSBURG, Oct. 29.—*Editor Forest and Stream:* The following are the nominations to the field trials of the Central Beagle Club. Classes A, B, C and D closed Oct. 20. The other classes were closed at the drawing.

Class A, for dogs and bitches 13 to 15in., whelped on or before Jan. 1, 1897: Fannie (Base—Dell), Nell S. (Darter—Sparkle), Pilot II. (ch. Pilot—Bell C.), Dandy (Bumper—Blossom H.), Guyasuta (Sailor—Gipsy Weller), Tomer Spry (Base—Rena), Roxy B. (Base—Midge).

Class B, for dogs and bitches 13in. and under, whelped on or after Jan. 1, 1897: Harker's Rose (Harker—Rose Weller), Staley (Harker—Bell Summer), Betty Jane (Buckshot, Jr.—Minnie S.), Tansy (Bumper—Blossom H.), Boliver (Sailor—ch. Snow).

Class C, for dogs and bitches, all ages, 13 to 15in., that have not been placed first in any all-age class in field trials: Nellie S. (Darter—Sparkle), Pilot II. (ch. Pilot—Belle C.), Bugle II. (Sandy—Phyllis), Birdie S. (Spotty—Judy W.), Maywood (ch. Lee II.—Panic), Dorsey's Woodman (Chimer—Bell of Woodward II.), Winona (Sailor—Lucy S.).

Class D, for dogs and bitches, all ages, 13in. and under, that have not been placed first in any all-age class in any field trials: Trump (Merrell—Ida), Smith Perry (John Bull—Lady Glenwood), Staley (Hucker—Bell Summers), Betty Jane (Buckshot, Jr.—Minnie S.), Doc Blue Cap (Doctor—Blue Maid), Madge H. (Streamer—Blossom H.), Bell of Franklin (John Bull—Belle), Lady Rose (Peterson's Jesse—Rose), Little Prince.

Continental Field Trial Club.

HILLSBORO, N. C., Oct. 25.—I inclose list of entries for our All-Age Stake. There are 17 setters and 13 pointers. The trainers are located as follows: Wm. Tallman, Greensboro; C. E. Buckle, Sherrells Ford; Geo. E. Gray, Newton; D. E. Rose, Cleveland; W. H. Hammond, Concord; Victor Humphreys, Houstonville; Chas. Tucker, High Point, all in North Carolina.

I have seen a great many young birds and very few old ones. The cover is rank.

All-Age Stake.

POINTERS.

Dr. J. S. Brown's b. and w. dog Ned B. (Rap—Lady).

Dr. J. S. Brown's l. and w. dog Will B. (Rip Rap—Croxie Kent).

D. E. Rose's (agt.) o. and w. dog Elgin's Dash (Kent Elgin— ——).

D. E. Rose's (agt.) l. and w. dog Chisolm (Von Gull—Croxie).

George N. Clemson's l. and w. bitch Highland View Revel (Ridgeview Cash—Blithesome).

George N. Clemson's l. and w. bitch Highland Riot (Ridgeview Cash—Blithesome).

W. Gould Brokaw's l. and w. bitch Fairview Meg (Prince Regent—Spinett).

Charlottesville Field Trial Kennels' l. and w. bitch Rupee (Delhi—Selah).

Wm. H. Hammond's (agt.) l. and w. bitch Forest Belle (Rap's Rip—Lafford's Pearl).

J. B. Bisbee's b. and w. ticked dog Ripstone (Rip Rap—Pearl's Dot)..

Del Monte Kennels' b. and w. dog Tick Boy (Tick Boy—Jilt).

G. E. Gray's (agt) l. and w. dog Young Jingo (Jingo—Pearl's Dot).

Tyro Kennels' l. and w. dog St. Clair (Rob—Ripse).

SETTERS.

P. Lorillard, Jr.'s, b., w. and t. dog Why Not (Eugene T.—Miss Ruby).

P. Lorillard, Jr.'s, b., w. and t. dog Wise Child (Eugene T.—Maiden Mine).

W. W. Titus' b., w. and t. dog Joe Cummings (Antonio—Piccaola).

Charles Sheldon's b., w. and t. Turnavo (Antonio—Laska).

Herbert Parson's b., w. and t. bitch Larissa (Antonio—Laska).

D. E. Rose's (agt.) b., w. and t. dog Sport McAlister (Tony Boy—Blue).

D. E. Rose's (agt.) b., w. and t. bitch Pearl R. (Sam Gross—Donna Inez).

Eldred Kennels' b., w. and t. bitch Loretta (Gladstone's Boy—Rill Ray).

W. Gould Brokaw's l. and w. bitch Fairview Bell (Edgemark—Bell).

Charlottesville Field Trial Kennels' b. b. bitch Pin Money (Count Gladstone—Daisy Croft).

J. B. Bisbee's b. and w. dog Paul (Paul Gladstone—Sing).

Del Monte Kennels' o. and w. bitch Minnie's Girl (Antonio—Minnie T.).

Del Monte Kennels' b., w. and t. dog Sam T. (Luke Roy—Betty B.).

Victor Humphrey's o. and w. dog Cotton Grove Dick (Dick—Donna).

S. W. Carey's b. and w. ticked bitch Shot's Kate (Albert's Shot—Sal English).

Edwards & Devereux's b., w. and t. dog Uncle B. (Harwick—Dan's Lady).

Fox & Blyth's b., w. and t. dog Dave Earl (Count Gladstone—Dan's Lady).

Leon Ernest Seay's l. and w. setter dog Dick (Dick Noble—Donna).

W. B. MEARES.

Dogs for the Klondike.

MONTREAL, Oct. 26.—A schooner load of Labrador and Eskimo dogs for the Dominion Government has arrived at Quebec, and will be shipped in a day or two by the Canadian Pacific Railway for the Pacific Coast, whence they will be taken to the Klondike. There they are to be employed in the winter carriage of mails. They are all well-trained animals, weighing each from 80 to 100lbs. and valued at $20 to $40 apiece. They were collected at many points on the North Shore of the Gulf, and number 140 in all. They are quite easily managed by those used to them, but ferocious when aroused. One team of six dogs which is included in the lot set upon its late owner, a trader of the Coast, and killed him. They are being fitted out with harness and commetiques, or Eskimo sledges, which they often draw over the snow for fifty or sixty miles a day. Sometimes three, sometimes five pairs of dogs are attached to the commetique, besides the guide.—New York Evening Post.

American Fox Terrier Club Stakes.

BOSTON, Mass., Oct. 24.—As the Metropolitan Kennel Club, of Brooklyn, will not hold a show this year, the stakes that were to have been judged there—namely, Home-bred Puppy Stakes and second division 12th Grand Produce Stakes—will be judged at the show of the American Pet Dog Club in New York, where also the following specials "open to members and American-bred fox terriers only" will be offered: $2.50 each for best fox terrier in open class, smooth; best wire; best dog in novice class, smooth; best bitch in novice class, smooth; best dog in novice class, wire; best bitch in novice class, wire.

AMERICAN FOX TERRIER CLUB.

Canoeing.

THE annual reports of the secretary-treasurer, the board of governors and the pursers of the American Canoe Association are most gratifying, as showing good financial management and a prosperous condition of the finances. The business of the year has been well managed, in that the executive has not only kept its expenditures within the assigned limit, but it did not call for the advance credited to it, and it paid its proportion of the receipts to the board of governors early in the season. The reserve fund in the hands of the board of governors, in spite of the deficits of several years, is now over one thousand dollars, and what is of much more importance than the exact amount of cash, it is doing what was expected of it in regulating the general expenditures of the Association. The general business has been carried on with a profit, $110 being turned over to the reserve after all expenses were paid. The four divisions are all in good financial condition, the wild extravagances that we have commented on in the past have disappeared; each division is fully solvent, and carries over a balance of from one to four hundred dollars. It is quite evident that the Association can be run properly within its income; and it is to be hoped that there will be no more large deficits for the incoming officers to shoulder. While there is no immediate need for the accumulation of a large surplus, it must be evident that a sum of several thousand dollars, such as may be realized in a few years, is something well worth having in case the necessity or opportunity for a permanent camp site is realized.

THE least satisfactory feature of the reports is the membership, which is not increasing as it should; though there is no indication of any decrease, the Association about holds its own from year to year. While this is to be regretted, it is not perhaps surprising when we take into account the growing competition of other sports, such as golf and bicycling, and the many attractive types of small yachts that now tempt the sailing men from the canoe proper, or even the canoe-yawl. The condition of the Association is after all but that of the canoe clubs, which constitute the bulk of its membership. The clubs are well housed, out of debt, and with full membership rolls, but they are taking in very few young men and novices, and there is a serious dearth of the spirit of active canoeing on the part of those who still retain their membership. This state of affairs goes to prove that the trouble lies not with the Association, but with general conditions affecting the whole sport of canoeing What the remedy may be it is impossible to say; a lengthy discussion at the meeting failed to disclose any feasible plan for arousing a new interest in canoeing or in the Association.

Yachting.

As the yachting journal of America, the FOREST AND STREAM is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.

THE trend of opinion at the present time is to all appearances, and we note it with pleasure, away from the racing machine in the small classes and toward safer, abler and more useful craft. The scow type, in vogue for the past three years even in the one-design classes, has probably had its day; and there are evidences that it will speedily give way to yachts of the true knockabout type, in which the first requirement is the carrying of a material weight of ballast. The Long Island Sound Y. R. A. will, in all probability, take active steps for the immediate establishment of three knockabout classes of 25ft., 21ft. and 18ft. l.w.l.; there being an evident demand for such yachts about New York. One of the Sound clubs is now at work on a one-design class of 18ft. l.w.l. in which the first requirement is the carrying of half a ton or so of metal ballast. The 21ft. knockabout has evidently come to stay in Long Island Sound, and there is quite as plainly a place for a larger and a smaller size. The subject of restricting these boats has been handled successfully in Boston by the Knockabout Association, and the two larger classes, 25ft. and 21ft., are now under restrictions which have worked very well in practice. These same restrictions are equally applicable to Long Island Sound, but in adopting them, and also extending them to cover a smaller class, the best plan will be for the two associations, the Boston Knockabout and the Sound Y. R. A., to unite in a thorough revision of the rules, correcting some minor details that are possibly capable of improvement; deciding the best limitations for an 18ft. class, and establishing a complete and permanent standard of restrictions. While the present limitations are based on actual practice and are in the main satisfactory, the whole subject of the knockabout type is better understood to-day than it was a couple of years ago; the field for these useful boats has far outgrown the original limits of Massachusetts Bay, and it ought to be possible now to frame restrictions which will be suitable for the Sound, the Great Lakes and other waters, and which will be generally adopted on their intrinsic merits.

The proposed class of 18ft. l.w.l. is an excellent one, giving an ideal single-hander, for one or two, and also a boat for racing in a restricted class.

What is even more important than the growth of the regular knockabout classes as an indication of a healthy change of yachting opinion is the proposal now under consideration by the race committee of the Seawanhaka C. Y. C. for the transferal of the cup contests to a restricted class, carrying a fixed amount of ballast, and with a rigid limitation of scantling. While it is not yet certain that such a class will be adopted, it is perfectly plain that the racing cannot continue on such a basis as now exists. Apart from the question of type involved in Dominion, the extreme of flimsy construction reached in the Crane boats necessitated a radical revision of the conditions of the races.

ONE discouraging phase of the measurement question is that all such legislation is of necessity negative in a way; no association or club is in a position to say to its members, "You must build yachts." The most that can be said is, "If you build a yacht, she must comply with such and such conditions." At the present time there is very little prospect of the thorough and satisfactory trial of any rule of measurement, good or bad. Such a trial can only be had through the designing, building and continued racing of at least half a dozen yachts in the same class. The performances of old boats, together or with one or two new ones, are useless as demonstrating the possibilities of a new rule of measurement, and only by actual designing under the rule can its ultimate results be developed. The linear rating rule just adopted by the North American Y. R. U. is in our opinion very far from perfect; but, even if it were very much better than it is, there is little chance as matters go that it will be fairly tested in the next season or two. There is no general desire on the part of yachtsmen to build racing yachts in any of the larger classes; even the 51ft., which thus far boasts but two or three boats. Whatever prospect existed of a revival in some one of the larger schooner or cutter classes next year has been dispelled by the arrangement of a match for the America's Cup with but one new yacht in the 90ft. class. As was proved in 1895, an international race of this kind between two big syndicate yachts, monopolizing the attention of the public and the press, tends to kill the regular class racing throughout the season, and we do not look for a specially brilliant year, except in the 90ft. class itself and in the smaller yachts of the Sound and Boston, the knockabouts, 30-footers, etc.

Now that a rule has been adopted, it is very important that it shall be put to some practical test, either to demonstrate at once that it is worthy of the confidence of yachtsmen to the extent of investing their money in building large yachts under it; or to develop its weak points so that improvement may be made on some definite basis. Under the circumstances it is very desirable that the new rule shall be thus tested by immediate building and constant racing during the season of 1899. If the matter be left to chance, nothing will be done, very few yachts will be built, and these will be distributed over several classes, with not enough in any one to make conclusive racing. There is one way, and so far as we can see, only one, in which the desired result can be reached. This is through the systematic fostering of some one class by the different associations and clubs interested in the new rule. The matter should be taken up at once and some one of the new classes selected; and permanent arrangements should be made for the racing of the class next season. The Sound Y. R. A., for instance, is now in a position to deal with the matter so far as New York yachting is concerned by selecting a class, arranging a series of dates covering the entire

racing season, and asking the aid of its component clubs in holding these races regularly, without default, and guaranteeing suitable prizes. With such aid from the clubs, it should be possible to secure a certain number of yachtsmen who, with races and prizes thus assured, would be willing to build at once for the class. Each would be at liberty to select his favorite type under the rule, which permits in theory at least the fin-keel, keel, moderate and shoal centerboard types; and the ingenuity of a number of designers would be called into play to test the rule to its utmost. In order to maintain the interest in the racing through the season, good series prizes might be offered in addition to the regular class prizes for each event; if the class filled to a fair number there would be no difficulty in securing one or two really valuable cups, such as have of late years been offered in vain for the racing schooners, for series trophies to be awarded permanently to the yachts making first and second averages in the class.

One special feature which we believe would attract entries to the class is the offering of cash prizes, and of value in proportion to the importance of the class. With a guarantee of a series of races for cash prizes of say $50 for first, $30 for second if four start, and $15 for third if six start, there would be a substantial inducement for building to the class, not merely on account of the cash returns, but because all the conditions would be favorable to spirited and continued racing. While these prizes might tax some of the smaller clubs, it is certain that the money would be well spent, both for the club and for yachting, and that there would be something to show for it in the record of the class at the end of the season; whereas much of the money now given is wasted on a handful of yachts distributed over a number of classes, and racing which is poor in itself and devoid of technical results.

The best possible class for such a purpose is, almost as a matter of course, the smallest that is generally practicable, the 36ft. linear rating. This gives a yacht of about 30ft. l.w.l., fully capable of making the Sound circuit, and carrying her owner and usual crew, giving fair accommodation in the keel and deep centerboard classes, and a cabin of some sort even in the more extreme of the fin-keels. In this class a man can still build a good serviceable yacht at a moderate cost; it is pretty certain that, whatever type may prove the most successful and the best suited to the rule, a yacht of good design well kept up, and skillfully and persistently raced through the season, will be able to show a goodly number of winning prizes, and quite an amount of cash to boot; while she will still have a reasonable sale value in the class. If it were possible to select and thus build up the 51ft. class, it would be an excellent thing for that part of yachting, the racing of the medium and larger classes, which is now dead. All things considered, however, a much larger number of yachts and a greater range of types may be had in the smaller classes, and we believe that the 36ft. would be better than the 51ft., or even the 42ft., being within the reach of a larger number of those men who are now actively interested in yacht racing.

This class is so nearly identical with the 37ft. class of the Great Lakes, allowing for the inclusion of topsail in the measured sail area of the latter, that the two might be brought completely into accord. This class is perhaps the best adapted of any for the needs of the lakes; it is rather small, but still even the 32-footers go from lake to lake for the races, and are perfectly seaworthy; and the next larger class, the 42ft., is too expensive for the average owner.

With the Canada cup again in competition in the 37ft. class, and the same class established on a permanent and practical basis on the Sound, the Y. R. U. would by next fall be in the possession of an ample amount of the most valuable evidence as to the possibilities of the new rule. Under such conditions the rule would be tested as it has not yet been in Great Britain; it should be possible to create a fleet of ten yachts at least on Long Island Sound, and to sail twenty races during the season; and to the new yachts might be added several existing ones fitted to the class.

This is a thing which will not take care of itself. If the rule is to be tested at all, it must be through the intelligent and persistent efforts of the larger clubs and associations. The latter have assumed of late many serious responsibilities, the majority of which they are discharging in a faithful manner. The greatest of all, however, is that of the amendment of the measurement rule, and it rests with them to continue the work to a point where they will have justified their action by a positive test.

The Measurement Rule.

Editor Forest and Stream:

The editorial defense of the report of the Seawanhaka committee on measurements in the FOREST AND STREAM of Aug. 11 was devoted chiefly to three points: viz., a comparison of the merits of the two types of rules; a justification of the committee's proposed formula, and answers to sundry criticisms. The only argument advanced in favor of the formula type of rule with variable factors is the alleged fact that the consensus of opinion throughout the yachting world is overwhelmingly in favor of this type, which has been used from the earliest days of yacht racing and is in universal use to-day. The rapid growth of restricted classes seems to show that this is not true; but if it were, the answer is that all popular superstitions and errors can be justified, and all reforms resisted, by this argument. Everything said on this point could have been said with equal force concerning all the formulas that have been tried and have failed. The value of a general consensus of opinion depends upon the circumstances. Sometimes it is practically conclusive; sometimes it is worthless. The authority of a general agreement of opinion about a matter that can be tested by the canons of logic, or concerning a proposition that has been verified by long and unvarying experience, is very great. Consensus of opinion in favor of a theorem that cannot be proved by logic, and that has been repeatedly put to the test of practice, and has usually failed, may be worthless. If there be any general agreement of opinion in favor of the old formula type of measurement rules, it belongs to the last mentioned class and is of moderate value.

We understand the FOREST AND STREAM to admit that this type of rule is purely empirical, and that it has usually failed. The truth is that in the proposed formula, $\frac{L.}{2} + \sqrt{\frac{S}{2}} + B. + D. - 3\frac{1}{3}\sqrt{M. S.}$, the relative values assigned to beam, draft, sail, length and midship section as speed factors (viz., 1ft. of beam = 1ft. of draft = 2ft. of l.w.l. = 2 units of $\sqrt{S. A.}$) have no existence in fact. The quantitive relation of these factors to speed is not known and cannot be stated even approximately. There is then no scientific basis for their use in this manner, and no presumption in favor of the formula. Its value can be determined by trial only. But it can be tried only on existing yachts; and therefore its value for measuring the speed of yachts to be built hereafter cannot be tested. This can only be inferred from an expectation that the new yachts will be like the old ones; and there is no warrant for such expectation.

Such is the slender foundation upon which the FOREST AND STREAM bases the opinion that an empirical rule of this kind is so much better for measuring the speed of yachts than any scientific rule that can now be made as to render further discussion of this point unnecessary. So far as is known to the writer, this is the first time that any advocate of the old type of rule has admitted that it has no scientific basis; and when yachtsmen generally understand this fact, it will likely have to give way to something better.

The fundamental objections to the new formula, which have not been answered, and the reasons why a rule with absolute restrictions and a rational classification would work better, may be briefly stated as follows:

1. There is no good reason for saying that two yachts should race on even terms because they have the same R. M. under the formula, $\frac{L}{2} + \sqrt{\frac{S.}{2}} + B. + D. - 3\frac{1}{3}\sqrt{M. S.}$ It is rational to say that two yachts having the same sail area should race on even terms, because they have the same motive power.

2. There is no probability of foreseeing with reasonable certainty what kind of yachts the foregoing formula will produce. The main purpose in amending the rule being the production of wholesome boats, this objection to the new formula is fatal.

With absolute restrictions calling for the minimum amount of M. S. deemed essential by the committee, there would be absolute certainty in getting it.

3. Under the proposed formula the designer is encouraged to produce undesirable boats with less than the requisite M. S. if he can discover a way of cutting down L., S., B. or D. without too much sacrifice of speed. With absolute restrictions there would be much less, if any, possibility of "beating the rule." Consequently designers would devote themselves entirely to the discovery of lines of least resistance consistent with comfort and safety, and thus advance the science and art of naval architecture. The Canadian, double-hull defender of the Seawanhaka cup is an excellent illustration of the effect of the old type of rule on naval architecture.

In answer to the argument that the old type is discredited by its repeated failures it is said that those failures were not due to intrinsic defects of the type, but to specific defects of individual rules. This is fair argument, if true; but its truth is difficult to establish; and the burden of proof is on those who assert it. If there are strong presumptions in favor of a type of rule, a reasonable amount of failure may be explained in this way; but if the failures are constant after repeated amendments of the rules, it raises a presumption against the type. When a type of rule has no presumptions in its favor, repeated failure is sufficient to condemn it in favor of something that rests upon sound theory. If there are *a priori* reasons why a type of rule should not work well in practice, as in the present case, allegations that its failures are due to errors of details will be received with great incredulity.

The only argument advanced against the new type of rule is that it has succeeded because of the defects of the old rules and not through intrinsic merits; and that its success is not unqualified.

In this case the FOREST AND STREAM urges a partial want of success in the case of the Boston knockabouts as an objection to this type of rule; but it does not consider that the repeated failures of the old type are significant. The distinction in the two cases is obvious. In the one case the method of controlling design is unscientific, as has been shown, and it is likely to fail. In the other it is a rational scheme, and is likely to succeed. Errors of judgment may be expected under both systems; but a given amount of wisdom and skill is sure to attain the best results with a rule that has a scientific basis.

In justification of the formula proposed by the committee it is said: First, that fifteen years' test of the Seawanhaka formula shows that the values of L. and S. "are as nearly correct as they can well be"; and, second, that the only defect in that formula has been remedied by the addition of the factors $B. + D. - 3\frac{1}{3}\sqrt{M. S.}$, the arrangement of which is especially scientific and accurate. It is not clear what is meant by the first statement; and this point should be further elucidated. It has been hereinbefore maintained that there are no quantitive relations between S. and L. with reference to speed that can be stated in simple ratios. If this be true the relative values of these factors in the Seawanhaka formula cannot be correct. There is no reason why the whole of S. should not be taxed if any of it is; nor why L. should be taxed at all.

It cannot be meant that these values worked well in practice, for it is admitted that the rule is a failure. Furthermore, if S. and L. are properly taxed under the Seawanhaka formula, they are improperly taxed under the new formula, for the rate of taxation has been changed.

The scientific character of the amendment,

$$B. + D. - 3\tfrac{1}{3}\sqrt{M. S.},$$

is not obvious. It is based upon the theorem that speed is due to the free use of the lever by which stability is obtained, and therefore this lever is as justly an object for taxation as the other elements of speed. The truth is this lever is no more an element of speed than the main rigging. Both of them enable the yacht to carry her sail, which is the proximate cause of speed.

Apparently the committee has not apprehended the logical effect of the amendment. In the report it says: "It appears extremely doubtful if any rule which includes beam as a separate and distinct factor would meet with acceptance, and it appears to be nothing less than a truism that to assign to either of these (beam and draft) distinct and separate value or values relatively each to the other, is in the absence of more accurate knowledge wholly unwarranted."

It is obvious that in the formula, $\frac{L.}{2} + \frac{S.}{2} + B. + D. - 3\frac{1}{3}\sqrt{M. S.}$ beam is as separate and distinct a factor as L. or S. or D., and that relative values have been assigned to all of them.

The third division, in which the FOREST AND STREAM answers sundry criticisms, demands a few words. In saying that yachtsmen were asked to accept the new formula on faith, the perfect candor and patriotism of the committee were not questioned. It was only intended to make the point that the merit of the new formula cannot be demonstrated by reasoning, and that it cannot be tested except by building. The plan of controlling form by direct restrictions on the principal dimensions is characterized as being practically a plan for the establishment of a series of standard designs, one for each class, to which yachtsmen shall be compelled to build, all other types being barred.

It is undoubtedly fair to push an opponent's views to their logical conclusions; but the foregoing is not even an approximation to the writer's position, which is briefly this: That there seems to be a general demand for a rule that shall induce the building of safe and commodious yachts in the racing classes; that there is no other way to bring about this result so efficacious as to state in plain terms the least that will be deemed safe and commodious, and to make this a minimum requirement. It may be as little as the carrying of a life buoy on deck, or so comprehensive as to cover every element of size, form and construction. In order that these so-called wholesome boats race on fair terms, they should be classified by sail area, all yachts in each class sailing on even terms. Under any form of rule, racers that are faster must be handicapped in some way so as to enable the wholesome boats to get the prizes, otherwise yachtsmen will continue to build prize winners of undesirable form. Such handicaps practically bar these boats; and they may as well be barred at the outset in so many words. In short, the writer has not advocated "one-design" boats; but a new method of measuring the speed of yachts, and of controlling their form within any desired limits, wide or narrow.

The position of the FOREST AND STREAM on the question of freedom of the designer is left uncertain. In the issue of July 2 it said: "No rule can be framed that will not put at a premium some one class of yacht, the racing machine, the all-round fast cruiser, or possibly even the slow cruiser. It has so happened in the past that every rule tested on an extensive scale has in time resulted in the production of an extreme racing type." * * * "This inevitable tendency of every rule has been fully recognized of late years by the various experts and committees called upon to suggest new formulas." It now apparently modifies that opinion, though it still holds that the designer must not be allowed to put fin-keels in a class of full-bodied, wholesome boats. It admits the charge that heretofore designers have been free to make a single type of racing machines, and nothing else, and attributes this to defects in the rule, which it says are now remedied, so that hereafter designers will be free to design good boats.

The freedom of the designer to design good boats will depend entirely upon the speed of these boats as measured by the rule. If it turns out that the formula sufficiently handicaps all other kinds to enable the good boats to win on allowance, then the designer will be obliged to make good boats. He must design winning yachts or lose his patrons. How many kinds of winning yachts can there be under one rule? At most two—centerboards and keels—and it is doubtful if in any class these two can be equal in speed. In the small classes the centerboards seem faster; and keels apparently do better in the large classes. The extent of the designer's possible choice is between these two types. He has no liberty to make boats absolutely fast or safe or comfortable; but he is bound to turn out the boat that can win under the rule, either by speed or allowance, it matters not which. He must decide at his peril (or rather at the peril of his patron's purse) which is worth more, under this complicated formula, absolute speed or the allowance that can be obtained for a small midship section, a short waterline or a small sail plan—a problem of uncommon intricacy and difficulty. All his ingenuity and skill must be expended in getting a result worthless to naval architecture and the evolution of the yacht. If the net product of the rule should happen to be a wholesome boat (which can only be determined by several years of building and racing under it), it will bar all other types from racing, and they would better be barred at the outset, and save an immense amount of money.

The probability of predicting the kind of boat that will be produced by the formula,

$$R. M. = \frac{L.}{2} + \frac{S.}{2} + B. + D. - 3\tfrac{1}{3}\sqrt{M. S.},$$

is precisely the probability that the committee could, at the first trial, design the fastest possible boat under the rule in every case, and that every boat would turn out to be a wholesome yacht.

SEXTANT.

Painting a Yacht.

IN answer to the inquiry as to painting a yacht, a correspondent in Port Clinton, Ohio, advises white lead mixed with turpentine to a good consistency. This gives a dead white, free from the gloss and yellow tint of oil; it is light, and a little comes off with each scrubbing, leaving a clean surface. Three coats will stand a season's scrubbing, and will show white when the time comes for laying up.

The Wreck of the Mohegan.

APART from the vague and sensational stories cabled immediately after the wreck of the steamer Mohegan, very little has appeared in the papers on this side, and the details of the mishap are still unknown. The following is from the last issue of the Yachtsman, of Oct. 20, reprinted from the Western Morning News, of Plymouth; an interview with Mr. John Hyslop:

"I had been reading in my room on the promenade deck, and had got pretty well through Kingsley's Westward Ho! when the dinner bell rang at half-past six on Friday evening (the 14th inst.). We had only just got seated at dinner, and there was about time for the soup and fish to be served, when I felt the vessel strike. A Mr. Lockwood, an elderly gentleman, who, I believe, is amongst the dead, sat opposite me, and said 'What is that?' I replied, 'She has struck.' What she had struck was another matter. It seemed to me to be a rock, but it was impossible to conceive that in broad daylight the ship could have been navigated in such a way as to make it possible that she had struck rocks. I therefore supposed, as the most reasonable thing, that she had struck a submerged wreck of a solid nature. Immediately I went on deck, and I soon made up my mind that the ship was lost.

"Mr. Lockwood asked, 'What can I do?' I replied, 'We must simply do the best we can,' meaning to indicate that it was impossible to say what could be done. I went out on the port side of the ship. It was not quite dark, and I could see land close by, and wondered if it was possible a ship could have got so near. No one can understand it. There she was within a mile and a quarter off the land. The men were trying to clear the boats on the port side. The vessel had then listed to the starboard, and when they got the lashing clear it was difficult to get the boats outward. There was also a very unfortunate arrangement on the vessel. I noticed, when I first went on board, the upper deck was not nearly so clear as the Victoria, in which I came across to England. There was a rail inside the boats, as well as outside, and I have not seen this elsewhere. The men were hampered very much indeed by the presence of this inner rail in getting the boats out. The vessel being listed to starboard, they would get the boats partly out and then they would swing in again. In one case the stay which is intended to keep the davits swung out in proper position had parted. Then, too, the men were working in the dark. Some one asked for a knife, and I lent mine. Seeing the chance of launching the boats on that side was poor, I went on the starboard side. By that time she had listed the other way, and these people were equally hampered.

Then I saw the case was very bad. The ship began to settle down. Her stern had been away in the air, and none of us knew how deep she would sink. We did not know whether there was forty or a hundred feet under the stern; but it then occurred to me that the best thing was to hang the boats clear. The sailors were hesitating to cut the lashings, and I shouted, "Cut them adrift." I knew if the boats were got clear before the vessel sunk the men would not probably get more boats afloat than the women would fill.

"I thought I would take my chance in the mizzen rigging. As I was putting my resolve into execution the stern settled so that the water overtook me. It went over my head and washed my cap off. I struggled up through the water, holding on to the rigging. I knew if the sea washed me free I might be entangled and be submerged, so I scrambled up. Eventually I got altogether out of the water and I remained on the rigging. Presently the assistant stewardess and a quartermaster got below me, but as high up as possible. Sometimes I would be standing on one foot, and scarcely room for that. There was a young man close to me, between myself and the back stay.

"Having given away my knife, I was unable to cut away a buoy within my reach, but I managed to wrench it away. Then there were strappings which I could not part, and which prevented my getting into the buoy. The shoulder straps were tied so that I could not use them. Lifelines outside the buoy, which got over my shoulders, would not hold. When I was completely worn out with carrying this weight and holding on to the rigging with one hand, I asked for a knife. Some one produced a knife and cut the buoy adrift. Then I felt better.

"The vessel must have struck about a quarter to seven. Her stern remained above water not more than ten or twelve minutes, I should judge.

"I think the bottom is ripped out of the boat from forward away aft to the center. The darkness, the listing of the boat first one way and then another, the presence of the inner set of rails, hampered the men very much.

"I do not think there was any deficiency of lifebelts; there were people all about me with them on. When I came on deck immediately after she struck, the captain was on the bridge giving orders to clear away the boats. I am glad to speak of this. I did not see a man who was not doing all that a man could do. The first officer behaved well, and I was told that he was the last seen to dive from the stern of the ship as she went down. Juddery, a quartermaster, is a splendid fellow. He was in the rigging self-possessed, active, and ready to do anything possible. When the lifeboat came alongside he was the man who swam out to establish communication with her. Afterward he employed himself in fastening the ropes from the lifeboat. I assisted in that.

"It was high tide when I got in the rigging, and the sea surged well up toward those in the lower part of the rigging. When the sea swept right over us and then rolled away, I could hear the screams of the poor women and children almost within reach, and yet not within sight in the darkness. As the vessel went down that wave must have swept a score or two into eternity. The voices of the perishing people will be in my ears for a long time.

"It was extraordinary that all the lights were electric, and they were all extinguished. If there had been an ordinary lamp on the masthead it would have been of great value to us, who were in the rigging from 7 o'clock until 2 o'clock in the morning. My watch stopped at ten minutes to 2, when I took the plunge. We recognized that there was no light to guide those who wanted to reach us. A small boat discovered us and went back."

New York Y. C.

A VERY important meeting of the New York Y. C. was held on Oct. 27, with Com. J. P. Morgan in the chair. Apart from the routine business of the usual fall meeting, a report was expected from the special committee on the subject of a new club house, and in this same connection the following amendment was under consideration:

Chapter I—Dues—Paragraph 1, line 2, substitute the word "fifty" for the words "twenty-five," and on line 7 substitute the word "fifty" for the words "twenty-five." When amended the paragraph will read: Each member, on his election, shall pay the sum of $100 as entrance fee, and $50 for the current year. If said sums are not paid within thirty days from the date of his election the treasurer shall notify the secretary of the fact, and such election shall be null and void. Each subsequent annual payment shall be $50, and shall become due at the first general meeting in each year. Foreigners, members of yacht clubs in their own country, and not residing in the United States, shall be exempt from all payments, except entrance fee. Members who are absent from the United States for the whole fiscal year, commencing on the second Thursday in February, shall be exempt from their dues for such year, provided they give notice of their absence to the secretary.

The report of the committee, read by Vice-Com. Lewis Cass Ledyard, recommended the purchase of ground for a new house, specifying two available sites, one of 50ft. and one of 75ft. frontage, in the vicinity of Fifth avenue and Forty-fourth street. Com. Morgan offered to present the ground on the conditions that a house of 75ft. frontage be built, and the dues raised to $50, which offer was accepted by the club, the committee being authorized to secure plans and to proceed with the work. An amendment to the by-laws was offered by Oswald Sanderson, providing that the owners of yachts of 30ft. l.w.l. and upward, regardless of tonnage, be accorded the right of representation; this was passed, subject to ratification at a subsequent meeting. A letter was read from Admiral Dewey, thanking the club for the honor conferred by the election to honorary membership. Messrs. Vanderbilt, Morgan and Iselin, the Defender syndicate, presented to the club a very handsome full-rigged model of Defender, the work of Gustave Grahn, the well-known model maker. The nominating committee for the coming club election was elected as follows: C. Oliver Iselin, Percy Chubb, Seymour L. Husted, Jr., Henry F. Lippitt, Harrison B. Moore, Philip Schuyler, Edward M. Brown, Arthur Ingraham, Oswald Sanderson, Francis H. Davies.

The following new members were elected: Thos. Carmichael, Abbot S. Rogers, Howard Willets, Commander Joseph G. Eaton, United States Navy; John R. Thomas, Lieut. H. W. Harrison, United States Navy; Henry G. Timmermann, Daniel Lord, Lieut. Frank Marble, United States Navy; Bryce J. Allan, Ensign Wililam H. Buck, United States Navy; Joseph E. Widener, Ensign John R. Edie, United States Navy; Lieut. Commander N. J. K. Patch, United States Navy; Edwin Gould, Past Assistant Engineer John C. Leonard, United States Navy; P. C. Stewart, A. Y. Stewart, F. S. Pearson, Pay Inspector Henry T. Wright, United States Navy; Commodore Charles O'Neil, United States Navy.

On the following morning Com. Morgan purchased the property on Forty-fourth street, opposite to the new house of the Bar Association, the price being $148,000, and presented it to the club.

Defender.

DURING the past two weeks the work of cleaning and fitting out Defender has progressed steadily at her moorings, off New Rochelle, just inside of Glen Island. The bottom has been cleaned by a diver, who reports the metal as uncorroded and easily cleaned with a brush. Contrary to the opinions expressed in many papers, there is nothing strange in this, as the bottom plating is not of aluminum, but of manganese bronze, a material which should corrode only enough to kill marine growths. Within a few days it has become known that Capt. Charles Barr has been temporarily released by Com. Postley, of Colonia, and has been engaged by Mr. Iselin. He will have charge of Defender, and probably of the new boat later on. He has been busy overhauling the yacht, and she will start for Bristol under sail, with Mr. Iselin and a few friends aboard, as soon as the new ways at the Herreshoff works are ready to haul her. She will go under jury rig, a trysail with no boom, her racing spars being left at City Island, where they have been housed, on Piepgrass' Wharf, since she was laid up in 1895.

The new railway will be of sufficient capacity to haul Defender, being carried out to get the necessary draft over the cradle. A new and powerful steam windlass has been specially constructed, operating the cradle by means of a steel cable. Preparations for the new boat are going on steadily, but no definite information is obtainable. A rumor is current that she will be built entirely of aluminum, which probably means that she will be plated with it throughout, instead of merely on the top sides.

Y. R. A. of Long Island Sound.

Notice to Representatives.

A general meeting of the Yacht Racing Association of Long Island Sound will be held at the Hotel Manhattan, Madison avenue and Forty-second street, New York, on Thursday, Nov. 3, at 8 o'clock P. M., to take action on the recommendations of the executive committee as to the new measurement and classification rules adopted by the Yacht Racing Union of North America, and as to various modifications of the classification rules of the Association. By order of the Executive Committee,

CHAS. P. TOWER, Sec'y.

The Canada Cup.

THE notice of challenge for the Canada cup, mentioned in our previous issue, has been received at Toronto, and reads as follows:

Royal Canadian Y. C., Toronto, Canada.

Gentlemen: I have the honor to notify you that the Chicago Y. C. will challenge for Canada's cup.

If agreeable to you, a committee will meet you in Toronto to present formal challenge and to arrange all details of races.

An early reply, stating when you wish to meet our committee, will greatly oblige. Respectfully yours,

CHARLES H. THORNE, Sec'y.

Chicago, Oct. 25, 1898.

A meeting of the executive and the sailing committees of the R. C. Y. C. was held immediately on the receipt of this letter, and it was arranged to hold a joint meeting at an early date.

Inland Lake Y. R. A.

THE annual meeting of the Inland Lake Y. R. A. was held on Oct. 15, at Chicago, the following officers being elected:

Pres., J. W. Taylor, White Bear Y. C., St. Paul, Minn.; Sec'y-Treas., Benjamin Carpenter, Lake Geneva Y. C., Chicago; Executive Committee, H. Battis, Oshkosh, Wis.; John Dupee, Oconomowoc, Wis., and Benjamin Carpenter.

Delegates from the following yacht clubs attended the meeting: White Bear, Green Lake, Delavan, Pine Lake, Lake Buelah, Fox Lake, Detroit, Minnesota, Lake Geneva, Minnetonka, Indiana, Oconomowoc, Pistakee, Pewaukee, Duluth, West End, Nodaway and Oshkosh.

It was decided to hold the 1899 annual inland lake regatta at Oshkosh, on Winnebago Lake.

Yacht Measurement.

NEW YORK, Oct. 29.—*Editor Forest and Stream:* In looking over the table published on Oct. 22, I found one noticeable discrepancy which led me to check over the columns headed "Equivalent based on speed and seconds per mile." The whole table was prepared in time illy spared, and consequently could not be properly checked, and this must be my excuse. In the first mentioned column, first and fourth lines, substitute 37.9 for 39.7; second line, substitute 19.5 for 13.0, and leave out the foot note. In the second column mentioned, first line, substitute 620 for 612.0; second line, substitute 758 for 1,022, and in the fourth line substitute 620 for 616.

GEO. HILL.

YACHTING NEWS NOTES.

Mr. W. B. Stearns, of the Marblehead Yacht Yard, has joined forces with Mr. J. R. Purdon, the Boston designer, and the union will probably be to the advantage of both. Mr. Stearns has a large and growing business, the management of which leaves him little time for designing, and the facilities of his yard will give Mr. Purdon new opportunities for those personal experiments in construction which are now necessary to the success of the designer.

A meeting of the executive committee of the Sound Y. R. A. was held on Oct. 24, at the Seawanhaka C. Y. C. house, with Pres. Cromwell in the chair. There were present Messrs. C. P. Tower, F. B. Jones, E. B. Hart and W. P. Stephens. The committee decided upon the recommendations to the association at the annual meeting, which will be held on Nov. 3.

We have heretofore looked upon the flippant and would-be humorous comments on the city of Oshkosh that are so frequently seen in the different daily papers as mere slanders, unsupported by facts; but after the following, which we reprint verbatim from the Oshkosh Northwestern, we are prepared to believe the worst. There might be some excuse for such a story in a Chinese or Egyptian paper, but it is impossible to conceive how such ignorance can exist in a civilized land:

"Oshkosh has secured the annual regatta of the Inland Lake Yachting Association.

"The event will easily be the leading one in yachting circles in the United States.

"All Oshkoshians therefore should commence early to acquire a knowledge of yachting and nautical terms, for the city will harbor the greatest yachtsmen in the country next summer.

"The Association at the very outset decided to adopt no style of model for next year until the St. Lawrence and the Swaneca clubs, the leading yachting organizations of Canada and of Eastern United States, have adopted models, as the Western clubs want to be on the same footing when it comes to putting their champion boat against the champion of Canada and Eastern United States.

"In the race this year between the Challenger, the Canadian boat, and the Dominion, of the Swaneca Club, of Long Island Sound, the latter defeated the Canadian craft. The American craft was a novelty to yachtsmen. It had a double hull and was built by Dugan, a noted Eastern builder of yachts. After their defeat the Canadians objected so strenuously to the double hull style of yacht that the Americans returned the cup they had won and Dugan said that next year he would build a yacht that would again defeat the Canadian boat, and of a model that they could not pick on. Therefore the clubs of the Inland Lake Yachting Association are waiting for that model to make its appearance."

The Chicago Times-Herald described as follows a new class of restricted yachts, proposed for that city; the 21-footer Spray, mentioned below, was fully illustrated in the FOREST AND STREAM of April 9-16-23, 1898:

Chicago's yacht fleet will be increased next season by a new class, known as the raceabouts. These craft are of the jib and mainsail rig, and are particularly handy for amateur crews. Besides being fast and very seaworthy, for cruising purposes they have considerable room and comfort. The three which are certain to be built will be enrolled in the Columbia Y. C., and will

be owned by W. S. Burrows, a syndicate composed of the Davis brothers and Tom Smith, and W. W. Wightman. Mr. Burrows owns Query, which has yet to be beaten, the Davis brothers have built Blade and other fast boats, and Mr. Wightman is present owner of Skate.

The dimensions of the three boats will be 25ft. load water line, 37ft. over all, 9ft. beam, 5ft. draft with fin, and 2ft. draft of body. The fin will carry about 4,000lbs. of lead. The sail plan will measure 880ft. of canvas. The type is destined to be very popular in the future, and others will doubtless be built. The only specimen of this class of boats is the knockabout Spray, which was brought to this port last spring, and has proved herself a comfortable, speedy boat.

Rifle Range and Gallery.

The Manhattan Rifle Association.

Editor Forest and Stream:

This Association being now an assured success, perhaps a short description of its aims and purposes may interest the readers of FOREST AND STREAM. It was organized a couple of years ago by a few sportsmen interested in rifle shooting, living in the upper part of the city, and meeting on various ranges wherever accommodations could be secured. As our membership increased, we began to look around for a place to erect a range of our own, and after some searching we found an ideal spot at Baychester, located on property owned by Mr. J. H. Campbell.

The membership has steadily increased, until we are now in a position to supply our own range with all modern conveniences. We have a well-built butt and target house, with three sets of sliding targets, and can readily add more as occasion requires. We have a club house, in which a comfortable fire burns on cold days in winter, and which we have heretofore been using as a shooting house also, until our regular house is completed; a telephone line connecting the butts with the club house and firing points, greatly facilitating the work of those who delight in experimenting and group shooting at rest; and we will soon have firing points arranged at 500 and 600yds., to accommodate those who take pleasure in shooting at these distances, as well as 25 and 50yd. pistol ranges. The new shooting house now being built will be at the 200yd. firing point; it will be small at first, but well designed, and so arranged as to readily admit of its being enlarged as occasion requires. It will also be provided with bench and machine rests, to enable members to test their guns.

The range is located in the open country, with a hill behind the targets to stop bullets, the line of fire being due north. There are no butts to shoot through, as in the schuetzen parks, all of the targets being in full view of all shooters at all times. No liquors are sold on the premises, those desiring other refreshments than the excellent coffee served by Mr. Campbell obtaining them from Miller & Zorn's hotel near by. Baychester can be reached in about twenty minutes from Third avenue and 129th street L station, from which trains leave at a quarter before each hour via the New Haven R. R., and the range is about ten minutes from the station.

Our members are all business or professional men, who enjoy rifle shooting for the sport there is in it, and not for the profits (or losses) to be derived from the kind commonly indulged in at the schuetzen parks. Many of them prefer to shoot hunting rifles, some of the military men among us prefer to use their military rifles, while others use target rifles; each is free to do as he pleases, and so all are satisfied. It is our aim to make this Association as nearly like the Massachusetts Rifle Association as possible, rather than copy after the schuetzen corps, who seem to have the monopoly of rifle shooting in this vicinity at present; and if all those who are interested in rifle shooting as a clean sport will join in with us and help, there will be no difficulty in having an organization equal to that of the Bostonians. A cordial invitation is hereby extended to all interested in this sport to join.

The dues are $6 a year, and the initiation at present is merely nominal ($1), so as to enable us to obtain as many desirable members as possible; each application, however, is carefully investigated by the executive committee before action is taken, as we only care to have true sportsmen in our organization.

Any further information will be cheerfully furnished on application to the president, Dr. W. G. Hudson, 73 West 131st street, or to the secretary, J. E. Silliman, National Park Bank, Broadway, to whom applications for membership may also be forwarded.

Elite Rifle Club.

THE shooting committee of the Elite Rifle Club, of Williamsburgh, have made up the record of the work done during the season, giving the number of targets, the counters, the total number of points and the premiums won by each man, which shows that Fred C. Ross again won the championship. The scores:

	No. targets.	Counters.	Total. Points.	Premiums.
F C Ross	68	68	14,040	$19.46
I Martin	64	56	13,308	18.45
L Zoellner	62	56	13,055	18.10
C Kanofsky	59	59	11,735	16.27
C W Horney	43	43	10,195	14.14
P Andrassy	57	42	9,841	13.62
F A Schlitz	65	41	9,611	13.29
Dr Hettersheimer	42	41	9,219	12.75
N Stern	44	43	7,382	10.28
C K Hoerning	30	30	6,987	9.59
G Frey	35	32	6,191	8.58
T Wolters	30	26	5,863	8.12
G Klingelhoefer	24	24	5,584	7.74
T B Fritz	26	24	5,319	7.38
L Mertz	24	24	5,318	7.57
G Simon	24	24	5,177	7.20
H Steinmeyer	17	16	2,879	....

G Koch	5	5	1,103	....
C F Morsch	4	4	699	....
A Scholl	3	3	552	....
H Rauch	2	2	396	....
C Huber	2	2	369	....
G Heitzman	3	3	335	....
F Kronsberg	1	1	225	....
C Turner	1	1	135	....
E Gerard	1	1	132	....

Cincinnati Rifle Association.

THE following scores were made in regular competition by members of the Cincinnati Rifle Association, at Four-Mile House, Reading Road, Oct. 16. Conditions: 200yds., off-hand, at the German ring target. Gindele was declared king with a score of 218. Nestler was high man for the Dietrich medal to-day with a score of 58 on the honor target. Payne was high for the Uckotter trophy with a score of 219. Weather cool, and gusty 1 to 2:30 o'clock wind:

King target:

Gindele	23	22	20	21	23	23	22	20	22	22—218
Hasenzahl	20	21	18	21	19	20	22	21	24	23—207
Strickmier	22	13	21	24	20	25	22	20	19	17—203
Nestler	21	18	18	22	24	19	22	19	21	18—202
Payne	22	22	22	15	23	18	19	24	20	16—201
Roberts	22	20	17	16	20	22	18	19	20	18—192
Weinheimer	15	16	18	18	19	22	21	9	18	19—175
Topf	13	16	17	16	19	5	18	20	17	23—164

	Honor target.			Special scores.		
Gindele	20	21	21—62	215	209	208
Hasenzahl	16	21	21—58	209	206	203
Strickmier	18	17	23—58	204	202	199
Nestler	18	17	23—58	212	202	202
Payne	15	15	20—50	219	214	212
Roberts	17	17	18—52	207	205	203
Weinheimer	16	21	19—56	192	206	187
Topf	15	16	16—47	175	170	162

THE following scores were made by members of the Cincinnati Rifle Association, in regular competition, at Four-Mile House, Reading Road, Oct. 30. Conditions, 200yds., off-hand, at the German ring target. Payne was declared king with a score of 217. Gindele wins the Dietrich medal for the fifth and last time, and it has fallen to his lot to keep the same for good. Gindele wins the Uckotter trophy this month with a score of 229. Weather cool and cloudy, with a 4 to 7 o'clock wind:

King target:

Iroquois Rifle Club.

PITTSBURG, Pa., Oct. 29.—The eleventh annual tournament of the Iroquois Rifle Club was held at its indoor range Oct. 24 to 27. The first day's shooting was a members' match, each contestant firing 50 shots in 10 targets of 5 shots each on the reduced standard American target. The first prize, a gold medal, was won by R. F. Phillips, who made a score of 454 out of a possible 500. The scores follow:

R F Phillips	43	45	50	44	45	46	43	45	48	45—454
H Sperling	45	38	46	42	45	44	38	43	40	41—441
Al Hofmeister	40	42	44	40	41	46	40	44	45	46—436
H B Pierce	41	41	39	48	44	39	36	43	37	41—415
W Riebling	43	47	41	38	39	38	38	34	47	34—408
R Rahm	36	38	38	43	46	46	40	44	41	36—408
B Kestner	43	40	40	48	41	43	38	42	36	42—405
A O Goldstrom	39	43	35	42	36	44	41	45	44	36—405
J Bergmann	39	34	40	48	46	42	38	42	37	39—401
H L Born	35	39	40	33	40	38	36	40	38	46—385
Aug Holmeister	40	39	43	38	40	39	37	43	34	40—373
J F Pfeil	29	38	40	40	34	38	39	42	34	35—365
C Scheuer	40	37	40	35	34	37	35	40	34	33—355

The last three days of the tournament were devoted to the all comers matches, there being two events on the programme, the first a continuous match, 3 shots per target, the best three targets made by each shooter to count, target being the reduced standard American. The second was the Stevens trophy match, each shooter firing 3 shots on a 3in. bullseye, the nearest shot to the center by machine measurement to count for the prize, which consisted of a Stevens Walnut Hill rifle, presented by the J. Stevens Arms and Tool Co. The scores in the all comers events follow:

Continuous prize match:

R F Phillips	30	30	30—90
L P Ittel	30	30	30—90
A C L Hofmeister	30	30	30—90

A. C. L. HOFMEISTER, Sec'y.

Shell Mound Range.

SAN FRANCISCO, Oct. 24.—Shell Mound range was well patronized yesterday by marksmen, and the shooting conditions were favorable.

At the Columbia Club butts some good scoring was done by J. E. Gorman with the pistol, and by Dr. Rodgers with the target rifle. Pistol, 50yds., and target rifle at 200yds., Columbia target with 1in. center and ½in. rings, count increasing outward. Scores of the Columbia Club:

Siebe pistol medal: J. E. Gorman, 35, 35, 40, 37, 42, 44; J. P. Cosgrave, 47, 52, 57, 57; G. M. Barley, 73.

Bisley Colts' revolver trophy: C. Roberts 70.

Small rifle match and Roos trophy for ladies: Mrs. C. F. Waltham, 27, 33; Mrs. Turner, 46, 51.

Rifle score, members' rifle medal: J. E. Gorman 56, M. J. White 74.

All comers' rifle medal: Dr. Rodgers, 45, 45; D. W. McLaughlin, 53; F. E. Mason, 54.

At the monthly medal shoot of the Nord Deutscher Schuetzen Club the following scores were recorded: Champion class, F. P. Schuster, 433; first class, Henry Stelling, 410; second class, J. Lankenau, 382; third class, not contested; fourth class, Herman Munster, 314; best first shot, John Gefken, 25; best last shot, William Morken, 24.

The monthly bullseye shoot of the Germania Schuetzen Club resulted in the following prize scores: H. Zecher, 279, Louis Haake 419, N. Ahrens, 473, F. P. Schuster 517, John Utschig 570, L. Ritzau 666, William C. Morken 723, D. B. Faktor 782, E. Goetze 832. Henry Stelling 863, J. Hartmann 1,022, Louis Bendel 1,043, R. Stettin 1,045, F. Rust 1,046, J. Beuttler 1,211, John Dewit, 1,223. ROEEL.

Brooklyn Revolver Club.

THE November programme is as follows. The club championship on Nov. 29 is the main event:

Tuesday, Nov. 1.—Handicap club shoot for the Boemermann medal, 20yds., any revolver, .38 to .45cal., 10 shots per man, standard American target.

Friday, Nov. 4.—Handicap shoot for prize donated by Mr. Frederick E. Healy, .22cal. pistols, 20yds., 10 shots per man, standard American target.

Monday, Nov. 7.—Handicap shoot for prize donated by Mrs. E. Wilson, .32cal. pocket revolvers, not over 4½in. barrel, 15yds., Columbia target, 15 shots per man.

Thursday, Nov. 10.—Annual meeting and election of officers.

Tuesday, Nov. 15.—Handicap shoot for a silver cup presented by Mrs. A. A. Webber, .22cal. pistols, 20yds., standard American target, 20 shots per man.

Thursday, Nov. 17.—Ladies' contest, distance 15yds., .22 or .32cal. pistols, four prizes, the first prize to be a jeweled club pin.

Members are requested to bring any of their lady friends who are interested in pistol practice.

Tuesday, Nov. 22.—Old-fashioned turkey shoot, any revolver, .38 to .45cal., 20yds. distance.

Tuesday, Nov. 29.—Club championship match, 50 shots per man, .22cal. pistols, 20yds., open sight, standard American targets. The final 20 shots of this match to be shot on this evening, and the previous 30 shots to be shot in re-entry; the best three 10-shot targets to count. Targets for this match can be shot at any regular shooting night through the month, but must be previously announced and signed by the contestant and a member of the shooting committee. Prize to be a .22cal., 10in. barrel, pistol, presented by the Stevens Arms and Tool Company, of Chicopee Falls, Mass.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Trap-Shooting.

Fixtures.

Nov. 2-3.—Indianapolis, Ind.—Tournament of the Limited Gun Club; targets only. H. T. Hearsey, Sec'y.

Nov. 2-4.—Cincinnati, O.—Cincinnati Gun Club's tournament; live birds and targets. J. A. Penn, Recording Secretary.

Nov. 8.—Newark, N. J.—Open shoot of the East Side Gun Club; Smith Bros.' grounds, Foundry street. Louis H. Schortemeier, Capt.

Nov. 12.—Fanwood, N. J.—New Jersey State League team shoot, on grounds of Climax Gun Club.

Nov. 12.—Princeton, N. J.—Intercollegiate match for cup, between teams from Harvard, Cornell, Yale, Pennsylvania and Princeton.

Nov. 16-17.—Sioux City, Ia.—Soo Gun Club's tournament; live birds and targets. E. R. Chapman, Sec'y.

Nov. 15-17.—Eau Claire, Wis.—Dan R. Scammon's tournament; two days at targets; one at live birds.

Nov. 16.—Singac, N. J.—Twenty-five bird handicap at Bunn's; $15 entrance, birds included. Commences at 12 o'clock.

Nov. 21-22.—Ottumwa, Ia.—Annual tournament of the Ottumwa Gun Club; targets. Walter Gephart, Sec'y.

June 7-9.—Columbus, O.—Tournament of the Ohio Trap-Shooters' League, under the auspices of the Sherman Rod and Gun Club. J. C. Porterfield, Sec'y, O. T. S. L.

DRIVERS AND TWISTERS.

The programme of the Soo Gun Club's tournament, Nov. 16 and 17, can be obtained of the secretary, Mr. Ed R. Chapman, Sioux City, Ia. There are nine like events on the programme for each day. The first four are at live birds: No. 1 at 10 live birds, $5; No. 2, 15 birds, $7.50; No. 3, 15 birds, $10; No. 4, 10 birds, $7.50. Of the five target events four are at 15 targets, $1.50 entrance; one at 20 targets, $2 entrance. Shooting commences at 9 o'clock. Money divided 35, 30, 20 and 15 per cent. In the live-bird events the handicaps will from 26 to 31yds. Plenty of live birds will be provided, so as to accommodate those who desire to shoot longer races for a larger entrance, or those who desire to shoot individual matches. Live birds will be trapped at 15 cents; targets, 2 cents. In each live-bird event the club will add cash in amount equal to 10 per cent. of the purse. Also $10 will be added for high average each day respectively on live birds and targets. Open to amateurs only. Professionals and manufacturers' agents are welcome to shoot for the birds only. The handicap committee are two members of the Soo Gun Club, with Messrs. W. Townsend, Omaha, Neb.; J. J. Elliott, Onawa, Neb., and Geo. R. Slocum, Pringhar, Ia.

Mr. Louis H. Schortemeier, captain of the East Side Gun Club, Newark, N. J., writes us as follows under date of Oct. 20: "There will be an open shoot on Election Day, Nov. 8, at live birds, beginning at 10:30 A. M., at Smith Bros.' grounds, Foundry street, Newark, the shooting grounds of the popular East Side Gun Club. The morning will be devoted to sweepstakes. At 1 o'clock P. M., approximate, the East Side Gun Club handicap will be started, at 15 birds per man, $5 entry, birds extra at 25 cents each. All handicaps arranged on basis of moneys won on the two previous handicaps on these grounds. Those having won first money will be handicapped 1yd.; winner of second, ½yd. All those entering that have not shot in a previous handicap will be placed according to their presumed ability by the committee composed of the officers of the East Side Gun Club. To get to the grounds, take Plank Road, Newark, trolley line, east from Market Street Station of Pennsylvania R. R., or west from Jersey City Ferry to Foundry street, Newark."

The well-known shooting journalist, Mr. Basil Hayman, is in this city, convalescing from an attack of Cuban fever, contracted in the salubrious marshes of Florida. Some months ago Mr. Hayman gave up the pleasant pursuit of kennel editing for the more peaceful pursuit of war, with the unfortunate result above mentioned, which came to so many others also. His wide circle of friends will be happy to learn that he is entirely out of danger, and ere long will be able to drive a quill or ride a ewe-necked broncho with the best of us. He was one of the Rough Riders, very good men, too, for lambasting the enemy, but entirely untried in a really warm war where the color, shape and winnings of a dog are in question.

From the Daily Times-Enterprise, of Thomasville, Ga., the following interesting item concerning Miss Annie Oakley, the world-famous lady rifle shot, is taken: "The shooting of Annie Oakley was the feature of the day. Her marksmanship is marvelous. From a bicycle, which she rode most gracefully at full speed, she shattered balls in the air with a Winchester rifle, and won the plaudits of the crowd by breaking four balls thrown into the air at the same time, changing guns during the firing. Her last feat was breaking eleven balls in ten seconds. This was lightning shooting. Annie Oakley is surely a wonder with the rifle, shotgun or pistol."

Mr. W. Fred Quimby, traveling representative of the American E. C. & Schultze Powder Co., is back in New York again after a very successful trip. In respect to killing 25 live birds straight at Belle Meade recently, Mr. Quimby says: "It is naught; it is naught. I do not count that as anything compared with what I really can do when I want to." Mr. Keller is anxious to shoot a team match with Mr. Quimby when the latter is in sufficient good form to shoot up to Mr. Keller's standard. Each man is to select a duffer for a partner, so as to equalize chances. It should be a great race if it ever comes off—25 live birds per man, 25 targets thereunto also.

Realizing the importance of the camera as an adjunct to sports afield, whether with rifle or shotgun, rod or canoe, or bicycle, etc., Messrs. Von Lengerke & Detmold, of 318 Broadway, New York, have recently added to their stock of sportsmen's goods a full line of the excellent cameras manufactured by the Eastman Kodak Company, of Rochester, N. Y. There are all sizes and kinds, from the tiny kodak for the pocket up to the giant for solid business. The bicyclist who has a wheel which cannot be fitted with a kodak must have one which has been run over with a trolley car or otherwise smashed.

There was a very light attendance at Dupont Park during the three days' tournament last week, a report of which is published elsewhere in our columns from the painstaking pen of Mr. Paul R. Litzke. There was $148 in added money, and the targets were thrown at a 2-cent rate, but still the home talent were unresponsive. The averages were surprisingly low. Gilbert was high on the first day with .825, Elliott next with .787. On the second day Gilbert was highest with .813, Elliott next with .812. High wind, bad weather and irregular flights explain the falling off in scores.

We sincerely regret the illness of Mr. Will K. Park, of Philadelphia, the popular representative of Sporting Life, who has been prostrated from an attack of fever. Still there is that to rejoice over in knowing that he is convalescing, and may soon go to his home to recuperate. It is hard to down a good man, and of such is Mr. Park. Our sincere wishes are for his speedy recovery.

In the live-bird event, a handicap at 25 birds, Elliott and Gilbert killed straight, standing at the 32yd. mark. The former uses Hazard, the latter Du Pont powder. Elliott used his Winchester repeater, while Gilbert used his L. C. Smith. Sumpter, Fulford and Dr. Smith each scored 24, Sumpter losing one dead out of bounds. S. Thompson, McMurchy and Nold were 23 each. Taylor and Sousa, the famous bandmaster, scored 22, the latter losing two dead out of bounds.

Yale will be represented in the intercollegiate tournament to be held at Monmouth Junction, N. J., Nov. 12, the morning of the Yale-Princeton football game. Also Harvard, Princeton, Cornell and the University of Pennsylvania will be represented. The intercollegiate cup, the trophy to be contested for, was won by Harvard at the last intercollegiate tournament. It becomes the property of the club winning it three times.

Mr. Paul Litzke writes us as follows: "The St. Thomas Gun Club, of St. Thomas, Can., claims the dates Dec. 27 to 30 for holding their live-bird tournament. It is the intention of the club to guarantee good substantial purses at this meeting. Arrangements have been completed to have Jack Parker, of the Peters Cartridge and King Smokeless Powder Co., to manage the shoot."

In the team contest of the New Jersey State League, at Dunellen, N. J., last Saturday, the Dunellen Gun Club was victorious by a score of 98 out of a possible 125. The other scores were: Reservoir Gun Club 88, Bound Brook Gun Club 84, Climax Gun Club 88. The next shoot of the League will take place on Nov. 12 on the Climax Gun Club's grounds, Fanwood, N. J.

Mr. Edward Banks, secretary of The American E. C. and Schultze Powder Co., returned last Saturday from a three days' absence at Dover Plains, N. Y., where he was the guest of Mr. Horatio Nelson, also a mighty hunter. Ruffed grouse was the motive. Mr. Banks is enthusiastic over his pleasant and successful outing.

Mr. John Parker, the popular and efficient representative of the Peters Cartridge and King Powder Co., is at Raleigh at present in charge of his company's exhibit at the State Fair, and also will be at the Tobacco Fair at Winston, N. C., next week, besides visiting the trade.

The fourth interstate autumn tournament of the Limited Gun Club, John M. Lilly, manager, will be held at Indianapolis, Ind., on Wednesday and Thursday of this week. The main event is the Grand Hotel cup, which requires that each of the two contestants shoot at 50 targets, unknown angles.

There will be a 25-bird handicap, $15 entrance, birds included, handicaps 24 to 32yds., at Bunn's, Singac, Nov. 16, commencing at 12 o'clock. Sweepstake shooting will follow. The winner will receive a handsome cup.

At the Indian Gun Club's live-bird club shoot, Brooklyn, L. I., Oct. 29, Mr. Frederick Scott killed 10 straight, standing at 29yds. There were ten contestants in the club event.

There will be target shooting this week on Saturday, on the grounds of the New Utrecht Gun Club, at Woodlawn, Brooklyn.

The Montgomery Ward & Co. trophy will be contested for at Watson's Park, Burnside Crossing, on Friday of this week.

BERNARD WATERS.

Trap around Reading.

Independent Gun Club.

SINKING SPRING, Pa., Oct. 22.—At a meeting of the tournament committee of the Independent Gun Club, of this place, it was decided to hold the annual fall target tournament Nov. 2, Wednesday, shooting to commence at 9:30 A. M. The principal event of the day will be the shoot for the individual target championship of Berks and adjoining counties for a handsome silver trophy, valued at $25. The second and third prizes in this event will be a 1lb. can of Gold Dust powder, donated by the U. S. Smokeless Powder Co. Each contestant in this event will shoot at 50 targets, entrance $1.50, the cup to become the property of the winner. One of the other events which will cause great interest is the Gold Dust event; six 1lb. cans of Gold Dust powder will be given the six high guns in that event.

The committee also reported having secured the services of Arthur A. Fink, of Reading, to manage the tournament. The magautrap will be used, and targets will be thrown at the cost of 2 cents each, which amount will be deducted from all purses. Loaded shells will be for sale on the grounds. Dinner can be secured at Joel W. Hainly's hotel, which adjoins the grounds.

Sinking Springs is located five miles from Reading, along the Harrisburg pike, and can easily be reached with the Womelsdorf electric cars from Reading; the car is marked with a large red flag from the trolley pole on the car. The management has decided to not allow dropping for place in the different events. In the individual championship shoot, in case of a tie for first or second, to shoot off the tie at 25 extra targets. The programme for the tournament has eight 10-target events, three 15-target events, and one at 50 targets. All shooters are invited to be present. Joel W. Hainly, captain Independent Gun Club, Sinking Spring, Pa.

Shooting Match at Norristown.

Norristown, Pa., Oct. 22.—Thomas V. Smith, at the monthly shoot of the Penn Gun Club to-day, carried off first honors by breaking 18 out of 20 targets. The afternoon scores are as follows:

Club shoot, 25 targets: Yost 22, Cassel 16, Penn 20, Smith 21, Bosler 16, Derr 13, Scheetz 17, Dotterer 17, Boyer 15, Johnson 23, Clay 7.

Ten-bird event: Yost and Smith 9, Dotterer and Cassel 8, Johnson and Sheetz 7, Kohl and Boyer 6, Clay 2.

Ten-bird event: Johnson 9, Yost 8, Scheetz7, Dotterer 6, Penn 3, Clay 2.

DUSTER.

Happy Days Gun Club.

NEW YORK, Oct. 29.—Inclosed please find the score of the Happy Days Gun Club, made on Friday, Oct. 28, at Murray Hill, Flushing.

This was the last live-bird shoot for the season. The Class A medal was won by our captain, E. O. Weiss, while the Class B medal was captured by our treasurer, G. Katzenmeyer. The special prize donated by our president, W. G. Ringler, in the shape of a handsome Winchester sporting rifle for the highest score on this occasion, was carried off by our champion clay-bird shot, Mr. B. F. Amend:

Trap at Riverton.

PHILADELPHIA, Oct. 29.—The fall handicap of the Riverton Gun Club, Philadelphia, an event at 60 live birds, $50 entrance, open to members of the Cartaret, Tuxedo, Blooming Grove, Herron Hill, Philadelphia and Riverton gun clubs, silver prizes and money divided 50, 20, 15 and 5 per cent., was won by Mr. Robert Welch with a score of 59 out of 60, the lost bird being hard hit and dying out of bounds.

Capt. A. W. Money was second with 57 out of 60. Messrs. C. Macalester and Yale Dolan were out of form, the latter missing 3 straight after his 50th bird and withdrew with 45 out of 53 shot at.

Dr. Karsoner seemed a winner well along into the race, but he lost several dead out of bounds and missed enough to spoil his chances in the race. Quite a number of sweepstakes were shot. Following are the scores in the handicap:

R Welch, 30	222222212*122222221

With all the facilities at Riverton, it would be an easy matter to arrange the shooting so that facing the sun in the late afternoon might be avoided. Those who have the sun to face in addition to killing birds have a harder task to face than they would otherwise have.

The St. Louis Tournament.

ST. LOUIS, Mo., Oct. 28.—The tournament which closed here yesterday and which had been in progress during the preceding three days at Dupont Park can in no sense be classed a success, especially in so far as the local shooters are concerned. Had it not been for the out-of-town shooters it would have been a frost pure and simple; even at this it savors very much as such. No doubt some one will say the presence of a few professional shooters is responsible for this condition. Such theory is not borne out by the returns, for the most successful shoot ever held in this city in recent years was one with all the bars down, while the strictly amateur shoot of last spring was not near so well attended.

While this was an open shoot, the Rose system of dividing the purses prevailed, with a ratio of 7, 5, 4 and 3. This is always a more satisfactory method than the old percentage system, as it gives the poorer shots a better opportunity to at least win their entrance money, if they shoot well enough to get into the division.

The programme was a good one and the inducements fair, there being $148 added money and 2-cent targets.

The target events for the first two days consisted of eight 20-target races each day.

First Day, Tuesday, Oct. 25.

The first day the weather was simply awful. It rained hard most of the day, though toward night it snowed. In the meantime the wind blew a chopping gale that caused the targets to cut all kinds of antics just at the wrong time. It seldom occurs that the averages rank so low:

Events:	1	2	3	4	5	6	7	8	Shot at.	Broke.	Av.
Gilbert	18	18	19	16	15	12	17	17	160	132	.825

Second Day, Wednesday, Oct. 26.

The second day was bright and clear, though it was still very cold, and the wind had subsided but little, so that there was little improvement in the shooting of the few who participated. Gilbert made high average each day, though it will be a surprise to his admirers to see how low this is. In the entire two days not a single straight was made, and only twice was the 19 mark reached, this also being accomplished by Gilbert.

Events:	1	2	3	4	5	6	7	8	Shot at.	Broke.	Av.
Gilbert	14	17	18	17	19	16	17	17	160	135	.843

Third Day, Thursday, Oct. 27.

The third day a 25 live-bird handicap was shot, and the weather conditions were all that could be asked for. It was bright and clear, not too warm, with a good strong wind blowing away from the score, which assisted the birds materially. They were a superior lot. Those trapped at the Dayton shoot were not so good. The handicap had but sixteeen entries. Elliott and Gilbert, the two scratch men, shot from the 32yds. mark, and came out with flying colors by killing straight. Their shooting was strictly high class, and a very creditable performance on birds of such quality. Elliott had a trifle the best of the draw, but when he did get a very fast driver he was equal to the occasion, and never showed off his Winchester to better advantage. Sumpter, Fulford and Dr. Smith scored 24. Sumpter's single loss just managed to clear the wire as it went out dead. Fulford shot with good judgment, and his score of 24 is the result of some very clever shooting from the 31yd. mark. Dr. Smith had the great run of 80 straight to his credit, having scored 60 in practice and the sweep that preceeded the main event. He really did the best shooting of the day. S. Thompson's shooting is also worthy of mention, as he only began shooting at the trap last May. To score 23 out of 25 on such birds as these is something he can tell his friends about with pardonable pride. McMurchy and Nold also finished with 23, and I question if Nold ever shot better in his life. Taylor and Sousa scored 22. The latter experienced some hard luck, as he lost two birds dead out of bounds, only missing his last one. In his score the number of the traps and the flight of the birds are not given, owing to the fact that he was permitted by mutual consent to shoot his score out before the event proper was begun, and before the writer arrived on the ground. Mr. Sousa is none other than the distinguished bandmaster, and his engagement at the Exposition would only permit him to remain at the shooting grounds until about 11 o'clock; therefore those interested generously permitted him to shoot his score first.

The conditions were 25 live birds, entrance $15, birds included, four moneys, Rose system, handicap rise.

Fulford's idea of having a pit close to the traps deep enough to contain the coops of birds and protect the trappers was here put into practice and did much to facilitate the shooting. It is a simple matter to trap 150 birds an hour with this system.

Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

No. 1, 10 birds, $5, three moneys:

Gilbert	2222*22111— 9	Sumpter	1012112121— 9

Osterhout	..	..	..	..	..	11	12	.. ..

JOHN S. WRIGHT.

New Utrecht Gun Club.

Woodlawn, L. I., Oct. 29.—A good attendance, good birds and good scores characterized the bi-monthly live-bird shoot of the New Utrecht Gun Club. P. E. George shot in his accustomed good form, being the only man to shoot out straight. In the shell shoot, Wynn and Thompson gave a good exhibition of shooting, it being nip and tuck up to the twelfth round, when Thompson missed a corker, being a twisting right driver which anybody could have missed. All B men are allowed one miss as no bird in all club shoots.

Clay-bird shooting Saturday.

Club shoot:

P George, B, 27	2222212121 —10	F Thompson, A, 28	1121101110 — 8

* Re-entry.

We have been informed by one of the officers of the Hell Gate Gun Club, at their shoot on Sept. 27, that the score of Mr. J. Belden was 10 instead of 9, so that the latter now is officially determined, and stands as 10, a complete score.

Confabulations of the Cadi.—XI.

Teeth.

"You will please come to order, gentlemen," said the Cadi, in firm official tones, "and I desire to preface the discussion by saying that there must be some definite business transacted at this meeting. You have dawdled through a number of meetings without advancing a single step toward arranging the details of the tournament. No gossip or irrelevant discourse will be allowed unless I find it uncommonly interesting or instructive. What is your pleasure, gentlemen?"

"Mr. Chairman," said Le Loup, "I move you, sir, that we settle first under what system the moneys will be divided. To that end I make it a part of my motion that we adopt the Rose system." The motion was duly seconded.

"I offer as an amendment to the motion of the gentleman from Coon Hollow that we adopt the Jack Rabbit system," said Montague.

"I offer this here amendment to the other amendment that these amendments adopts class shootin'," shouted Andy Coxey, in excited tones.

"That's as far as we can go with amendments at present, gentlemen," said the Cadi. "All those in favor of class shooting will say aye."

Coxey and Ephraim said "Aye." No one dared to say "No," which is a common occurrence at meetings—so class shooting was adopted.

"I have come to think well of class shooting," continued Ephraim, "for under it in practice nearly all the experts are bunched up in first and second places, thereby leaving third and fourth moneys to us amateurs, to say nothing of dropping into a place alone."

"I move you, Mr. Chairman," said Moke, "that we bar manufacturers' agents."

"I second Moke's motion, and don't you forget it," said Coxey. "I want to tell you fellers about my boy. You know he's only twelve years old, but he's a heap smarter than most boys of twenty. He's taken to writin' lately, and he has some of the cutest idees you ever seen. He has been studyin' up on the professionals at the trap shoots, and he has my idees exactly to an allspice. He sent a piece to the editor of the Bazoo, and I don't mind tellin' you that I read the letter and I think it such a good thing that I want to read it here and let you know that the opinions of my boy is mine too, and I want it to go into the inscriptions of this here meetin'. Cadi, old feller, you wouldn't mind readin' this here letter for me, would you, old feller? I can read all right, but my eyes is bad sometimes." The Cadi took the sheets of foolscap, and after several minutes of hard studying read the following:

Egipt, Jewly 24.

"mistur editur Man i Had a dreme ov a fabel The uther Nite and i waz in oure sheap paster 2 mende fensus and i Laid doun in The shaid on The gras wich i thort wud bea a gude thyng 2 put in youre paiper wich i rite 2 yu notwithstandin. me an yu knose wot this fabel menes wen we rede it but a hole lot ov yure reeders dont know wot yu mene in The things printted in yure paiper so hens i dezire yu kan tel them wot this menes When yu meat them at swarrays and caffays and i name it a dreme ov a fabel and i begins it rite hear so yu wil no i hav begun 2 rite it. ther waz wunst a turnamynt uppon a tyme 2 wich Evry man an evry boy had a invite with a Gun, an tha cum with dimonts 2 shute an Lots ov munny besides. Mi dad waz thar 2 an yu bet he kan shute. mi dad's a shuter frum shutervil an dont yu furgittit. and Sum ov the men wot waz at the turnymint had sors Instid ov guns but not so menny had sors az had Guns. An the men with sors sord all the targits, and the men with guns smashed sum but not so menny az the men with sors sord. and tha sord an shot an shot an sord til the men wot had guns got left, and the men with sors sord rite on an sord up the pockit bookes in 2 ov all the amitoors wich korsd them grate pane an then tha howld 2 hav the sors bard so az 2 get sum sors ov thair owne an this waz dun an then the other men wot had guns got scart an wanted 2 fite but the men wot had sors only larft. But the men with guns sed the men with sors coudnt shute no moar becors tha waz 2 hard 2 shute an waz ajuntz an thairafter it waz parst that tha cud shute for targits oanly wich woke me up an the morrul ov this dreme is 2 plane 2 talk aboute. "Socrates Coxey."

"Well," commented the Cadi, as he wiped the perspiration off his brow, "I do not remember seeing this published in the Bazoo, although I read it through very carefully each week."

"It wasn't. The editor didn't have room for it. He told us so in a real nice letter. Here it is. Read it, Cadi," said Coxey, nervously, as he passed over the letter, which the Cadi read very feelingly, as follows:

Office of Bazoo, July 25.

"Esteemed Sir—Herewith please find your MS. entitled a 'Dreme ov a Fabel,' which we return to you because it is not available for use in our columns. This does not imply that it is lacking in literary merit, nor that it would not be eagerly sought for by other publishers. Assuring you of our most distinguished consideration, we are, dear sir, yours most cordially,

"Editor Bazoo.
"(per Z.)."

"That's a very nice, gentlemanly reply, and it is printed on very nice paper. But what in the name of all that's sensible is the meaning of the saws and guns, and guns and saws?" queried the Cadi.

"Well, now that's funny too. I told my boy what you said about trap-shooting bein' a matter of teeth, and he said that you couldn't mean nothin' else but saws, for they was a matter of teeth more nor anything else he knowed of, and he said he could write about saws till you couldn't rest. Isn't it all right, Cadi?" and Coxey's face showed anxiety as we awaited the answer.

"It'll do," replied the Cadi. "It is much nearer the truth than many older than he can reach, and I am pleased to observe that he was courageous enough to sign his own name, a bit of bravery which is not at all common when men publish their opinions on controversial matters. We will now return to the motion. Are you ready for the question, gentlemen?" All were silent. "All those in favor of Moke's motion will signify it by the usual sign." All voted in the affirmative.

In re Advertising.

"Now, gentlemen, I would suggest that you give the matter of programme some consideration, for it is now high time that it was placed before the shooters of the country. Has the secretary taken any steps in the matter?"

"I have attended to the most important part of the programme," Moke replied.

"Be so good as to report upon it," said the Cadi.

"I have written to all the manufacturers of guns, ammunition and sporting goods, setting forth the many advantages to be derived from advertising in our programme, and I expect favorable answers in a few days. I am sure that all the best-known manufacturers will take a page at least, besides giving us some valuable merchandise prizes. I have also written to all the sporting papers and secured all the free advertising we want in the shape of reading notices, and I have asked that they give us from one to thirty subscriptions as prizes too."

"What were the alluring advantages that you set forth, which lead you to expect so much and so quickly?" queried the Cadi, as he filled his pipe with some rank uncured tobacco.

"Oh, the same old advantages," Moke proudly replied. "The advantage of avoiding the sandbag or the boycott."

"They both are equal to the same thing, and in time have the same result."

"My boy says that things which are equal to the same thing are equal to each other," hastily remarked Coxey, who was an ultra fond parent.

"Not always when your boy says it," said Moke, with irritating calmness.

"I'd like to see you prove it, you cantankerous old ignoramus," retorted Coxey, with some fierceness.

"You probably mean that you'd like to see me disprove it. That's very easily done. You are an animal, for instance, are you not, Coxey?"

"My boy said that I was an animal of the marsupial breed or the mammal breed, I disremember which, so I suppose that I am," Coxey conceded.

"An ass is an animal, is it not, friend Coxey?" continued Moke.

"Yep, sure thing," again assented Coxey.

"Then you and the ass being equal to the same thing are equal to each other, are you not?" and Moke seemed to be somewhat apprehensive as to how Coxey would accept the conclusion.

"That looks so, sure enough, though I know I hain't no ass," said Coxey.

"Well, so long as you assent to the proposition that you are equal to an ass, we will consider that the ass has no perjudices in the matter, and therefore we will take its assent for granted. Now, to convince you that you are entirely and hopelessly in the wrong, I will quote you what Mr. Herbert Spencer, in his "Synthetic Philosophy," says on this very point." Moke hemmed and hawed a time or two and continued: "Spencer says, 'For whether a quantified relation be or be not rightly regarded as a thing, it is unquestionably true that in the intellectual process by which relations that are equal to the same relation are perceived to be equal to each other, the concepts dealt with are the relations, and not the objects between which the relations subsist; that the equality of these relations can be perceived only by making them the object of thought; and that hence the axiom, being established by the comparison of three concepts, is established by the same species of mental act as that which has for its terms substantive things instead of relations.' I think that you will admit now, friend Coxey, that you are wrong."

"I'm dead wrong. I'm more than wrong. I give up. I had no idea that I was an ass, and that there were so much to be said on what appears to me to be a simple subject, but still if you leave out the donkey and Spencer it still seems all right to me."

"You are all right, Coxey," said the Cadi, reassuringly. "All right on that point at least. Moke is bewildering you with false logic and smothering you with a stack of words. Returning to the point under discussion, the sandbag and boycott are much the same thing, and are largely of the boomerang order in due course of time. But how did you word your letters, Moke? I trust that you uttered no threats."

"Not at all, or rather only by indirection," Moke replied. "I do not mind reading you the original draft of the circular letter. Here it is:

Egypt, July 27.

Messrs. Juvenal & Cicero, Makers of Blunderbusses, Cairo, Egpyt:

Gentlemen—I beg that you permit me to call your attention to the fact that we are preparing to give one of the greatest tournaments of modern times, and in furtherance of it we will have 2,000 programmes printed, which will be distributed to the sportsmen of America, Asia, Africa and a small section of Europe. You, being men of rare intelligence, will readily perceive the great advantages to be derived from advertising in our programme, the rates of which are extraordinarily low, $10 for a full page, or $9 for a half page. Any merchandise which you see fit to donate will win our friendship according to the amount of it. It is unnecessary to call your attention to the advantages you will secure by purchasing our friendship and our influence in pushing the sales of your goods in this section. We will be pleased to hear from you at your earliest convenience, and beg to subscribe ourselves," etc.

"Of course, the converse of that is that if they do not comply with your request they will not have our friendship and we will not push their goods. It is really a concealed threat, and you seem to presume not on the advantages that you offer, but on the disadvantages which would accrue to dealers and manufacturers if they excite your enmity. Is that right, Moke?" queried the Cadi.

"I might influence some trade," objected Moke.

"That letter is a copy of the letter you wrote when we held our last tournament. How much trade have you influenced since then? What effort have you made to reciprocate the favors you received then? When the tournament was ended, all your efforts ended, and matters of trade went on in the same lines that they did before, and your influence and friendship ended also. Each of us uses the same ammunition that he did before, and I dare say that all of us have forgotten who gave us advertisements and merchandise, and further we do not care who gave them. Speaking of influence, you have no more than any one else. You could not persuade a single one of us to change his load or his gun, and if you could not influence us, how much less could you influence strangers, even if you made the attempt, which is far from happening, so long as an attempt implies any effort on your part. Out of all the 2,000 programmes, which will dwindle down to about 200 when they are actually printed, or at least all that are needed, about 50 may reach the hands of the shooters. Give us your own opinion on the subject, good Moke," said the Cadi.

"I do not think at most that we can find use for more than 100 programmes, friend Cadi," said Moke. "But the manufacturers do not expect any real advertising in return. They look upon the money paid to us as so much money given away. When we secure one manufacturer as an advertiser, the others come in because they are afraid to remain out. A programme advertisement may be of some advantage to local advertisers, but it is not such to the great manufacturers, for in the first place the programmes go into the hands of men who are already much better informed through the advertisements in the sporting papers, and therefore have nothing to learn from a programme advertisement. Secondly, the programmes are so limited in number that, no matter what class of people receives them, they reach but an insignificant few at best. This is a matter which we can talk over here between ourselves, but it is not a good matter for publication. Still, after all is said, we are not running the manufacturers' business, and if they think that programme advertisements pay it is not for us to say that they do not pay, for if we were to say so under the circumstances we might be mistaken," and Moke made a most grewsome grimace at the Cadi as he concluded his frank admissions.

"We add some of the advertising money to the stakes if it is necessary to do so," remarked Le Loup.

"If we add the money to the stakes or to the treasury, it doesn't much matter how we get it," said Moke. "They have our friendship and influence all the same."

"A friendship and an influence which are manufactured on the spur of the moment as a premise to trade pilfering are of no worth. The promise of influence and the implied threat to do harm all end with the close of the tournament. The power for harm is no greater than the power for good, and neither one, as represented by the programme sandbag, is worthy of serious thought. These things, like many others which have been abused, are working their own cure. The aggregate returns of the sandbag has been thousands of dollars in years past, not so much at present, and will be less in the future. Ah me, this wicked, wicked world!" and the Cadi crossed his hands on his bosom and looked upward with a look which comes only on the faces of those who are of the chosen. BERNARD WATERS.

Philadelphia Trap-Shooter's League.

At Wissinoming, Oct. 22, the Philadelphia Trap-Shooters' League held its contest on the grounds of the Florists' Gun Club, under the auspices of the Forest Gun Club.

Team match, 25 targets and handicap, known angles, six men to a team:

WESTERN TRAPS.

Limited's Autumn Shoot.

CHICAGO, Ill., Oct. 29.—The fourth interstate annual tournament of the Limited Gun Club, of Indianapolis, will be held this coming week, Nov. 2-3, and ought to prove an interesting affair. On the first day there will be twelve targe events, all of which will be shot under the equitable system, as used at the great Minneapolis tournament. On the second day the class system will prevail. The Grand Hotel cup race for the target championship will be shot off on the second day, Nov. 3. In order that conditions governing this regular competition may be known, I offer same below:

"Any amateur residing in either of the five States, Ohio, Kentucky, Illinois, Michigan and Indiana, may challenge for the cup by sending $10 forfeit to the secretary of the Limited Gun Club, Indianapolis. If the directors of the club consider the challenger eligible, they will immediately notify the holder, who will accept within ten days of the receipt of the challenge, forward $10 to the secretary and name a date for the match within thirty days of the acceptance of the said challenge. Should the decision be against the challenger, his money will be returned promptly.

"All contests shall take place on the Limited Gun Club grounds, Indianapolis, Ind.

"On the day of the match each party will put up an additional $10, the winner to take the trophy and the stake.

"The match will be shot at 50 targets, unknown angles, per man. In case of a tie, the contestants will shoot at 25 targets, unknown angles, each, and continue until the match is decided. The cost of the targets will be arranged by the contestants.

"Should the holder fail in any of the above conditions, the cup is forfeited to the challenger.

"The winner will be required to furnish a satisfactory bond for the safe return of the cup to the Limited Gun Club for challenge competition, and for the annual interstate autumn tournament.

"No challenge will be considered after the holder has been notified to return the cup for the annual tournament.

"The present holder of the cup is Mr. E. E. Neal, of Bloomfield, Ind."

At Chillicothe, O., tournament last week high honors were won by Alkire, of Woodlyn, who ran straight in several of the live-bird events, and did some fine shooting in the process.

In the death this week at Detroit, Mich., of Mr. John E. Long, Western sportsmen suffer a distinct loss. Mr. Long was fifty-eight years of age, and had always been a great lover of the gun and dog. He was for some time in the sporting trade, a member of the firm of Fisher & Long. In his time he was well known at the trap tournaments, as in many forms of gentlemanly sport, and his loss is mourned by very many sportsmen friends.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

Eureka Gun Club.

The Eureka Gun Club held its final target contest of the season on Oct. 29. The attendance was fairly good, considering the weather, which was anything but agreeable. The sky was overcast; later there was mist and a strong driving wind. The targets were somewhat erratic in their flight. W. D. Stannard won first place in the trophy event. V. L. Cunnyngham won in Class B, and A. C. Borroff in Class C. The scores in the trophy contest are detailed as follows, at 25 targets:

Class A.

A W Adams	1111111110111011111101100—20
F P Stannard	1111111111111001101101101—20
W D Stannard	1111111110111101111111111—23
C C Hess	1111101011001000101011001—14
A C Paterson	1111100111101011101110101—18

JOHNNY JONES.

East Side Gun Club.

Newark, N. J., Oct. 27.—Following are the scores of the East Side Gun Club, made at the shoot to-day on Smith's grounds, Foundry street. Conditnons, 28yds., point handicap:

Feigenspan, 7	1211211222—10	A Koeller, 6	1002222121— 8
H Otten, 7	2011212122— 9	H C Larkey, 7	*10211122— 7
B Clinchard, 5	1012111221— 9	H Reiboldt, 6	0201220221— 7
J Fischer, 6	1122012221— 9	E Waldman, 5	1110001122— 7
Dr Hudson, 7	11*2211021— 8	Schorty, 7	0110102212— 7
F Perment, 6	1021210211— 8	T H Richards, 6	0222100021— 6
F Seitz, 5	1200111112— 8		

Five birds:

Larkey	11212—5	Seitz	10211—4
Feigenspan	22101—4	Schorty	110*1—3

Seven birds:

Dr Hudson	20222*2—5	H Otten	2121201—6
H Reiboldt	1220122—6	E Waldman	1010020—3

Trap at Lyndhurst.

Lyndhurst, N. J., Oct. 25.—The postponed shoot took place today. The main event was at 25 live birds, $10 entrance, birds extra, two moneys. Capt. A. W. Money won first alone with a straight score of 25. Brewer was second with 24. Aaron Doty killed 23, Morfey and Timmons tied on 21. Fairmont killed 20.

Nos. 2 and 3 were matches between Morfey and Money, for $10. They both tied on 10, then made it a double-header, Morfey winning. No. 3 was a match at 10 birds, Long Island rules, use of both barrels, gun below elbow. Each used his first barrel very effectively.

The birds were a good lot. There were a number of sitters, but they proved good ones when on the wing. A larger entry was expected. Capt. Money killed 51 straight, including two practice birds. Mr. W. A. Hobart was referee. Mr. Jacob Pentz, scorer:

Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

Hell Gate Gun Club.

New York, Oct. 25.—The attendance was unusually large, owing to the fact that the full limit of club membership has been reached. All are in good standing. The score of Mr. J. Belden in the shoot-off, Sept. 27, was 10 instead of 9, as published by you:

		Points.

No. 13 was at doubles.

Greater New York Gun Club.

Oct. 27.—The Inaugural shoot of the Greater New York Gun Club was a total failure so far as attendance was concerned. So few were present that the programme was not followed. A few friendly sweepstakes were shot. The morning hours were windy and the birds were good. In the afternoon as the wind subsided the shooting became easier. Following are the scores:

No. 1:

Schortemeier	22122—5	Waters	12122—5

	No. 2.	No. 3.
Schortemier, 31	2222211222—10	11112220—7
Capt Money, 31	2*21211121— 9	11121211—8
H Money, 30	1101121122— 9	22122122—8
Waters, 30	2211202211— 9	0
Marten, 27	.....	0

	No. 4.	No. 5	No. 6
Capt Money	22022—4	12211—5	1210100222— 7
Waters	11212—5	02121—4	22221110*212—10
Marten	....	.....	20202
H Money	....	.....	22121002212*— 9

In No. 6 Capt. Money stood at 30yds., on one foot.

No. 7:

Capt Money	02110—3	Selover	12120—4

	No. 8.	No. 9.	No. 10.
A W Money, 30	02112—4	11112—5	11111—5
Selover, 29	12120—4	12212—5	11011—4
Waters, 28	11222—5	21121—5	22122—5
Martin, 27	10012—3	20022—3	11112—5
H Money, 27	22110—4	12212—5	12112—5

No. 6 was $1, miss-and-out; Nos. 8, 9 and 10 were 5 birds, $3, birds included.

New Jersey State League.

Dunellen, N. J., Oct. 29.—Following are the scores made today in the team races of the New Jersey State League:

Reservoir Gun Club, of New Brunswick.

Audubon Gun Club.

BUFFALO, N. Y., Oct. 22.—The following scores are from the Audubon Gun Club's regular club shoot. The shooting was very difficult, owing to the bad weather. No. 3 event was the club badge shoot. E. C. Burkhardt won Class A, Walker won Class B, and A. J. Barnes won Class C. Next Saturday the regular monthly cup shoot of the club will take place. No. 7 event was at 10 targets, gun below the elbow:

Events:	1	2	3	4	5	6	7
Targets:	15	15		25	* 15	10

PUBLISHERS' DEPARTMENT.

Hunting and Fishing on the C. & O.

No necessity exists for a journey across the continent for the sportsman who is looking for an outing. Five hours from Washington, through the most beautiful mountain scenery this side of the Rockies, deer are almost as plentiful this year as they were in the days when the Old Dominion was first settled by white men.

Since the open season began, on Oct. 1, several parties have gone from Washington into Bath county, Virginia, and the reports which they bring back are such as to make the heart of the sportsman jump with expectancy. There is plenty of sport to be had with the rifle, the shotgun, the fly-rod, and none of the game bags or fish creels are brought back empty.

Within a radius of ten miles from Millboro, Va., there are literally hundreds of deer. Then too the Cowpasture River is teeming with bass, and a 2lb. small-mouth will make the disciple of old Izaak, who has played the big-mouth on 40yds. of line, think that he has a salmon at least on his hook.

Virginia at this season is the paradise of the sportsman, and the Chesapeake & Ohio trains leaving Washington at 2:20 P. M. and 11:10 P. M. carry him right into the heart of that paradise.

For information, address H. W. Fuller, General Passenger Agent, Washington, D. C.—*Adv.*

Page Fence Music.

DR. J. A. REYNOLDS has written the words and T. F. Rinehart the music of a "Page Fence Waltz" and a "Page Fence March," published in sheet music form by the Page Woven Wire Fence Co., of Adrian, Mich. We often speak of singing the praises of a good thing; here it actually is done. The musical celebration of the qualities of the famous fence will no doubt be sung over the wide extent of the continent which is circled by the Page wires. The music will be sent to any address by the Page Co. on request.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, NOVEMBER 12, 1898.

VOL. LI.—No. 20. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

The Forest and Stream Platform Plank.

"*The sale of game should be forbidden at all seasons.*"
—FOREST AND STREAM, Feb. 3, 1894.

AMATEUR PHOTOGRAPHY.

THE FOREST AND STREAM'S announcement of prizes for amateur photographs is given elsewhere.

I never hear a greasy-faced, sanctimonious fellow declaim against the cruelty, the wantonness and the unprofitableness of field-sports, but I set him down for an arrant fool or an arrant hypocrite. But I long to assure him that in the eyes of Heaven, and God be thanked, even in the world also, some pursuits are held profitable besides that of the almighty dollar; and some amusements innocent besides cheating our neighbors on the street, and calling that business; or slandering them by the fireside and calling that conversation.

Frank Forester.

A FINANCIAL CONSIDERATION.

NEW BRUNSWICK is rapidly coming to the front as a game country. This season has proved a most fortunate one for sportsmen from the United States, as our game columns from week to week have testified. Moose and caribou hunters have been very successful; and many noble trophies have been brought out of the woods. The law of demand and supply has worked to increase the native supply of guides. A few years ago the really good guides and moose callers might be numbered on the fingers of one hand; and to supply the deficiency, Maine guides were taken in by visiting sportsmen. The New Brunswick woodsmen have learned the trick of calling, and there are now so many qualified guides among them that the visitor may be reasonably certain of satisfaction with the local talent. These guides have in many instances an exaggerated notion of the value of their services, and evidently look upon the American moose hunter as a victim to be bled. Cases are cited of guides who, when they got their parties well in hand, demanded six dollars a day or deserted. This is extortion. No guide can earn six dollars a day. If his employer chooses to give him that wage, or ten times as much, he may take it, not as earned, but as given; but the lavish rewards scattered by bountiful employers may not reasonably be accepted as affording any gauge of what the service is worth or should be made to pay when others are concerned. Moose hunters are not invariably millionaires; some of them have first to count the cost; and even millionaires are currently believed to be resentful of downright imposition.

It is with guides and guiding very much as with the tipping system, which is coming to be all so prevalent in every branch of service where one person does anything whatever for another. The person who tips thereby puts an obligation upon the next one who comes along to give a tip too, or else be slighted; voluntary tipping by some leads to obligatory tipping by all; and the exactions are such as to be burdensome to many who cannot afford them. In precisely the same way the giving of a fancy price for services rendered in the woods often means making crooked and difficult the trail for those who are to follow. No one will begrudge whatever a woods guide may receive from those who can afford it, and are disposed to give it, over and beyond the actual worth of services rendered, but the generosity of such gratuitous rewards should not be taken as the measure of what is actually due and just as a reasonable and sufficient scale of payment for guiding.

NOVEMBER.

NOVEMBER—what changing scenes the name recalls. To-day, beneath the cold, gray sky, the trees shiver in the scant remnant of their gay attire; the forest floor is strewn thick with the cast-off splendor; the clogged pools are clotted with it, and are more gorgeously mantled than if the departed wood ducks had left their splendid plumage in their forsaken summer home, and all the summer flowers were blooming, afloat with all the summer butterflies voyaging on them.

To-morrow, under the same cold, rough sky that the harrows of wild geese do not smooth nor soften, the trees stand naked and gray, the gay litter of the forest turns to somber hue and the sodden leaves sink down, dyeing the crystal pool to amber. From aloof, the surly north wind sends a hollow murmur, then nearer and louder, clashes the bare boughs and tosses the scurrying leaves along the earth. A procession of crows is swept before it in a hurried, staggering flight, swifter than the blown clouds above or the leaves beneath.

Another day, under the pale blue sky, the windless air is soft as May. Through the veil of haze the wooded hills are stranded clouds; the mountains, piles of moveless smoke; the gleam of the sunlit stream, a ribbon of silver winding through space. From it comes, in softened cadence, the raucous call of the dusky duck; from the cloudland of the hills, the mellow chiding of a hound, the dreamy memory of the cock grouse's April drum call, the indolent cawing of lingering crows, and faint and far, or near and loud, the gun's sudden boom breaks in upon the congruous voices of nature.

Again the scene changes, the mountains and then the hills are blotted out in the lowering sky, and the world is narrowed to a dreary circle, beaten by a slant of leaden rain and downright drip of branches and roofs with dull and lifeless monotony.

Again, and the bitter north wind turns the earth to stone, the circle of the world widens toward its old bounds, then closes in a blankness of gray and white, as the desolate nakedness of autumn is made seemly by the charitable garment of winter.

CAMP PHOTOGRAPHS.

SOME amateur photographs of camp scenes or other subjects are not so pleasing in effect as they would be if the people who appear in them were not staring at the camera. Unless the purpose of the photograph is to give full-face portraiture, artistic considerations demand that the human element of it shall not be manifestly having its picture taken.

A photograph of camp life should be permeated with the theme of the subject. The campers should be dining, or making fires, or fixing tents; getting guns, rods or boats ready for the day's sport; or whatever the hour of the day, the incidents should have a corresponding fidelity to camp as it actually exists at the moment. But when the campers are lined up in front of the camp, or standing in stiffly set and self-conscious poses, they themselves have abandoned the reality of camp life to engage in having themselves photographed. Tents, trees and other detail of the camp then merely serve the purposes of a background, as the curtain does in the photographer's studio.

As one looks on a photograph composed after the set manner above mentioned, the impression of camp life is but remotely conveyed; one is impressed by the dominant feature, the personality of the camp being photographed.

If the picture is to really portray camp life, it must be as camp life really is. People must fit in with the life of the camp. People in camping, fishing, etc., do not stand stiffly looking with set eyes at a point in the foreground. To the members of the party so photographed there are associations with the subject which make the photograph an incident of camp life; to all others, the incident is stripped of all associations. It then is only an incident complete in itself, telling no story of the motive inspiring the camp in its pursuit of health and sport.

So it is with all other photographs. Each person should be a consistent part of the whole, whether of camping, boating, shooting, or fishing scenes.

If then you make part of a camp group before the camera, don't stare at the instrument, be doing something, looking at something, posing in some way to indicate that the picture is of a real scene, as natural in attitude and grouping as it would be at the very moment of the snap were there no camera within a thousand miles.

SNAP SHOTS.

Despite the posting of lands in the deer district of Long Island, and an endeavor on the part of many of the residents to prevent hunting, a large force of hunters turned out early on Thursday morning of last week; and before the frightened deer realized what was happening sixty odd had been killed, thirty-eight on the lands adjoining the preserves of the South Side Club. When the deer recognized their danger, they took to the refuge of the protected grounds; and it is improbable that there will be offered again this season another opportunity such as that of Thursday. The Long Island deer are practically tame. Living in perfect security the whole year around—save for four or five days in November, and these at intervals of a week—they do not recognize man and dog as deadly enemies. On the contrary, they stray at will, feeding by the roadsides, where as one drives he may almost flick them with his carriage whip, grazing on lawns, herding with the cattle in the fields, and in all respects conducting themselves as semi-domesticated members of the community. Such animals are hardly game in the sense of being wild creatures of the wild woods, which must be sought for with craft and cunning and skill in sportsmanship. There is in the slaughtering of Long Island's tame deer little of that pitting of the shrewdness of the hunter against the wariness of the game, of which we are wont to descant when we praise the art of deer hunting. There is, however, this to be said for what takes place on November Thursdays in the Long Island deer country, that it gives an opportunity for trophy head and haunch of venison to many a man who could not make an expedition to distant hunting grounds; and that for those people who care for deer hunting of this kind it is a chance highly prized.

In an 1857 copy of "Porter's Spirit of the Times," upon which we have chanced, complaint is made that the New Jersey game law at that time imposed a fine of only one dollar for its violation; and a moiety of this was the only stimulus offered for bringing the out of season gunner to justice. The law had thus neither terror for the violator nor encouragement to voluntary enforcement; and it was a dead letter. Forty years have gone by, and to-day we have the New Jersey game law executive force urging that the penalties now prescribed are altogether excessive, and defeat the ends sought to be gained by enlisting sympathy for those who are subjected to them. The way in which this has come about is well told in the paragraph of the report quoted in another column. The principle we have noted before as operative in other States: if a game law fails of its purpose because laxly enforced, double the penalty; if that does not help matters, double the penalty again. It is a common delusion to imagine that if only the punishment be made severe enough, the law will enforce itself. The fact is that whatever the penalty, light or heavy, the statute must be put into execution by those whose duty this is; and a reasonable penalty rigorously exacted is certain to prevent repeated violations, and at the same time it does not permit the offender to pose as a victim of injustice. With such an admirably administered system as is that of New Jersey, the suggestion to lighten the penalties may well be assented to.

In this same number of "Porter's Spirit" we find the text of a law prepared by Frank Forester for the protection of salmon in the Delaware, Raritan, Passaic and Hudson rivers, which waters there was then an intention of stocking with this fish. Forester thought that there was here an opportunity to add incalculably to the fishing resources of the three States; but the project never got beyond the drafting of the law.

The expressions "buck-ague" and "buck-fever" are given by Bartlett as Americanisms. But surely there were deer hunters who were agitated with the tremors of excitement at sight of the game long before deer were hunted in America; and there must have been at least an equivalent for the terms before there were any Americanisms.

The Sportsman Tourist.

Just About a Boy.—XIII.

"Say, I got a camp all fixed up fer winter up river 'n' I reckon them beaver pelts is about right now—what yeh say, less go up 'n' git 'em?" Thus the boy spoke as he came into my workshop one bright November morning.

The leaves had become only brown bits of flotsam that the wind played tag with, and piled into long windrows and heaps in the protected spots of ground, and the trees were gray skeletons penciled against the sky. Frost whitened the ground, while every morning there was a fringe of ice along shore in the quiet reaches of the river, and the air was just snappy enough to be like wood wine.

"Well," I answered, "I guess there is no valid reason why I should not go, so make your plans and consider me a part of the outfit."

"All right. Reckon we might juss as well figger on gittin' all th' fun we kin while we're at it, so I'll take all my traps along—mebby we kin git some coons 'n' mussrats while we're ketchin' them beaver too."

"What do I want to take?" I asked.

"Oh, bring yer gun 'n' shells fer ducks 'n' geese, 'n' some small shot fer quail 'n' cottontails, nen yeh better bring a couple o' loads o' buckshot, cos we might see a ki-ote—some 'round up there all right. I got 'nough outfit fer both of us, 'n' we'll git supplies fer a week er so, nen we won't haff to come back tull we git them pelts, 'less we want to."

"When will we start?"

"In th' mornin', I guess—can't git ready much 'fore that, nen they ain't no use to hurry anyhow, an' we want th' best part of a day to git things fixed 'n' th' traps set, yeh know. Say we start early in th' mornin'?"

"All right then, I'll meet you at the landing about sunrise to-morrow."

"Uh huh. So long."

The next morning bright and early I hurried to the landing, where a clatter of oars on the sides of the boats and the sound of a merry whistle told me that the boy was already on hand and busy.

"Hullo, got here, did yeh?"

"Yes. I see you are ready."

"Yep. Got th' old 'mud hen' out 'n' loaded her up, cos I thought th' canoes ud be a leetle touchy like fer so late in th' season—ice liable to come with the first freeze 'n' it ud cut 'em all to pieces, yeh know; nen th' old 'mud hen' 'll stand most any kind o' knockin' 'round 'thout hurtin' her any. Git yer stuff in 'n' less be goin'. I'll row 'n' you steer, 'n' have yer shootin' iron ready—mighty apt to git some ducks this time o' day, yeh know."

Five minutes later we were leaving a long, wrinkly wake that spread across the quiet stream, and tinkled against the thin ice crystals that fringed the shore. The willows now were gaunt stripling trees, outlined like pen lines against the morning sky, and the blue-gray of the timber banked in behind them half-way to their tops in flattened perspective from our point of view. Small brown birds chirped among the bushes as they hunted their morning meal, but the clatter of summer visitors was lacking, for all the birds were gone, save these hardy little brown fellows, and an occasional slate-colored titmouse that ran up and down the larger tree trunks, unmindful of whether he was on the upper or lower side, or whether he was headed up or down—gravitation seemed to have no more effect on him than it does on thistle down.

"Don't seem much like it did a month er so ago 'long th' river now, does it?" asked the boy. "Still," he continued, "they's juss as much to see 'n' hear as they was then, only it's different, an' yeh got to know how to look fer it—these here frosty mornin's changes everything juss like they take th' leaves offen th' trees, don't they?"

The boy kept up a running fire of comment on river life and ways until we reached his winter camp—a snug little half-sod, half-dugout cabin hidden away in a nook of the river bank.

"Here we are," he announced, as he pushed the nose of the old 'mud hen' up against the soft bank and jumped out.

"Less git our truck int' th' cabin 'n' git things fixed up fer livin', nen I want to git them beaver traps set sure to-night, cos the sooner we git 'em th' better, while they don't know we're in th' country. Yeh see these here beaver is mighty slick critters, 'n' they savie things 'fore yeh know it, so th' best way is to trap 'em 'fore they know yer 'round—that's why I want ever' beaver trap I got set fer to-night."

We piled our outfits into the cabin, then, taking a hasty lunch, loaded the traps and axe in the boat and were soon pulling for the beaver grounds a mile further up stream. On the way we stopped long enough for the boy to cut six poles, about 10 or 12ft. long, and strong enough to hold a struggling beaver when the trap had him fast.

"Now you row 'n' I'll fix these trap poles," said the boy.

I took the oars and the youngster went to work whittling wedges and splitting the small ends of the poles, after which he slipped the ring of a trap chain over the end and drove the wedge firmly into the pole, enlarging it so the ring could by no possibility be pulled off.

"That's a trick I learnt from old man Hagey when he was trappin' 'long th' river here, an' it's the best scheme I ever saw to work on a beaver trap— Whoa! Now back up to th' bank where yeh see that kind of a wore place in th' grass, 'n' be careful yeh don't touch th' bank er th' bottom with th' boat, nen I'll set this trap fer Mr. Beaver."

I backed the boat into position, and the boy, taking one of the poles, drove it deeply into the soft mud of the river, tipping it at a slight angle downward, and in such a position that it was entirely under water when he had finished.

Then he set the powerful trap, and leaning out, placed it in the runway leading into the beaver hole in the bank, but in such a way that the pan was about 4in. under water; then he covered the heavy parts of the trap with soft river mud and was finished.

"That one'll ketch Mr. Beaver by the front foot—left front foot—when he comes out, nen when he finds he's fast he'll plunge right fer deep water, takin' th' trap with him 'n' slidin' the ring clear out to th' end o' th' pole. That's where he'll make a mighty big mistake, cos the pole's longer 'n th' trap chain is, 'n' he can't git back to th' shore, nen th' trap is so heavy he can't swim to th' top fer more fresh air, ner he can't git to th' stick to gnaw it off, 'n' 'sides it's hard 'n' dry, 'n' he couldn't cut it anyhow 'ithout breakin' his teeth. Yeh see them little knots on th' pole is all long enough to ketch th' ring 'n' stop him ef he should try to git back to shore after he gits caught, 'n' he can't hold his breath long 'nuff to gnaw his laig off 'n' git out that way, 'n' there he is—just got nuthin' to do but drownd hisself, cos he didn't stop to think about how he'd git back when he struck fer deep water. That's what old man Hagey told me when he showed me how to trap beaver, 'n' he knowed if ever anybody did—nen I've caught a lot of 'em that way since, 'n' I know it'll work.

"Some folks puts castor on sticks 'n' things to draw beavers to th' trap, but I think that kind o' stuff is a whole lot like puttin' anniss oil on fish bait—all a lot o' rot 'n' foolishness. I reckon it's a whole lot better to juss figger on bein' smarter 'n whatever you're after is, nen you don't need no such tomfoolery.

"All right, less g'won to th' next place—got to set these other five traps to-night."

By and by all the beaver traps were in position, and we went back to camp, where we soon had things in good shape for a comfortable stay of several days, if need be.

"I'm goin' out 'n' set a lot o' these mussrat traps now," said the boy. "You git a bite to eat, 'n' I'll fix these rat traps alone—they ain't pertic'lar work, cos a rat'll just purt' near fall into a trap if yeh give him a chance."

About dark he came in, tied up the boat, and said: "I figger we'll have 'bout four er five beaver 'n' twenty er thirty mussrats, 'n' maby a coon er two, by mornin', less'n it comes a storm, 'n' that ain't likely. Nothin' moves much when it's a-stormin', yeh know, but when th' weather is like it is now, all these critters goes galavantin' 'round 'bout all night, so we'll have some fur in th' mornin' all right.

"Less eat. I'm hungrier 'n a ki-ote 't ain't done nothin' but chase hisself fer a month."

After supper I smoked and listened to the homely wood lore that the boy was so familiar with, until the fireplace glowed dull red and the boy remarked that "We'd better sleep some." El Comancho.

Goin' A-Fishing.

The Man with the Old Tackle.

Unconsciously, perhaps, some men slip into the "sere and yellow leaf" and only realize their fading opportunities when routine halts, and life gazes over the widening path of the forever past. Then there is a sudden realization of years lost, for even years spent clanging a money drawer are ofttimes really lost when the brevity of life's span is considered. The mind needs a shock sometimes to bring about this realization.

Take, for instance, the "man with the old tackle." All day long the busy city has echoed with the never ending medley of noises so familiar to the man of business. The heavy drays had thundered past his office over the cobble stones of the narrow street, and his nerves had, for the three hundred and sixty-fifth time that year, vibrated and quivered with the depressing torture. Figures multiplied in his mind almost unconsciously, and the regular routine of the daily labor seemed but the greater part of his being and of his life.

He was a busy man, this "man with the tackle," and while accepting this as a general proposition, there was no special plea in the fact. The world is filled with busy men and women, and the dawn, the day, and the stars witness with wonderful regularity the procession, never ending, of the workers to tasks which never seem to be done. Narrow streets in hot, dusty cities; imperative business transactions, and can't get aways; all are more or less inseparable, but the "man with the tackle" on this 365th day of the year (might have been the fiscal, or even an imaginary year, you know) was brought up standing, as it were, and his gray matter got out of the routine groove in a jiffy.

"What's this," he mused, in a somewhat bewildered manner, as he glanced at the personal columns, "old Jones going on a fishing trip? That beats me. Never thought old Jones had it in him. Let me see," meditatively, "when was the last time I went fishing?"

"Beg your pardon, sir, Smith the broker wants your opinion in regard to that sugar stock," here remarked the confidential clerk, interrupting, and the busy man dropped his paper, got the gray matter into shape, and curtailed his musing.

"This has been a busy day," sighed the "man with the tackle" as he entered the den in which he occasionally entertained a friend. He threw himself on a worn lounge, when his eye happened to fall upon a dusty array of fishing rods hanging on the wall near the fireplace.

"That makes me think of Jones; wonder where the old rascal's going? Wish I was going with him," he muttered, as he gazed at the rods and then glanced at a little cupboard in the angle of the chimney.

"Poor old tackle. Why, now that I come to think of it, it was with old Jones I last went fishing, nearly—what? Twelve years ago! Twelve years since I went fishing? Time, thou art a mysterious thing—and Jones was not old Jones then."

Nor was the "man with the tackle," but the heavy black dust on the rod cases and the rusty key in the little cupboard, in which reposed lines, hooks, flies and reels, told their own stories, and of the passage of years—of busy years and lost opportunities.

It was but the work of a few moments to take down the rods, open cases and cupboard, and the little table with the antique legs was littered with a medley of old but almost forgotten friends. Lines were mildewed, hooks rusty, and reels groaned and shrieked upon the slightest pressure. And the rods, ah, they were all right, save a tarnish of the bright parts, but they seemed disconsolate, neglected, even antiquated, and a cricket on the begrimed hearth sang merrily, and the mind of the "man with the tackle" opened up as the cricket sang. The tree tops waved, and the water ruffled somewhere out of sight, but his mind's eye saw it all in the years agone, as the bass flirted in murmuring streams where the birds sang, and the ferns stealthily unfolded in the damp shadows. The "man with the tackle" saw it all and more. One of the pictures was something like this:

It was a crisp, cool night. The river ran rapid over the rounded stones in the shallows, and silently where the bottom dropped away and the water moved heavily and deep. A dense growth of somber-toned pines came bristling and pungent almost to the river's edge, and seemed all the more somber and deep because of the contrast made by the canvas tent, which glowed in places, reflecting the ruddy light of a camp-fire, and showing hospitable and cozy in the midst of the gloom.

Far beyond, and above the shadows of the opposite bank of the stream, the majestic, snow-capped summits of "God's eternal hills" broke almost fair upon the moonlit sky, and a few pale thin clouds drifted out of the glow and into the deeper colors of the heavens.

What a night it was. All nature was magnificent and at peace. The deep cry of a predatory bittern echoed clumsily, and scared into flight a forest mouse which had crept near the tent.

The camp-fire made the near shadows grotesque. Seated about, lounging on fragrant pine straw, were two young men. A third was busy about the fire with a frying pan. A tall tin coffee pot stood near the glowing embers, and the fragrant steam curled from the spout. Plates were scattered on a red tablecloth, spread on the earth, and a variety of edibles were awaiting a sortie upon the part of the hungry fishermen. That they were fishermen was apparent. A long string of fish hung from the limb of a nearby tree, and the frying pan was adding rapidly to a smoking heat of the cooked article then filling a good sized tin pan by the edge of the fire.

"And I was the fellow with the frying pan," murmured the "man with the tackle" as his mind played on.

The scene had changed. The sky was ominous with moisture-laden clouds. The great dark green billows swept heavily across the sea, and pounded into foamy fragrants on the brown sands. The gulls were circling on unsteady wings, screaming, and ever and anon plunging like feathery darts into the shallows where the minnows had gathered to escape the curling swells. The pass was dark with roughening water, save where the foam eddied in the swift incoming current, and made a lighter blue, which faded even as one gazed. The stiff salt grass of the sand hills bent gracefully before the ardent wind, and the small brush shivered and tossed uneasily. The scene was wild and nature severely grand. The blue-black masses of cloud wrack fled like fleeting shadows, piling in the northeast in impenetrable masses, the western heavens colored with a touch of deep cadmium and scarlet from the slowly rising sun.

A solitary fisherman stood near a damp sand knoll, which jutted into the pass. The waves here had no effect, the point sheltering the water beyond, and its depths were not stirred. The fisherman was knee deep in the clear water. His rod was vibrating in the stiff breeze, as he lightly cast his hook into the pass. No time was lost. The bait sank into the surface, and then the metallic whirl of the reel clanged sharply above the sound of the waters. How the line strained and the rod bent. The fisherman braced himself, and carefully playing his game, breathed sharply, and earnestly gave himself to the contest. Give and take. A silvery green slim object leaped desperately from the waves only to plunge like a shot beneath the surface, and once again the reel sang and the fisherman's face was drawn and firmly set. Inch by inch, and then the line came in steadily, and soon the lithe and beautiful creature lie gasping on the sands, its sides of silver flecked with the well-known deep green spots and clearly defined stripes, the king of the Gulf, a 2ft. Spanish mackerel.

"I caught twenty that morning—such sport—such weather, and that was fifteen years ago," mused the "man with the tackle."

The den faded once more, and the summer breezes sighed softly in the tops of the magnolias, and the white oaks in the bottom lands. The white blossoms of the magnolias shone like great pure stars in the deep glossy foliage. There was a carpet of soft grass under foot and the balmy sky overhead.

The roses were in full glory of life, and the porch of the weather-beaten old farm dwelling was bright with the new color. Nature was lavish. The mosses swayed gently from the limbs of the trees, and the mockingbird and bluejay whistled sweetly in the glorious sunshine.

On the wide gallery of the farmhouse, sheltered by the tender leaves and early forming fruit of the scuppernong, was a great old-fashioned table, heaped with the many good things of country cheer. Golden combed honey, the great yellow bowl with milk, fresh homemade bread and butter; simple fare, but honest.

Swinging in a great crimson hammock between the trees in the front garden were several children, their happy voices sounding in joyous play, and dear round healthy faces, pink from the pleasure and exertion. A group of elder folk gave color to the front porch, and near the old gate, with its creaking hinges, gray pickets and medieval chain weight, a sweet-faced young matron stood, gazing down the tree-arched country road as it wound toward the river.

"Here he comes," cries out the matron in a pleased voice, and now in full sight with rapid tread comes a man. He is clad in simple garments, wears boots, and over his shoulder projects a long bamboo rod, while by his side hangs a fine string of bass—the good old country sort. His face is healthy and happy, and as he removes

his old slouch hat and kisses lovingly the waiting wife, it is evident there is perfect understanding and trust.

"Just in time, Jack, dear," says the little woman; "table's set and the little ones are hungry. Did you have a pleasant day?"

The couple joined the others, and the children run to kiss and be kissed, and with merry cry and laugh the fish are carried to the kitchen, and soon the family is gathered about the simple fare, everybody happy and contented.

The "man with the tackle" sighed. "Good times those," he said, "and it was just twelve years ago. I have never had the time since. I must have been very busy, but—" here a bright look spread over his face, as though a [illegible] inspiration had mixed with his dreams.

A BUNCH OF ELK IN THE FOOTHILLS.
From a photograph by T. G. Ingersoll.

"Sam," he called, and the wrinkled face of the old negro porter was thrust inquiringly through the door.

"Here you, Sam, get all my fishing truck together in the morning sure. I am going to take the family into the country for a month. Want all my lines and my gun, and Sam, get some boy to take your place, do you hear, you old rascal? I'm going a-fishing and I want you to come along."

"Jess as I uster, Massa Jack?"

"Just as you used to, Sam, long ago."

H. M. MAYO.

In the Louisiana Lowlands.—VIII.

BY FRED MATHER.

[*Continued from last week.*]

THOSE Southern steamboats are leisurely craft. If they do not reach a certain point to-day there is hope that they will on the morrow. Therefore one must be early and wait. We were at Alexandria about 10 A. M., and the boat was expected about noon, but no one knew when she might arrive. Strolling down to the levee we found old Sam, who had been my *fidus Achates* during the week's fishing on Catahoula Lake. He had his great line out for big catfish, and was fishing with a cane about 20ft. long for smaller fish. He had just unhooked a crappie and strung it through the gill covers and placed it in the water to keep alive, when I asked: "Well, Sam, how are they running now?"

"Well, I 'clar' ef heah ain' my Yankee Kunnel an' Doctah Gawdon too; it does my ole eyes good to see yo' bofe. Whah you bin all de time, Doctah? I ain' see yo' fo' many years, an' I 'membah yo' w'en yo's a little boy come heah to visit de ole Kunnel w'at's dead an' gone, long befo', an' yo' come wid you muddah fum Gawgy."

Here was a clue to the solution of my problem of Dr. Gordon's nativity, he was born a Georgian, and I stored that fact away.

"Sam, you are getting old," the Doctor remarked. "I was here last year, and brought you a ham and a bottle of gin for a Christmas present. Can't you remember as far back as that?"

"Wus dat las' yeah?"

"Certainly it was. I supposed that the ham would only last a few days, but the gin was well corked, and if only used for medicinal purposes, as I suggested, it could not evaporate, and you must have some of it left."

"Ise gettin' ole, fo' a fac', and can't 'membah good. I 'membah de ham, dat las' 'bout fo' days, but dattah gin, Doctah, was fo' 'dicinal puppus, an' Ise gettin' ol', an' wid de 'tism in de laigs an' misery pains in de haid an' back, dat gin nebbah got no time to 'vaporate, less de ol' woman got up in de night an' 'vaporate some, as I 'spec' she did w'en she got a smell o' de stuff, but hones', it didn' las' as long as de ham, it didn' fo' a fac'."

"Sam," I said, "the Doctor and I do not drink gin; in Yankeeland there is a saying that only women and darkies like it. Now take this and go up and treat yourself and I will fish for you."

"T'anks, Kunnel, I'm proud to have yo' 'quaintance, an' I 'member de good times awn Catahoula." With hat in hand, after the manner of the old-time darky, he left us in possession of his entire fishing outfit, without asking for security. Confidence was not a creature of slow growth with Sam. I have recorded how he left me in full charge of his fishing outfit, and went to the hotel at my expense and gave me that high compliment: "I know'd yo' was a gemman w'en I seed yo' get off de boat."

I took in quite a number of the small fishes which make their homes in Red River, without giving thought to other things, when the Doctor yelled: "There's a bite on the big line!"

I dropped the cane and rushed to help the Doctor. It was lug and tug, hand under hand, for more minutes than we kept a record of, and we landed a giant catfish. Just then Sam returned and killed the fish with the poll of an axe that he had for that purpose, and after a critical survey gave his opinion: "He's a big cat, fo' a fac', but I don' 'spec' he's so big as de one dat de Yankee Kunnel an' I got jess fo' we went to Catahoula Lake. How much did dattah fish weigh, Kunnel?"

"Just sixty-three and a half pounds."

"I doan jess 'membah de poun's, but I 'membah de two dollahs an' a half wot I got fo' him."

We went to dinner, which I afterward regretted. There we found a first course of fried crappies, which was good, one to each plate; then came an alleged "beefsteak," which might have grown on the neck or on the shin bone, and was fried with onions! If I were intrusted with the government of all the inhabitants of this world, I would select some quarter of the globe where good steak was rare (pun intended), and there colonize all people who fry a beefsteak. If there is any crime against the giver of good things, it is the frying of a succulent, juicy steak.

As we chewed away on the tough meat the Doctor sarcastically remarked: "The onions are good; I always like a steak smothered in onions, don't you?"

"Yes, if the steak is eatable, but I believe with 'Frank Forester' that the penalty for frying a steak should be death, without benefit of clergy."

"I agree," replied the Doctor, "but on the menus in New York and Paris I find an expensive item named 'chateau briand,' and the waiters tell me that it is a beefsteak cooked between two thin slices of beef, which are thrown away; all I know is that it is thick, juicy and tender, and is a veritable poem in beef; you can't dispute that!"

"When the financial wind blows from the right quarter I agree, but at other times I forget that such things are and order fried clams or a 'Hamburg' steak. But why, in this place, and with such an apology for a steak before us, do you mention a chateau briand? 'No more of that, Hal, an' thou lovest me.'"

"All right; in future we will order our meals while in country places and stick to ham, eggs and such things they have and know how to cook. We may be here all night for all I know, there's no telling when the boat will arrive." The landlord had removed the steak and we had finished the ham and eggs, the rice pudding and the *cafe noir* when the Doctor exclaimed: "Hark! that was a steamer's whistle. One is expected from down the river also. Say 'up' or 'down' for the cigars; not to be bought here, but when we reach a place where we can get a decent weed; we have plenty for present use."

A Little Gambling.

"Down!" and I won. We had our luggage taken to the levee, where old Sam was dickering with a man about the big fish. He had taken it up to the scales, and it weighed 54lbs. The man offered "a dollah an' fo' bits," but Sam held out for two dollars until the boat rounded to and the steward and Sam went to look at the fish, and it was brought on board to be served for the roustabouts who formed part of the crew. No wood was taken here and we were soon off. At some landing a lot of gamblers got on; the Doctor said they had left the upgoing boat, and that they worked the river nightly in that way. After supper the cabin was lighted and the games were opened. They were of the kind that follow circuses and fairs, at which the yokel has a better chance of being struck by lightning than of winning from the experts. There was the old "sweatboard," three-card monte, and a game that was new to me, called "chuck luck." It was a gorgeous lay out of watches, jewelry, and one prize of $100 in gold. Ten dice were thrown, and 60 would win the gold, while 10 would win a fine gold chronometer. It was a dollar a throw. I watched the game for an hour; the highest throw was 42 and the lowest was 30, and the prizes were trashy pins, rings and silver mugs, yet the real players did not seem to mistrust that some of the dice were loaded. After the hour

was up the play slackened and then a new bettor came in and lost a few times, and then, after a wrangle, when I saw enough to know that the dice were shifted, he took another throw and won the gold. This brought in a few more bettors, who played awhile, and then another stranger appeared and won the chronometer with a throw of 10. But at a midnight landing I noticed that the men who won the big prizes went ashore with the gamblers.

As we turned in the Doctor said: "It's curious how those fellows always find enough fools who think that they can beat them. That pack of gamblers took off at least three hundred dollars from this boat, and they can do it with the same crowd when they come back. I never cease to wonder at it."

"Nor I. If I was a gambling amateur I would not risk money on a game handled by a professional. Those fellows can juggle dice, cards or other implements of their trade in a manner that only a trained eye can detect, and they are not in business to enrich a lot of steamboat passengers. Good night!"

The Atchafalaya.

It was near noon when we left the steamer at Red River landing, on the Mississippi. Here we bought an old tub of a scow, a piece of canvas that had been in use on a steamer, pork, bacon, some bread, butter, a frying pan and an iron pot; hired a darky to load the outfit on his wagon and deposit us on the banks of the Atchafalaya River, some dozen miles to the west. The road was bad, miry in places, and the mules were slow. It was after sundown when we reached the river, which at that time was only capable of floating our craft. We made a fire. Pete hobbled one mule, put a bell on it, turned both out, and got out his blankets. We fried bacon and made tea, determined to try to enjoy life despite the swarms of mosquitoes. Pete turned in on the wagon, but we spread our canvas on the ground, turned the boat over it and crawled in, but between the mosquitoes and that clanging cow bell on the mule no one reveled in too much sleep.

Morning has never failed to come, up to the present writing, no matter how slow it may be in getting here, and this time there was no exception to the rule. The Doctor interspersed his remarks with whacks at our insect pests. Slap—"There's no use (slap) in staying here (slap) an extra minute (slap). You just make the coffee (slap) and fry out some (slap) pork fat (slap), and I'll get some (slap) fish and (slap) clean them, and we'll (slap) scoot." Slap.

I slapped and obeyed his directions in the intervals of slapping. Pete assured us that a few miles below the river broadened, and we might get a breeze that would banish the pests, and we enjoyed the very anticipation of such a respite. As for Pete, he seldom slapped, and was not much annoyed. There is much in being used to your environment, and that's a mighty good word to represent a swampy hole, where insects make life miserable. The waters had covered the earth in this part when the Red River, in its season of flood, had taken a short cut across it in order to reach the Gulf in less time than by following its usual course down the tortuous Mississippi. Our ablest engineers have tried to prevent this overflow, but without avail; each year the water covers this district and makes agriculture impossible.

Down the River.

Breakfast over, we launched the scow, loaded her with our plunder, including a ten-gallon copper tank for alcoholic specimens of the smaller forms of aquatic life, and shoved off. We had intended to drift down, merely steering with pole or oar, but anxiety to reach the place where the wind would scatter our hosts of enemies impelled the use of both pole and oar to reach the promised water. "Mark," said I, and paddling ceased; I picked up a gun and dropped two teal out of a bunch of five. As I picked them up and dropped them in the boat, I added: "There's our dinner, Doctor."

Just then he called: "Mark," dropped three out of a bunch of seven, and replied: "And there's our supper. We will shoot no more to-day, for when we reach the wide water and leave the skeeters behind we will pick up enough frogs for a good breakfast."

A full hour after starting the river broadened, and by keeping well to the eastern bank we got a breeze from above the tree tops, and were happy. Here we rested awhile, and then began collecting the fresh-water mussels, Unios, snails, crawfish, frogs and other forms of aquatic life. The frogs, and all but a few crawfish, were for our menu, the rest went into the alcohol.

The day was not bright, but the Doctor looked at the bright spot where the sun was supposed to be and asked: "Do you begin to feel hungry?"

"No, I don't begin to feel that way; my appetite is at least two hours old and has become chronic."

"But," looking at his watch, "it's only 10:30, and if you were at the Colonel's you would not think of eating for two full hours from now."

"If we were at the mansion we would not have been turned out before daylight by insects to get breakfast and escape; and then paddle and push an old tub some five or six miles down stream. I don't need a watch to tell me when I want to eat on such an occasion. You make a fire on this point, get out some fat to fry these frogs, and I'll skin the breasts of a pair of teal, cut them out and we will feast in a manner to forget that miserable steak of yesterday, and that equally miserable breakfast with slap accompaniment this morning."

"But you laid out the frogs for breakfast to-morrow, how's that?"

"Frogs, my dear Doctor, are not so rare in Louisiana swamps as to necessitate economy, as we are situated. I was not hungry when I allotted them for breakfast; I will probably lay out more for that event. It is well that our teal are all blue-wings, or we would need the whole five for dinner, and we may yet if you don't get that fire under way soon."

By the time he had a good fire started, and the frogs rolled in cracker dust and frying, I had several fillets of teal cooking on sticks and was basting them with pork fat.

"How do you like your teal, Doctor, rare or well done?"

"Moderately rare; it is better that they should be under than overdone. The frogs are ready and well done. I'll get the tea made, the cutlery out and some bark for plates, and trust the teal to you."

We passed through another mosquitoes' paradise, but in half an hour left them behind. About 4 o'clock we came to a breezy point which impressed the Doctor as the place to camp, for we might not find its equal.

The Thunder Came.

"Doctor," said I, "do you see that cloud coming up in the west, no bigger than a man's farm?"

"Yes, that's a storm sure."

"Then let us make camp at once, and let it come. Let us hope that the wind, which comes first, will drive the skeeters so far into the woods that they can't get back after the rain kills the wind."

The canvas was spread, the boat dragged up over it and propped up on the leeward side with two stumps, the canvas so arranged that the edges would come inside the boat, and our provisions secured before the cloud cut off our daylight. Then came the moaning of the forest, as if each great tree was praying not to have its roots torn from the earth, yet the air was still and oppressive. Not a sound came from beast or bird during this awful stillness. We were cuddled together under the boat, but did not talk. When all nature is hushed man should be silent. Gradually there was a sound of moving tree tops, which increased rapidly; we could feel the air move under our boat as it curled over the upturned bottom. Distant thunder rumbled, and after a time a dull flash followed it. The rumblings became louder and the intervals between them and the flashes were less; the wind was now shrieking among the tree tops, and the sound of dropping branches was frequent. Then came a roar of wind and a few pattering drops of rain fell on our boat, and we knew that the drops were great ones. A tree crashed to the ground near us, and some small animal ran under our canvas on my side, but I was too much interested in the conflict between earth and sky to mention it. There was a blinding flash that was instantly followed by an ear-splitting discharge of heaven's artillery, and a large branch fell on our boat.

Then the Doctor spoke: "That was a close call for us, but lightning will always take a tree before it will reach for a man, but will surely take him if he is under it. Did you ever hear it pour harder than it is hammering our boat now?"

"No, never; but the rain has killed the wind and the storm is passing to the east, at least the electrical part of it; I am only afraid that the mosquitoes will come to see how we weathered the storm after the rain ceases. I have been wondering if our canvas would wet through, but all such questions fade into insignificance before the mosquito."

Two Squirrels.

"Something ran over me just after that first tree fell," the Doctor said, "and I heard it jump up on one of the seats of the boat, but never heard it go away. What could it be?"

"Don't know; something ran under the canvas on my side close to my back, and it may be there yet, for all I know; I haven't stirred for fear of pressing water into the canvas. The wind has gone and the rain is going. I am in good condition to eat, and if I had a good bellyful I have an abiding faith that sleep would come; a sleep which had principal and interest due for last night, and would defy so small a thing as a mosquito to disturb it. Nothing, my medical friend, is so conducive to sleep as a well-filled stomach. Some men in your profession advise exercise after dinner. See how the cow, dog and cat curl up and go to sleep after a gorge of grass, chicken bones or milk, and then give me a reason for exercise after eating or why I should not take a nap after dinner?"

"Not a reason; and there is no reason why we should lie here all night hungry; it is hardly dark, and we can find some dry wood to start a fire; let's do it."

The sky was clear and the moon, just past the full, was rising, but was concealed from us on the east bank by the trees. We found some dry pine and soon had a roaring fire. The Doctor took the bag of provisions from the seat of the boat and turned the boat over so as to dry the canvas before the fire; something dropped from the overturned seat, and he picked up a squirrel with the remark: "That's the animal that ran over me, and it's stone dead."

"What could have killed it after it had found shelter on the seat under the boat?"

"Heart failure, my boy; its heart stopped beating and it died."

"Clear as mud! When you medical Johnnies have no idea what a fellow dies of you look wise and say 'heart failure'; want of breath would do as well, but the question before the jury is: Why did that squirrel's heart fail?"

The Doctor smiled and said: "Here's another squirrel under your side of the canvas, and that's a conundrum for you, but let's drop conundrums and get supper. If you'll skin out the breasts of the three teal I'll get more wood and fry some ham, for I could eat the teal alone at this time o' day after that early dinner."

A Frugal Supper.

Two good slices of ham and the breasts of three teal, with bread, butter and tea, made a good meal for two tired and hungry men, and as we sat on the edge of the boat and saw that the steaming canvas did not scorch we smoked in silence and watched the moon through the tree tops. I was wondering if those squirrels were killed by fright, and if so whether other sportsmen had noticed anything of the kind. It was my unprofessional opinion that the hearts of the squirrels had failed from terror, but they were adults, and must have heard thunder before; yet that storm was an extraordinary one, and had struck a tree, if not two, close by. There was no use in pressing the question on the Doctor, who no doubt thought as I did, for there seemed to be no other solution of the problem; still it was curious that two squirrels should seek protection under our boat about the same time, and both should die. I have heard that rabbits have been either killed or paralyzed by a sudden shout from a man, but never witnessed such a thing, and have thought it curious how a shout could have that effect when I have seen them escape, apparently unharmed, from a gun shot.

The frogs were discussing matters, probably freshets and droughts, or the edibility of beetles, dragon flies and other insects; the night herons were "quawking" to keep in range of each other, and an owl in a tree overhead was arguing with an owl across the stream on the cause of the scarcity of mice, and regretting that it was necessary to fill up on cold-blooded frogs. While meditating on these things, a muskrat made a great commotion in the water and roused us both.

The Doctor arose, yawned, looked at the moon, slapped a mosquito, and said: "It's near midnight, and we've been dozing. Let's turn in. There's nothing fresh in camp for breakfast except the squirrels, and here we are miles from a butcher or grocer."

"Well, Doctor, we are in a land of plenty as long as our fishing tackle and ammunition hold out, and if those fail we can get enough frogs with saplings to last if we keep our matches dry, for I'm a sinner if I want to eat raw frog. Let's spread the canvas, turn the boat over it and let the mosquitoes do the rest."

And Daylight Came.

The sun was up before we were, and our insect friends had worked faithfully, but we, fortified with a good supper, good consciences and with sleep due us, never heeded them. In those days we accepted mosquitoes as we did thunderstorms; things that there was no dodging and as necessary evils to be borne without grumbling. We knew of no combinations of tar and oil, "lolicapop" and other preparations to anoint the skin and repel insect advances. The Doctor had spoken of mint and peppermint in this connection, but we found none. He had ammonia, which we used in a diluted form to alleviate the stings. At the close of the century I glance back and see the changes. We prided ourselves that percussion caps had superseded flints, that good guns were lower in price than in 1800; but we never dreamed of such outfits as the sportsman of to-day goes afield with. He is luxuriously provided for, but I doubt if the younger men appreciate it; they have a choice of many insect repellants, and do not suffer as we did only a quarter of a century ago, and that is only yesterday.

Said the Doctor: "You do the fishing this morning and I will prepare the squirrels, and be ready to help to do the same with the fish."

He spoke as if the catching of fish enough for breakfast was a certain thing, and it was. The waters were so filled with fish and the competition for food was so great that a baited hook hardly got below the surface before a fish of some kind took it. Casting out some undesirable species, I took six crappies and three big warmouths in half an hour, and said to my friend: "There's a breakfast for you, about 6lbs. of fish, gross weight, and at least four net. Then, if you can eat a fried squirrel, with the usual amount of bread and butter, after the fish are gone, I'll go and get some frogs, for if we starve here it will be our fault."

The Land of Plenty.

After the fish and squirrels had been disposed of the Doctor said: "Now bring on your frogs."

I started for the boat, but he declared that he was joking, and that we had better pack up and drift down the river. As we drifted a few miles the river widened and we had a southerly breeze from the Gulf night and day. "The absence of pain is pleasure," and we fully realized this as we entered the country where the Gulf wind is strong enough to keep the mosquitoes back. Here I could hope to find new forms of life, and I began work again. It was fun for the Doctor, who had never paid any attention to the smaller aquatic life, and he was enthusiastic in collecting. We did not repeat the error of the first day in being caught with a short commissary. There were always ducks, frogs and squirrels enough in our larder to tide over a rainy day, or even two, but we only caught fish as we needed them. We had two rainy days, not thunder showers, but two consecutive days of drizzle, and still had meat on hand when it cleared up, for we had two soft-shelled turtles, ten squirrels, fourteen ducks and a lot of frogs when the rain began. We camped on a point and just cooked, ate, smoked and slept. We took a few fish for a change of diet, and could have killed a hundred or more ducks, but did not need them.

We had passed some houses on the higher lands, but having no occasion to stop, we did not visit them. Drifting along we naturally wondered where our boat might be in relation to a map of North America, or more particularly in Louisiana. "Doctor," said I, "this trip does not promise to yield more specimens, and we had better strike for a railway or for a chance to get to the Mississippi and go home."

A Short Cut Home.

"This is a pleasant life; why do you wish to leave it? Let us drift down to the bayou and then get back into civilization; how does that proposition suit you?"

"Can't do it. I've about finished my work on this river and must get back with my specimens. The life is pleasant, as you say, and I'd like a month of it, but I have duties to perform; you have none. There is a darky on a flatboat ferrying a team of mules and a wagon across; we can find out where we are."

He was a middle-aged man who "libed up yandah in St. Martin's Parish, 'bout fo' miles, an' jess cum fum Plaquemine, an' is gwine back in de mawnin' fo' mo' p'visions."

"How far is Plaquemine; and can we get a boat there for New Orleans?"

"I spects it's full twenty mile obah dah, an' de boat stops w'en dah's passengahs."

We arranged to camp there and go with him in the morning, and he gladly accepted our boat in payment for transportation. We would shoot a half-dozen teal to take to New Orleans, not that the markets would not supply all we needed, but a sportsman enjoys eating his own birds more than he does those he buys. He knows each individual by the shot marks, and an incident in

the day's sport is recalled by each bird. "Gawge," for so he called himself, promised to send over one of his boys to show us a marsh where the ducks came to feed before sundown, and we camped, got dinner and waited for the sun to get into the west, and for young Gawge to appear and show us the marsh.

[TO BE CONTINUED.]

The Ascent of the Grand Teton.

ST. PAUL, Minn., Oct. 31.—*Editor Forest and Stream:* Mr. Henry Gannett, of the United States Geological Survey, whom Mr. Owen quotes, has written a letter to the New York Herald, of which that paper published but a few lines. As Mr. Gannett is a disinterested party, what he says is more to the point than anything that may be written by an interested man; and the testimony will not be complete without his letter. Therefore I ask you to publish his letter, for it shows that he believes that we got to the top of the Teton, and that he had confidence in Mr. Stevenson's statement.

One very important point that he makes is that the aneroid computations, made by himself, and which Stevenson and I did not know how to make, showed that we reached the height that Mr. Owen did.

N. P. LANGFORD.

WASHINGTON, Oct. 14.—Editor New York Herald—Dear Sir: Having been, until recently, out of the world, it was only yesterday that I had the pleasure of reading Mr. W. O. Owen's account of his ascent of the Grand Teton, in Wyoming, as published in the Herald of Sept. 18. He is to be congratulated upon his success. Although he quotes me in support of his position that he is the first to reach the summit of the mountain, I cannot agree with him, having, as I believe, good reasons for my conclusion that Messrs. Langford and Stevenson succeeded in reaching the actual summit. The story of this climb was told by Mr. Langford in the pages of Scribner's Magazine of June, 1873. In the Annual Report of the Hayden Survey for the year 1872, Dr. F. V. Hayden speaks of this ascent and decribes a stone circle, evidently built by man, which, as he stated, was found upon the summit of the mountain. In 1878 Mr. A. D. Wilson, who was at that time carrying on the primary triangulation of the Hayden Survey, attempted to reach the summit with the large theodolite used for the triangulation, but found himself unable to do so. He, however, reached a point very close to the summit, both in altitude and distance, upon which he found an artificial stone circle, presumably the same mentioned by Hayden as having been found by Messrs. Langford and Stevenson. This point Mr. Wilson occupied as a station. Its position and height relative to the summit of the mountain have been computed from his observations. It was practically, although not literally, the summit. Putting these things together I assumed that this was the highest point reached by the Langford-Stevenson party, and in that belief I wrote Mr. Owen on Oct. 19, 1896, the paragraph which he quotes in the article in question.

Subsequent correspondence with Mr. Langford, now living in St. Paul, Minn., satisfied me that Dr. Hayden made a mistake in stating that the stone circle in question was upon the summit; and also that Messrs. Langford and Stevenson went beyond the point upon which the circle stood and reached the literal summit. Acting upon this, I wrote to Mr. Owen on May 5, 1897, as follows:

"Since writing you I have had a little correspondence with my friend, Mr. N. P. Langford, now living in St. Paul, Minn., regarding his and Stevenson's climb of the Grand Teton. In response to my request he has sent me two copies of the article which he published in Scribner's Magazine, one of which he desired to be sent to you, and it is forwarded, under separate cover, by this mail. Within the cover he encloses a copy of a letter to me concerning the climb, which contains certain matters not found in the article. A perusal of this article, which I had not seen for nearly a quarter of a century, together with Mr. Langford's letter, convinces me that beyond any question he and Stevenson succeeded in reaching the summit of the mountain."

Mr. Owen, in quoting me, should have told not only the truth, but the whole truth. He should not have quoted the first letter and omitted the second. So much for my own connection with the matter.

Now I will proceed to the evidence upon the main question. That Messrs. Langford and Stevenson did reach the summit of the mountain is, to my mind, proven by the following evidence:

First, the statements of the two men, both in public and private. Mr. Stevenson is now dead, but Mr. Langford is one of the most prominent and respected citizens of St. Paul.

Second, the first measurement of the height of the mountain was made by Mr. Langford by an aneroid barometer, which he carried with him on this ascent. The resulting height, which was computed by myself, was 13,762ft., which is a very close approximation to the true height of the mountain. As neither Stevenson nor Langford knew enough about barometric work to manufacture a reading which would fit this altitude, this bit of evidence in itself, and without regard to the character of the gentlemen, seems to be conclusive.

As for Mr. Cooper's statement, I can only say that he was not employed by the Survey in 1872. In 1877 he was employed as a packer in the party of the Hayden Survey, working in that region, and in that year he attempted to climb the mountain and failed. The fact that Mr. Owen found no monument upon the summit is no evidence whatever that the mountain had not been climbed. Does he imagine for a moment that men who were in the habit of climbing high mountains in the course of their work nearly every day exhausted themselves by building cairns of rock upon every summit reached? Very respectfully,

HENRY GANNETT.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Natural History.

Extracts from Letters.

LAST evening I got to the barn at 5 P. M., and shut it up for the night. It might have been some time last night or early this morning, a chipmunk came in through the window, ran along the shafts, and climbed upon the cushion of the wagon. There was a horse blanket folded upon the cushion.

This morning Frank backed the wagon out to wash it, but seeing what he thought were my shucked beechnuts in a neat pile on the cushion be laid cushion and all upon the fire clay pipe, where I found it, and asked him where he got his beechnuts.

He said he thought they were mine. They are all (about one hundred kernels) nicely shelled, and I will send you some.

I put just fifty back, and am going to see if he continues to carry his store there. He is an enterprising 'munk, for all the beechnuts I have found this year have been empty.

I looked overhead to see if by any possibility they could have been dropped through a hole, but no.

To-day I went again to the barn to see if the pile of nuts had been increased, but not one was to be seen. Mr. Chipmunk had been there last night and carried away every kernel!

There was just one that had not been shucked. He had left, of all that had been there, just that shell on the seat!

So I was outwitted by so small a creature, and instead of having more to send you, I have only half of what he first piled there.

This evening two of the fallow deer of the park, one pure white and the other brown and white, spotted, came out of the timber to the clearing about the camp. It was getting dark, and the wind was fresh. All animals seem so much wilder on a windy day.

They came out to feed on the fungus you saw before you left, that sprang up so suddenly during those two warm, muggy nights!

The deer looked awfully pretty, starting constantly as some slight noise, and being ever on the alert, sometimes holding pieces of the brittle fungus in their mouths while they cast furtive glances back toward the forest.

Suddenly their attention was attracted by some Angora goats that showed up white against a dark ground, and they seemed riveted to the spot for a moment, holding a half-eaten bit of the fungus in one side of the mouth.

Then, as if impelled from a catapult, they bounded away, fleeing from some imaginary bugaboo, conjured up in their active brains and made real by some sound in the wind.

The baby moose stays at the cottage all the time, and now eats everything, and drinks all the dish water. Salt pork he likes very much, probably because of the salt. Tobacco also. It is all grist that comes to his mill. He hates to be touched, and when he is not wanted we catch him by the hump over his shoulder, and he skedaddles.

I never was more amused at the Little Mammoth's antics than when watching him drink salty water from the bottom of a boat.

The boat was one of those very tippy Saranac Lake style of boats. It was drawn up part way on the beach, and lay pretty well on its beam.

The awkward little thing would gingerly climb into it, steadying himself as the skiff rocked. The place he wanted to reach was down hill, and you know he can't touch the ground with his nose, anyway, without bending one knee, and generally he goes down on both knees, like a goat.

We had been carrying rock salt in the boat, and the water leaking in had become salty. I think he must have drank at least two quarts in all, going along on his knees from one boat-rib to the next, and his hind part absurdly elevated, until he had her completely bailed out, salt water, mud and all. HEATHCOTE.

THE ADIRONDACKS.

Are Bull Bats Game?

Editor Forest and Stream:

If my friend Coahoma were a good Christian, as I am, he would look upon it as a duty to resist the temptations that the devil is placing constantly before us in the shape of night hawks and things. He's a very intelligent man and knows that the aforesaid bird is a fluffy little bundle of feathers and wings, with a body so small that it would take at least two dozen to fill a hungry man, and he knows at the same time that it's a harmless and purely insectivorous bird that the law protects in the Northern States, whatever it may do or not do in the South. Two or three years ago the Rev. Thos. Dixon paid two or three hundred dollars duty on a bag of robins, which, though protected as insectivorous, are guilty of many little thieving operations, which sins cannot be laid to the door of the innocent cause of our dispute. Now as the Rev. Dixon was fresh from the South, where the robin is looked upon as game, it seems to me that a little clemency might have come in play, whereas none should be shown toward a nighthawk shooter. Here is what that inexhaustible source of interesting knowledge, Fred Mather, says: "The bull bat, the whippoorwill and the bat keep down the innumerable hordes of insects which make life a torment for us but for their unceasing work." I feel proud of being supported by such an authority as that—though he did, in a weak, unguarded moment, oppose me once!

And now another word on the mosquito question. My friend asserts that the home of the little pest is in the swamps, and that the night hawk gets very little chance to feed on him in the open country. I have been two or three times to South America, have traveled all over the West, and have seen specimens of the insect on the fag end of Staten Island, but I have never seen any approach to the swarms that I found on the open prairies at the West, where there was not a drop of water within miles—not one of our party being able to give a guess as to where they came from. They don't confine themselves to their birthplace, but go on marauding expeditions.

My good, intelligent friend knows very well that bull bats are not game birds, and the only argument he can use in support of his position is that he wants the sport of shooting them. I advise him to go into missionary work and try to stop the slaughter of robins, for as it is the Northern States are simply protecting them for the benefit of pot-hunters at the South.

DIDYMUS.

ST. AUGUSTINE, Fla., Oct. 30.

The Linnaean Society of New York.

A REGULAR meeting of the Society will be held in the American Museum of Natural History, on Tuesday evening, Nov. 22, at 8 o'clock. Subject: "The Warblers of North America." Exhibition of specimens of Bachman's, the blue-winged, the golden-winged, Brewster's and Lawrence's warblers, with discussion of distribution, habits, etc. WALTER W. GRANGER, Sec'y.

Fresh-Water Pearls.

WE have received from the United States Fish Commission the paper on "Fresh-Water Pearls and Pearl Fisheries," by Mr. George F. Kunz, a part of which has been printed in our columns. As published by the Commission, it has added interest and worth in the admirable illustrations.

Game Bag and Gun.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

The "Brief's" Pictures.

THE illustrations in the current edition of Game Laws in Brief, Mr. Charles Hallock says, well represent America's wilderness sports. The Brief gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

Gun Licenses.

TORONTO, Nov. 3.—*Editor Forest and Stream:* It must be gratifying to you and the many able contributors to FOREST AND STREAM to notice the growing interest in game and fish protection in the United States and Canada. It has been uphill work to educate the would-be sportsmen to understand the unwise and destructive results of spring shooting. An account of a spring snipe shooting trip by a Chicago sportsman appeared in an early number of FOREST AND STREAM of the present year that should have had the effect of converting all spring shooters who had the pleasure of reading it. It was to the effect that a Mr. Watson, of Chicago, when snipe shooting in the vicinity of that city, after having killed a number of snipe, found one sitting on a nest of eggs, which, if it had flushed, would no doubt have gone into the bag with others killed in the act of propagating the species. This experience should result in the reformation of at least one advocate of spring shooting.

Much remains to be done under existing circumstances if the pleasure and benefits derived from shooting and fishing are to be perpetuated on this continent. When we take into consideration the great improvement in guns, and the immense increase in the number using them, in most instances not wisely, but too well, it appears to me that the time has arrived for some restriction to be placed on the guns, or on those using them, if the extermination of game is to be prevented. The true basis of taxation is to tax the luxuries and not the necessaries of life. Shooting game is, or should be, a luxury connected with recreation and health-giving exercise. While a tax on guns, however small, would be objected to by the general public as being too much of an Old Country innovation, there should be no objection to a general license being required from all persons killing game of any description, one-half of such license fee to be paid to municipalities, the other half to the respective States to be applied for the sole purpose of game and fish protection.

Game dealers ought to be licensed, and their establishments open to inspection at any time by the officer interested in enforcing the game laws. These are a few of the practical measures that would do much to protect game, and would also have a tendency to reduce the number of accidents caused by guns in the hands of small boys. The licensing of and open inspection of game dealers' establishments would also do much in preventing the recurrence of a transaction brought to my notice during the fall of 1897, viz., a shipment of 112 dozens of quail made from St. Louis to a foreign country.

RANGER.

Maine Game Records.

THE Bangor & Aroostook Railroad has sent out a tabulation of its game shipments for October, which shows the following comparison with the statistics of former years:

	Deer.	Moose.	Caribou.
Total shipped, 1894	479	24	10
Total shipped, 1895	669	53	37
Total shipped, 1896	1,029	79	57
Total shipped, 1897	1,246	55	20
Total shipped, 1898	1,348	71	22

In 1897 the moose shipments were from Oct. 15 to Dec. 1 only.

In 1898 the moose shipments were from Oct. 15 to Oct. 31 only.

The above statement, compiled from records kept by station agents, comprises only game shipped by visiting sportsmen, and does not include that killed by native hunters, nor the large quantity consumed in camps.

An Alaska Game Country.

MR. THOS. C. DUNN, President of the Munina Alaska Gold Mining Co., who has just returned from Homer, Alaska, brings us word of the expedition made by Mr. Harry C. Lee, of Chicago, into a new hunting country, reached via Homer. A summary of the expedition is given in the subjoined interview with Mr. Lee by a Tacoma Post-Intelligencer representative. To Mr. Dunn we are indebted for the map and the two photographs here reproduced. One shows the remains of bones of a mastodon found on Yukon Island. The other is of Mr. Lee, who stands in the center of the picture, with his trophies, including moose, caribou, mountain sheep and bears. The country explored by Mr. Lee lies between Chugachik Bay and Tustamena Lake. It is reached by way of Homer, which is in regular mail-steamer connection with Sitka. Indian guides may be engaged at Homer. The Post-Intelligencer report follows:

"Among the arrivals on the schooner Nellie Thurston yesterday was Harry E. Lee, the famous hunter, of Chicago, who has spent three months hunting and exploring in the wilds of Alaska, north and west from Cook Inlet. He visited localities that were never before seen by white men, and went up Sheep River forty miles, a feat that even an Indian has never dared attempt. He believes he has found the paradise of Alaska, from the standpoint of gold, agriculture and scenery, and is going there next spring with an outfit and expert men to open it.

"Mr. Lee is wealthy, and spends his entire time hunting. In the winter he goes to the South, Mexico, the West Indies and other places; in summer he is found in Utah, Missouri, Kansas, Illinois and nearly every State in the East, and will go from here to Salt Lake, and thence by way of Kansas City to Central Kansas, where he will try some fine dogs on quail and grouse.

"He had been planning an Alaskan trip for several years, and went up there last June, landing at Cook Inlet. He was in company that far with Dell Deweese, a wealthy hunter of Canyon City, Colo., but there they parted company, Mr. Lee heading for Sheep River, against the advice of all the settlers there. He engaged the services of three or four Indians, got a boat and proceeded up that tortuous stream. This river empties into Kachekmak Bay, twenty or twenty-five miles from Homer, and is so swift and ful lof rapids that heretofore no boat could stand against it. The shores are hills and mountains so precipitous that they cannot be penetrated. Hundreds of miners had tried the ascent, but were never able to get up more than twenty miles, their boats capsizing and losing their outfits, provisions, and frequently their lives.

"But the hunter's courage and skill got him through, and he was rewarded by discovering some extremely rich gold quartz ledges that he believes are the source of the gold that is washed toward Cook Inlet by innumerable streams. From every mountain in that neighborhood Mr. Lee inspected the surrounding country and made maps of the great unknown district.

"From one summit he discovered a large open plain that appeared to his astonished eyes like the realized Arcadia of an explorer in the wilds of Asia. Thirty by forty miles in extent, he says, with innumerable creeks running through it, and hundreds of springs bubbling up; woods, grass, beautiful climate and all—it seemed the most perfect place on earth. He found wild redtop grass growing 3 and 4ft. high, and huckleberries, strawberries, raspberries and black and red currants in wild and luxuriant profusion. The soil was a rich loam, and the natural park abounded in all kinds of wild game, from grizzly bear, mountain sheep, elk, moose, caribou and deer to pheasants, grouse and snipe. And further, Mr. Lee says, he discovered a route that needs only a little work to make an easy road for horse or railroad to the coast, less than forty miles away.

"After spending a few weeks exploring the surrounding country, the hunter returned to the coast, where he secured some men and sent them back to look after his mining interests. He has no intention of organizing a stock company, but will take his own expedition in next May, spending his own money and starting from Seattle.

"Mr. Lee succeeded far beyond his expectations in bagging good game, and brought back some of his finest specimens to have them mounted and placed in his museum in Chicago. He killed three mountain sheep, one of which is pronounced by authorities the finest they have ever seen. Three caribou are among his victims, and one of them has fifty-seven points, which furriers pronounce remarkable, the average being but thirty to forty. He has two moose, but says he could easily have killed more if he wanted, and five magnificent grizzly bears, besides innumerable birds of many and rare varieties. Each of the animals was killed by one shot, as an examination of their carcasses showed. They were shot behind the ear. The hunter uses a .30-30 Savage rifle with soft bullets for animals and steel-pointed for birds.

"Several times Mr. Lee narrowly missed losing his life. Once he was scaling the side of a steep hill, starting from a narrow ledge, 2,000ft. above the bottom of a chasm, and climbing from one projecting rock to another. He was in a particularly dangerous place and reached up to grasp an obtruding boulder. The stone broke off, and just as he was losing his balance he jammed the butt of his rifle in a projection at his feet and held himself until he caught a new hold.

"Mr. Lee gave a vivid description of his experiences to a Post-Intelligencer reporter at the Butler Hotel last night. He says there is no necessity for anybody's being in destitute circumstances, and that all needed are health and determination for any man to succeed. 'I could make $2,000 in a winter with my gun in that country,' he says, 'and have the finest time on earth. The climate is fine, there being no cold winters, and the resources are without limit. In my opinion it is the garden spot of Alaska.'"

The points from which the largest shipments have been made this year are Patten, Norcross and Greenville, which stations are tributary to the best hunting districts.

Notes from New Brunswick.

FREDERICTON, N. B., Oct. 31.—Why do not a few of the many successful big-game hunters who have taken out horns and health from Bluenose land this fall give us some account, in the luminous type of FOREST AND STREAM, of their experiences? Such stories are always of interest, and add to the sum of human knowledge. No two moose are ever killed in precisely the same way, and it is always good to hear about the mammoth moose who got away, and is still ripping up the roots and polishing his horns on the mountain side. There are no letters so pleasant to read as those from the true sportsman, who has enjoyed his trip, and who wants to share with you his reminiscent happiness. Here are the principal items in a letter dated Oct. 18 from my friend Mr. Charles S. Bird, of East Walpole, Mass.:

"It may interest you to know that I returned from New Brunswick last week, being in the woods seven days only. I got the best head that I ever saw, twenty-six points, 57½in. spread, and though not so large as some it was most perfect. I refused a shot the day before I got this one because I did not like the head. I got my moose in the way I like best—next to snow-tracking. He was feeding in a small lake, and in order to reach him I had to crawl for about a quarter of a mile, much of the time over an open meadow. The wind too was partly in his favor, so I consider he had a fair chance. Long before I shot him he suspected trouble. All in all it was very exciting. Mr. L. F. Fales, of Walpole, was with me in the woods, and he got a very good moose head and a caribou. You recommended to me some time ago George E. Armstrong. He is a most capable, honest guide, and knows the country thoroughly. Last summer I had him on a fishing trip down the Nepisiguit, which is the greatest trout stream, I believe, in Canada. I wish you could pass a law holding the owner of a lumber camp responsible for any moose meat found in his camp. Such a law would do much good, for the lumbermen kill a great deal of game."

Mr. Bird's suggestion as to holding lumber operators responsible for game illegally killed is right to the point, and is one which I have already drawn to the attention of the Government. Such a provision ought to be especially effective in this Province, where nearly all the large operators are licensees of the Crown.

For a very interesting letter from Mr. A. M. Brewster, of Newburyport, Mass., dated Oct. 28, the following extracts are taken:

"Last year I had a most enjoyable trip up the left-hand branch of the Tobique, and went through to the Bathurst Lakes. It was a trifle early for moose calling, although we succeeded in getting a very good sized moose, but his antlers were small. The trout fishing in the Bathurst Lakes is something I never before experienced, although I have been down in Maine spring and fall, on fishing and hunting trips, for the last twenty years. My trip last fall gave me a little better knowledge of guides, so I made preparations rather earlier this summer, and engaged for Mr. Burley and myself four of the best men in the Tobique tribe of Indians, and they proved A1 in every respect. We were fortunate in securing two very large moose, with exceptionally fine antlers. There is one little matter of detail which I would like to have corrected, as it is always well to have things right. In one of your letters to FOREST AND STREAM your informant places my moose at 52in. and Mr. Burley's at 56. The exact reverse is the case, mine being 56 and Mr. Burley's 52, although his moose was rather heavier than the one I killed. I must tell you what close connection I made with the animal in question. We reached our destination Sunday afternoon, Sept. 18, and the next morning I started out before breakfast with my guide, and inside of ten minutes had my moose down in the river. The old fellow was standing on the edge of the deadwater and watched for us from the time we got into the canoe until I commenced shooting; although we had no idea a moose was in sight until we stepped into the canoe for our start. This is even a closer connection than Mr. Houghton, of Boston, made, who got his moose within half an hour after breakfast. I read your articles in FOREST AND STREAM with a great deal of interest, and from reports think there must be a small army of American sportsmen in the Tobique country this fall. There is no danger, however, that the country will be overrun, as the trip up either the left or right hand branch is rather a hard one and takes about a week from Andover to accomplish. It is a fine trip, however, and one of the most beautiful countries I ever visited."

The veteran Braithwaite still keeps up with the procession. Messrs. Gordon Parker, W. H. Fowle and Dr. Chalmers, of Woburn, Mass., arrived from the Crooked Deadwater on Thursday with a hayrack full of horns. Each member of the party secured his full complement of moose and caribou. The three caribou heads were unusually good specimens, the points numbering thirty-four, thirty-two and thirty respectively. Mr. Parker's moose, as previously reported, measured 58in., and is perhaps the best specimen ever taken in the Miramichi country. Mr. Kidder, of New York, is now in the woods with Henry.

Frank Bartlett, the well-known Doaktown guide, shot a moose last week 6ft. 10in. high at the shoulder and with 42in. horn spread; also a caribou with twenty-nine points. If any of your readers want good snow-hunting I can unreservedly recommend Mr. Bartlett.

George R. Sheen, the C. P. R. Pullman conductor, was sighted going west on Friday, accompanied by a very large moose. Mr. Sheen will have the head mounted and present it to the Knights Templar of Malden, Mass.

Capt. Sears, brother of Mayor Sears, of St. John, had very good fortune on his trip to the headwaters of the St. John, securing specimens much above the average of moose and caribou.

C. A. Cates, of the Elgin & Havelock Railway, has returned from a three days' hunt in the Canaan woods, the proud possessor of a 48in. moose head.

Local sportsmen are aroused over the dire results produced by the amendment in the game law in regard to the sale of partridges. Two years ago the Legislature passed a section prohibiting the sale of partridges, but at the last session of the House a majority of the members (chiefly those representing rural constituencies) repealed this section. The result this fall has been a gruesome slaughter of the innocents by pot-hunters. Not less than 2,500 brace have been sold to dealers in Fredericton alone. The local covers are almost denuded of this noble bird. One must go into the deep woods now to secure a respectable bag.

Deer seem to be gradually increasing in the western counties of the Province, yet not so rapidly as might have been expected. It is believed that the wildcats, which are very numerous in York and Charlotte, are responsible for the demise of a great many deer, especially of the young. The woodcock flight, which is now nearly over, has been fully up to former years. The birds have been large and lusty, nearly all over 8oz., and occasionally running as high as 10.

Mr. Edwin B. Holmes, of Boston, reached Fredericton this afternoon after a three weeks' hunt on the upper waters of the Nor'west Miramichi. Mr. Holmes was about as well satisfied with this life in general as any one who has been seen in these parts for several moons. He not only had in his possession a moose head spreading 54in., but an exceptionally large and shapely caribou head. His guide was the well-known woodsman Arthur Pringle.

The Gueggas country, which is on Little Sou'west Miramichi waters, is fully maintaining the high reputation it secured last year. Dr. Caille's party of three gentlemen killed two moose, three caribou and two bears. The moose heads were small. One of the caribou heads, with thirty points, was particularly fine. Carl Pickhardt's party of three was also very successful. Dr. Gerster the first day on the grounds killed a moose with a horn spread of 55in., very heavy, with large blades. Mr. Pickhardt secured an exact mate for his moose of last year, the spread being 52in. The party also killed three caribou, of which the best specimen fell to Mr. Pickhardt. Caribou were very numerous, while moose seemed not so plentiful as last year. One bear, which was sighted, broke for cover and beat out the Winchester. The guides, Ed and John White, of Littleton, did effective work.

Oswald L. Simpson, of New York, and H. F. Dodge and Joseph Carleton, of Mount Vernon, N. H., who spent a week or ten days hunting in Queens county, passed through St. John on Wednesday. They had exceptionally good luck, having shot three bull moose and a deer at Congo Lake. One of the moose is said to have weighed 956lbs. when dressed. The spread of the antlers was 53in. The carcass is being taken to New York by Mr. Simpson, who will have it mounted. Mr. Simpson says that his party had in John Taylor, of Canaan, an excellent guide. The party saw twenty moose and fifteen deer while in the woods, as well as several bears.

FRANK H. RISTEEN.

A Hunt with Gen. Brooke.

EARLY in November, 1893, we had a heavy snow in the Rocky Mountains, which lasted several days. After the weather cleared off and became settled, I started out one morning on horseback to look for bears. Up in the mountains where I went the snow was 15in. deep. Taking in a wide circuit westward, about ten miles from the ranch at the furthest point, I had found no tracks, and was returning homeward, about five miles distant, when I crossed the trail of an old bear and two cubs—a cinnamon bear, as the hairs brushed off along the trail indicated. The trail was at least three days old. The roughest country to be found is the kind through which bears take special delight in traveling, and as that locality was famous for roughness, I tied my horse to a tree and started on the trail.

This was about 1 o'clock, and by "cutting across lots" and following fast till 4 o'clock I found myself not more than twenty-four hours behind them. Being satisfied then where they were heading for, I started back to my horse, thinking to start early next morning for Big Creek Lake, about six miles from home, where I was confident I would find their fresh trail.

Just when it was getting dark I hove in sight of the ranch, and there on the meadow of my nearest neighbor, Elick Hilton, was a fair-sized village of campers. I could see at a glance it was a Government outfit, but on a larger scale than we were accustomed to seeing. Riding up to Elick's house, I inquired what was up.

"That is General Brooke and a part of his staff on their way out for a hunt. He came here this morning about 9 o'clock on his way into the mountains; and as none of his men were familiar with that locality, he asked for a guide."

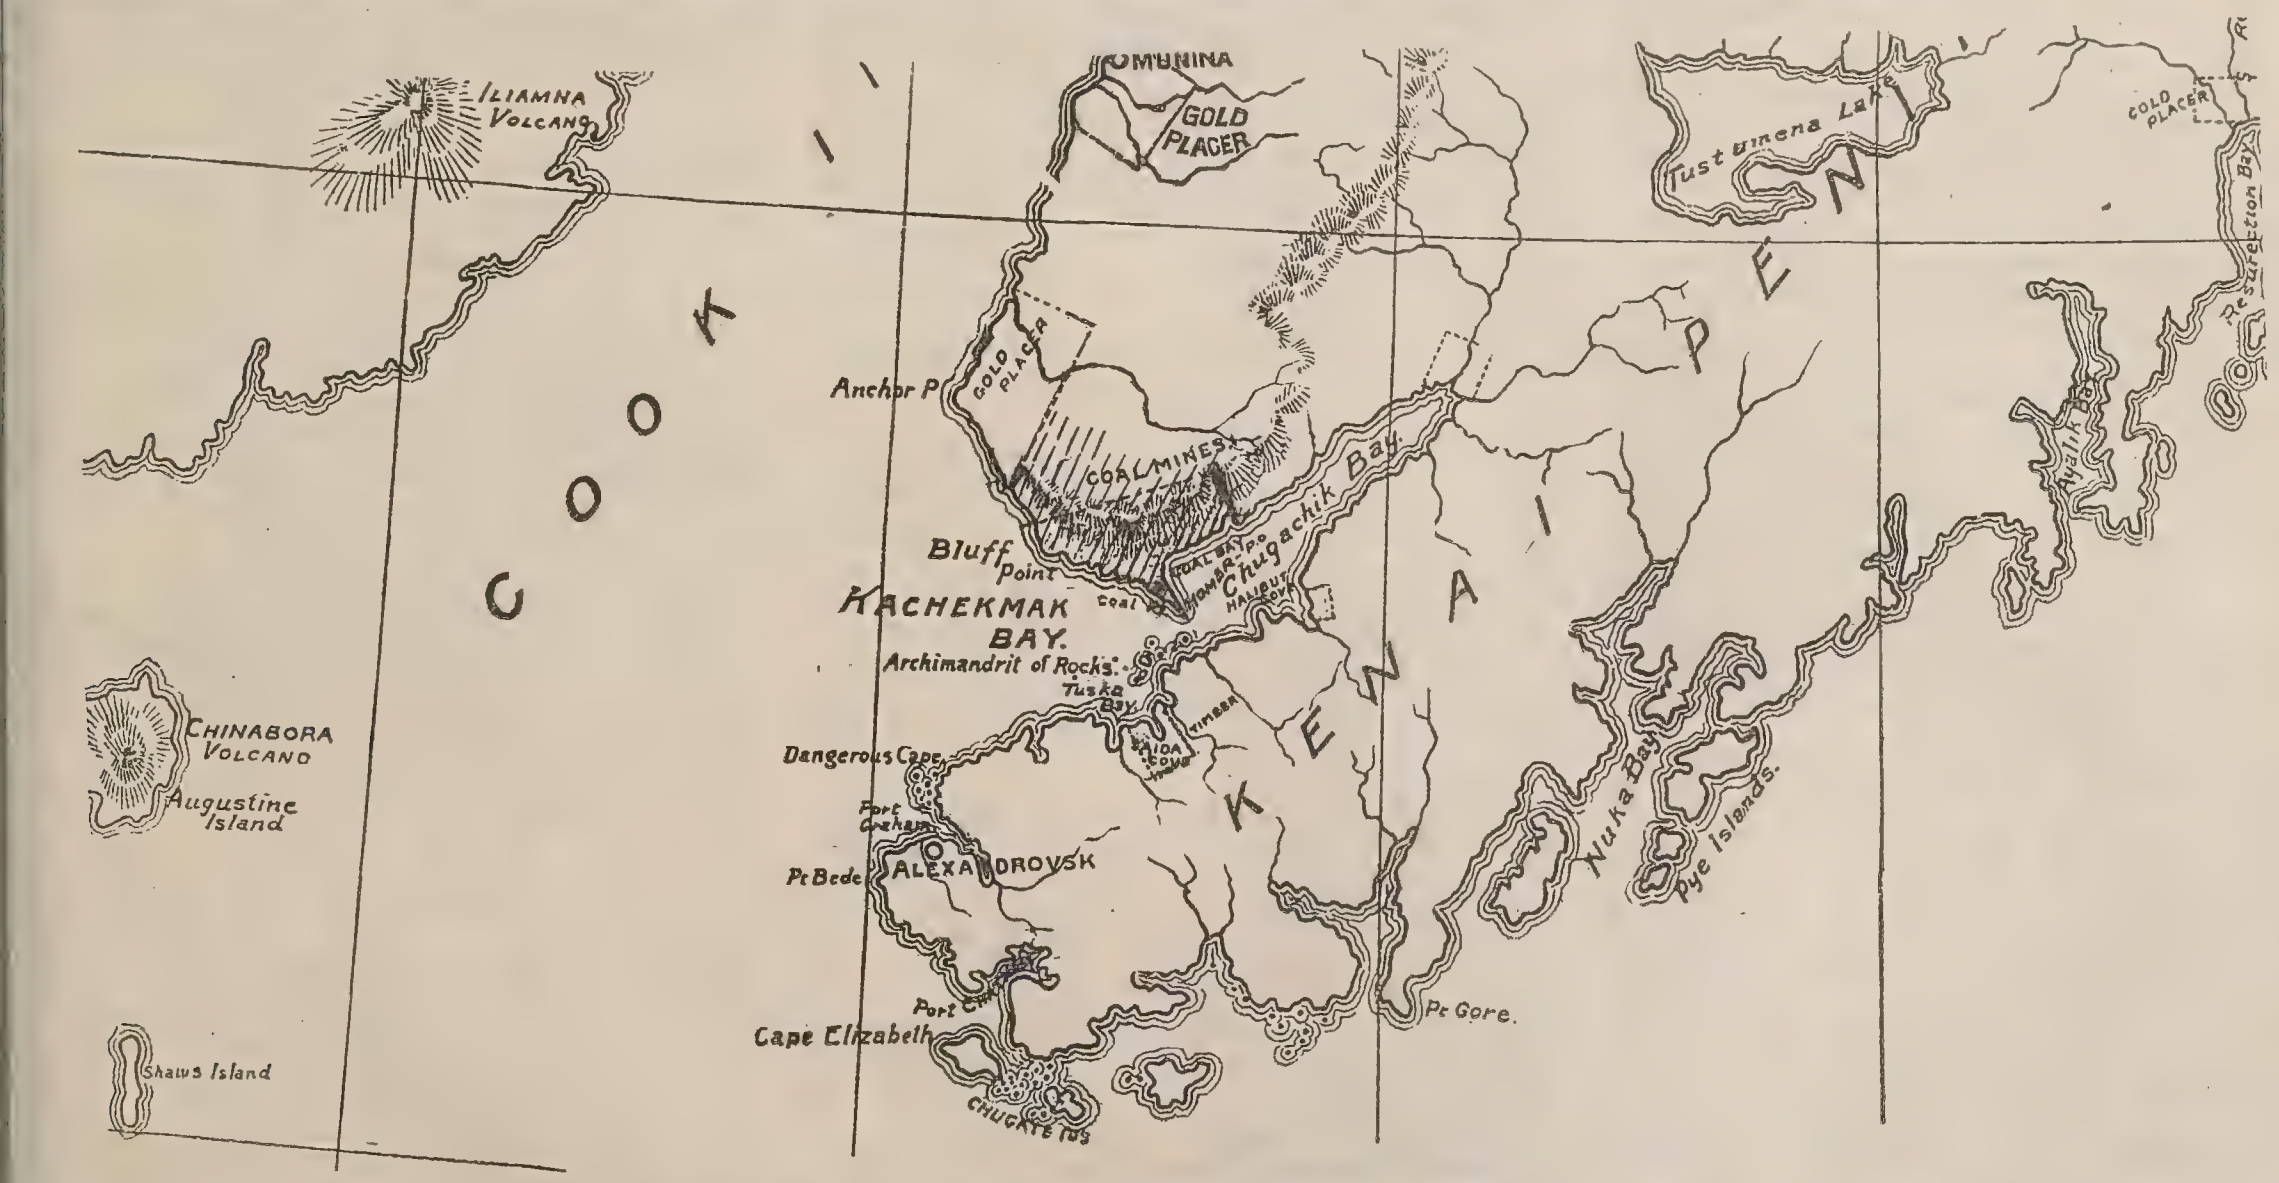
Elick recommended me as a successful guide, but explained that I was out hunting. The General at once ordered that they camp there and wait for my return. On learning this, I was disappointed, for I had great anticipations of fun with the bears for the next day; but the novelty of accompanying such an outfit, with the knowledge I could gain, was an offset for the disappointment. That night after supper I went to the General's tent and we agreed on terms. The next morning they were astir long before daylight, preparing to pack up, for their entire outfit was carried on pack mules. There was the General and four of his staff who were to do the shooting—three Indians as guides in hunting, one of whom was the General's favorite guide and scout, who has a reputation. He is a half-breed, commonly known as Bat. I make special mention of him because he was to me an interesting character. The remainder of the men, about twenty-five in number, were packers, cooks, hostlers and general helpers. The animals consisted of ninety-four pack mules, and about thirty mules and horses for riding. It seems that trips of this sort were made every year for practice and experience for the men.

When I saw the tents all standing at 7 o'clock in the morning, I thought it would be impossible to get started before noon, for to pack that number of mules with from 200 to 350lbs. each seemed like an immense undertaking to me, who had never seen Uncle Sam's packers at work. In just one hour from the time they commenced packing the first mule everything was packed ready to start.

I thought I might get some pointers on packing by watching them, and this is what I saw: Two men worked together in packing, one on each side of the mule. The packs, which generally consisted of two pieces of equal bulk and weight, one for each side, were raised to their places, then for the space of about a quarter of a minute the air was full of pack ropes, which ended in a final yank of the rope and a groan from the mule; and it was there to stay all day. That is just as much as I learned about the way Uncle Sam's boys do their packing. To one watching them the first time it is wonderful.

At 8 o'clock we were on the move. The ground in Big Creek Park, where we started, was bare. We started went with the other two Indians, while Captain —— went with me. The Captain and I, after hunting till 2 o'clock without success, were going to camp. I was riding ahead and went into a bog hole, but having a small horse, I went through all right. The Captain was riding a white mule. Owing to the shape of the mule's feet the force of gravitation gets strong when it strikes a mud hole. The mule floundered and strove "mulefully" to keep on top, and the Captain did the "Rough Riding" act as gracefully as could be expected, but at the close of the first performance he was wandering around in the snow, hunting for his hat. He claimed that he "got off"; I could testify to the fact that he was off anyhow, and we didn't discuss his manner of getting off. ful feats of Bat, and as they were all going out next day to get in the meat, and have a final hunt, I requested that I might go along to see Bat perform. We all started out together on horseback. Soon we became separated, and the General, two of his staff, Bat and myself formed a party. Soon we struck a fresh trail of some deer. Bat took the lead; soon he dismounted and gave me his horse to care for, while he went ahead on foot. As he came on top of a rise of ground, he held up his hand for us to stop; then we saw him run at full speed until he was out of sight, then there commenced such a quick succession of firing as I never heard from one gun. Of course, we all went quickly to where he was, and he said it was elk—five of them. We followed

ALASKAN HUNTING TROPHIES.



SKULL OF MASTODON ON YUKON ISLAND.

for the head waters of Elk River, on the western side of the Continental Divide.

About the middle of the day our progress was retarded by about a dozen mules getting mired in a swamp, all of which had to be unpacked before they could be gotten out. Here the packers showed the true soldier spirit: wading into the snow and mud up to the knees unpacking the mules, carrying the 200 and 300lb. packs several rods to solid footing, and repacking, was all done without a murmur. A more cheerful, jolly and manly lot of men would be hard to find than those coming from Fort D. A. Russell, Wyo.

The snow was becoming deeper as we advanced into the mountains, and by the middle of the afternoon we were completely swamped, and yet we were three miles He was sure he had a hat on when it commenced, but no hat could be found. There was no solution to the hat question but one—it must have fallen off while the mule was "stepping deep" in the mire, and coming under one of its feet, had gone to the bottom or at least the length of a mule's leg. I took off my coat, rolled up my sleeve and reached into several of the tracks up to my shoulder, but failed to find it. Fortunately he happened to have a cap in his pocket, as a precaution against storms, and did not suffer any inconvenience.

Shortly after our coming into camp the two Indians and their men came in. One of the Indians had killed a small deer, which was all they got. Darkness came on and the General had not appeared. About an hour after dark one of the officers asked a corporal to fire a a few rods and found one unable to run, and it was killed; following 100yds. further, another one was found, lying down badly wounded, and was killed. Then commenced the wonderful part of the performance. Bat got on his horse and started on the trail of the remaining three elk. At that place the ground was bare and mostly covered with sod. He rode on a trot most of the time, and while keeping a sharp lookout ahead for the game followed their trail like a bloodhound, never even hesitating to see where they had gone; while to the ordinary hunter it would have required careful trailing on foot to have followed them in most places. After watching him awhile, I left them and went to camp, got a camp outfit and packers, and went out for the two elk they had killed.

MAP SHOWING THE ALASKA HUNTING COUNTRY DESCRIBED BY MR. LEE.

By courtesy of Mr. Thos. C. Dunn.

from the top of the divide, and as it was sure to keep increasing in depth as we went on, it was wisely decided to turn back, retrace our steps about four miles to Buffalo Park, and take another route, leading to Snake River.

By the hour we reached Buffalo Park, where we were to strike the other trail, it was time to camp. While we were making camp, the Indians, who had been rambling all over the country by themselves, and who saw our movements when we turned, from a high peak one and a half miles away, came in with a deer they had killed. The next morning we started on our new course, and after going through some very rough country arrived at our intended camp at dark.

The next morning the General and Bat took the course pointed out as being the best elk country—for it was elk they were after specially. Three of the others shot; he did so, and we heard a shot in reply, but a long distance away. In about an hour another shot was fired at camp, and a shot in reply was heard half a mile away, and about 9 o'clock the General and Bat came riding into camp. The General said they had a grand hunt; had found a band of about sixty elk, and he had killed three. The next morning the General, very unselfishly, proposed that he should stay in camp, while Bat would lead the rest of the party out to find the band, and give them a chance. I was directed to go further west and locate another camp ground to be used if we wished to move camp. The whole party returned in the evening, feeling jubilant over one of the biggest day's hunts of their lives. They had killed eight elk. That was entirely satisfactory to everybody, and there was no thought of moving camp.

The General had been telling me some of the wonder- As we came to the spot and were about to begin packing, we heard some one calling at a long distance; looking around we saw some men away on top of a mountain, over a mile away, who seemed to be trying to attract our attention, but they were so far away we could not tell what they were trying to tell us. We went up with the pack outfit, and there we found Bat and the others, whom I had left, with two more of the elk that we were after, both of which had been badly wounded by Bat's first onslaught. The fifth one had also been wounded, but for want of time they could not follow it. Bat was fully 100yds. away from the bunch of elk when they commenced running and he commenced shooting. He was shooting through thick timber, and while they were getting out of his reach, he wounded all of them, mostly fatal wounds. This ended the killing, as they wouldn't even look for any more. That was the largest

amount of meat taken out by any one party for a number of years, and at first thought it would seem like imprudent slaughter, but considering the immense party and equipments, they did not take the limited amount of game allowed them by law, and the meat was all carefully preserved and packed out and distributed among their friends from Cheyenne, Wyo., to Omaha, Neb., where it was fully appreciated, as elk meat was then becoming something of a rarity.

This to me was one of the hunting trips that was full of interest and instruction, learning many things about regular army life that I never knew, and learning to admire the gentlemanly soldiers who are a high type of manhood.

EMERSON CARNEY.

WEST VIRGINIA.

CHICAGO AND THE WEST.

The Deer Season.

CHICAGO, Ill., Nov. 3.—This is the banner week of the deer season, and at this writing a good many thousand men are out in the woods of the three Western States of this section in which most of the deer hunting is done, Michigan, Wisconsin and Minnesota. There is little doubt that the hunters will be rewarded with at least average success, as deer have been reported in good numbers at all the favorite points. The Chicago & Northwestern Railroad has carried an army of shooters and delivered them chiefly at the following points: Antigo, Mercer, Tomahawk, Conover, Three Lakes, Pelican, Woodruff, Pratt Junction, State Line, Rice Lake, Iron River, Geobic and other points in the territory above covered. The Milwaukee & St. Paul road has imported a similar number and unloaded them at such points as Star Lake, Minocqua, Floodwood, Champion, Ellis Junction, Wausaukee, Dunbar, Middle Inlet and Pembine. The Wisconsin Central lines have sent their hosts of deer hunters into the country tapped by such points as Fifield, Phillips, Rib Lake, Glenwood, Prentice, Stanley, Glidden, etc. Out in Minnesota the new road known as the Fosston branch of the Great Northern has taken out many hundred deer hunters.

It is likely that the followers of wildfowl shooting and deer hunting average an increase in numbers from year to year, this, of course, governed by the relative increase in business prosperity. The number of deer licenses issued in Wisconsin this fall would seem to warrant this belief, though perhaps the number of non-resident licenses will be cut down by the closeness with which the law is thought to be enforced this fall. The law was a laughing stock last fall in Wisconsin, and the number of non-residents who shot on residents' licenses must have run into the hundreds, if not thousands. The identification measures this season are more sensible, and the result will perhaps be a total increase of non-resident licenses registered, but a decrease in the actual number of non-resident hunters in the State of Wisconsin. Minnesota will get the benefit of a good deal of this overflow, since Minnesota has no license law as yet. There is no real way of getting at the extent of deer hunting travel in the State of Minnesota, and before the establishment of the license laws in the States of Michigan and Wisconsin the number of deer hunters in those States was still more a matter of guess.

As to the actual number of licenses issued, for instance in the State of Wisconsin, nothing but a county canvass would justify a claim to accuracy, though there are certain indications by which an estimate can be reached. At Ashland, Wisconsin, there were 627 deer licenses issued last year. At the same date this fall there was a falling off of nearly one-half, only 250 licenses having been issued up to the last week of October. At Superior, Wis., the county clerk has issued 133 licenses up to the last week of October. On Oct. 28 and 29 he issued fifty-one licenses. This town last year issued 488 licenses. At Black River Falls, Wis., there had up to the beginning of this week been issued 125 licenses. At Baraboo, Wis., the county clerk had issued 200 licenses before the beginning of the season. A friend of mine, who has just come down from Wisconsin, says that he heard that 3,000 licenses had been issued in Lincoln county this fall. He could not confirm this, and I am inclined to think that it may be a mistake. It may be seen, however, from the meager figures given above that a good many people seem to be out of deer meat, and intend to make good the shortage.

There has been a heavy snowfall in upper Wisconsin. On Nov. 1 there was 3in. of snow in the north peninsula of Michigan. A good "tracking snow" is the fondest wish of the deer hunter, and there seems to be nothing lacking this fall to satisfy the hunter.

The deer season in the State of Michigan does not begin until Nov. 8, though it is very likely that this fact is not understood by a great many hunters who have gone into Michigan north peninsula, where some of the best hunting points are near the Wisconsin State line, the law in Wisconsin making the date Nov. 1. At Marquette, Mich., 243 deer licenses have been taken out up to this week. This is an increase of about 100 over last year. At Grand Rapids, Mich., eighty-six licenses had been issued at date, and at Hillsdale, Mich., about thirty licenses.

"Grand Rapids."

I presume that in every mountain region there is a peak known as "Old Baldy." I have known many such mountains. I have nearly always found also that in any lake region there is a "Long Lake," a "Deep Lake" and a "Crooked Lake." Every once in a while, in their work, the old French-Canadian voyageurs found a bad bit of water in a river, which they would call "Grand Rapids." There are a good many grand rapids in the Northern country, and as such a piece of water nearly always came to make a good milling power in the later days, it has happened that towns have grown up at the old carries. At the Grand Rapids, Michigan, above mentioned, there was a fall of about 11ft., which built up the milling industry that made that place the center of the hardwood manufacture for an immense territory. The white men have now blown up and smoothed out most of the rapids. Naturally we may expect any town named Grand Rapids to be a good sporting town. The thriving Michigan city above mentioned is the home of a remarkable number of splendid sportsmen, as witness, for instance, the eighty-six deer licenses, most of which were perhaps resident.

At Grand Rapids, Wisconsin—for, of course, this State must also have a Grand Rapids—there have this fall been issued 175 deer licenses. This is a falling off from last year's record, which shows none the less that the town is in a sporting neighborhood.

At Grand Rapids, Minnesota, we have another instance of the quality of a name. This is the town which a couple of years ago advertised a big trap shoot and moose hunt combined, putting out circulars under the head of a "Hot Time." This effort received a great deal of condemnation, for some reason or other. There is a wide difference between Grand Rapids, Michigan, and Grand Rapids, Minnesota. The former is the home of a large element of modern, intelligent, law-abiding sportsmen, whereas the latter is a harbor of about everything which is the reverse of this. I presume there is not a town in Minnesota where the law is so extensively and flagrantly violated. The town itself is progressive and well built, but is near a good deer and moose country. Venison and moose meat are served the year round. It is the exception when the average of a certain class of men living at Grand Rapids kill a fish in a legal way. You can get a guide for a moose hunt at any season of the year at Grand Rapids, and they openly boast there that they will not allow any game wardens in their neighborhood. It is indeed likely that it would be dangerous for a warden to go in there. There are no licenses reported from Grand Rapids, Minnesota, and even if there were a license law in that State it is doubtful if Grand Rapids would make many returns. At this particular Grand Rapids the game laws are run pretty much to suit the inhabitants. I fancy that this will not always continue to be true. Grand Rapids, Michigan, is an older town than Grand Rapids, Minnesota.

Distinguished Sooners.

A nice little haul of distinguished sooners was made at Lakewood, on the Gillett branch of the Milwaukee & St. Paul road, in Wisconsin, last week. Game Warden Bissinger took in a special car party whose membership was as follows: J. S. Brooks, of Chicago; John M. Roach, head man of the Yerkes Street Railway Company, of Chicago; H. M. Schmidt, a Chicago lumber dealer; J. C. Durgin, of Chicago; George W. Thompson, of Henry, Ill.; C. H. Lester, of Oconomowoc, Wis.

John M. Roach is the second vice-president and general manager of the North Chicago Street Railroad Company. Mr. Moses Brooks is a member of the Oconto Lumber Company, and Mr. Thompson is superintendent of the same company. Mr. C. H. Lester, of Oconomowoc, included in the subpœna, answers very closely to the description of the C. H. Lester who once indignantly protested in these columns on account of the publication of a story about his helping to kill something like a thousand quail in lower California.

The charges against these gentlemen, or some of them, appear to be somewhat complex. They were arrested last week, whereas the game law does not open until Nov. 1. They are charged with hunting with dogs, which is contrary to the law of that State. Some of them have pleaded guilty to this charge. Moreover, the non-residents of the party had failed to provide themselves with licenses. These people seem to belong to a certain American class who have more money than they have decency, and who seem to think themselves beings set apart from the ordinary run of humanity. I think that Warden Bissinger will do somewhat to disabuse them of this erronious belief. They are just folks like the rest of us.

It seems that the charge that offense of illegal hunting in Wisconsin is not a new one with this outfit. The game warden says that a similar special car party went through the deer country ahead of the season last year and killed a great many deer, though escaping under the extraordinarily lax enforcement of the Wisconsin game laws. This special car party is said to have left Chicago about a week ago, as guests of John C. Brooks, of Chicago, president of the Oconto Lumber Company. They side-tracked their car at Lakewood, and the entire party, nine men in all, were guests of Mr. Brooks at the farm of the Oconto Lumber Company. Three of the party escaped arrest. Moses Thompson, George W. Thompson and H. M. Schmidt pleaded guilty to hunting with dogs, and have been fined $140.64. It is certainly to be hoped that all the rest of them can be brought to book.

The man who arrested the above gang is Special Deputy Game Warden F. M. Bissinger, of Green Bay. Every sportsman in this country who believes in common decency ought to arise and call Warden Bissinger blessed. There are no classes in America. We are all just folks.

Good for Wisconsin.

There has been a singular revival of energy in Wisconsin this fall in game law matters. I have already taken pleasure in mentioning the stoppage of the "Mr. Hicks" leak at Milwaukee, by which a great deal of game was coming to Chicago. I also mentioned the fact that Warden Johnson, the Oshkosh hustler, had been delegated to go over to Lake Koshkonong to look into the numerous violations of the game laws at that point. It is pleasant to be able to say that, with his usual activity, Warden Johnson got to work among the sneak boat shooters, and last week he arrested eighteen different parties, each of whom was taken to Fort Atkinson and fined. Some of these men were from Janesville, Wis., and among these were Harry H. McKinley, William McVicar and Edwin Parker. A number of sneak boxes and other outfits were confiscated. I have no doubt whatever that a deep sense of injury broods over the bosom of Lake Koshkonong at the present writing. Warden Johnson and Warden Bissinger, of Wisconsin, deserve a high place among the celebrities of the week in sportingdom.

Close in the company of the two wardens above named, should be mentioned Deputy Warden August Zinn, of Milwaukee, who located the mythical "Mr. Hicks." "Mr. Hicks" was mostly concerned with shipping partridges. It seems that Messrs. T. D. Randall & Co., of South Water Street, Chicago, wanted some Wisconsin deer, and other game, as badly as H. L. Brown & Son wanted partridges. The following is the circular which they sent out to encourage the violation of the Wisconsin game laws:

"Chicago, Ill., Oct. 11, 1898.—Dear Sir: Are you doing anything in game yet? If so, we would certainly like very much to handle your shipments for you again this season as formerly. There is very little game coming forward as yet, and market here is ruling firm and active. It is quite difficult for us to keep our large trade entirely supplied.

"Prairie chickens and partridges firm at $4.50 per dozen; quail, $2; jack snipe and golden plover, $1.75 per dozen; mallard ducks, $3.50 per dozen; teal ducks, small or common ducks, $1.50 per dozen; venison saddles, 15 to 16 cents per pound.

"If there is any information that you want concerning the market, drop us a line, and we will gladly furnish same, and if out of tags advise us to this effect. Yours truly, "T. D. RANDALL & Co.

"P. S.—If you have any difficulty in shipping, send your game to the Hurson Transportation Company, of Milwaukee, Wis., instructing them to reforward it to us in Chicago. The way to do this is to have tags on one side of which is printed the 'Hurson Transportation Company" and on the other side 'T. D. Randall & Company.'

"Advise them when shipping and also drop us a line."

Deputy Zinn fell upon this circular and raided the "fence" of Mr. Hurson. The latter gentleman says that he was innocent, and can prove an alibi, and promises that he will aid in no such violation of the law henceforward. When, after a while, the enforcement of the game laws has become a matter of such importance as it should already be, there will be a system of detective work put in force which will uncover an enormous amount of illegal game, which is shipped into the Chicago market contrary to the Wisconsin law. There is no doubt whatever that tons of Wisconsin venison will come into Chicago this month, as it has been coming for the last thirty or sixty days ahead of the law. That Deputy Zinn has discovered one of these illegal schemes is a good thing, and he deserves the backing of every sportsman, and of every citizen, who believes in doing business honestly and legally. The storm center in Wisconsin this week is one of great interest, and its chief interest lies in the fact that it indicates a better, a more honest and a more manly day.

Special Cars.

This is a day of the special car. I presume that never in the history of American sport have there been so many special car parties out in the West as during this fall. My friend, Dick Merrill, who is back with his brother, Fred F. Merrill, from their annual hunting trip at Devil's Lake, says that he never saw so many hunting cars as he did this fall. They were side-tracked all over North Dakota. There is no pleasanter way of going hunting than in a special car, well equipped, and well conducted, and usually it is a splendid class of men who go in this manner. They are not all like the special car outfit further above mentioned, who cared nothing for the laws of the State where they did their hunting.

Nebraska Quail.

This is a great quail year in the State of Nebraska, as I learned by comparing reports from a number of different points in that State. The general belief is that there are more quail in Nebraska than for twenty years past. At Wymore, Neb., quail shooting has been going on for six weeks, ahead of the open season, and bags of several dozen to the gun have not been infrequent.

The States of Nebraska, Kansas and Indiana have been among the weak sisters in matters of enforcing the game laws. Kansas is better than it formerly was. Indiana takes no real interest, and makes no decent appropriation for protection. Nebraska is spasmodic. There is no general sentiment in favor of protection, though in spots the game laws are sometimes enforced.

Indiana Instance.

There is a newspaper known as "The Democrat" down at Anderson, Ind., which is a rank howler against sportsmen. This week it comes out with its customary tirade against the "annual bluff at the enforcement of the law" by Anderson citizens. It says that no prosecution has ever been made by any Anderson man or Anderson's sportsman's club, and is distinctly in favor of the farmers as against sportsmen in general.

Accidents of the Field.

The week has been a sad one in its records of accidents of the field. At Littleton, Colo., Dr. Edward Bovett and Earnest Gerard were drowned by the overturning of their boat, while hunting ducks on Bowles Lake. Near Pine Grove, Wis., Frank Somonski was accidentally shot and killed by a friend with whom he was out rabbit hunting. Vespasian Smith was last week shot by unknown parties, who no doubt took him to be a deer, the killing taking place near the suburbs of Duluth, Minn. This was two days ahead of the open deer season. At Park Rapids, Minn., on Oct. 30. William McMullen was shot and killed by his friend, Nelson Rust, while they were hunting deer together near Lake Itasca. The Minnesota deer season opens Oct. 25. Near New Orleans, La., last week, Edward Seruntine was accidentally killed by James Kearney while they were out hunting birds. He was shot through the back at close range by a load of No. 9 shot.

Ducks.

Shooting has been fair on Lake Winnebago, Wis., the past week. Messrs. Siewert and Service, of Oshkosh, bagged 59 birds last week. Two guns on Lake Poygan bagged seventy birds. Mr. D. J. Hotchkiss writes me that hundreds of ducks came in on Fox Lake last week, though the sport was spoiled by boats that persisted in chasing around in the open. Mr. Hotchkiss asks what can be done to stop this chasing of the ducks, and I am sure I don't know, unless it comes under the general Wisconsin provisions, prohibiting the use of a sneak box or sneak boat, outside the natural covering of vegetation.

An open row boat does not contravene to the law. Mr. Hotchkiss sends me two handsome photographs of his Chesapeake retriever, with whose aid, he informs me, he bagged eighty-six ducks (to three guns) one day.

From Little Rock, Ark., my friend, Joe Irwin, writes encouragingly about ducks, etc., in that country:

"I have not written you for some time, but have just returned from a day or two's trip on the prairie, where last Monday there were reported thousands of ducks, but as we did not get away until Thursday evening, we were late on the grounds. We, Pemberton and myself, landed two and a half dozen mallards. Friday turned off warm and they quit the prairie lakes and went to the timber to feed. We expect some good quail shooting this fall. In spite of several heavy frosts, the cover is very heavy yet.

"At Scott's Bayou, only ten miles out by rail, the boys are having fine fishing on crappie and black and rock bass ("bar fish"). Their catch is very heavy. Strange as it seems, there has been but little fall fishing done here until the past year. A new club house has just been erected at the mouth of Scott's Bayou, where it goes into Old River. Old River is where Pemberton and I took the big lot of bass with the bucktail flies, which I wrote about two years ago. It is literally alive with game fish, and the members of this club are having grand sport with live bait.

"There was a heavy flight of mallards last week, and I killed a few and saw large numbers feeding in Fouche, a small stream one-half mile from the city limits. Come and see us when you can."

Personal.

Mr. William Schmedtgen, artist of the Chicago Record, has this week gone down to Spring Lake, Ill., for some duck shooting and for a rest. Mr. Schmedtgen, as perhaps I have earlier mentioned, was one of the newspaper artists in the Santiago campaign. He came back somewhat hurt in health, but he is one of the few correspondents and artists who do not claim to have saved the country by their unaided personal efforts.

Mr. W. H. Mullins, of Salem, Ohio, maker of the famous featherweight metal duck boats, was in Chicago again this week, and paid the FOREST AND STREAM office a little visit.

Mr. Harvey McMurchy, of the Hunter Arms Company, spent a couple of days in the city this week. He reports good sales, and looks as though he might make them.

Mr. C. W. Budd, the celebrated trap shooter, who has done so much for the Hazard powder this season, was in Chicago this week, and left for Cincinnati.

Mr. Richard Merrill and his friend, Mr. Hunt, an old Florida acquaintance, were in the city Monday, planning for a winter trip South. Mr. Merrill and his brother, Mr. Fred F. Merrill, will take a launch and a house boat down the Mississippi this winter, perhaps going by rail as far as Memphis. They will shoot in Louisiana, and may get over as far as High Island, Texas, which point I believe is a coming one among wildfowl resorts.

I had thought Mr. Leon Reynolds, of Augusta, Mich., was perhaps the oldest deer hunter of record this fall, but now I notice that in Berrien county, Mich., licenses have been taken out by George Elston, who is seventy-five years of age, and by Major Pearl, who is eighty-three years old. The sportsman's life is a healthful one.

At Chippewa Falls, Wis., there had been issued up to Nov. 1 850 deer licenses. Last year over 1,300 licenses were issued in all at this point.

Mr. L. H. Hascall, Grand Rapids, Mich., paid the FOREST AND STREAM office a little visit this week. Mr. Hascall is an old-time shooter, and knew all the sportsmen of this vicinity in the days of Turrill, Bogardus and the Kleinman boys. He tells me of trap shoots of 237 entries in the wild pigeon days, and says that in those days things were shot to a finish. Therefore he feels rather a contempt for a Grand American Handicap where one man does not take all the money at the end of the shooting. Times have changed very much since Mr. Hascall first began to shoot, but he still goes out with all of his accustomed zeal in the field. He tells me that this is a great game year in Michigan, though he is not hunting deer this fall himself. He says that deer hunting has fallen off from what it was in the old times. He says that in his day dogs and everything else used to go in the hunting methods, and he gives me the interesting news, which he says was well authenticated at the time, that in one year 30,000 deer were shipped out of the lower peninsula of Michigan. I fancy that the old-timers of the future will never be able to speak of any such record as that.

Nearly 500 Utes are reported on Sulphur and Cathedral creeks, Colo., not far from where the Ute killings took place last fall. They have killed a great many deer, and have not been troubled by any wardens. Their hunt is now nearly over, and they are expected soon to go home.

The State of Oregon, a great one, and of great game resources, is at present without any fish or game protector, the law covering that office having been repealed. The legislators of that State seem to be a gaudily intelligent body of men.

Last winter was a mild one in Indiana and Illinois, and the quail did very well. The breeding season has also been fortunate, and the shooting this fall will be the best we have had for very many years.

I have recently mentioned two or three side-hunts which have this fall been perpetrated in Western districts, but I feel after all that the West is by contrast not so bad, but that it might be worse. This week forty members of a Baltimore shooting club not only went out on a side-hunt for count, but put up a silver medal for the man making the highest score.

Buffalo Jones in the Arctic Circle.

CHICAGO, Ill., Oct. 21.—Yesterday I sat in my office busily engaged with something which at the time seemed important. I heard a light step on the floor behind me and turned as a hand fell on my shoulder. I looked at the man who had come in, looked twice, indeed. It was Buffalo Jones that stood before me; my old friend Jones, hearty and brown as ever, and though more wrinkled about the forehead and eyes, apparently as young as ever, with his fifty-four years.

"Well," said I, "where have you been?"

"Everywhere," said he. "To the arctic circle last. I have only been home about two weeks."

"What have you been doing?" I asked.

"Everything," he said, "I have been busy out West."

"Did you get your irrigation ditch in Nebraska built?" I said.

"Yes, long ago," he replied. "That was after I sold my herd of buffalo. Then I concluded to go North."

"Where in the world do you get all this money for these trips?" I said.

"Why, I sold my railroad," said Buffalo Jones.

"Oh, I didn't know you had a railroad."

"Yes, I built a railroad down in Texas, seventy miles long. I had some money, and I never had built a railroad, so I thought I would. I sold it out and made plenty of money, then I thought I would go North after musk oxen. I wanted to get some live musk ox calves."

"Yes, I know you started on that trip," said I. "The last I heard of you was a couple of years ago, when you were fast on a rock in the Athabasca Rapids. Did you get off that rock?"

"I did," said Jones, "and I got a good deal further North than that rock. I have been not only to the musk ox range in the Barren Grounds, but beyond it. I have been all over the ground covered by Warburton Pike, and far to the east of that. I was away east of the Coppermine River, and far beyond the Great Fish River. I didn't travel in a sledge, but walked it. On the furthest parts of my trip I did not have any guide whatever. With one white man, John Rea by name, who was also a stranger in that country, I was out for over a month on the musk ox range without any guide. I think I have been where no white man has been before. This I did not by the help of the Indians, but in spite of them."

"Jones," said I, looking at him, "it is barely possible that under these circumstances there is a story in you."

"I shouldn't wonder," said he.

"I suppose it is not worth while to ask you whether you got any musk ox calves, because, of course, you did."

"Yes, I got five calves," said he.

"What did you do with them?"

Jones unwound a long roll of newspaper he carried in his hand, and pulled out the strangest looking weapon I have ever seen. It was a piece of steel butcher knife blade, perhaps 3in. long, worn and ground until the word "Sheffield" was barely visible upon its face. It was sharpened with the bevel all on one side, as savage people sharpen their knives. This trivial bit of steel was rudely riveted to a long, slender, recurving piece of hard bone, apparently the rib of some animal. In the edge of the bone, close up to the tiny blade, were cut notches for finger holds. Jones took the long bone handle in his hand, its end lying back to the right and resting on his arm above the elbow, his right hand grasping the lower end of the handle at the notches. He swept the blade, thus stiffened by a strong leverage, back and forth in the air. It could be seen that much damage could be done with a weapon so strengthened by the purchase of the arm. "They whittle this way," said he, drawing the blade toward him.

"Who?" said I.

"I don't know," said he, "but either Yellow Rib Indians or Esquimaux. Anyhow, that is what became of my musk ox calves." He threw the knife down upon the table. "That is what killed them," he said. "We found this knife lying by the bodies where they were killed. We never knew who did the killing, but we found all the calves with their throats cut." Jones showed more emotion than I ever knew him to do before in my long acquaintance with him.

"Jones," said I, "I am more than ever convinced that there is a story in you this morning."

A Daring Trip.

And there is a story, I think, without doubt one of the greatest stories of personal adventure and daring enterprise that has come up in this part of the century. It is a story too long for giving in any detail in these columns, so that I am glad to say that it will soon appear in book form, being given as a climax in the story of a life spent in similar adventure, and intimately concerned in the capture and handling of large wild animals.

I shall try to give some little idea of this remarkable journey in such space as may be allowed. The trip was made without the aid of any corporation or individual. It was made under the espionage of all the white men along the route, and against the opposition of all the native tribes encountered. It required the overcoming of the superstition of the Indians and of the fears of the white men. We read about the Klondike and the Yukon trails, and about the Mackenzie River route to the Klondike gold fields. Buffalo Jones undertook a trip a hundredfold more dangerous and trying, going where there were no trails, where there were no charts, and where there was no definite destination. Somewhere out in the land of ice there were musk ox calves. Jones started from his home, his last home at Perry, Okla., to find these calves. He found them and came back, striking the old Hudson Bay water trail far up toward the arctic circle. He went within the arctic circle, reaching the mouth of the Mackenzie. He passed two thousand winter-bound refugees caught in that awful region in the middle of their journey to the land of gold. He reached the Yukon, and the Klondike seeming too tame, he went on to the mouth of the Yukon and took ship for home. Here also there was vicissitude. On the Dutch Harbor coast the vessel was nearly wrecked. Two weeks ago Buffalo Jones arrived at Seattle. When he got home he learned that he had been twice reported dead. His daughter fell in a faint at a sight of him. Instead of being gone six months, he had been gone seventeen months. And he had, I submit, carried the flag of Yankee daring as far and as well as any man has done.

Jones told me that he had in all seen about forty musk oxen. He had killed in all about a dozen, securing some of the rarest and most valuable trophies that can come to the sportsman of any clime. He brings a bad report for the future of the musk ox. He says that all over their range the arctic wolves have become very numerous. Jones is not a timid man, but he speaks with fear of these great wolves, which he says followed them day and night, and gave them continual anxiety. They came into the very camp, so close that Jones struck at one with the axe one night. They bit one of the large sledge dogs, which soon thereafter developed acute hydrophobia. This dog bit three of the others, one of the dog train and two of the shepherd dogs, which Jones had taken along for assistance in baying up the musk oxen when he was capturing the calves. All four of these dogs died of hydrophobia. They shot these great snow white wolves in scores, indeed shot too many of them.

Buffalo Jones' Last Shot.

Coming in from their last musk ox hunt, they were still fifty miles from camp when they found that their stock of ammunition was reduced to a single cartridge. They came upon some caribou, and Jones made the stalk. It was a long-range shot, and upon it rested all their hopes.

"I took a knee rest," said Jones, "and drew up until I was holding about 4in. above the top of the caribou's shoulder."

"It must have taken a good deal of nerve to go up in the air that way, with your last shot," said I.

"I don't know," said Jones. "I knew I was holding right. I never raise my rear sights, but I knew I would kill that caribou, and so I did. We lived seventeen days on caribou meat alone. At another time we lived eleven days on a biscuit and a half apiece per day. You should see me eat now."

As an instance of the ghastly blood-thirstiness of the arctic wolves, Jones tells the following story, which he admits his partner begged him not to repeat, since no one would believe it. He shot at one big wolf, breaking its foreleg. It went away and he followed it, firing at it again at long range, and breaking a hindleg, so that it finally fell in the snow. When he went up to it he saw a gruesome sight. The blood from the wound in the broken foreleg had run down and frozen, covering the lower portion of the leg. Tasting this blood, the ravenous wolf, as it lay there, helpless in the snow, had actually eaten off and devoured its own forefoot! I think this is the most savage story I ever heard, and gives the best idea of that savage country. It was no wonder that, followed by scores of these great beasts, the march with the musk ox calves was a slow and always dangerous one.

How the Calves were Caught.

Buffalo Jones had, of course, never seen a musk ox before he made this trip, yet he made his plans in advance, figuring out exactly how he would capture them, and he said that the plans worked perfectly. They apparently involved one imperative but cruel necessity, namely, the crippling of the cows. Jones took along six shepherd dogs. When the musk ox were sighted, a band in which were some calves, these dogs were loosened. The musk ox, on seeing the men, would nearly invariably come directly toward them, sometimes within a hundred yards. When the dogs were slipped the musk oxen stood and fought them, depending on their horns. This is the way in which they fight the wolves, circling up with heads outside, knowing that they dare not run. Approaching close, the hunters shot down the old animals. The cows with calves were shot down, one or two being left alive and being shot through the hindlegs, so that they were crippled and broken down. As they lay there still fighting the dogs, the calves ran about them, afraid to go away from their protection. Then Jones roped the calves, one by one, and they were pulled out of the heap of dead and dying. The calves were taken in April, and were then about ten months old. In size they were about that of a Jersey calf of equal age, though not so tall. They were of the size of a five or six months' buffalo calf, and looked something like the buffalo with half the legs cut off, being very short and stumpy in appearance.

Arctic Itinerary of Buffalo Jones.

I shall attempt to give briefly the itinerary of Buffalo Jones, without attempting to cover any of the hundreds of delays, dangers and adventures of which he told me. He left home in June, 1897, and arrived at Edmonton, Alberta, in early July. He built a boat and started down the Athabasca River alone, being unable to hire an Indian guide. In the Grand Rapids he was hung up on a rock, as I have said, this story having come back a year and a half ago, through the Hudson Bay people, to Edmonton, whence I got track of it and mentioned it in the FOREST AND STREAM. Rescued by the Northwestern Mounted Police, the latter forbade him to go on without a guide. He finally hired an Indian. He reached Athabasca Lake the middle of July, and arrived at South Landing about the middle of August. He made the sixteen miles portage at the Great Rapids, half-way between Athabasca Lake and Great Slave Lake. On the 20th of August he arrived at Fort Resolution and built a boat. He sailed to the east end of Great Slave Lake, to Fort Reliance, where Captain Back wintered in his search for Captain Ross in the winter of 1833 and 1834. He went into winter quarters here on the 22d of September, this being about the limit of good timber. He built a log cabin, using one of the four chimneys left standing by Captain Back. At Fort Resolution it was that he met his companion, J. R. Rea, a Canadian, whom Jones calls a hero, and of whom he cannot speak with sufficient admiration. Rea was a trader whose partner had left him and gone to the Klondike. Rea and Jones wintered together. In November Rea made a little trip to see if he could locate any musk oxen, and to try to do a little trading with the Indians. He found no musk oxen, and the two wintered in their cabin. In March they started out with two dog trains and one Indian. They had to take with them their lodge poles and all the wood which they would have to burn. They went west over Artillery Lake, and went up the river to Clinton Golden Lake, this being about two hundred miles from camp. They crossed Clinton Golden Lake and struck out E. by N. E., traveling about sixty miles, as near as they could tell. They found six bulls and killed them all. They

packed the heads and hides upon their overloaded sledges, but still would not turn back. They went on, E. by N. E., 130 miles more, and over the Great Fish River. They did not pause even here, but went on, circling to the east, until at length they were entirely out of wood and forced to return over the long distance to Artillery Lake, the nearest point where they could find wood. All the heads and trophies were at this point all right, but as yet no calves had been found.

"Very Bad."

Here was where the greatest difficulty of all arose. They rested and got ready for another trip, intending to go over on the Dubont River. The Indian was curious. He could not see why these white men should care for any heads, after the success and the hardships of the trip just ended. Jones at last told him that they wanted to get some calves. At this there was an explosion: "Nazùlee, Nazùlee," cried the Indian (No good—very, very bad). He protested for hours, saying that it was wrong, that it was well enough to kill some of the musk oxen, but that as for taking the calves, that was out of the question, for everybody knew that if the calves were taken out of the country every head of musk oxen in the world would follow them out, and the Indians would have none left. This Indian superstition is a very firmly fixed one, and no argument could overcome it. This was the reason that, after the mysterious way of the wild countries, the word had gone all over the far north among the tribes that this white man must not be aided, but run out of the country. The Indian took his dog train and pulled out for home on the Great Slave Lake. The two white men were left entirely alone in the icy north. None the less neither would turn back. They resolved not to go back again until they got the calves. Here is where it seems to me they showed more nerve than in any case of which I have heard among the annals of wild life.

Alone in the Barren Grounds.

With no flour, no guide, no chart, with only one dog train, and with their rifles for their dependence for food, they headed out alone for the Dubont, which they followed for a way after it was reached. Then they struck out N. E. for 150 to 200 miles, running altogether by the compass, and relying for their return solely upon the chart which Jones kept of their route—the day's march, the hours of travel, etc., being charted, with the bearings of the compass for such and such times. It is little less than marvelous, and proof of the matchless plainsmanship of Jones—in which he has, I think, no superior, as I have had personal occasion to note in trips with him in unknown country—when one says that they made this trip, being out thirty-eight days in all, winding and turning in all their side hunts, etc., and got back to their camp within two miles of the point from which they started out. This is self-reliance and generalship, if there are such things! No harder proof was ever asked of any traveler.

As last they got to their musk oxen again and captured the calves, as I have described, a task itself of seriousness. From that time on it was a continual fight with the wolves, which followed the calves all the time. Two men, five musk ox calves, a hundred wolves, no flour, cartridges getting scarce, running by compass, snowshoeing, over a country that they had never seen before, nor had any other white man—if those conditions do not ask a bit of a man's quality, I do not know what should.

Tragedy of the Calves.

In the daytime the wolves would for a time be less bold, hence the day was the time chosen for sleeping. On the fourth day after they had got the calves, and while they were slowly getting them broken in, so that they could travel a dozen miles a day, hitched on the rope and driven by the shepherd dogs, the two men went to sleep for a time in their lodge, leaving the calves tethered on a long rope outside and near by. They slept from 10 to 2 of the day, and woke to find their calves slaughtered, to the last one. The trip was to end in this failure of one of its purposes, impossible as that would have seemed from the first to any other man. The men were now well in on the hunting grounds of the Dog Ribs and Yellow Knives. They saw the tracks of fifteen snowshoes near the slaughtered musk oxen, but they never knew who did the work. The tell-tale ugly knife was the only clue. If the long handle is the bone of a fish, it was no doubt done by Esquimaux. If it be the rib of a caribou, as seems likely, then the knife was the property of some Yellow Knife or Dog Rib, who was determined at any cost to stop what he felt was to be a devastation of the range.

Homeward.

Jones still was not beaten. "We will go back," said he; "we will go back and get some more calves." He was met by the sturdy common sense of John Rea, a man as brave, if not as resourceful, as himself. "We will not go back," said John Rea. "We have no flour, we are nearly out of ammunition. If we go back we will only be eaten by the wolves." They therefore decided to come back home.

"Home" meant for Rea a trip to the Klondike, where he would meet his missing partner. It meant a journey of many months yet for Jones. The calves were killed about the 1st of April. They got back to Fort Reliance, on Great Slave Lake, on April 20. Here they lay till July 7, waiting for the ice to clear. They made 425 miles by boat, taking one storm, in which a boat that tried to follow was swamped and one man drowned, three others being rescued later after terrible exposure. They reached Great Bear Lake July 28, and July 30 ascended the Bear River, to have a look at the ruins of old Fort Franklin, where Sir John Franklin spent his last winter. Here there is but one log cabin left, with ruins of others, or rather signs of where they stood. They now went down Bear River to Fort Norman, and there made an important change of their means of travel. They traded their big scow for a Peterboro canoe, which had been left with a man at the Mission by some one of the Klondike argonauts, who, misguided by criminally inaccurate stories of outfit sellers and transportation companies, had before this gone down the river. Jones and Rea were now beginning to get into the Klondike zone. At Fort Norman they stripped down to the last ounce, resolved to make a keen run for the Yukon. The canoe was a godsend. With it they broke the record of travel over that route, doing in a little over a month what the heavy outfits have not finished in more than a year.

The Arctic Portage.

They reached the mouth of the Mackenzie Aug. 8. They went up the Peel River, which comes in at about the same outlet, leaving the Peel on Aug. 9, and getting to the Rat River Aug. 10. They were now wading in ice water all day, "tracking," or dragging by rope, their boat, whose splendid qualities were now apparent. It was over 20ft. in length and weighed but 158lbs. It saved them from wintering at "Destruction City," as Jones named that camp of woe where over 2,000 unfortunate souls will be obliged to pass the coming winter. These people have not in many cases been able to get their heavy boats and outfits beyond the first cascade of the Rat River. It was openly said that if one Wamholtz, who was a leader in some of this expedition business, could have been secured, he would have been treated at once to miner's law and hung. The man named has returned to the States, and is probably wise enough to stay there now. He is a Chicago man.

Jones and Rea went up the Rat sixty miles. They discovered a new portage by way of a smaller creek, and on the 17th day of last August made a carry of only 2,400ft. and got into the Yukon waters, this at the upper part of the West Rat River. This stream they descended to the Bell River, and thence went down the Porcupine, only seven days in all from the portage. Jones left his gallant companion Rea at Fort Yukon, Rea going up to Dawson, where it is very likely he has had a little settlement with his missing partner long before this. Jones took boat to Minock, and also visited Circle City. He reached the mouth of the Yukon safely, and caught a vessel bound for God's country, leaving St. Michaels Sept. 17. He arrived at Seattle Oct. 7.

How to Get Off a Bar.

It seems to me there was a story in Jones. This man, as I knew when I met him on a hunt on the plains in 1886, is no ordinary man. He is the worst case of nervous restlessness that anybody ever did see, and he can't be stopped. When he got his boat hung up in the rapids, the Indian wept and cried that they were lost. The water was terribly swift, and no man could swim to shore without being carried over the heavy falls below and killed, to a certainty. Jones got out and waded the 50ft. to shore, keeping his footing by shoving hard down a pole, which he prepared for the work. He got two ropes made fast to a tree, the Indian still weeping in the boat. The Indian could not see the purpose of the crazy white man, who surely could not pull off the heavy scow with its two tons of weight. Jones had a double rope, and between the two strands he thrust a pole. Then he began to wind and wind, twisting the two ropes together. The rope shortened, the boat started with the irresistible pull and swung into shore, and there was a very happy Indian. The reason why the Anglo-Saxon rules the world is because he is the best man in the world. You can't stop him. At least you can't stop Buffalo Jones.

Siberia Next.

Of all this trip, and many other things, I asked Jones many questions, and learned a great deal, for which there is not room.

"Now, what are you going to do next?" I asked him. The answer was prompt:

"Next year I think I shall go to Siberia after crown sable," he said. "I shall get me a lot of sable and raise them for profit. The Russian sable is the most valuable of all furs. The United States Government has promised me an island in the Bering Sea for my sable colony. I shall there raise sable and other animals of value or of curious interest."

Buffalo Jones to-day went to Bloomington on a visit. In two weeks he will return here and push preparations for his forthcoming book. He has relatives living in Chicago. Part of his family is at Troy, Kansas, and his home is at Perry, Okla. It does not seem exactly clear where he lives.

I think there was a story in Jones.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

New Brunswick Caribou Grounds.

Editor Forest and Stream:

Here is the chance of a lifetime. The soul that thirsts for caribou need seek no further. The Bald Mountain country, at the head of the Little Tobique, New Brunswick, is alive this year with unnumbered herds. Anyone with little trouble can get a good head, and at the same time have an unusually good chance at the moose.

During the time we were in camp on Nictor Lake five magnificent heads were brought in from two ranges, both within three miles of the lake. The largest head bore thirty-two points, the smallest twenty-one. Three of the caribou were shot on one ridge in an interval of six days, and each man practically picked his head. Mr. John W. Hunt, who brought down a tremendous bull, saw six other caribou the same day, and three of them had heads almost as large as the one he got. The next day Mr. Robinson, of Belfast, Ireland, tried the same ridge, saw two more big bulls, and got another rattling good set of horns. Caribou sign we saw everywhere. They were even ranging over the top of Bald Mountain, and the day we got into camp Mr. William Walker, of Fredericton, shot a fine bull from the dooryard of the camp.

Anyone in search of further information need only write to Adam Moore, Scotch Lake, York county, New Brunswick. He has three camps on the Little Tobique and Nepisiguit, and can guarantee every man his head. Also, by the way, I can guarantee him. M. H. F.

The Long Island Quail Season.

SOME uncertainty prevails respecting the open season for quail on Long Island. It is contended by some that the law makes no provision whatever respecting Long Island quail, and that therefore they may be killed at any time. Others reason that the law of 1898, prescribing for the State an open season running from Nov. 1 to Dec 15, prevails on Long Island. The Game Laws in Brief on page 47 says: "The general State law (Sections 72-73) applies to Long Island." But an addendum just now added to the Brief gives the season as Nov. 1 to Dec. 31. Our reason for adopting the last dates as those which now prevail is found in the following considerations:

Prior to the date of the last revision, April 22, 1898, the game law relating to quail made no exception as to Long Island. The law covering the entire State read as follows:

"Sec. 72. Quail shall not be pursued, shot at, hunted or killed except during the months of November and December."

The last Legislature, on April 22, 1898, amended the law as follows:

Section 1. Section 72 of Chapter 488 of the laws of 1892, the title to which was amended by Chapter 395 of the laws of 1895, to read, "An act relating to game, fish and wild animals, and to the forest preserve and Adirondack park, constituting Chapter 31 of the general laws, and to be known as the fisheries, game and forest law," as amended by Chapter 974 of the laws of 1895, is hereby amended to read as follows:

Section 72. Quail, Close Season.—Quail shall not be pursued, shot at, hunted or killed, except from Nov. 1 until Dec. 15. Whoever shall violate or attempt to violate the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of $25 for each bird killed, trapped or possessed contrary to the provisions of this section.

Section 2. Section 73 of said act, as amended by Chapter 974 of the laws of 1895, is hereby amended to read as follows:

Section 73. Quail, When Not to be Possessed.—Quail shall not be sold or possessed except during the months of November and December, but possession thereof during the month of December after expiration of close season is forbidden and shall be deemed a violation of this section unless it is proved by the possessor that said birds were killed within the lawful periods for killing the same, or outside the State, and they shall not be killed or possessed in the counties of Chemung, Genesee, Wyoming, Orleans, Livingston, Monroe, Cayuga, Seneca, Wayne, Tompkins, Tioga, Onondaga, Ontario, Steuben, Cortland and Otsego, prior to Nov. 1, 1898. The provisions of this section shall not apply to Robin's Island and Gardiner's Island. Whoever shall violate or attempt to violate the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of $25 for each bird killed, trapped or possessed contrary to the provisions of this section.

Section 3. The provisions of this act shall not apply to Long Island.

Section 4. This act shall take effect immediately.

We construe Sec. 3, "The provisions of this act shall not apply to Long Island," as limiting Sec. 1 and restricting it precisely as if the concluding clause had been enacted, "is hereby amended to read as follows, but this amendment shall not apply to Long Island." Had this Sec. 3 of Chap. 459 been omitted, the amendment would have applied to the entire State, Long Island included; but by Sec. 3 the amending of Sec. 72 is restricted to an application only throughout the State outside of Long Island; and the original Sec. 72 in so far as Long Island is concerned remains unaltered. While the general season then is Nov. 1 to Dec. 15, the Long Island season remains Nov. 1 to Dec. 31.

The official compilation of the game laws prepared by the Fish and Game Commission adds a note to Sec. 72 saying that the law as amended apparently does not apply to Long Island; but no mention is made of the old law, nor so far as this official compilation is concerned is any law whatever given for quail on Long Island. It is stated in the Brooklyn Eagle, however, that the Commission adopts the dates of Nov. 1 to Dec. 31.

If the Brief is in error in holding that the law is still in force which makes the Long Island season Nov. 1 to Dec. 31, then there is no law whatever for Long Island quail. That would not mean, as some have thoughtlessly stated, that Long Island quail may be shot at any time. It would mean on the contrary that they could not be killed at all. For Sec. 78 of the law (page 45 of the Brief) says that "wild birds shall not be killed at any time," except "birds the killing of which is prohibited between certain dates." If the original form of Sec. 72 does not survive with respect to Long Island quail, there is then no law whatever "prohibiting the killing" of Long Island quail "between certain dates." They must be classed then with wild birds, which Sec. 78 says "shall not be killed at any time." Q. E. D. And there you have one of the beauties of the game law tinkering as she is tinkered.

The Cuvier Club.

PRESIDENT ALEX. STARBUCK writes from Cincinnati under recent date: Our club is advancing rapidly, and its influence is being duly impressed upon the public. Yesterday we elected eighteen members, and there are now eight more upon the slate for the club to determine upon. I am positive we will add fifty more to our roll before the year closes.

This year the penalty on birds is $25, and violators are somewhat scared by the expansiveness of the fines. Last week we bagged one violator, and are now on the track of two more. Our greatest violators a e those who use the cold storage houses, but I think we will do some work there this season.

Since writing the above, a member has just entered with three more names for enrollment.

Another One Dreams It.

DEDHAM, Mass.—Just been reading Mr. Mather's No. VII. in FOREST AND STREAM. He says: "I have often wondered if this happens to others dreamers." I read it to my wife, who said: "Why, how often you have told me of the same dream." It commenced in my early shooting days, and now at sixty years I occasionally have it. Another dream is of thousands of geese and ducks on the water, very tame. At 30yds. I would pull the trigger, a puff, the shot rolling out of the barrel into the water, and the birds calmly looking at me while I reloaded and repeated. FRED A. TAFT.

Quail in the South.

THE Southern Railway Company send us their new book, giving particulars of hunting resorts for quail and other feathered game and deer in the South, particularly North Carolina and Virginia. From recent reports, all gathered within the last few days, by the Southern's agents at the points designated, we extract the following hints as to the opportunities for shooting. That many of the reports are unfavorable is to be taken as a guarantee that the representations may be accepted as reliable:

Charlotte, N. C.—In regard to present conditions, would state that birds were never more plentiful.

Bushnell, N. C.—Quail are scarce.

Elkin, N. C.—Think it will be very good season.

Asheboro, N. C.—Am advised by local sportsmen that present outlook is very favorable, and quail are plentiful.

Newells, N. C.—Birds are reported scarce in this section.

Stovall, N. C.—Quail plentiful.

Lyons, N. C.—The quail are very plentiful.

Bullocks, N. C.—Birds are plentiful.

Durham, N. C.—Quail shooting will be fine in this vicinity this season, as birds are reported to be plentiful.

Flat Rock, N. C.—The quail shooting here does not amount to much.

Troutman, N. C.—This is one of the finest quail shooting districts in the State. Game is abundant this year. As there has been very little quail shooting in this community for quite a time, everything is most favorable for a season's outing.

Otter River, Va.—There is a fine lot of quail, but are hunted but little. Some of the land is posted, but I think persons desiring to hunt could get permission to do so. Would advise that you refer persons contemplating coming to this locality to Mr. E. R. Goodman.

Broad River, Va.—Hunting is not allowed by the farmers. I think every farm in this section is posted.

Mt. Jackson, Va.—Nearly all lands are posted.

Sutherlin, Va.—Quail abundant in this section, and quite a number are being killed.

Culpeper C. H., Va.—All the best country in this egion for bird hunting is posted against all persons hunting on it. I do not think non-residents will be allowed to hunt in this county.

Lawyers' Road, Va.—There is plenty of quail in this vicinity, but there has not been any sportsmen here this season, as the people around here who own the land forbid any one from hunting on their lands. This has been the case for quite a number of years.

Chase City, Va.—The prospect for fine sport has never been equalled. From all directions reports come of quail in the greatest abundance; also other game.

Fairfax, Va.—Game is not so plentiful, and farmers do not allow hunting on their farms. There are no sportsmen here who make a practice of hunting. Rabbits is the only game that is anyway plentiful.

Proffit, Va.—Quail and rabbits are plentiful here.

Skipwith, Va.—There are lots of quail around here, but not much hunting.

Scottsburg, Va.—Good many quail. Some lands are posted, but no trouble to obtain permission to hunt.

Tunstall, Va.—Quail are very plentiful in this section.

Hounds and Still-Hunters.

Editor Forest and Stream:

Having been in the game for thirty years I think I can safely say that it has not been the sportsmen with hounds who have slaughtered the deer in this State, it's the still-hunter, and always was the still-hunter. Ninety per cent. of them are market-hunters; and I am very well acquainted with their ear marks.

I was one of a party of ten, and all good sportsmen, and we hunted with hounds. On a three weeks' trip we usually killed from twenty to thirty deer. A good still-hunter will kill as many. And I was acquainted with several other parties that averaged about the same. The men who hunted with hounds were sportsmen and did not make a business of it. As far as I know they have all dropped out of the game, as the law in this State now leaves it all in the hands of the pot-hunter, and they will finish them up in great shape—and it won't take many years at that.

I notice an article in the FOREST AND STREAM, quoting "Van Dyke's Still-Hunter," that not one in twenty or even fifty deer still-hunted is ever seen. He evidently has never been acquainted with the genuine article. I have known a score of still-hunters that averaged from thirty to sixty in a season. And I know of several now that I would like to back to kill nine out of every ten they started after on a light snow.

I have had some queer experiences with still-hunters. The majority of them was always threatening to kill our dogs, but I never knew them to fail to sneak in and kill a deer ahead of the dogs if they had a chance, and perhaps kill the dog afterward. I usually gave them as fair warning as they did me, for I should be very sorry to see a man shoot a dog of mine. They did not want but little, the best of it—all the deer would do.

I know that there are exceptions to the class I refer to, but I rarely ever met them.

All the still-hunting outfit has to do now is to take a bull dog and a hatchet and wait for a deep snow and crust. It's their long suit.

It would appear that the hounds give a deer quite as much chance as a moose gets when he is called up and potted. Men's ideas of what constitutes sport differ, and probably always will. I am on the shady side, but am looking on at the game and expect to see the finish.

For a number of years we camped at the mouth of Big Creek, on the Au Sable River, and what a splendid deer country it was! They are gone, like the buffalo and the pigeons. Perhaps some one will say the sportsmen killed them. It would be a splendid idea if more people would practice what they preach, and not preach about things they know nothing about.

The grayling fishing I have had on the Au Sable is something to be remembered. It was a very bad day a man could not take a hundred if he wanted them. While talking with a friend this summer, who had been fishing on the river, he told me that he only took two grayling—all trout. And I have fished there days in years gone by and never took a trout. The trout is the better fish. The grayling must be cooked very soon after being caught or they get soft. But they are rare sport. There is still good grayling fishing in the Manistee River.

One who remembers the countless thousands of pigeons would never have supposed they could disappear in the way they have; but when one knows how they were followed by pigeoners, winter and summer, north and south, netted and their nestings robbed of squabs and shipped to market by the car load, it's not so surprising. It's only a few years ago that deer were slaughtered in the same way—by the thousands—and shipped to market.

I am not doing any guessing in regard to it. I have seen it all; and I think it would take a man with considerable nerve to say it was done by sportsmen.

The Cadi's parting shot at the sucker was a warm one and hits so many.

L. H. HASCALL.

MICHIGAN, Oct. 30.

The Adirondack Deer Law.

Editor Forest and Stream:

In Essex county, which comprises a large slice of the Adirondack State Park, the nominees for State senator and assemblyman on both the Republican and Democratic tickets are striving to win favor by promises to work for the repeal of the existing deer law and the legalizing of hounding. It began with a letter from the Democratic nominee for assemblyman, who purposely confused Game Protector Fletcher Beede with his brother Orlando, who is running for assemblyman on the Republican ticket, in an attempt to injure the latter by prejudicing the hunting class against him. The writer asserts that both he and his running mate for the Legislature will attempt to have "game laws that will be for the interest of the people of our section."

To this Orlando Beede answers that both he and Senator Chahoon are opposed to the present anti-hounding deer law, which is for "the benefit of the cities alone," and in favor of laws "for the benefit of the residents of Essex county."

Essex county includes as many native hunters as any other Adirondack county, and is fairly representative of the whole section. The fact that the repeal of the non-hounding law is made a leading feature in the party measures of both Republicans and Democrats shows the strength of native sentiment in favor of hounding.

The Essex County Republican is the chief newspaper published in the eastern Adirondacks. It is in touch with the sentiment of the people regarding the present deer hunting law. So are the Republican nominees for State senator and assemblyman. The Republican says editorially: "The people of Essex county want hounding. Chahoon and Beede are both in favor of hounding and will work together for the repeal of the present anti-hounding law." Incidentally, common report has it that most of the deer killed this fall are killed in front of the hounds.

J. B. B.

IN the last issue of FOREST AND STREAM is found an article on deer hounding by Raymond S. Spears, of Brooklyn, who seems to be sadly misinformed as to the real condition of affairs in at least this side of the Adirondacks. It is a well-known fact that so intense was the belief of the guides of the Brown's Track region that hounding should be prohibitory at all times, they met in Boonville last winter and perfected an organization, the object of which was to combine and act as a unit in the interest of the anti-hounding law. These guides are true sportsmen and not pot-hunters, they are men who believe that in the protection of the deer lies the safety of the beautiful Adirondack forests they love so well. To them more than any other source is due the fact that the proposed amendment to the game law permitting deer hounding failed to become a law. No one who knows the members of the Brown's Track Guides' Association would for a moment entertain the idea that they were anything but staunch advocates of the anti-hounding law, and Mr. Spears' article is unhappy in its inference that the guides are not in sympathy with the best possible means of protecting, not only the deer, but the whole Adirondack wilderness.—Boonville Herald.

The Sale of Game out of Season.

THE gauntlet thrown down by the Baltimore firm of Henderson, Linthicum & Company to the Maryland Game and Fish Protective Association in attempting to have part of the '98 game law declared unconstitutional, will be taken up by the Association, which is prepared to make a hard fight in defense of the new statute. President George Dobbin Penniman, when asked what action, if any, his Association would take with regard to Mr. Henderson's attempt, said to a Baltimore Sun reporter:

"Why, certainly we shall defend the law. We have every confidence in State's Attorney Duffy, but we are directly interested in this matter, and we shall ask him to allow us to assist him in the prosecution of the case, and unless he objects, some one, perhaps myself, will make one of the arguments in defense of the law. Here is, in brief, the reason for that clause of the law forbidding the sale of game out of season, no matter where it comes from, which is the one they will attack: If the law can close the markets entirely to game out of season it will go very far toward stopping the slaughter of game out of season, but if game can be brought here from outside the State it will open the doors to all game, for Maryland game can be mixed up with that from Virginia, North Carolina and other States, and it would be next to impossible to prove that any particular game was killed in Maryland or somewhere else. Again, any quantity of game could be slaughtered along the borders of the State and shipped from just across the line, and therefore it would be perfectly lawful to sell such game, if that clause were declared unconstitutional. It would simply throw down the bars and render the law, or that part of it, valueless.

"Mr. Henderson is mistaken in thinking the Maryland Court of Appeals has ever decided the point at issue. The point did not arise in the Dickhaut case. On the other hand, Judge Alvey, of the District of Columbia, has decided the same question in a case arising out of a game law similar to ours, and he ruled the statute valid. As for this clause injuring the commission business, of course the commission men would like to sell game from other States, but it seems unreasonable to me to say that because a man cannot send a rabbit to Baltimore he will not send a crate of chickens, when he can get a better price for them here than elsewhere, or better transportation rates.

"Some people are trying to raise the demagogic cry that the game law is for the benefi of rich men. It is just the contrary—it is for the man of moderate means and the poor man. The rich man, when he goes gunning, usually goes outside of Maryland, to North Carolina and where game is more plentiful, and he is not only not interested in preserving Maryland game, but is interested in getting game to eat out of season as well as in season. Why, we had to raid the Maryland Club the other day. We are trying to preserve the game in Maryland for the clerk, the small business man, the farmer and any man who likes to take a hunt sometimes and is not able to go out of the State for his game. The season opens Tuesday, and every gunner who shoots a bird ought to thank the game association that there is still a bird to shoot."

Maine Game.

Now the Maine papers are making sport of what they seem to consider a rare joke. It seems that Senator Eugene Hale has been down to his old home at Elssworth, and that while there he conceived the happy thought of sending his mother-in-law in Washington, Mrs. Zack Chandler, a fine brace of partridges. The birds were duly packed, tagged and shipped. But a game warden smelled of the box and smelled game. It was regularly seized and Senator Hale was notified. He appeared, and quietly drew his pocketbook and paid the fine for illegal shipment of partridges out of the State, $5 for each bird, the entire shipment costing him about $40. The papers say that Senator Hale claims that he has been so busy looking into national affairs that he has not had time to study the game laws of his own State.

The handsomest moose of the season was seen in Faneuil Hall Market Tuesday, at the stall of W. H. Jones & Co., who squarely bought him of the hunter who shot him in Maine. The lucky hunter's name is Edward V. Goodwin, of Antrim, N. H. He came through with his game, and thus had a right to ship it out of that State. The animal had a beautiful set of eight-pronged antlers, very clear and symmetrical. With entrails drawn and head and hide on he weighed 730lbs. His limbs were clear and of a beautiful silver-gray color; a characteristic of an aged moose from Maine. One is sorry to think that another beautiful specimen of a noble race of animals has fallen. The feeling is general that the moose is doomed to follow the bison.

The Bangor, Me., papers say that on Friday the game wardens seized a calf moose, claimed by F. E. Wakefield, of Boston, which he shot at Stacyville. He was arraigned in the municipal court and pleaded guilty. The judge sentenced him to three months in jail. He appealed, giving bonds in the sum of $200 for appearance at the February term of court. The papers further state that this is the second case of seizure of calf moose within two days, and that the last one, up to these two cases, was two years ago.

SPECIAL.

New York League.

SENECA FALLS, N. Y., Nov. 1.—To all Clubs, Organizations and Associations for the Protection of Forests and Propagation and Protection of Fish and Game in the State of New York: You are hereby notified that the regular annual meeting of this League will be held at the Yates Hotel in the city of Syracuse, N. Y., at 10 A. M., Thursday, Dec. 8, 1898.

All clubs, organizations and associations created or organized for any of the above purposes or objects are invited to be represented at this meeting. No part of the State should fail of representation, for it is only by their united efforts that sufficient protection to game, birds, fish and forests can be speedily accomplished.

All sportsmen, game protectors and foresters are particularly urged to see that clubs are organized in every town and village in their districts, and that they send delegates to this meeting.

It is the special aim of this League to simplify the present fisheries, game and forest laws; to remedy any evils that may now exist; to eliminate therefrom unwholesome and unjust local legislation, and secure uniformity thereof; to create and foster a public sentiment in favor of better fish and game protection and forest preservation, and produce the enactment of just and wholesome laws for these purposes, as well as to promote the observance and enforcement of the same. At least every county in the State should have a protective game and fish or forest organization which should be represented at this meeting, thus carrying to the Legislature a voice of power making for a common interest and an honest purpose.

Additional information and membership application blanks will be furnished upon request to the secretary, with whom correspondence is solicited.

Suggestions or recommendations of amendment to the fisheries, game and forest law must be in the hands of the chairman of the law and legislative committee, above named, by Nov. 15.

All clubs and organizations well disposed toward fish and game protection and forest preservation should not fail of representation at this annual meeting. Respectfully yours,

W. S. GAVITT, President.
ERNEST G. GOULD, Secretary.

Florida West Coast.

TARPON SPRINGS, Fla., Oct. 27.—Deer, quail and turkeys are fairly plenty. Fishing good.

TARPON.

New Jersey Legislation.

From advance sheets of the report of the New Jersey Fish and Game Commission, we take the following paragraphs, discussing the provisions of the game law as they now stand and as the commissioners suggest they might advantageously be changed. The text of the quoted sections is here summarized:

The principal objections to the present laws are that the seasons are altogether too long, that in some cases game may not be killed when it is in the best condition for the table, that some kinds of fish and game recently introduced into this State are not protected at all, and that in many instances the penalties are out of proportion to the offenses. Your commission has on several occasions suggested amendments, doing away in a great measure at least with these objectionable features, but no heed has been paid to these suggestions. Unfortunately the general public holds the commissioners responsible for the laws on our statute books, when it is too frequently the case that these laws are the result of local influences, and that broader views and the application of restrictive measures to the whole State should have prevented their enactment. We therefore desire to reiterate the opinion expressed in our preceding annual reports that the seasons for the taking of fish and game should be uniform, as nearly as such uniformity is possible, and in order that no mistakes may arise as to what the suggestions of your commissioners are, we herewith submit such measures as would in our opinion give the State of New Jersey a code of fish and game laws which will be reasonable, affording at the same time protection to our fauna without too much restricting the liberty of the hunter and angler or infringing on the rights of the owner of the soil.

Penalties too Severe.

When the present fish and game laws were enacted there was no adequate provision for their enforcement. On this account probably the Legislature placed severe penalties on the offender, endeavoring to make up in severity of punishment the laxness of enforcement. A person contemplating a violation of the fish and game laws knew that the penalties imposed were severe, but he also knew that there was little chance of his being arrested and punished. Since the date when severe penalties were visited upon the few violators who were so unfortunate as to be detected, a material change has taken place. The Legislature has provided efficient machinery for the enforcement of the laws, and where formerly convictions were few they have become numerous. The effect of the vigilance of the wardens has been apparent everywhere, not only in the increased number of native birds, but also in the multiplication of several species of fauna which had threatened to become extinct. But with increased activity on the part of those entrusted with the enforcement of the laws there has been no reduction of the penalties imposed. It is our opinion that a reduction of the penalties by about one-half would be proper at the present time, and that such a step would not militate against an enforcement of the laws, nor remove from our fish and game that protection which their welfare demands.

Uniform Seasons.

The principal difficulty in the way of a uniform season for game is the extreme length of New Jersey when compared to its breadth, making the seasons in the southern part either two weeks earlier or two weeks later than in the northern part. The experiment of having different seasons for different parts of the State has been tried in New Jersey, and here as well as elsewhere it has proven unsatisfactory. A two-section law might meet with approval in the extreme southern and the extreme northern part of the State, but it would meet with severe opposition in the large territory lying between the two extremities. The difficulty can, however, be readily overcome by opening the season a few days later and closing it a few days earlier than might be indicated if only the demands of the separate localities were considered. A few days more or less will make little difference, and there will always be the consolation that there will be so much more fish and game the following year.

Introduced Species.

That New Jersey has taken the lead in the protection and propagation of fish and game has been frequently conceded in other States, and methods first adopted here have often been copied elsewhere. There is, however, one direction in which New Jersey has been extremely lax. Thousands of adult fish have been brought to New Jersey waters from the Great Lakes, and thousands of birds have been brought hither from other States. In many cases these importations meant introductions of new and valuable species, and it is but just to remark here that in all cases the greatest care was exercised not to try experiments, but to introduce only such birds and fish as abundant experience elsewhere had shown to be well fitted for this State. Although annually a large part of the appropriation placed at the disposal of the commission has been expended in the acquisition of additions to our indigenous fauna, nothing has been done in the way of legislation to afford proper protection to the strangers and to secure for them an opportunity to increase. If the birds and fish were worth introducing, and of this there can be no question, they are worthy of protection.

Proposed Amendments.

Sec. 1. Forbidden to take any game except by use of shoulder gun, and in the open seasons prescribed by the law. Penalty $20.

The proposed section differs from the present law by reducing the penalty from fifty dollars to twenty dollars.

It also excludes from protection the English pheasant. This bird does not exist in New Jersey excepting in a few private preserves, the owners of which have taken their own precautions against the destruction of the birds; it gives such owners the right to do as they like with birds which are their personal property. The ring-necked pheasant, which has been introduced in various parts of the State, is protected.

The same protection accorded to our indigenous birds is also extended to the pinnated grouse, a few of which were introduced into this State two years ago. It was the intention of your commission to secure more of these birds, for there seems to be no reason to doubt that they would do well in parts of New Jersey where they were numerous before the lax enforcement of the laws caused their annihilation, but the person to whom the contract for supplying the birds was awarded failed to carry it out; it is hoped that better success will attend this project in the near future.

2. Proposed open season for deer, Oct. 25 to Nov. 5. (Owners of deer preserves to take their deer whenever they may see fit.) Penalty $20.

Scarcity is the forerunner to extermination, and this is particularly true as to deer in this State. The number killed annually is decreasing, while the number of hunters is larger. If the few remaining deer were left to multiply there is little doubt that in the course of a few years their progeny would be counted by the hundreds. Your commission has several times received applications for replenishing the present stock of deer, but did not deem it advisable to take any favorable action; deer which can be bought in the market are generally more or less domesticated, and their liberation in a country open to gunners would quickly result in their slaughter; but if these deer could be protected their progeny would be as wild as the indigenous deer.

Preserves containing deer are very few in New Jersey, but in such cases the deer have become private property and consequently have been removed from the class of animals generally protected by legislation; it is for this reason that it was deemed best to insert a clause providing that the law should not apply to deer preserves at present established.

Nor does your commission deem it advisable in this particular instance to suggest a reduction of the statutory penalty; men who hunt deer unlawfully almost invariably do so for gain, and consequently the penalty of an infraction of the law should be such that the violator cannot pay the penalty and still have a profit left in consequence of his offense.

3. Proposed open season for ruffed grouse, pinnated grouse, woodcock, gray, black or fox squirrel, Oct. 15 to Jan. 1. Quail and hare, Nov. 10 to Jan 1. Penalty $10.

The law at present permits the killing of woodcock in July, which is objectionable, not so much on account of the number of woodcock killed as because it affords the violator of the law a pretense to be in the woods with a gun. Under our present statute shooting for some kind of game is permitted from July 1 to Jan. 1, and unfortunately there are too many persons who are apt to shoot at anything affording a living target, no matter what particular kind of game they may have ostensibly started out after. Closing the month of July to woodcock shooting would mean the preservation not only of woodcock, but of other birds.

The open season for game above suggested is a compromise between the demands of the extreme northern and extreme southern sections of the State. From the 1st of November to the 15th of January would suit the people of Cape May, Cumberland, Salem, Atlantic and Gloucester; in Sussex, Passaic, Bergen, Morris and Warren an open season from Oct. 1 to Dec. 15 would be preferred, but it is believed that the dates suggested above would meet with general approval in the between-lying territory, and would meet with little opposition from the two extremes.

The penalty provided by the present statute is twenty dollars for every animal killed or had in possession.

4. Proposed open seasons for gray snipe (sometimes called English or Wilson snipe), March 15 to May 1 and Aug. 25 to Jan. 1. Rail bird, reed bird, or marsh hen, Aug. 25 to Jan. 1. Dove, upland plover, the month of August. Penalty $10.

The present law prohibits the killing of snipe in October, despite the fact that during this month the birds are in better condition than during the preceding month.

The change in the date of killing reed birds, rail birds and marsh hens is made to conform to the special law passed in relation to these birds last year.

5. Proposed open season for ring-necked pheasant, Oct. 15 to Dec. 15, but the birds to be protected for two years from date. Penalty $20.

Your commission during the past two years has expended considerable sums of money in the introduction of these birds into this State. It is apparent that the ruffed grouse is disappearing, despite all attempts to protect it, and the ring-necked pheasant offers the only proper substitute. On account of its extremely wild nature it has not been practicable to secure the ruffed grouse from localities where it is still numerous, but this difficulty does not exist in connection with the ring-necked pheasant. In a number of places in New Jersey where the ring-necked pheasant has been introduced by your commission the birds have been taken care of by the owners of the soil, and no gunning has been permitted. In every instance of this kind the birds have multiplied and have done well, better in fact than in their native home, showing conclusively that the climatic conditions and the food afforded are suitable to the birds. The birds which were put out were bred in confinement, and consequently had acquired more or less domestic habits; these, however, readily disappeared when the birds had been liberated for some months. Unfortunately the period of liberation required to secure a return to the wild state was not sufficient to prevent the killing of the birds under the laws at present prevailing in this State. The young, where the birds propagated, were fully as wild and wary as our indigenous ruffed grouse. Your commission would therefore strongly recommend a close season of two years, feeling confident that even in that short period the birds will have been afforded an opportunity to become firmly established.

6. The wild birds which may not be killed at any time are specified as follows: Bluebird, bluejay, brown thrasher, cardinal bird, cedar bird, chat, chewink, chickadee, cowbird, brown creeper, cuckoo, egret, finch, flicker, fly-catcher, yellowbird, grosbeak, gull, nighthawk, hummingbird, kinglet, martin, meadowlark, indigo bird, kingbird, oriole, oven bird, phœbe bird, pewee, redstart, robin, shrike, snowbird, sparrow (the English sparrow, however, excepted), swallow, swift, tanager, tern, titlark, vireo, warbler, thrush, whippoorwill, woodpecker (the yellow-bellied woodpecker, or sapsucker, however, excepted), wren, or yellowthroat. Penalty $10.

The present law enumerates a number of birds which shall not be killed, and then proceeds with a sweeping provision prohibiting the killing of all insectivorous birds. All birds, with exceedingly few exceptions, are insectivorous, if not at all times, still at some periods of their existence. Under the present law it is unlawful to kill reed birds and nearly all of the different species of shore birds, the latter feeding to a great extent on aquatic insects. For the purpose of removing this objection, and at the same time preserving the birds which are the most useful to the agriculturist or most pleasing on account of their appearance or their music, it was thought best to clearly specify what birds should not be killed. The above section is not near as sweeping as the present law, but it is believed that it will be productive of better results.

The penalty under the present law is twenty dollars for each bird killed or had in possession.

Under the present law dealers in game have thirty days in which to dispose of their stock of game after the close of the season. The law formerly gave the dealers only ten days, but this was extended to thirty days when a material reduction in the periods for killing game was in contemplation; with the seasons open as long as suggested by this act twenty days would be amply sufficient, as it would carry the time far beyond the holidays, and we do not anticipate any objection on the part of the dealers to this change.

14. It shall be unlawful to hunt with a hound or hounds, or with firearms or weapons of any kind, or to carry a gun in the woods or fields, on the Sabbath day, commonly called Sunday, under a penalty of $20 for each offense.

This is the law, with the exception of changing the word "dog" to the words "hound or hounds," as it stands on our statute books at present. The reason for the slight change will be readily apparent to all persons who are fond of taking a stroll in the woods with their dogs on Sundays: bird dogs do not destroy or injure game; hounds do. But beyond this slight amendment no reason has been adduced to warrant a change. The Sunday gunning law is generally violated by persons coming to New Jersey from New York or Philadelphia for the purpose of killing anything in hide or feathers. These men had become an intolerable nuisance until their depredations were stopped by drastic measures on the part of the wardens, and your commission sees no reason why the stringency of the present laws should be in any manner relaxed.

15. Nothing in this act shall be so construed as to prevent associations or individuals from bringing into this State any birds or other animals for the purpose of propagation, or from keeping such animals until a seasonable time for their release.

In this section the words "or domestication" have been dropped after the word "propagation," it having been found that the pretense of domestication was resorted to often for the purpose of shielding persons trapping birds intended for sale in the markets of New York and Philadelphia. The law as it stands does not prohibit the possession of a robin or other bird or animal as pets, and your commission has never tolerated any prosecutions where the purpose was stretching the law to cover cases of this nature.

A Philadelphia correspondent sends us these suggestions respecting the proposed changes in the New Jersey game law:

The most vital point which occurs to me is in connection with the ending rather than the beginning of the fall shooting season. In my judgment, no shooting or hunting should be permitted in any part of New Jersey in the season of the year when snow is to be expected. A fall of snow enables the shooter to track the game, to see it upon the ground, and in the case of quail to destroy an entire covey at a single shot. I once went quail shooting in New Jersey on Dec. 25, and found that the birds could readily be seen upon the ground, and also that they were so weakened by the cold, and perhaps by starvation, that they were scarcely able to fly. It is needless for me to say that I never went again after snow had fallen.

Another essential feature is the beginning of the ruffed grouse season. I approach this with diffidence because I fully appreciate the efforts made by the commission to compromise between the northern and southern section of the State. Oct. 15 is admittedly too early for quail shooting, yet ruffed grouse being then in season, the temptation for killing game of all kinds is constantly before the shooter. The dogs used in ruffed grouse shooting do not respect the fine distinctions of the law, and will point illicit quail on Oct. 15 as readily as they will the true and lawful ones on Nov. 10. As a consequence, their master must either become a law breaker or call off his dogs. While it is true there are to be found a few coveys of undersized quail on Nov. 1, yet most of them are full grown and fit for shooting at that date. Would it not be a fair compromise, therefore, between the two sections of New Jersey to make the season for quail, rabbits and ruffed grouse begin, not on Oct. 15, nor upon Nov. 10, but as it used to do many years ago, on Nov. 1, and then in the interest of game protection end it on Dec. 10 or 15, in time to prevent shooting in the snow.

In my opinion, the cause of game protection will be better served by making the season for ruffed grouse, quail and rabbits begin Nov. 1, and end on Dec. 10 or 15, for the following reasons:

1. Because it would obliterate the interval of temptation to law breaking between Oct. 15, ruffed grouse time, and Nov. 10, quail and rabbit time, and

2. Because—no one being permitted to hunt with dog and gun after snow falls—it would prevent the ruthless destruction of half-frozen birds, tracked to their hiding places through the snow.

On page 10 of the report the following statement is made: "It is apparent that the ruffed grouse is disappearing despite all attempts to protect it." Is it possible for me to advance a stronger argument than this in favor of postponing the season for killing ruffed grouse from Oct. 15 to Nov. 1?

Regarding the ring-necked pheasant, a foreign bird, I know nothing, and have nothing to say, but the native ruffed grouse, the finest game bird in this country, I should like to see so protected as to prevent its becoming an extinct species.

Page 8 of the report excludes summer woodcock shooting, which is perhaps an advantage, but it may be open to the criticism that there are sections of New Jersey where there is no woodcock shooting at all except summer shooting. In these sections there is nothing else to tempt the sportsman in July, the quail being on their nests; while on Oct. 15, the birds being hatched, he will be constantly required to call away his dogs from pointing covers of half-grown quail.

If there is much objection to the abolition of summer woodcock shooting and postponement of the fall woodcock season to Nov. 1, a fair compromise upon woodcock for the month of July, and from Oct. 15, would perhaps do little harm, as woodcock, being scarce and not so valuable as ruffed grouse, few people would go after woodcock alone on Oct. 15. Personally, I would rather see the shooting of woodcock allowed in July, and then again only from Nov. 1 to Dec. 10.

Page 9. Snipe, rail birds, reed birds and marsh hens between Aug. 25 and Jan. 1.

The largest territory for shooting rail and reed birds lies along the Delaware River. On one side, in Pennsylvania, the season does not begin until Sept. 1, when the birds are in better condition than on Aug. 26. There would be, I believe, little opposition from sportsmen to making the season uniform on both sides of the river, Sept. 1, which would gain six days to the cause of game protection.

On page 9 snipe shooting is mentioned. May 1 is, I think, too late to permit the shooting of English snipe. April 15 would be better, unless indeed you are able to prevent entirely the shooting of these birds in the spring, which would be best of all. The contradictory words "between" and "inclusive" appear in many places in the New Jersey game laws. I would suggest a change in the form of expression, so that the season may be described as extending from one day to another, both inclusive. This would prevent such misunderstandings as occurred on Aug. 25, 1898, when rail and reed bird shooting was allowed on that day, instead of on the following day, as provided by law.

On page 14 the duck shooting season is stated as "between" Sept. 30 and May 1, "both days inclusive." Would it not be better to say from Oct. 1 to April 30, or still better, to March 31, both dates inclusive? May 1 is surely too late in the spring to shoot egg-laden ducks. An enlightened public sentiment will sooner or later prevent all spring shooting. Let us hope that it may come before the game is extinct.

I have had thirty years' experience in game shooting in New Jersey, am tolerably familiar with the wishes of sportsmen and farmers, and feel confident that the above suggested changes would increase the game supply. I have no knowledge whatever of fishing and therefore do not venture to mention that portion of the report. I have returned the report to Mr. Moody with a copy of this letter.

Central New York Game.

ITHACA, N. Y.—Nov. 1 indicated the open season for quail in Tompkins county, the first open period upon these birds in this county for some years, and while they are by no means plenty, as your score shooter would define the term, there are quite a goodly number of bevies to be found. John Nolan and Geo. Lyon bagged twelve birds out of a bevy of thirty-six Nov. 1.

Ruffed grouse show up plenty, but the covers are difficult of access, and Madam Grouse has already acquired her winter's speed of pinions; hence individual scores are not large.

A good many wild ducks are on Cayuga Lake, and it only remains for some stiff north winds, iced with a bit of frigid weather, to afford a dash of exhilarating sport on the local marshes. M. CHILL.

Flight of Coots on Long Island.

INNER BEACH, Long Island, Nov. 7.—A great flight of coots has made lively work for gunners during the past week. On Saturday 183 birds were killed by the gunning parties who went out from East Rockaway and this vicinity. The birds were in prime condition.

PRIZES FOR AMATEUR PHOTOGRAPHS.

THE FOREST AND STREAM offers prizes for meritorious work with the camera, under conditions which follow:

The prizes will be divided into three series: (1) for live wild game; (2) for game in parks; (3) for other subjects relating to shooting and fishing.

(1) For live game photographs three prizes are offered, the first of $50, the second of $25, and the third of $10.

(2) For live game in parks, for the best picture, a prize of $10.

(3) For the best pictures relating to FOREST AND STREAM's field—shooting and fishing, the camp, campers and camp life, sportsman travel by land and water, incidents of field and stream—a first prize of $20, a second of $15, a third of $10, and for fourth place two prizes of $5 each.

There is no restriction as to the time nor as to where the pictures have been made or may be made.

Pictures will be received up to Dec. 31 this year.

All work must be original; that is to say, it must not have been submitted to any other competition or have been published.

There are no restrictions as to the make or style of camera, nor as to size of plate.

A competitor need not be a subscriber to the FOREST AND STREAM.

All work must be that of amateurs.

The photographs will be submitted to a committee, who, in making their award, will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities and other things being equal, the unique and difficult nature of the subject.

Photographs should be marked for identification with initials or a pseudonym only, and with each photograph should be given, answering to the initials, the name of sender, title of view, locality, date and names of camera, and plate or film.

Vermont Game.

Editor Forest and Stream:

Neglect in use has caused my FOREST AND STREAM pen to become very rusty. Generally old age makes a person garrulous, but in our case it seems to have made us indolent. It is the "height of our pleasure" to sit on our back in an armchair and read the newly-arrived FOREST AND STREAM. Once when we expressed a wish that it was double its present size, our darky, Tom, looked up from his work pulling burrs out of the setter's coat and exclaimed: "Dey couldn't do dat without dey done put it all advertisements."

"Why not, Tom?"

"Dey couldn't done get any more good things togedder in a week dan dey do now." Then he expressed a wish that the "Majah" would come up here and we would take him out with Bruce M., and he would shoot a lot of grouse for the "Majah" to take home, etc. We notice when we read the FOREST AND STREAM aloud that not only Tom, but all the members of the family, find my "den" a pleasant place to occupy.

So far some good bags of ruffed grouse have been made, and woodcock were early in the season plentiful, but with the first frosts of Sept. 11 and 13 they left us, southward bound. Since then we only get an occasional bird. In some localities gray squirrels are very abundant. Foxes also. One of our fox hunters has already killed six. And almost every school district in this part of the State can boast of its local deer, mostly does and fawns. So far about eighty bucks have been shot in the State since Oct. 1. Give us another ten years' close season and compel owners of hounds to keep their "horn' dogs" confined during the months of March, April and May. Deer would become very numerous in this State, and there is not a farmer in this section but would stand uncomplainingly all the damage the deer would do to their crops. It is only the greedy pot-hunter, whose only desire is to kill and destroy, that makes such claims, and as they have votes, they are unfortunately able to have their complaints heard in our legislative halls.

It is too early to say positively what our present Legislature will do in amending the defects in some of our game and fish laws. It is a great pity that we haven't got some legislator with backbone and sand enough to stand up and make a successful fight against seine and net fishing in the waters of our beautiful Lake Champlain. It should be made a severe penal offense to pollute its pure waters with such nefarious devices, and unless such a champion soon appears, policy and petty politics will prevent any radical change being made.

STANSTEAD.

SHELDON, Vt., Oct. 29.

No. We Expect More.

I HAVE been a regular reader of FOREST AND STREAM for some time, and have greatly enjoyed the articles entitled "Reminiscences of an Old Sportsman," by Shadow, who is the author of "Hitting vs. Missing." Lately I have missed his articles from your paper. I hope they have not been concluded.

S. R. LONGENECKER.

Sea and River Fishing.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

Black Bass Rearing and Stocking.

[From the Proceedings of the American Fisheries Society Meeting at Omaha.]

DR. MILLER, Omaha.—Mr. Ravenel, of the United States Fish Commission, has been very polite in making suggestions to me about a lake which I have of forty acres. I began without any scientific knowledge to put in breeders, and through the courtesy of Mr. May I put in some young trout and some old ones. I had hopes I could exclude all other fish, but to my utter astonishment the selections were not properly made, and I find I have all sorts of fish, peculiar and indigenous to the country. Mr. Ravenel told me that the rainbow would probably live in a temperature of 60, but for the reason that the water would become warm very soon after coming out of the artesian well, which is about 1,000ft. away, I didn't venture to risk it. What I have come here to find out is, whether I could risk putting the rainbow in that water that is fed by water of 60° temperature?

I would like to know if bass are cannibals. As I say, it is a purely selfish interest on my part, outside of a public one. I have raised bass from breeding to 1½lbs. and 1¾lbs., and I have had two or three thousand fish taken out of there by fishermen.

I want to know another thing, if some gentleman will give me the information, whether bass are in any danger from bullheads and carp? I also want to know whether I am in danger of overstocking this forty acres of water, which has neither inlet or outlet. I want to know what proportion I can expect to raise from breeding, and whether I am in danger of overstocking this place and making it an offensive place.

Mr. Peabody.—We have a number of gentlemen who can give you a great deal of information. You will find out a great deal of that information from books written by Dr. Henshall.

Very many people feel that they would like to know whether they can take a given water and stock it ad infinitum and make a success of it. I suppose it is a pretty well established fact that nature sets up a pretty correct natural balance between varieties of fish in all waters. Many of the States have beautiful lakes to which people resort for summer homes. Those lakes may have been naturally stocked with black bass, but the persistent fishing of a dozen or more anglers for four or five months in each year, with the spearing that goes on at other times, has in course of time depleted the waters of bass. The next thing that we as commissioners hear is an application from the denizens about some lake for a permit to net out the suckers, which they say have grown in numbers enormously, and they believe the suckers are killing the bass. This is not so. The bass is a fighter who will maintain himself against any other fish of even greater size. In no case should the attempt be made to destroy the sucker, which is prime food for the bass, or the carp, which is also fine food for the bass. If I had a private water, in which I wanted to raise bass, I would see to it that a certain number of carp were put in there as food for the better fish, and they wouldn't hurt at all if you can keep them in control.

Again, we hear some one say, I have a magnificent stream; I want 50,000 or 150,000 brook trout put in that stream at its source. That is the poorest place that could be selected. Plant them away from the source; put them in ponds made along the stream. You there give opportunity to the insects to deposit their eggs, which are fish food. In time you have natural food that will to a great extent support fish life. You may overstock a stream or lake, and if you do so, in time you will have a generation of runts. You must avoid that. If you do it your fish will be undersized, and that is the case with many clubs who have overstocked their waters in their anxiety to increase their stock.

Dr. Miller.—Would you leave the carp in the water?

Mr. Whitaker.—You cannot get them out after they are once in.

Mr. Miller.—Would you keep them reduced?

Mr. Whitaker.—Yes, and I would reduce them by putting in enough bass to keep them down.

Dr. Miller.—How about the bass eating one another?

Mr. Whitaker.—The bass is supposed to be one of the very few fish that takes care of its young. They select a place for nesting and lay their eggs, and guard them from their enemies.

Dr. Miller.—I think that Mr. Henshall states that after they leave their nests they eat each other.

Mr. Whitaker.—Large fish will eat small ones under all circumstances if they get a chance. The fishculturist learns that in his practical work. You have got to separate fish of different ages as well as you can, to prevent it, when held in ponds.

Mr. Stranahan.—The black bass won't prey on their kind if they have an abundance of other food. I believe it is of more importance to you, Dr. Miller, with your area of water, to see to crossing your fish with new stock than it is to look after the carp. I have had some experience with much larger ponds than yours, where the stock has become diminutive through inbreeding. I should say it would be the best thing to introduce every year a new stock of bass; if you don't you will get a diminutive race.

Mr. Peabody.—There is a club in Indiana that has taken up the subject of producing bass artificially. They have two artificial ponds in which they keep their bass, and another in which they carry on the hatching. In the small one they keep the bass until they get large enough to be active; then the club takes all the larger ones and puts them out. They have a drain in the center of this pond by which they can draw the water all off. They can go into it and take out all the fish. They have met with such success that they have their larger ponds amply stocked. They do this in an artificial way.

Dr. Miller.—I wish to state for the information of the gentlemen that Mr. May, the honorable president of your convention, is the gentleman who started me in my enterprise, with this result, that this year out of my lake there have been caught, I suppose, two or three thousand bass by hook and line. This spring I put in twenty breeders and I don't know how many young bass there are, but the lake seems to be alive with bass.

Mr. O'Brien then read the following paper:

Large-Mouthed Black Bass—Methods of Hatching and Rearing.

A great deal has been said and written, at former meetings of this Society, on bass culture, by persons of much greater ability than myself, therefore do not expect an elaborate essay from me. But as we departed somewhat from the usual method of handling our bass spawners at the Nebraska hatcheries the past season, possibly my experiments and the results obtained will prove of interest to those engaged in this branch of fishculture.

Our main spawning pond has a surface area of about one acre, and with the exception of the kettle, or drainage point, averages about 2ft. in depth; bottom being both mud and sand.

Previous to the spring of 1896 it had been the custom to place the spawners in the pond as soon as the ice melted off, together with a large number of chubs and shiners to serve as food, and pay no more attention to them until the pond was drawn off in the fall to remove whatever young bass there might be. This haphazard manner of propagation, of course, resulted in rather indifferent success.

In the spring of 1896 I used gravel spawning beds with brush shelter, and removed a large number of the fry to another pond when about a month old, and fed ground crayfish with considerable success.

The spawning season for bass in our ponds extends usually over a period of about six weeks, and I noticed when we transferred the fry there was a great difference in the size of some as compared with others, and after the fry was moved I noticed that, although I fed an abundance of ground crayfish, and there was considerable insect life in the pond, the larger fry preyed on the smaller ones continually, diminishing the number to a considerable extent.

In the spring of 1897 I decided to change the method of handling the spawners entirely; instead of transferring them from the winter pond to the spawning pond when the ice melted off, we placed the spawners in a pond that had previously been used for trout, where temperature was about 55°.

We then drew off the water in the spawning pond about May 1 and allowed it to remain dry for ten days. We then placed eight wagon loads of mixed fine and coarse gravel on the bottom of shallow portions of the pond, in spots or beds about 8ft. square and about 2in. deep. We also put in twelve spawning boxes made of wood 3ft. square, with sides 3in. high and filled with

gravel. The pond was then filled with water and willow brush laid in V-shape, the butt ends of the brush being crossed at the pointed end of the V, being placed around each spawning bed, forming a perfect inclosure.

Willow brush with the butt ends sharpened and stuck in the bottom of the pond was also placed around the spawning boxes to afford seclusion for the spawners.

May 29 the spawners, forty-two in all, about an equal number of males and females, were transferred to the spawning pond; the temperature in the pond being about 66°, a change of 11° from the pond from which they were transferred; the spawners were put in near the inflow pipe, and the change of temperature did not seem to affect them in the least, but, as I had expected, it caused the ova to ripen rapidly, and within twenty-four hours they began to pair and spawn, and in nine days from the time they were placed in the pond the last pair had spawned; out of the whole number only two pair used the spawning boxes, and one pair spawned in open water on fine sand.

The eggs hatched out in eight days, and when the fry were about a month old I transferred what I estimated at 20,000 to an adjoining pond, collecting them with a ⅛in. mesh common sense minnow net, the most of them being taken about sundown around the inflow pipe.

In the same pond with the fry I placed a large number of eyed carp eggs laid on moss, the carp when hatched to serve as food for the young bass. This experiment proved a failure, for within a month the carp had grown so rapidly that they were as large as the bass and were destroying all insect life and making the water very muddy.

Wooden boxes 2ft. square, with slat sides ½in. apart, and supported by stakes driven in the bottom of the pond, were then placed at different points in the pond, and ground crayfish placed in these fed for the balance of the season; but the carp kept the water so roily that the bass did not seem to thrive, and when the pond was drawn off in September less than 15 per cent. of the number placed in the pond were found.

The original spawning pond was well stocked with chubs and shiners, which spawned about the same time as the bass. About Aug. 1 I partitioned off about one-third of this pond near the inflow pipe with 1in. mesh galvanized wire fencing, supported by stakes driven in the bottom of the pond and extending 10in. above the surface of the water; this fence being put in to allow the young bass to feed on the minnow fry undisturbed by the parent bass. The bass in this pond thrived beyond my expectations, and when the water was drawn off in October I removed over 33,000 young bass of an almost uniform length of 3in., not to exceed thirty oversized fish being found among the whole number.

The uniformity in size I attributed entirely to the fact that the fry were all hatched at practically the same time, and I believe that if bass spawners were held in water of a low temperature until about June 1 and then placed in spawning ponds where the water is several degrees warmer, so as to ripen the ova rapidly and thereby shorten the spawning period, that much of the loss and annoyance caused by oversized fry would be avoided.

Although the experiment in feeding the carp fry to the young bass in the pond proved a failure, yet I am convinced it would be possible to keep carp spawners in water of a low temperature to prevent them from spawning until late in the season, allowing a few pair to spawn at intervals as needed; this, I believe, would prove a cheap and easy method of feeding bass fry in troughs or small ponds where the number of carp fed could be completely controlled by the attendants.

Mr. Stranahan.—With reference to this matter, I will say that experiments have been made in France, also in this country by the United States Fish Commission in Washington, to retard the growth of carp. It has been found very successful. Mr. Ravenel told me that the results were very gratifying by withdrawing the food.

Mr. Clark.—From Mr. O'Brien's paper I see that he is an advocate of the partial rearing of fish, and that brings us back to the old question that Mr. Whitaker, Mr. Mather and myself fought over so many years ago; the question of yearlings. I think, if I am not mistaken, they dubbed me the Father of the Yearling. I will say I don't want to bring that question up now, but I am still an advocate of it, but not for bass. If the gentlemen that have been raising bass will take the pains to examine them minutely with the microscope they will find that a young bass one week old is as mature a fish as at five years old. For that reason I am an advocate of planting the fry of the bass. I think when it is thoroughly investigated it will be found better to plant the young bass. I want to put myself on record as an advocate of planting bass fry. If you plant them broadcast in lakes and rivers they can spread out more. It is a more difficult thing to find artificial food for young bass than for other fish.

Mr. Oberfelder.—As far as the United States Commission is concerned, I presume it is all right to deliver fry, but when the people who pay for this work are sent the fry they don't think they are getting any fish. The Nebraska Fish Commission are trying to deliver pike six months old; I think the people throughout the State would be better satisfied with the delivery of such fish to them than the fry. They might not from the standpoint of the United States Commission. I know the Commissioner of Wyoming told me that they sent trout last year in cans, saying "There is 5,000 trout in a can," but those who received them said it was the same old fish story; we counted them and found there were but 850. After this they say we want more yearlings and no more fry.

Mr. Whitaker.—I don't suppose there is any way by which you can guard against misrepresentation as to the number of fish that are put in cans. I think it is poor policy on the part of a board, and I think they will find that misrepresentations of that kind must ultimately come back to them injuriously. It is not policy, if you want to put it on the ground of policy. It is not honesty, if you want to put it on the ground of honesty.

So far as not getting results from the distribution of the fry is concerned that may be as stated in the State of which the gentleman speaks, but it is not so in Michigan. The great and successful work of stocking there has come solely from plants of fry. There is this to be said, in my opinion, that notwithstanding the fact that the planting of fingerling and yearling fish has been advocated in this country by some for ten or fifteen years, the planting of fingerling fish has not made perceptible headway anywhere and the large work of distribution is still being done with fry.

Mr. Clark.—And always will be.

Mr. O'Brien.—I don't wish to be understood as advocating the planting of fingerling or yearling fish. I just mentioned the fact that we are rearing our bass to an age of six months. It is not done because we thought we could transport them with greater safety at the age of six months. That is the reason I should put out the bass in the fall. We have hot weather in June and July, and we are not as well fixed to carry fish as the United States Fish Commission.

Mr. Clark.—I don't wish to prolong this discussion, but I want the members of this society to understand the point. I don't care to bring in the yearling question, but the point is that the black bass is a fish that should not be held and reared, because it is not necessary; because at the end of a week or two weeks they are just as mature as they ever will be, just as well able to take care of themselves as they will be in a year.

Mr. Peabody.—I understand you are in favor of fingerlings and yearlings as to trout.

Mr. Clark.—I will say I stand just where I did ten or fifteen years ago. In answer to what Mr. Whitaker said, and he perhaps didn't wish to be understood just exactly as it sounded, that the yearling theory has not progressed, I wish to say that arises from the fact we cannot raise enough. We can only keep two or three hundred thousand at any station. There is no station in the country large enough to raise a million yearlings. The point is to raise what you can, and as to the balance distribute fry.

Mr. Nevin.—Do you mean that in relation to lake trout?

Mr. Clark.—Yes, I do.

Mr. Peabody.—I am glad to hear you say that. Last winter I talked with the New York people, and they are strongly in favor of fingerlings.

Mr. Whitaker.—There is no probability, so far as the results are concerned, if you will watch them for the next ten years, that you will find any great increase in their output of fingerling trout. It is impossible, with the multitude of streams we have, taking the great comparative cost of planting fingerlings, to stock the streams of this country with fingerlings.

Nets In Oneida Lake.

SYRACUSE, N. Y., Nov. 4.—*Editor Forest and Stream:* The New York Fish Commissioners having granted licenses for netting in Oneida Lake, it is reported that the fishing has become general. Here is what is going on at Oneida, as told by the Herald this week:

"It is stated upon unquestionable authority that many persons are unconsciously violating the fish laws through the resumption of the use of nets in taking fish from the waters of Oneida Lake. About two weeks ago press dispatches sent out from Albany stated in substance that the State Fisheries, Game and Forest Commission had adopted a resolution permitting net fishing in Oneida Lake, and the general understanding of the announcement seems to have been that the resolution passed was in itself a license for all who desired to engage in fishing with nets without restriction for a time.

"This understanding of the situation is declared to be erroneous, according to those who profess to be well versed in the fish laws, it being meant by the resolution that those desiring to fish with nets could again obtain license by applying to the commission, a specific license being required for each individual fisherman. Hundreds of fishermen are reported to have begun the use of nets without having obtained the required license, and it is said that they stoutly maintain that the resolution recently passed obviates the license required by the fish laws. It is as strongly urged on the other hand that the fishermen are making themselves liable to prosecution through their ignorance of the meaning of the resolution, in the publication of which there appears to have been omissions in the press dispatches."

They have nets on the bass grounds at lower South Bay to my own knowledge; and allowing them the right to use 14ft. trap nets, is an outrage to the angler. The fishing has been ruined by netting. What will be left for hook fishing another season will be very little. The netting period will run to Dec. 31.

The opening of the lake to netters is the undoing of all that has been done there this year; and will be just so many more nets to get and so many more bounties to be paid out. It is no question but it is done to get votes.

ONONDAGA.

At a meeting held last week, the Anglers' Association of Onondaga adopted resolutions on the subject as follows:

"Whereas, the people of the State of New York spend annually thousands of dollars for the propagation and protection of fish in the inland waters of the State; and,

"Whereas, the Commissioners of Fish, Game and Forests has granted licenses to fish with nets in Oneida Lake, thereby depriving the public of one of the best fishing grounds of the State; therefore, be it

"Resolved, that the Anglers 'Association of Onondaga emphatically protests against this action of the commissioners, and earnestly requests them to revoke all licenses at once."

The text of the resolution adopted by the New York League, as noted in our last issue, reads:

"We, the executive committee of the State Fish and Game Protective League, assembled at a regular meeting, do hereby express an unqualified disapproval of the act of the honorable Commissioners of Fisheries, Game and Forests in granting licenses for the netting of fish in Oneida Lake or other inland waters of the State; and we hereby petition and request the immediate cancellation and withdrawal of such licenses; that we instruct our secretary to forward a copy hereof to each of the said commissioners."

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

The Story of a Leader and Three Flies.

"COME in a minute. I've got something I want to show you—something you will appreciate."

"Oh, yes! I know you always have something fine and tempting, but you won't catch me this time, for I won't buy a thing. I have more tackle now than I can ever use, and I am not going to invest in any more—you will only waste your time showing it to me."

"Oh! that's all right! I won't ask you to buy, but I want you to see some of the finest flies and leaders and lines that ever happened."

And so I followed my friend into the store and temptation, and of course fell a victim to the snare. I have often thought that if fine fishing tackle is half as attractive to the fish as it is to an enthusiastic angler it is not surprising that they need protective laws. The flies that lure them to the surface have first dangled before the eyes of the sportsman, and landed him; but the experience don't kill him, nor even cure him, and he is sure to rise again if the bait is good enough. What a good thing he is for the manufacturers and dealers, and what a pity 'tis that the fish is denied the privilege of being caught again and again! The baits I saw in the store that morning were the product of a famous maker and bore a name which bespoke their quality. They were simply beautiful, and I came away with a cluster of flies and half a dozen leaders in spite of my declaration that nothing would catch me. But those leaders! Who could resist them? The gut was round and perfect, the knots tied to perfection, the loops perfectly spaced, and they were dyed a peculiar greenish bronze that made them look like some aquatic thread that must appear natural in the water.

"I'll guarantee these leaders to be the best you ever had, and if you break one of them in any legitimate way, so that you say the leader is at fault, you shall have two in its place." and I felt that the statement was a safe one for him to make.

Not long after this a party of kindred spirits met at the house of the Mastigouche Club. Not a chance meeting by any means, for the agreement to be there was one of long standing, and the event was one to which all had looked forward with anticipation of a genuine good time, and an outing in the most attractive part of Canada's domain. About a hundred miles from Montreal, on the shore of a beautiful lake, stands the big club house. Numberless other lakes are tributary to the little river which flows through this valley in the Laurentian hills, filling to the utmost the ideal of one who loves forest and stream, is fond of canoeing and tramping, and enjoys out-of-door life and the delights of enticing Salmo fontinalis to join in the game. At least twenty of these lakes are within two hours by canoe and trail from the club house, so that no one need go into camp unless he desires to visit the distant parts of the tract. The afternoon of our arrival was devoted to visiting among ourselves, and with the guides—those sturdy examples of French-Canadian habitant—unpacking of luggage, etc., preparatory to commencing business next day. My guide was one I had known before, and never want a better, a thorough woodsman, strong, tireless, devoted to his patron, and the best man in a bark canoe that I have ever seen, and withal a good cook. Next morning everything was ready for a start long before we finished a good breakfast, and we were soon afloat.

"Well, George, where shall we go to-day?"

"If no want to go veree far, Ah t'ink Lac au Cap bes' place for fly-feesh, prob'ly. Ah see some trouts jompeeng dere yes'day, me."

Crossing Lac Seymour, and paddling up the river about a mile, a short carry, then through Lac Crescent, another portage of about half a mile brought us to our fishing water for the day. It was in August, a perfect summer day, with the water like a mirror, except for now and then a bit of ripple, but too warm and too still to hope for great sport in the way of fly-fishing. So I was not looking for anything unusual either in the size or number of the day's catch.

"What do you think of it, George, shall we have any luck here to-day?"

"Sometam can't tell notting 'bout feesh; one day jomp, jomp, all tam, all round; an'udder day no jomp tall. Ah'll see two, t'ree now ove' dere, me. We get some sure, prob'ly, p'r'aps note so manee; wataire ver' warm an' feesh no raise ver' mooch."

The rod was jointed, and with one of those brand new leaders, decorated with a Reuben Wood, Montreal and a "Cheeney Belle" for a stretcher, the game was opened. If I had tested that leader as I almost invariably do, this story would have had no beginning or ending, but having unlimited confidence in its maker, this precaution was neglected. A few minutes of casting yielded a few small fish, and then a good one rose a few rods ahead of the canoe, and in a few moments the flies were over him. He came up like a rocket, landed on that R. W. with a rush, and I struck for keeps, expecting to set the hook for a good tussle, but alas! for that big expectation. The next instant the line and about 2ft. of leader came back, a clean break at the upper loop, and away went Mr. Goodone with the remainder of the leader and three flies.

"Bah gosh! dat too bad! good feesh too! He got hook in hees mouth an run all roun' with leader an two fly. T'ink he got all fly he want for one tam."

With no little disgust another new leader was well tested and bent on, and with a fresh display of feathers we went on. The sport was fairly good, and we were just about to quit for luncheon, when suddenly the canoe was brought about with a whirl and a shout of laughter, and paddling as if in a race away we went up the lake toward our starting point. As soon as we swung around I saw at quite a distance a good sized trout flopping on the surface, and there we were going as fast as George could drive us.

"Ah been look' for heem all tam since he run way wiz dem fly. Dat feesh ver' good kine. He catch heemself an' now come up top and ask for net, an'— Look at dat! He been fly-feesh too, an' have good luck; catch two more. Ver' smart trouts in dis lac."

And so it proved, for on netting the big fellow, which

weighed a trifle over a pound and a half, we found that in running about with the trailing flies he had caught and killed two others of about a half-pound each. The struggle had been too much for him, and though I tried to bring him around and give him his liberty, which I felt he had richly earned, he was too far gone, and was dead nearly as soon as netted.

I retied the leader to its short end and used it for the rest of the day, and then put it away among the relics which serve to recall many an hour of pleasure and many an incident of the kind that so often get tangled up in the experience of the angler, but none of them brings to memory anything so remarkable as this. It is to be hoped, however, that it will meet a better reception than a few days ago, when I related it to a friend and substantiated my tale by exhibiting the leader with my clumsily tied knot of repair. He listened patiently to the end and then remarked with some emphasis: "Oh, get out!" B.

American Fisheries Society.

We have received the "Proceedings of the American Fisheries Society" at the twenty-seventh annual meeting at Omaha. The papers read and discussed at the meeting and here printed are: "Artificial Propagation versus a Close Season for the Great Lakes" by James Nevin. "Notes in Connection with the United States Fish Hatcheries in Michigan," by F. N. Clark. "The Protection of Fish and a Closed Season," by F. B. Dickinson. "Natural versus Assisted Reproduction of Certain Kinds of Fishes," by Seymour Bower. "The Origin of the American Fisheries Society," by Livingston Stone. "The Identification of Adult Fish that have been Artificially Hatched," by Dr. H. C. Bumpus. "Large-Mouthed Black Bass Hatching and Rearing," by W. J. O'Brien. "The Microscope as Practically Applied to Fishculture," by J. J. Stranahan. "The Fishculturist," by J. E. Gunkel. "The Relation between the Areas of Inland Lakes and the Temperature of the Water," by E. A. Birge. "Observations concerning the Artificial Culture of the Grayling," by Dr. J. A. Henshall. "Protection of the Food Fish Supply on the Pacific Coast and in Alaska," by Dr. B. W. James. "State Organizations for the Promotion of Fishculture and Protection of Food and Game Fishes," by J. W. Titcomb. "Aquacultural Experiment Stations and their Work," by Dr. Henry B. Ward. The Society invites membership of all persons interested in its work. The membership fee is $1 a year. The secretary is Mr. J. E. Gunkel, Toledo, O. The next meeting will be held at Niagara Falls, June 28 and 29, 1899.

A Salmon's Last Jump.

San Diego, Cal., Oct. 24.—*Editor Forest and Stream:* A rather curious incident occurred while fishing for landlocked salmon trout three miles distant from Port Angeles, on the Puget Sound, western Washington, with my friend Mr. Charles Dyer, who was at that time receiver for the bank in that town, and who can vouch for my story. My friend and myself are ardent lovers of Walton, and have passed many happy hours in the trout streams of western Washington. We determined to try our luck at the salmon trout, which were very shy, but would rise occasionally to the fly, providing one could send a good long line after them. I had caught about ten, average weight about 1lb. My friend Charley not having good luck, both of us determined to "jack it up." When we were taking our casting lines off, a salmon jumped about a yard and a half out of the water and landed in our boat at Mr. Dyer's feet; the fish was 2lbs. weight and in good condition.

New England Beagle Club's Field Trials.

The New England Beagle Club held its sixth annual field trials at Oxford, Mass., Oct. 31-Nov. 4. The club made its headquarters at Bacon's Hotel, where everybody was well cared for and made comfortable. The judges were Geo. B. Appleby and Harry B. Tallman, and their decisions apparently gave satisfaction. Game was scarce, and most of the rabbits went to earth as soon as possible. Had there been more long, hard runs the result of the trials might not have been different but would surely have been more satisfactory to those whose beagles had but little opportunity to show themselves on game. To remedy this defect, if possible, the club will next year run a pack stake for an entire day. The pack will be made up of hounds entered in the regular classes, and each owner will be allowed to enter but one beagle. The rules to govern the judging and running of this novelty in field trial work are left in the hands of the field trial committee. Some are of the opinion that the running of this stake will revolutionize the method of running beagle trials, while others are quite as confident that it will be impossible to get satisfactory results by running all the entries in a class at once. The outcome will be watched with interest. Owing to the generosity of Jas. L. Kernochan, in adding $50 to the entry fees in this new event, it will be known as the Hempstead Beagles' Stake.

Wm. Saxby made an uncommonly fine record at these trials, and had the satisfaction of carrying home two beagles who can henceforth claim the title of field trial champion. His wins were popular ones, and he received the heartiest congratulations.

Among those present at the trials were Geo. F. Reed, Barton, Vt.; G. H. Clark, Lowell, Mass.; Howard Almy, F. W. Cielfeld, Providence, R. I.; L. F. Akers, Melrose, Mass.; Philip A. Hutchins, West Medford, Mass.; Wm. Saxby, Ilion, N. Y.; A. D. Fiske, Worcester, Mass.; W. H. O'Connor, Springfield, Mass.; Jas. L. Kernochan, Hempstead, N. Y.; A. J. Purinton, Waterbury, Conn.; Bradford S. Turpin, Roxbury, Mass.

The beginning of the trials was postponed from Monday to Tuesday, as a number of the beagles entered here had not arrived from the national trials at Hillsdale, N. J. When the hounds were measured in the afternoon Hunter was thrown out for being over size. All the other entries filled except Splitter, Somerset, Starlight and Belle of Barton.

Tuesday.

It was a beautiful day. Scent, however, was bad at times, and rabbits were hard to find.

Class A, All-Age, 15in. and Under.—This stake was open to all beagles 15in. and under in height which had not been placed first at any recognized field trial. The fee to run was $8, and the first prize was 40 per cent., second 30 per cent., and third 20 per cent. of the entry fees.

The drawing for the first series resulted in running Thos. Shallcross' w., b. and t. bitch Helen Briggs, by Rustic—Daisy, with Hempstead Beagles' w., b. and t. bitch Rusty, by Lasell's Ringwood—Lasell's Royal; Howard Almy's w., b. and t. dog Buckellew, by Lewis—Skip II., with Thos. Shallcross' b., w. and t. dog Baronet, by Dauntless—Reckless; A. J. Purinton's b., w. and t. dog Millard R., by Millard—Haida R., with Wm. Saxby's b., w. and t. bitch Dime's Della, by Clyde—Saxby's Pleton's w., b. and t. bitch Dahlia, by Pulboro Crafty—Time; A. D. Fiske's w., b. and t. dog Sportsman, by Clyde—Lady Novice, with Howard Almy's w., b. and t. bitch Miss Quynn, by Diamond—Nancy Lee; J. W. Appleton's Bounby, with Howard Almy's w., b. and t. dog Lewis, by Bannerman—Parthenia; Hempstead Beagles' w., b. and t. dog Bellman, by Florist—Bashful, with H. S. Joslin's w., b. and t. dog Trick, by Clyde—Lady Novice.

Helen Briggs—Rusty.—G. A. Clark and Geo. F. Reed handled this brace. They were cast off at 8:30 on the McCabe farm. Two rabbits were started, and both were lost almost immediately. Rusty pottered and Helen tongued on the track and off it. The work of both hounds was unsatisfactory. Ordered up at 9:14.

Buckellew—Baronet.—The latter in hunting covered his ground well, but Buck was too fond of his master to work out as he ought. A rabbit was found by Baronet, but bunny went to earth before the hounds were fairly started on his trail. Down at 9:44 and up at 10:35. Buckellew was hunted by Howard Almy, and Baronet by G. A. Clark.

Millard R.—Dime's Della.—They were handled by Geo. F. Reed and Wm. Saxby, and did the first really good work of the trials. Millard proved his starting abilities by putting up two rabbits, but in driving he was not as fast as Della, who picked up the losses quickly and worked beautifully throughout the race. Down at 10:35 and ordered up at 11:31.

Sportsman—Miss Quynn.—This couple was in charge of A. D. Fiske and Howard Almy. They were unable to find a rabbit in a half-hour's hunt, and at 12:10 they were taken up, while the party discussed one of landlord Bacon's picnic lunches. After lunch two rabbits were started. The runs were comparatively short, and Sportsman appeared to be faster and to have a better nose than Miss Quynn. Up at 1:33.

Dahlia—Lewis.—The brace was ordered down at 1:40 in charge of Geo. F. Reed and Howard Almy. Two rabbits were found, but the drives were so short that they were but little test of the ability of the hounds. Lewis did not get out to his work, and Dahlia was under no control, and was frequently lost. Up at 2:23.

Bellman.—This youngster was hunted by Geo. F. Reed. Trick ran with him, but only for exhibition, as his win at the national trials last week had placed him in the champion class. They had a short run in a very wet swamp, where neither hound could do good work. Up at 2:53, after a twenty minutes' run.

Second Series.

Dime's Della—Sportsman.—They were ordered down at 3:06. In a short run to a burrow neither gained any advantage. Up at 3:20.

Millard R.—Helen Briggs.—This brace was cast off at 3:37. Millard worked in the eager way characteristic of him, and had the advantage in two drives. Taken up at 4:26.

Baronet—Bellman.—This couple was ordered down at 4:35. It was rapidly growing dark when they started a rabbit in a large, thick swamp. The chase was a long, hard drive, and gave the party the first real music of the trials. Judging by the tonguing, which is always a dangerous thing to do, Bellman was far in the lead in the last half of the race. The run, however, counted for nothing, as but little of it could be seen. Up at 5.

Wednesday.

It was a clear, beautiful day, with a high wind, which marred somewhat the pleasure of the hunt. Rabbits continued to be scarce, and scent was not good.

Sportsman—Lewis.—A. H. Morse had the former in charge, and Howard Almy, Lewis. They were put down at 8:40, and Sportsman trailed to a start. The run was a short run, and Sportsman appeared to have the best of it, showing an excellent nose and pretty casting. Just after they were ordered up at 9:10, Lewis jumped another rabbit, and drove him well till he was caught off the trail.

Baronet—Bellman.—They were ordered down at 9:14 where Lewis was taken off his rabbit. Neither caught the trail, but Baronet was strongly suspected of running heel. Taken up at 9:20.

Bellman—Helen Briggs.—They were put down at 9:28, and taken up at 9:40, without making a start.

First prize was awarded to Dime's Della, second to Millard R., third to Helen Briggs, and reserve to Bellman.

Class B, All-Age, 13in. and Under.—This stake was open to all beagles 13in. and under in height, that had not been placed first at any recognized field trial. The fee to start was $8, and first prize was 40 per cent., second 30 per cent., and third 20 per cent. of the entry fees.

The first series resulted in running Hempstead Beagles' b., w. and t. bitch Fearless, by Tyrant—Frantic, with Howard Almy's w., b. and t. dog George F., by Harker—Nell R.; Wm. Saxby's b., w. and t. bitch Saxby's Bessie, by Judge—Baby, with H. S. Joslin's w., b. and t. bitch Cora J.; Geo. F. Reed's w., b. and t. bitch Snifter R. D., by Wanderer—Triumph, drew the bye.

Fearless—George F.—George F. Reed and Howard Almy handled this pretty pair. They were put down at 10:20, and at lunch time not a sign of a rabbit had been found. After lunch, however, fortune changed and a cottontail was discovered in his form. George F. had a slight advantage at first, but he soon lost it to Fearless, who cast well and ran true to the trail. Up at 1:25.

Saxby's Bessie—Cora J.—The former was in care of Wm. Saxby and the latter of H. S. Joslin. Cora was freightened and refused to hunt. She was withdrawn by her owner, and the brace was ordered up at 1:35.

Saxby's Bessie—Snifter R. D.—This couple was hunted by Wm. Saxby and Geo. F. Reed. Bessie was under no control, but in two races she showed greater speed and full as good nose as Snifter. Down at 1:37 and up at 2:34.

Second Series.

Fearless—Snifter R. D.—This brace was ordered down at 2:54, and ran one of the longest and fastest races of the day, finally driving the rabbit to earth. Unfortunately much of the work was done in a thick swamp, where the hounds could not be seen. Up at 3:30.

Saxby's Bessie—Fearless.—They were cast off at 3:38 and Bessie quickly disappeared. She was under no control, and Mr. Saxby could neither find her nor call her in. At dark the couple was ordered up and the day's work came to an end.

Annual Meeting.

President Joslin presided over the annual meeting in the evening. Geo. B. Post, Bernardsville, N. J.; J. W. Appleton, New York, N. Y.; N. A. Baldwin, East Orange, N. J.; G. Mifflin Wharton, Islip, N. Y.; L. F. Akers, Melrose, Mass.; Philip A. Hutchins, West Medford, Mass., were elected to membership. The election of officers resulted as follows: H. S. Joslin, President; A. J. Purinton, J. L. Kernochan, Vice-Presidents; A. D. Fiske, Secretary-Treasurer; Thos. Shallcross, C. J. Prouty, Executive Committee. It was voted to abandon the Futurity Stake in future trials. H. S. Joslin, Geo. F. Reed and Bradford S. Turpin were appointed a committee to revise the running rules. The Hempstead Beagles' Stake, which is spoken of above, was discussed, and it was finally voted to leave all arrangements in the hands of the field trial committee. An oil painting for the most typical beagle at the trials was offered by H. B. Tallman, and the meeting adjourned.

Thursday.

Another beautiful day greeted the early risers. Scent lay well, and the best sport of the week was enjoyed on the Shepardson farm, which has been the scene of so many good races in former years.

The first event on the day's programme was the bench show. H. W. Lacy judged the beagles at the kennels and gave first prize to Hempstead Beagles' Fearless, with A. J. Purinton's Millard R. reserve. Fearless won Mr. Tallman's special.

Saxby's Bessie—Fearless.—They were ordered down at 9:06. Bessie surprised everybody by hunting close to her handler, and behaving throughout the whole heat in a most exemplary manner. They had a long run in the alder thicket back of the Shepardson barn, and Bessie's work was considered the best. Up at 10:22.

First prize was awarded to Saxby's Bessie, second to Fearless, third to Snifter R. D., and reserve to George F.

Class C—The Derby, 15in. and Under.—This stake was open to all beagles, 15in. and under in height, whelped on or after Jan. 1, '97. The fee to start was $8, and the first prize was 40 per cent., second 30 per cent., and third 20 per cent. of the entry fees.

The driving resulted in running G. A. Clark's w., b. and t. dog Murry, by Bumper—Summers' Fly, with Hempstead Beagles' w., b. and t. dog Bellman, by Florist—Bashful; A. J. Purinton's w., b. and t. dog Dykeman, drew the bye.

Murry—Bellman.—This couple was put down at 10:48. The former beagle was hunted by G. A. Clark, and the latter by Geo. F. Reed. Murry did not work in his true form, and Bellman won with considerable to spare. He picked up the losses quickly, and ran at great speed and with fine judgment. Up at 11:40.

Dykeman.—Bellman was put down to run with Dykeman, who was handled by A. J. Purinton. Dyke was inexperienced, and Bellman defeated him without much trouble, but nevertheless the youngster is a promising hound, and will do better the next time he runs. Up at 1:35.

Second Series.

Murry—Dykeman.—The former started a rabbit, and the brace ran a long race in cover. Murry had the best of it. Up at 2:10, after a twenty-five minute heat.

First prize was given to Bellman, second to Murry and third to Dykeman.

Class D—The Derby, 13in. and Under.—This stake was run under the same conditions as Class C, except that it was open only to beagles 13in. and under in

height. The draw resulted in running Wm. Saxbys' b., w. and t. bitch Balance, by Bumper—Bessie, with Geo. F. Reed's w., b. and t. bitch Fancy, by Harker—Nell R.; Howard Almy's w., b. and t. dog George F., by Harker—Nell R., drew the bye.

Balance—Fancy.—This stylish pair was put down at 2:20, in care of Wm. Saxby and Geo. F. Reed They ran a long race in thick cover, and Fancy appeared to have the best of the race. She was a bit quicker on the turn than Balance. Up at 3:28.

George F.—Balance was run with him. They took part in a long drive, and the judges could see but little difference in their merits.

First prize went to Fancy, and second and third money was equally divided between Balance and George F.

Friday.

This was another excellent hunting day. The Championship Stakes were run, and the trials brought to an end.

Champion Class, 15in. and Under.—This stake was open to all beagles, 15in. and under in height, that have won a first prize in an open class at a field trial. The fee to start was $10, and the first prize was 80 per cent. of the entry fees and the title of field champion.

The only entries were Wm. Saxby's w., b. and t. bitch Dime's Della, by Clyde—Dime, and Wm. Saxby's w., b. and t. bitch Saxby's Bessie, by Judge—Baby.

Dime's Della—Saxby's Bessie.—The brace was handled by Wm. Saxby and was cast off at 10 in a brush field. Rabbits were scarce, but Della finally found one and in a fast and pretty run defeated Bessie. Up at 11:05.

First prize and title of field champion was awarded to Dime's Della.

Champion Class, 13in. and Under.

Saxby's Bessie.—This well-known beagle was the only entry, and she walked over for the title of field champion.

The judges then awarded the following special prizes. Best in trials, best combination of speed and nose, Dime's Della. Best at hole, best trailer, best starter, greatest sustained speed, Bellman. Best 13in. all-age entry, Saxby's Bessie. Best voice, Millard R. Best Derby entry bred by owner, best style, Reed's Fancy.

Field Trials in the North.

THERE are many reasons why field trials on quail could not successfully be held in the Northwestern States. First of all, it is almost impossible to secure proper grounds, and by this we mean grounds which are near enough to hotel accommodations, large enough in area and suitably divided into cover and open so that the dogs could properly be under the eyes of the judges. Last, but not least, the grounds must be sufficiently stocked with birds. This has been found almost impossible of attainment in the Northern States from a field trial point of view. Hard winters and poaching are against it. Every club which has attempted trials in the Northern States has either been forced to abandon them entirely or to move its trials to the South.

Besides the field trial grounds proper, wherever a trial is held, there must be territory more or less near suitably stocked with birds and of a suitable character for training purposes, otherwise the trainers could not prepare their dogs. As all the trainers are in the South at such times as the season is right for trials in the North, and as they are then preparing for the fall and winter trials held in their section, they would not as a business proposition consider a Northern trial.

The early trials were far from being so exacting in their requirements as are the modern trials, for the simple reason that they were then in a more or less rudimentary stage, and utilized what was most conveniently at hand. Standards of merit, of judging, and of all the circumstances appertaining to a competition have so changed that what was possible twenty years ago in the way of field trials might be impossible now. The trainers, many of whom lived and trained in the North, have either moved to the South permanently or spend the training season there, returning to their Northern homes only when the season closes. There are many minor reasons bearing on the subject, but the foregoing are the most important. LIVER AND WHITE.

Connecticut Field Trials.

NEW HAVEN, Nov. 2.—*Editor Forest and Stream:* The entries for the Connecticut Field Trials All-Age Stake are as follows:

J. B. Robertson's (New Haven) b. and w. setter Pet.

Bassett & Reeves' (New Haven) b., w. and t. setter Rowdy Roy (A.K.C.S.B. 24,226).

Lester Jones' (New Haven) b. b. setter Shot.

F. G. Goodridge's (Abington) o. and w. English setter Pearl D., b. b. English setters Tilda and Pauline Rainford.

H. T. Morsely's (Chaplin) b. and w. English setter Bob M.

Warwick Kennels' (Bridgeport) English setters Albert's Daisy Queen and Albert's Woodcock.

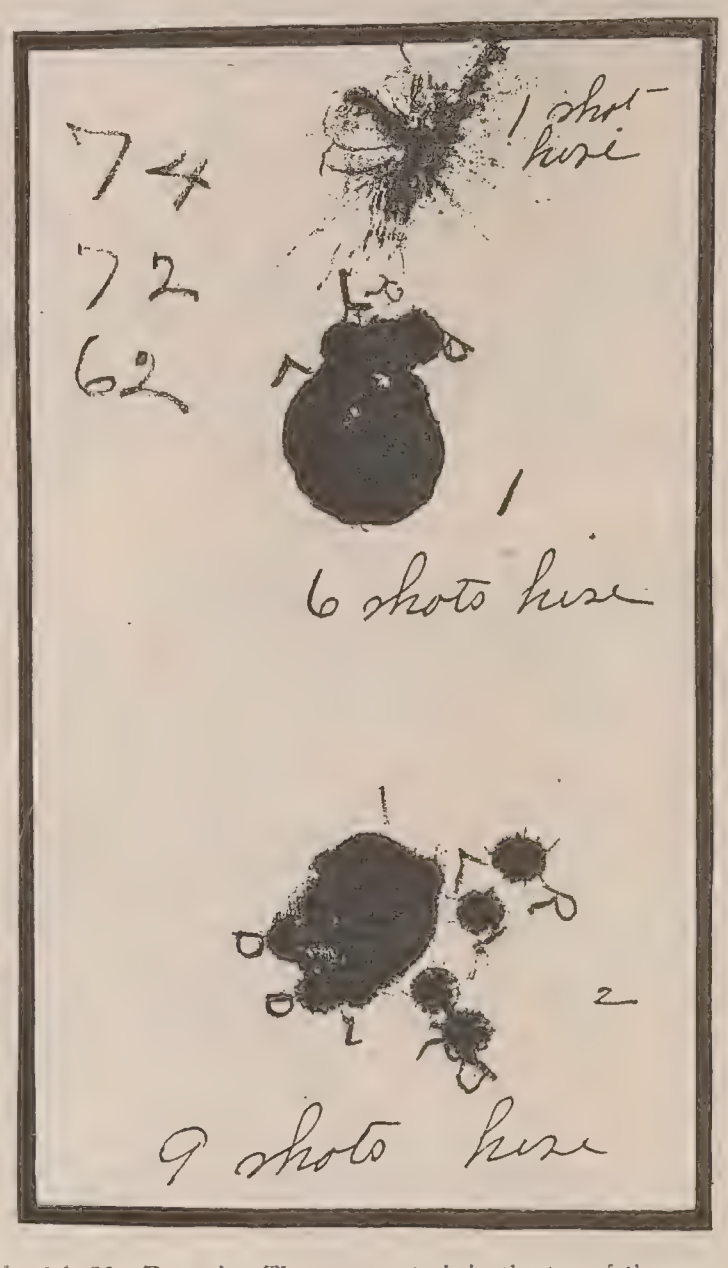
Hiram Dawson's (Rockville) b., w. and t. English setter Conquer (A.K.C.S.B. 40,919).

H. W. Stoehe's (Hartford) o. and w. English setter Joe.

No Derby entries were received.

JOHN E. BASSETT, Sec'y.

Points and Flushes.



The prize list of the American Pet Dog Club's show, to be held on Thanksgiving Day, at Sherry's, Fifth avenue and Thirty-seventh street, New York, is now ready for distribution. A number of valuable specials have been added to the list of prizes, and all the prospects indicate a successful show. Mr. Fielding C. Roselle is the secretary. Mr. S. C. Hodge is superintendent. Office, Bowling Green Building, New York.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Rifle Range and Gallery.

The Veterans to the Front.

IRONTON, O., Oct. 28.—*Editor Forest and Stream:* I mail you a target made here to-day by Messrs. E. Lawton, G. Rogers and R. S. Dupuy. Mr. Dupuy is seventy-four years old, Mr. Lawton seventy-two, Mr. Rogers sixty-four. They used a Stevens Sure Shot .22cal. U. M. C. long rifle. The shot in the center of

No. 1 is Mr. Dupuy's. There was a tack in the top of the paper; Mr. Lawton drove it for his last shot. I don't think you can find three more men of their age anywhere who can beat these three men. Messrs. Dupuy and Lawton have been shooting matches for thirty-five years. Can you tell which is ahead? They can't. I thought you would be interested, so mail this to you. JAMES DUPUY.

The annual meeting and election of officers of the Brooklyn Revolver Club will take place on Thursday of this week.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter-century.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

Nov. 12.—Fanwood, N. J.—New Jersey State League team shoot, on grounds of Climax Gun Club.

Nov. 12.—Princeton, N. J.—Intercollegiate match for cup, between teams from Harvard, Cornell, Yale, Pennsylvania and Princeton.

Nov. 16-17.—Sioux City, Ia.—Soo Gun Club's tournament; live birds and targets. E. R. Chapman, Sec'y.

Nov. 15-17.—Eau Claire, Wis.—Dan R. Scammon's tournament; two days at targets; one at live birds.

Nov. 16.—Singac, N. J.—Twenty-five bird handicap at Bunn's; $15 entrance, birds included. Commences at 12 o'clock.

Nov. 21-22.—Ottumwa, Ia.—Annual tournament of the Ottumwa Gun Club; targets. Walter Gephart, Sec'y.

Nov. 23.—Hackensack, N. J.—All-day target tournament. C. O. Gardner, Jr., Sec'y.

Nov. 23-24.—Pueblo, Col.—Tenth semi-annual State tournament of the Colorado State Fish and Game Protective Association; $100 added each day. C. L. Funk, President.

Nov. 24.—Buffalo, N. Y.—Thanksgiving Day shoot of the Bison Gun Club; targets. John E. Wilson, Sec'y.

Nov. 24.—Rutherford, N. J.—Thanksgiving Day Turkey shoot of the Boiling Springs Gun Club. W. H. Huck, Sec'y.

Nov. 24.—Pawling, N. Y.—Thanksgiving Day shoot of the Pawling Rod and Gun Club. Geo. S. Williams, Sec'y.

Nov. 24.—Dansville, N. Y.—All-day shoot of the Dansville Gun Club.

Dec. 3-4.—Milwaukee, Wis.—Tournament of Milwaukee Gun Club; live birds and targets.

Dec. 5-9.—Indianapolis, Ind.—Grand Central Handicap; targets first day; sparrows two days; pigeons two days. H. T. Hearsey, Sec'y.

Dec. 7-8.—Kewanee, Ill.—Tournament; live birds and targets. E. E. Baker, Manager.

Dec. 13.—Burnside Crossing, Ill.—John Watson's tournament; live birds only.

Dec. 27-30.—St. Thomas, Can.—Tournament of St. Thomas Gun Club. Jack Parker, Manager.

1899.

April 4-7.—Baltimore, Md.—Tournament of Baltimore shooting Association; targets and live birds; money added. Geo. L. Harrison, Sec'y.

April 11-13.—Elkwood Park, Long Branch, N. J.—The Interstate Association's seventh annual Grand American Handicap tournament.

April 18-21.—Baltimore, Md.—Prospect Park Shooting Association's tournament; added money. H. A. Brehm, Pres.

May 15-21.—St. Louis, Mo.—Tournament of the Missouri State Fish and Game Protective Association. W. R. Nold, Cor. Sec'y.

May 24-25.—Greenwood, S. C.—Annual live-bird tournament of the Greenwood Gun Club; 25-bird Southern Handicap. R. G. McCants, Sec'y.

June 7-9.—Columbus, O.—Tournament of the Ohio Trap-Shooters' League, under the auspices of the Sherman Rod and Gun Club. J. C. Porterfield, Sec'y, O. T. S. L.

Mr. Neaf Apgar, well known as an expert trap shot and salesman, has accepted the general management of the Gun Bore Treatment Co., 7 and 9 Warren street, New York. He began the duties of his office some days ago.

DRIVERS AND TWISTERS.

On Oct. 27 the election of officers of the Boiling Springs Gun Club took place. The list is as follows: President, Mr. E. A. Jenerette; Vice-President, C. H. Coe; Secretary, W. H. Huck; Treasurer, Frank Crebs; Captain, E. A. Jenerette. The foregoing officers, with Messrs. J. C. Blauvelt and L. Laue, are the Executive Committee. In December the club will shoot a series of five matches with the Passaic City Gun Club. On Thanksgiving Day it will hold a turkey shoot.

The Pawling Rod and Gun Club will give an open shoot on Thanksgiving Day, Nov. 24. There are fifteen programme events, 10, 15 and 20 targets, entrance respectively $1.20, $1.30 and $1.40. Shooting commences at 9 o'clock; Sergeant system. Special rates given to sportsmen at Dutcher House. Pawling is ninety miles from New York, on the Harlem Railroad. Geo. S. Williams, secretary.

The editor of this department leaves New York for North Carolina on Wednesday of this week for a month, to gaze sweetly on the doings of the smell dog as he engages his nose on the quail bird, in competition and good sport assembled, so all communications intended for publication should be addressed to FOREST AND STREAM.

The Missouri State Fish and Game Protective Association claims May 15 to 21 as the dates for holding its next annual meeting and tournament. St. Louis is the city in which the meeting will be held. The local organization expects to add at least $2,000. W. R. Nold is the corresponding secretary.

Mr. U. M. C. Hallowell, who has been making an extensive trip through the West since the Grand American Handicap, made the excellent average of 94 per cent. at the Kentucky Gun Club tournament. Mr. Hallowell arrived in New York on Monday of this week, looking the picture of good health.

Mr. Fred Gilbert, who is well known to fame as a man who is mighty where guns are aimed in great competitions, added new honors to his already long list at Cincinnati last week. The story is told most interestingly by Mr. Litzke in the report of the tournament.

The State shoot of the Colorado State Fish and Game Protective Association will be held on Nov. 23 and 24. There will be $100 in added money. C. L. Funk, president.

The silver set to be shot for at Singac, N. J., in Bunn's 25 live-bird handicap, is in design most pleasing to gaze upon.

BERNARD WATERS.

Cincinnati Tournament.

CINCINNATI, O., Nov. 4.—The first annual tournament of the new Cincinnati Gun Club was brought to a most successful close to-night. In many respects it must be classed as an impromptu event, due entirely to the fact that through a combination of circumstances the club was unable to take possession of its new home as soon as had been anticipated, therefore no announcement of this tournament could be made until only about three weeks ago. All the visiting sportsmen who were the honored guests of the club were outspoken in their praise of the management. All are unanimous of the opinion that this was one of the most successful shooting meetings they have ever attended. To the untiring zeal of the officers this can alone be attributed. The lion share of the credit belongs to Messrs. R. S. Waddell, president; J. A. Penn, corresponding secretary; Milt Lindsley, captain, and Arthur Gambell, the club's active and efficient manager.

Mr. Waddell, the club's chief executive, is a man peculiarly fitted for the position. On several previous occasions he has displayed wonderful executive ability in the art of conducting successful shooting events. None will gainsay that the big Du Pont and Hazard tournament under his able guardianship was other than a model affair. It must be recalled that at the Hazard shoot the top entry in the history of target shooting was reached. In several events 134 shooters participated. This was mainly due to Mr. Waddell's personal popularity and executive ability. True, on this occasion nothing unusual in the way of large entries was recorded, but the average maintained, and furthermore the foundation to future big tournaments was laid. I feel safe in predicting that ere another year rolls around Cincinnati will have held one of the best attended tournaments in the history of the sport. Mr. Lindsley, the club's genial captain, contributed more than his share of labor to the success of this event, and notwithstanding the demand on his time managed to shoot in nearly all of the events. In the live-bird events he more than held his own with those less hampered.

The club, when its present improvements are complete, will be one of the best equipped in the country.

Each day during the tournament an excellent dinner was served in the club house, under the supervision of Mrs. Gambell, the estimable better half of the manager. Everything that the market afforded was to be had in both quality and quantity, so that there was no occasion for any one to go hungry.

First Day, Wednesday, Nov. 2.

The programme of this tournament calls for but one day of target shooting. The target events were disposed of to-day. They numbered twelve, ranging from 10 to 25 targets each. All of these but Nos. 9 and 11 were divided by the equitable system. In the two referred to, the old percentage system, class shooting, four moneys, prevailed. This was done to give the expert an opportunity to win a good purse. Both of these were long races, 25 and 20 targets respectively, with $10 added. The opportunity to make a killing was there in the 25-target event, and Frank Alkire was the only one equal to the occasion. He smashed his 25 straight in clean fashion, and as no other contestant could duplicate his feat he scooped first money, $25.60, alone. The place hunter was evidently not present, for there was an opportunity to win third money alone, as there were no 23s, though Heikes, Gilbert, Young and Fanning each scored 24. In the 20-target events, where the system of division prevailed, the money, as is usually the case, was very much split up. The other features of to-day's shooting was another one of those oft-recurring races between those old-time rivals, Heikes and Gilbert, for the premiership. This varied from event to event; first one and then the other would lead, and it was not decided until the very last target was broken. Gilbert lost 3 targets in the last event, and this made it possible for Heikes to win out by a single break if he could score his final 15 straight. Notwithstanding that this event was shot on the hardest set of traps, he was equal to the emergency, and thereby finished first. Young, who is tie with Alkire for third place, made the longest straight run of the fifty-nine. He scored 10 straight in an extra that preceded the regular events, and continued smashing them up to the very last target in event No. 4. In the events where the equitable divisions prevailed targets were worth from 14 to 20 cents, so that any one who shot into money always received a trifle more than his entrance money. No one made very much money, and none lost any to speak of. The weather was beautiful, clear and bright, with just a tinge of frost in the air, and scarcely a breath of wind stirring. It was absolutely a perfect day for big scores.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Shot at.	Broke.	Av.

Confabulations of the Cadi.—XII.

The Equation of the Systems.

"At our last meeting," said the Cadi to the club dignitaries who were grouped about him in solemn session, "we officially decided to adopt class shooting, therefore the manner of dividing the moneys at our forthcoming tournament is settled. Also we decided to allow to manufacturers' agents the privilege of shooting for targets only, while we sandbagged their employers for advertisements and donations of merchandise. On the whole, we have made extraordinary progress of late in the arrangements of the necessary details, and in due course of time all other essential matters will be settled, which probably will be before the tournament takes place; in any event, we can arrange many important details after the tournament is over, a procedure which is sanctioned by good usage amongst gun clubs in some sections of this country."

"Mr. Chairman," snappily exclaimed Le Loup, as his matted beard bobbed about in jerky responsiveness to his jerky jaw, "on further thought, I am convinced that class shooting will not be the most attractive system whereby to draw the amateurs to our tournament. It is not the system which best fits their moderate skill and which best juggles them into the money. I therefore move you, Mr. Chairman, that we reconsider our former action in respect to the subject, and adopt the equitable system instead."

"Mr. Le Loup, I object to opening anything in this here meeting that's already settled," shouted Coxey.

"Mr. Coxey, I want you to understand that this meeting acts as the members see fit, and that we are not bossed by anybody who is rooting for any one system," exclaimed Montague.

"Order, gentlemen! Order!" said the Cadi. "You are drifting into that delightful freedom so common at an old ladies' tea party, wherein everyone is talking to everyone else and no one is listening to anything other than her own voice. However, as chairman I may say that to a certain degree it is allowable, for there are many men who, if held to talk only to the question, could not talk at all, their manner of thought being much after the manner that an old stiff car-horse walks when he is accorded the freedom of green pastures; that is to say, he has his eyes fixed on a certain point, but his legs having different degrees of stiffness and lameness do not co-ordinate, and he walks off in a direction other than the one he intended to walk in.

"I will now take advantage of my position as chairman to do a little talking on the subject, and by way of illustration I will tell you a short story which is brought to mind by your clashing contentions concerning systems. It is of a country doctor who for many years was conceded to be the greatest medical genius of the world, and this by the unanimous acclamation of the people in his bailiwick, a section of river bottom some ten miles long by eight in width, famous in market reports for its excellent corn and hog products. His admirers were accomplished judges of hogs and geniuses, as the qualifications for judging the one are reciprocally useful in judging the other, although in justice to both it may be said that they possess many traits which are not held in common, one of which is that the hog is not a vain creature.

"On visiting a patient the benign doctor would begin by brusquely feeling the patient's pulse, then as one in authority he would command the patient to stick out his tongue, whereupon he would scan much as one looks at a counterfeit half-dollar of which one is the unintentional possessor; then he would ask the patient what was the matter with him, laughing quietly, kindly and indulgently at the reply, as if to say, 'Poor boy, it will not do you any harm to think so; but I know a heap better.'

"Then collecting himself into becoming gravity, he would look sharply at the patient about three seconds, remarking to the nurse as follows: 'The etiology of the disease is obscure, and the semiology indicates indisputably that the pathogeny will be greater at my next visit, when I will be able to make an absolutely correct diagnosis and possibly a prognosis, if the patient only develops his ailments into a settled nosology. You will in the meantime give him No. 2 of my famous downendibus remedy, a teaspoonful every two hours, alternating with a half-teaspoonful of my upendibus remedy, giving this bolus of circumendibus the last thing at night. If any feverish symptoms develop I will then prescribe my infallible clyster if ice water and frozen gravel to reduce the temperature to the normal. Keep his head hot and his feet cold. Good day.'

"And then the good doctor would step into his chaise and drive furiously, as if he were on missions of life or death in all directions of the river bottom, although he simply was going home in a roundabout way at the time. Nevertheless he understood the value of driving fast and looking grave, with the aspect of serious affairs which was thereby implied, as was becoming to a man who was forced to live up to the character of a genius, even if the degree was conferred by people whose judgments were matured by growing corn and making estimates on the market value of hogs.

"In the course of time the years touched heavily on the shoulders of our Æsculapius of the river bottom, much lightened, however, by a good bank balance, so he concluded to engage an assistant, who must needs practice after the same school as his master; for when people become habituated to the curatives of a certain school they always feel that they are not well cured if the treatment is that of any other.

"Taking the young man into his study one morning to give him his preliminary suggestions, he looked at him solemnly and in a deep bass voice said: 'Young man, I will now induct you into the mysteries of my wonderful system of medicine, which is a vade mecum for all the ills of which flesh is heir and all the ills which are imaginary. The system has proved eminently successful in a long practice, and has enabled me to hold my job as a genius without trouble. All my medicine is made of the bark of the ash tree. There you have it. You may now begin practice at once.'

"'But you have different remedies,' said the surprised assistant. 'What is the downendibus?'

"'You pull the bark off the tree downward,' replied the aged medicine man.

"'What is the upendibus?'

"'You pull off the bark upward,' was the sage reply.

"'What is the circumendibus?'

"'You pull it off round the tree, and that completes the whole system of therapeutics,' as practiced by the greatest medical genius this river bottom ever had,' said the good, wise man, with a glow of conscious worth."

Here the Cadi stopped talking.

"I don't see how that story has any application to the point in question," commented Ephraim.

"There is no harm done in that case," replied the Cadi, "and your inability is quite what I expected."

"But what is the application of the ice water and frozen gravel to a system of trap-shooting moneys?" queried Le Loup.

"That's concerning the added money, which reduces the trap-shooting fever after a few trials, if properly applied," replied the Cadi.

"Are all systems alike then?" queried Moke.

"Not at all, when compared with each other," the Cadi replied, "but they are all alike to the shooter who cannot get into the money without a handicap. Your downendibus and upendibus and circumendibus systems may lead him to think that there is a true remedy in one or the other, whereas it's all the same thing, and without a handicap he cannot shoot well enough to get into the money. A system which only applies to a division of the money does not benefit him in the least. Shooting well enough to get into the money and dividing the money afterward are quite distinct matters."

"You have been kicking against everything that has been proposed," said Moke testily. "Will you be so good as to tell what you would agree to, assuming that you would not disagree with yourself if there was no one else whom you could conveniently disagree with or oppose."

The Equation of the Shooters.

"With pleasure, gentle Moke," the Cadi replied. "I have told you my views several times already, but I am far from expecting you to overload your brain with more than two consecutive ideas on the same day. I maintain first of all that we are all professionals, and if there is any virtue in the accepted tests of what constitutes professionalism I can come pretty near proving it on fit occasion. If this is conceded, I further maintain that we target shooters should all shoot together, under the equity of a handicap, after the manner of live-bird shooting. It is absurd to maintain that a handicap is good for contestants at live birds and not good for contestants at targets. The handicaps have no reference to the objects shot at, but to the inequality of skill which exists between the shooters. If we once for all reject the term amateur, it will simplify matters greatly. As commonly used, it denotes one who is inferior in skill, yet who is trying to do what is possible only to the most skillful. He really is the semi-expert or the novice, as distinguished from the expert, and as to profession they might be classed as circumendibus, upendibus and downendibus shooters.

"As to the novice, much has been said about him and his chances in competition, but the place for the novice is within the limits of his own club confines, which in a way is the preparatory school. His place is therefore not in the serious competition of a tournament. There is nothing in any of the affairs of either business or competitions of skill which can be arranged to make the incompetents appear as being the best performers. At the present time the competition at the traps is of such a high order that a man who can shoot no better than 80 per cent. is a losing tailender, and the 85 per cent. man is but little better off. Establish a handicap, and you bring in all the men, who are 80 per cent. or better, into the competition, with some chance to win."

"But it would be impossible to handicap such a host of target shooters," objected Ephraim.

"How do you know that?" queried the Cadi. "You have never seen it tried. As a matter of fact, it would be no more difficult to handicap target shooters than it is to handicap pigeon shooters. Nothing on earth is possible to the man who folds his arms and asserts that it can't be done. The history of civilization and progress is against the 'can'ts.' The great difficulty is not in the theory, but in the dearth of good handicappers. By good ones I mean those who have the knowledge of the class to which each shooter belongs, and also the moral courage to place the men accordingly. It requires a great deal of moral courage to do that. I have in mind one man in particular who is a model to aspire to in this respect. When he says a thing you may be sure that it is right, and equally sure that it is final; hence he and his rulings are respected. Such procedure squelches effectually both the man who kicks eternally on principle, to the end that he may get all the advantages possible, whether they are his by right or not, and the man who always believes that he is getting the worst of it, regardless of all fact. The proper way is to know what is right and then use a firm hand in maintaining it, regardlass of man or beast."

"I fear that your ideas will not be generally accepted, good Cadi," said Le Loup.

"I know that the expediency of the moment will govern, and what promises success in the concrete will be used regardless of abstract merits or demerits," the Cadi replied. "But there will come a time when the old expedients will avail nothing, and then there will be a groping for the new."

"Do you mean that trap-shooting has taken a start on the toboggan slide of failure?" said Coxey.

"On the contrary, I asserted not long since that it was in an extraordinary good condition, considering the lack of equity which governs the target competition. There is no danger of chaos. But I think that it could be bettered and improved, and that a handicap as a logical necessity will be established in time. Club shooting is good and thriving, but tournaments, wherein the weaker shots are required to meet the stronger on equal terms, and wherein more money is involved, do not receive the support that they should. Some men are satisfied to quit when they are well thrashed just once; some men will take a hundred or two hundred thrashings; but if you thrash any man times enough he is bound to have a sufficiency sooner or later.

"The time will come when the handicap will be the expedient of the moment, and then it will be popular. Till that time comes, the upendibus and the downendibus and the circumendibus systems will be in the ascendent, because they are the illusive expedients of the time being, and we will continue to talk of the upendibus amateur and the semi-circumendibus expert and the downendibus professional.

"I never had such a dry feeling in my throat. The meeting is adjourned till next week, when I will tell you about handicaps, and we will now proceed with the previous cider question, the reply to which is mostly always, 'Some of the same.'"

BERNARD WATERS.

Nov. 24 there will be a Thanksgiving Day shoot under the auspices of the Bison Gun Club, Buffalo, N. Y., on their grounds, Walden avenue and city line. The programme provides for ten 20-target events, each 75 cents entrance, and $5 added to each. Money divided 40, 30, 20 and 10 per cent. Guns and ammunition shipped to Chas. H. Werlin, 1634 Broadway, will be delivered on the grounds free of charge. Take Sycamore street cars direct to the grounds. Targets 2 cents each. John E. Wilson, Sec'y.

Mr. Paul North, of the Chamberlin Cartridge and Target Co., Cleveland, O., sailed for England last week on a business trip of two months' duration. The hustling representative of this company will induct the sportsmen of England into the uses and advantages of the magautrap and the rapid-fire system, which gives a maximum of fun in a minimum of time.

Trap around Reading.

Reading, Pa., Oct. 27.—The two days' tournament of the Oakbrook Gun Club at targets and live birds opened to-day. Live birds were used in all events. The birds were a fine lot of strong, old flyers, who left the traps like a streak when liberated. A strong wind assisted the birds, and many "dead out of bounds" were just caused by the bird being blown out and then dropped. The tournament was held in a large open field adjoining the Kurtz House, and although the crowd was not very large, those who were fortunate enough to be present enjoyed the day's sport.

The Peace Jubilee parade at Philadelphia hurt the tournament, as many said if the event would be postponed until later on they would come, but secretary James W. Kurtz decided not to change, and the tournament was held.

Mr. Arthur A. Fink, of Reading, who has been managing all the tournaments held in this vicinity lately, had full charge of the shooting and attended to his duties promptly, allowing no unnecessary delays whatever.

Among the shooters present from out of the city were F. T. Felix and J. T. Delaney, of Philadelphia; J. T. Benner, of Bingen, Lehigh county; Charles Hiltebeidel, of Telford, Bucks county; Harvey Clouser, of Gibraltar. Clouser is but eighteen years of age and is a wonder at pigeon shooting, having great control of his first barrel. The scores of the first day follow:

Event No. 1, 10 birds, Rhode Island rules, 21yds. rise, 80yds. boundary:

Benner	1001111110—7	Geikler	111011001—7
Clouser	1111101101—8	Hiltebeidel	000111111—6

Event 2, 5 birds, American Association rules, 28yds. rise, 50yds. boundary:

Benner	02012—3	Hiltebeidel	0**11—2
Geikler	11210—4	Clouser	2012*—3

Event 3, miss-and-out: Clouser 0, Geikler 1, Hiltelbeidel 1, Benner 1, Delany 0, Clouser , re-entry, 1; Delany, re-entry, 2.

Event 4, match at 10 live birds each, for $5 a side, between Clouser and Delany, Rhode Island rules, 21yds. rise, 80yds. boundary: Clouser 10, Delany 8.

Event 5, miss-and-out: Geikler 8, Clouser 3, Delany 7.

Event 6, miss-and-out: Geikler 2, Clouser 0, Winthrop 0; Delany 3, Clouser, re-entry, 3.

Event 7, miss-and-out: Geikler 3, Clouser 1, Delany 3, Winthrop 2.

Event 8, 10 birds: Geikler 7, Delany 8, Winthrop 6.

Event 9, 10 birds: Geikler 6, Clouser 6, Delany 6.

Shoot-off of tie at miss-and-out: Geikler 0, Clouser 2, Delany 2.

In a match between Geikler and Clouser, at 15 birds each, for $10 a side, Geikler scored 9 and Clouser 14.

After the last event a match was made between Clouser and "an unknown" of Philadelphia to shoot at 50 birds each, Rhode Island rules to govern, 21yds. rise, 80yds. boundary, gun to be below elbow until bird is on the wing. The date to be selected later on and also the place, but as both shooters are satisfied with the Kurtz House grounds, they will probably be selected. The match is for $100 a side and a side bet.

Second Day, Oct. 28.

The second day of the Oakbrook Gun Club's two days' tournament opened to-day promptly at 10 A. M., the hour set to start. One thing very noticeable was the absence of the Reading shooters, the majority of whom were at Philadelphia viewing the large parade. Manager Fink had everything in fine working order, three traps being used to throw the targets, Sergeant system. All the shooting was over by 4:30 P. M., so as to allow the visiting sportsmen time to catch their trains for home. Among the out-of-town shooters present were M. S. Brey, of Zionsville; Hufford, Hainly and Spatz, of the Independent Gun Club, of Sinking Spring; W. I. Grubb, of Pottstown, and Chas. Hiltebeidel, of Tolford, Buck county. The traps were in charge of Benneville S. Keim and Edward Mengel Krebs. The referee of the live-bird events was Manager Fink, while Mr. Francis Yost, of Reading, officiated in the target events. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Targets:	10	10	10	10	10	10	10	10	10	10	10	10	5p
Brey	8	10	9	9	10	4	5	7	10	10	9	8	4
Grubb	7	6	7	8	6	9	5	8	5	9	9	8	6
Hiltebeidel	7	8	7	6	6	6	4	7	5	5	7	9	7
Kurtz	5	4	4	6	8	..	..	..	..	..	..	..	..
Hufford	4	5	5	5	2	3	5	7	..	..	..	..	..
Hainly	5	7	5	8	10	3	w	..	..	..	..	..	..
Spatz	8	6	6	5	8	5	..	..	..	..	..	..	..

Limekiln, Pa., Oct. 26.—A sweepstake pigeon match was held at the Oley Line Hotel, this place, to-day, each contestant shooting at 10 birds each, entrance $2.50. Scores: Gechter 8, Wertz 7, Carroll 6, Stein 5.

Reading, Pa., Oct. 29.—Arrangements are being made to hold a two days' shoot at Seidel's Spring Valley grounds, near this city, to be held about Nov. 22-23. This ground is the finest in the State, having a set of underground traps for pigeon shooting of Mr. Siedel's own patent. Also a magautrap is on the grounds, and two squads can shoot, neither squad bothering one another. The principal event will be a 15-bird match, $10 entrance, birds included. As yet the positive date has not been decided upon.

DUSTER.

Yachting.

As the yachting journal of America, the FOREST AND STREAM is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.

At no previous time in the history of yachting has it been so difficult to predict the temper of yachtsmen and their probable action on any proposed change. Old methods and ideas have disappeared entirely; new influences are at work in different ways, and in spite of the lack of one final standard of measurement, and the general confusion existing among those most active in the improvement of the rules, there is good ground to hope for better things before many seasons. While definite and satisfactory proposals for amendment are still lacking, there is evident a general feeling, such as has not yet been known in yachting, in favor of restrictive legislation in the interest of the all-round yacht, as opposed to the racing machine. While many of the changes proposed or adopted by clubs and associations are but experimental, and some of them will doubtless prove failures, the situation is such that they can do little harm to yachting; and in the end they may lead to satisfactory results. The over-development of the racing machine, permitted by all clubs, with no efforts at timely restrictions, has resulted in the past three or four years in the stoppage of all building save in the smaller classes, and the withdrawal of many yachts, both small and large, from the racing. This has happened not as the result of legislation, as some would claim, but as the result of a general refusal to act until it was too late, the whole field of yacht racing being then monopolized by the lightly built racing machine, the fin in the larger and the skimming dish and scow in the smaller classes. With practically no yachts building of late years, and but few racing, matters are in such a state that positive legislation, even though of doubtful benefit, is better than mere continued inaction; and from this point of view all new experiments are to be welcomed.

Through various causes, but mainly through the practical example of the different restricted classes, there has been of late a visible change of opinion among yachtsmen in the matter of restrictive legislation. Many

who have always opposed the proposals for restrictive legislation, on the ground that the object of yacht racing was the development of the highest possible speed, have at last come to realize that there is no such thing as absolute speed in yacht racing, according to all standards thus far accepted by yachtsmen; that among fairly good yachts the winner and loser are only determined by the particular standard by which the race is measured; and that the search for absolute speed at the expense of the essential qualities of a vessel must inevitably result in the survival of one extreme racing machine in each class, and the exclusion of all true yachts.

The proposal to limit the scantling has been made repeatedly of late years, but no attempt has been made to put it into practice, some being opposed to any such restriction on racing speed, and others recognizing the difficulty of the task. At the recent meeting of the Y. R. A. of Long Island Sound, this proposal came up, almost by chance, as a mere suggestion, and at once met with such favor from those present that it was decided to attempt to put it into immediate effect in some of the smaller classes. Such racing as there has been about New York for the past three years has been mainly under the direction of the Sound Y. R. A., the fleet being made up mainly of yachts under 36ft. R.M., cutters, sloops and catboats, of moderate type and reasonably staunch construction. The classes that have filled best have been those in which the older yachts have still had a fighting chance, which they have made the most of. As matters now are, these classes are rapidly dying out, through the introduction of a few new and extreme yachts. Instances will occur to all who follow the racing where the sport has been good for a season in some particular class through the continued competition of half a dozen or so of evenly-matched yachts. The promise of sport in the class leads some one man to build to the limit of the rule, with extreme dimensions and light and temporary construction. The first season he wins everything, the old boats put up a good fight for a time, but the hopelessness of it is soon too painfully apparent, and one by one they abandon the racing. The next year the new champion is left to enjoy her honors alone, the old boats will not continue to sacrifice themselves for her benefit, and there is no strong inducement to men to outbuild her by a more extreme machine. The result is that the class is killed for an indefinite time.

If the new yacht represented any substantial improvement on the old, as was once the case, there could be no objection to such a survival of the fittest, inevitable in all sport; but as it now happens, the new yacht is probably inferior to the old ones in every respect save speed; she is unfit for other use than racing, through her light construction, extreme draft and limited accommodation, she costs much more to build, and when her brief racing career is at an end, through outbuilding if the interest in the class keeps up, and through the absence of competitions if it fails, she is entirely worthless.

This course of racing evolution is now so common that it can no longer be overlooked or denied, and yachtsmen generally have come to understand that they must choose one of two things, a single racing machine in each class, or a standard of limitations which will preserve the class to a number of yachts of moderate type. This is the case to-day in several classes on Long Island Sound, where there is a plain and direct issue between one or two new boats and half a dozen older ones. So far as speed is concerned, the issue, broadly speaking, is not between a fast boat and slow ones, but between a number of fairly fast boats and one that is just enough faster to win with certainty under the average racing conditions. With such perfection of design and construction as is quite compatible with strength, accommodation and seaworthiness, a modern yacht may be in every sense a very fast boat, and but little inferior to the racing machine.

The proposal now before the Association, so far as it has taken definite shape, is to divide each of the several classes concerned into two divisions, which, for want of better terms, may be roughly designated as racing and cruising. The former will be open to all yachts built under the rule as it now stands, without regard to construction or accommodation. The latter will be open only to yachts, new or old, which conform to certain standards established by the Association. These standards, of construction and arrangement, if not of actual design, will be such as are indicated by good existing yachts; such as the average all-round yachtsman will be glad to build to with the assurance that he may have a yacht that is at least thoroughly strong and staunch and so fitted that he can live aboard; and at the same time he can race her against others of her own kind. How far it may be possible to go in the regulation of design, as well as construction, is as yet an open question. It is possible that some general restrictions on design, construction and accommodation combined, as in the knockabout classes and the definition of a cabin yacht, may be found practicable, so that the necessity for separate knockabout classes may be avoided. The task assigned to the committee is by no means an easy one, and it is too much to expect that perfectly satisfactory results will be attained from the start; but in the present condition of racing the experiment is well worth trying; at the very least it can make matters no worse than they now are; and it may lead to a general improvement in the rules.

A Chicago Challenger.

CHICAGO, Nov. 4.—The coming season bids fair to be an active one in yachting circles on the Great Lakes. On next Tuesday evening there will be a meeting of the Chicago Y. C. for the purpose of appointing a committee who will go to Toronto to represent this city in arrangements for the international regatta next summer. This committee will meet representatives of the Royal Canadian Y. C., and perhaps we may seen an early arrangement of details in the American attempt to win back lost yachting honors. We are likely to have a number of good boats on Lake Michigan for the trial races, and it is thought that three or four boats will be built by the Chicago Y. C. for the trials, probably in the 65ft. class. One boat may already be considered under way, and will be owned by Com. Morgan, Sec'y C. H. Thorne and William Herrick. E. H.

Yacht Measurement.

Editor Forest and Stream:

I have to thank you for sending me your issues of Sept. 10 and of Oct. 1 and 8. I could not deal adequately with the two questions referred to in the conclusion of your comments, accompanying my last letter, without hunting up some mislaid papers, which I have only now had leisure to do. I will take the two questions successively:

1. Your arguments against a girth tax as an inducement to a greater area of section.

I fully agree that, per se, a girth tax, like any other cross section dimension tax, as e. g., a tax on B and D, operates primarily against, and not for, increase of section area. But a sail tax also operates against increase of section area; hence an exchange of sail tax for girth or other cross section dimension tax (such as the Y. R. A. change of 1895) may very well operate to increase section area, not only relatively to extreme cross section dimensions, but absolutely as well.

Secondly, speaking now specifically of an outline girth tax, such as your arguments mainly related to, I agree also that, as compared with a B and D tax, such a girth tax operates specially against section area in the region of the bilge, while in favor of it in the region of the garboards. Whether this, so far as it goes, is an advantage or the reverse, is a debatable question. But anyhow I insist that both these special effects of outline girth taxation, particularly the former, are of very secondary character. Other and much more cogent considerations, concerning sail-carrying power in relation to resistance, tend inexorably to impose on the cross section a certain general character; and this character, such measurement considerations as we are here dealing with, avail only to modify in a minor degree. To say that outline girth tax acts in effect as B and D tax, and nothing more, would be an exaggeration, but not a very gross one. How else can we account for the survival—the still very flourishing survival—of the plate and bulb form of section, or something scarcely distinguishable from it, under the present Y. R. A. Rule?

Your view as to the effect of girth tax on ratio of beam to draft I do not quite follow. In a combined beam and girth measurement the girth is the draft-taxing element, and the higher the coefficient of G relatively to that of B, the greater the ratio of beam to draft which tends to be encouraged. At present, under the existing English rule, this ratio varies widely; I doubt, however, whether there is a single case in which it is as low as 10-9, while in some successful boats it much more closely approaches your other extreme of 14-6.

The effect of a girth tax on centerboards must, of course, depend entirely on the degree in which the centerboard projection may be discounted in measuring the girth.

2. Comparison between the Hyslop, Herreshoff and other formulas.

For an adequate discussion of this subject, I fear I must be content to refer you to a letter which I contributed to the Field of Feb. 19 last, following the lead of Thalassa in a previous issue. But I may notice here that, broadly, Mr. Hyslop's formula may be regarded as a combination of the Y. R. A. with the Herreshoff rule, sharing as it does cross section dimension tax with the former, length tax and sail tax with both, and cross section area premium with the latter. In the Hyslop formula, the cross section dimension tax is rather lighter than in the Y. R. A., and the sail tax much heavier, while both the sail tax and section area premium are considerably lighter than in the Herreshoff rule. In virtue of their heavy sail tax, both rules would tend to promote under-canvasing (relatively to stiffness) much more strongly than the Y. R. A. Rule; and the Herreshoff rule the most so of the two. At the same time, in computing the probable indirect effects as well as the direct effects of all the taxations concerned (by a method which cannot be explained here), I was led to the conclusion that both rules, and especially the Herreshoff rule, would to such an extent encourage greater sail carrying power (relatively to length) than the Y. R. A. rule, that in spite of the under-canvasing the actual sail spreads (relatively to length) likely to obtain under them would be as great, or greater, than under the Y. R. A. rule.

Here again I am using the word "under-canvasing" perhaps in a different sense from yourself. By "under-canvasing," in my previous letter and here, I mean giving a definitely smaller sail spread (and by "over-canvasing" a definitely larger one) than the hull upon which it is put could in the long run utilize to advantage for prize winning, if there were no sail tax in question. So defined, it seems inconceivable that, in the absence of sail tax, over-canvasing could continue to generally obtain, whether in England or America, or anywhere else. I can see no conceivable inducement either to owners or designers to continue to give excessive sail plans to their boats, to the detriment of their chances in racing. While again, using the same definition, it seems equally certain that any sail tax must in the long run, pro tanto, operate to promote under-canvasing, and do so approximately in proportion to the severity of the tax. R. E. FROUDE.

GOSPORT, Oct. 20.

P. S. (Oct. 21).—I have just seen the letter from your correspondent, J. H., in your issue of Oct. 15. For the explanation of what seems to strike him as an inconsistency on my part, I must refer him to the final paragraph of my letter, "Every practicable rating rule," etc., observing also that under the girth and beam rule the "lessened rating" is not "secured by an increased area of midship section," but by lessened cross section dimensions. I must also call his attention to the reservation "qua effect on hull design," which I expressly attached to the proposition concerning sail tax, to which he takes exception. For the rest, I repeat that, historically at any rate, the original purpose of yacht measurement for racing was unquestionably that of handicapping or classification by size, and that only, with the object that the fastest boats of their size might win the prizes; secondly, that this purpose has as yet never been admittedly repudiated or superseded or belied by the shaping of the formulas that have been adopted. We have, of course, a perfect right, now or at any time, if we choose, to adopt the rating machinery to a new and different ostensible purpose; but it is desirable to recognize that in doing so we shall be taking a new departure. R. E. F.

The Sound Y. R. A.

A SPECIAL general meeting of the Y. R. A. of Long Island Sound was held on Nov. 3, at the Manhattan Hotel, New York, with Pres. Cromwell in the chair. The executive committee made the following report:

In the matter of the new measurement rule adopted on Oct. 1 by the Y. R. U. of N. A., your executive committee recommends that it be adopted, to apply to schooners and cabin sloops, cutters and yawls; that, as regards open sloops and all catboats, the rule now in force be retained; that, as to classification, the 43ft. class be retained as at present; and that other changes as adopted by the Y. R. U. be adopted by the Association. Your committee also recommends that the 15 and 20ft. classes be abolished, and that 18 and 21ft. classes be established in their places; also that provision be made for knockabout classes of 18ft., 21ft. and 25ft. l.w.l.

The report was accepted and the recommendations adopted, after which Mr. Jones made a motion that existing yachts be retained in their present classes, giving time for the excess of measurement in cases where they may exceed the limit of a class. An amendment offered by Sec'y-Treas. Tower to substitute the date Nov. 1, 1898, for Nov. 1, 1896, in paragraph 4 of the measurement rule was adopted. A motion of Mr. Jones, that a committee be appointed to confer with the Boston Knockabout Association as to uniform rules for three classes of knockabouts, was adopted.

Mr. E. C. Seward, of the Sachem's Head Y. C., called the attention of the meeting to the rapid introduction of yachts of light and flimsy construction in all classes, to the exclusion of yachts of reasonable construction. He spoke of the necessity in his own club of strength and seaworthiness, as the yachts, though of small size, were expected to be capable of cruising well to the eastward on Long Island Sound. The remarks were received with favor, and awakened a lengthy discussion as to the means of accomplishing an object of which all present approved. Mention was also made of the serious results in certain classes through the introduction of a single new yacht of extreme model and construction driving out of the racing a number of good all-round yachts and entirely killing the class.

It was suggested that some limit to construction be imposed on the classes from 30ft. R.M. downward; and also that in imposing restrictions each class might be separated into two divisions, one of yachts under the rule as at present, with no restrictions as to construction or arrangement; the other of yachts conforming to definite restrictions on construction and other details. The following motion, made by Mr. Seward, was finally adopted: Resolved, that the executive committee be instructed to prepare a scheme of restrictions as to scantling, construction, etc., for all classes from 30ft. downward, to the end of establishing cruising classes as distinct from racing classes; and that the committee shall report to a special meeting of the Association at the earliest possible date.

In view of the possibility of arranging such restrictions in the regular classes as would admit the knockabouts without making special classes for them, the motions already passed, relating to the changes in the 15ft. and 20ft. classes, and the change of date, were recalled and laid on the table. The committee will act in the matter at once, so that any possible changes may be made before building begins.

Defender.

THE fitting out of Defender was completed by Nov. 2, such sails, spars and gear as were needed being brought by tug from City Island, and all the work being done while the yacht lay at her permanent moorings inside of Glen Island. Capt. Chas. Barr was assisted by Capt. Hansen, who was in command of Vigilant in 1893, as first mate, with a crew hired for ten days. At 1:10 P. M. on Wednesday the mooring lines were cast off and the tug Theresa Verdon took Defender in tow for the open Sound. The yacht turned round and went ahead through the narrow channel, but before she had been under way for ten minutes she brought up hard and fast on Lecount's Rock, inside of David's Island, between it and the main land. The tug Flushing came to the aid of the Verdon, but both were unable to move Defender, even after her mainsail had been set to heel her. Thomas Webber, the yacht builder, of New Rochelle, was out in his launch, and he was able to direct the towing so that the yacht finally swung clear after being aground for some time. She was towed to Premium Point, anchoring off Mr. Iselin's house. At 5 P. M. she got under way with Mr. Iselin, accompanied by Messrs. Newberry Thorne and J. G. Berresford, and Sandy, the yellow dog of the Defender-Valkyrie races. She carried a gaff trysail, with lug foot, staysail and jib. The wind was light at the start, but soon freshened so that the staysail was taken in. She made a quick run through the Sound, reaching Bristol at 9:45 on Thursday morning, the distance of 145 miles having been covered in sixteen hours. She was immediately stripped and lightened, her mast being removed so that she could be hauled out as soon as the ways and steam capstan were ready.

The Society of Naval Architects.

THE annual meeting of the Society of Naval Architects and Marine Engineers will take place on Thursday and Friday of this week, at 12 West Thirty-first street, New York. The annual dinner will take place on Friday evening at Delmonico's. The Bethlehem Iron Co., of Bethlehem, Pa., has invited the Society to visit its works on Saturday, Nov. 12. The members of the Society will be the guests of the company on leaving New York. Members desiring to take the trip will please notify the secretary at the meeting on Nov. 10, when particulars will be furnished.

Y. R. U. of the Great Lakes.

Annual Meeting, Buffalo, Oct. 29.

THE annual meeting of the Yacht Racing Union of the Great Lakes was held at the Hotel Iroquois, Buffalo, N. Y., on Saturday, Oct. 29. The following members of the Council were present: Chairman F. B. Hower, E. W. Radder, of Cleveland, and Otto F. Barthel, representing Interlake Yachting Association; Æmilius Jarvis, J. Frank Monck and Secretary J. E. Burroughs, representing Lake Yacht Racing Association of Lake Ontario, and W. R. Crawford, Geo. R. Peare and F. W. Morgan, of Chicago, representing Lake Michigan Yachting Association.

After confirming the minutes of the previous meeting the members proceeded to discuss the amendments to the measurement rules, which were identical with the ones adopted by the Yacht Racing Union of North America at the meeting in New York on Oct. 1, 1898.

Mr. Crawford stated that through some oversight he had not been furnished with any copies of the amendments, and as it was impossible for him to act on the amendments without thoroughly looking them over and consulting with his Association, he would go on record as voting against them as a whole.

After some discussion the following changes in the measurement rules were adopted:

Measurement.

1. Yachts shall be rated by racing measurement, which shall be determined by adding together the load waterline length, the beam, .75 of the girth .5 of the square root of the sail area, and dividing the sum by 2.

$$\text{Formula: } \frac{\text{L.W.L.}+\text{B.}+.75\,\text{G.}+.5\,\sqrt{\text{S.A.}}}{2}=\text{R. M.}$$

2. The load waterline length shall be the distance in a straight line between the points furthest forward and furthest aft where the hull, exclusive of the rudder stock, is intersected by the surface of the water, when the yacht is afloat in racing trim in smooth water, with any person or persons, who may be aboard when the measurement is being taken, stationed amidships.

If any part of the stem, sternpost of other part of the yacht below the load waterline projects beyond the length thus measured, such projection shall be added to the measured length; and a form, resulting from the cutting away of the fair line of the stem, sternpost or the ridge of the counter for the apparent purpose of shortening the load waterline, shall be measured between fair lines.

The measurement for load waterline length and girth shall be made with the same number of persons on board as are allowed for crew in the yacht's class, whose average weight shall not be less than 150lbs., or at the option of the measurer, with a dead weight equivalent thereto.

The measurer at the time of taking his measurements shall affix a metal plate as a distinctive, permanent mark at each end of the load waterline.

3. The beam shall be taken from outside to outside of the planking on the broadest part of the yacht, and no allowance should be made for wales, double planks or mouldings of any kind.

4. The girth shall be taken from L.W.L. to L.W.L. under the keel at a point 0.6 of the distances between the outer edges of the L.W.L. marks from the fore end. The girth shall be measured along the actual outline of the vertical cross section at that point at right angles to the L.W.L. If the draft forward of that point exceeds the draft at that point, twice such excess to be added to girth. In taking these measurements all hollows on fore and aft under-water profile of the vessel to be treated as filled up straight.

To the girth of centerboard yachts must be added twice the distance between the lower side of the keel to the center of the area of the centerboard when lowered to its full extent. Centerboards when ballasted, except to overcome flotation or fitted with bulbs or otherwise, to be measured as fixed keels.

Measurers shall mark the points for measuring the girth as follows: By fixing three metal plates of suitable size on each side of the yacht not less than 2in. or more than 6in. above the L.W.L. level and parallel thereto, and not less than 3ft. or more than 6ft. from end to end, and so that the center mark of the three coincides with the distance 0.6 from the fore edge of the bow marks. The measurer shall also place a plate coinciding with this center mark under the rail or covering board, and another on the side of the keel perpendicular to the L.W.L. level. The distances between the L.W.L. level and the horizontal marks to be measured when the yacht is afloat in smooth water and deducted from the girth as obtained from center mark to center mark.

Measurers may accept for the measurement of girth the designer's written certificate or drawing certified to as being correct by designer and builder. But this shall not relieve the owner from fixing the marks heretofore described, or relieve him from the responsibility of the accuracy of the certificate and proper position of the marks. In the event of a measurement protest the yacht must be measured as heretofore provided.

Page 18, paragraph 4, amended to read:

"If a yacht after having been officially measured be increased in L.W.L. length, beam, girth, or sail area, the yacht must be remeasured before starting the race."

Page 18, Rule IV., regarding restriction on area of midship setion, was stricken out, as the new measurement rules cover these points.

The classification was changed as follows:

Classification.

First Class, A, yachts over 45ft. racing length; 45ft. class, B, not over 45ft. and over 40ft. racing length; 40ft. class, C, not over 40ft. and over 35ft. racing length; 35ft. class, D, not over 35ft. and over 30ft. racing length; 30ft. class, E, not over 30ft. and over 25ft. racing length; 25ft. class, F, not over 25ft. racing length.

Rule VIII., time allowance, was amended to read:

"Time allowance shall only be allowed in the first class, and shall be calculated on the racing length according to the appended table, but in class racing the racing measurement of a yacht shall be assumed to be the maximum limit of her class."

And paragraph 2, page 21, was stricken out, together with the formula on page 22.

Page 25, Rule XV., crews, amended to read:

"1. The total number of persons on board a yacht shall not exceed the allowance in the following schedule:

"First class, one person to every 5ft. of R.L. or fraction thereof.; 45ft. class, nine persons; 40ft. class, eight persons; 35ft. class, seven persons; 30ft. class, five persons; 25ft. class, four persons."

Page 32, paragraph 11, converging close-hauled, amended to read:

"When two yachts, both close-hauled on the same tack, are converging by reason of the leeward yacht holding a better wind, and neither can claim the rights of a yacht being overtaken, then the yacht to windward shall keep clear."

Page 33, Rule XXVIII., protests, paragraph 3 amended as follows:

"If through protest the measurement of a yacht be called in question, the regatta committee shall direct the measurer to remeasure such yacht, and the result as reported by him shall be final. A charge of 10 cents per foot R.L. for measuring shall be collected from the owner if the measurement be found wrong to a greater extent that one per cent. of the R.L., and from the person protesting if the measurement be found within that limit."

Page 35, paragraph 7, amended to read:

"If a yacht which has been officially measured makes any alteration causing an increase of her racing length, and starts in a race without having been remeasured or notifying the regatta committee in writing previous to the start that such alteration has been made, she must be disqualified."

The definition of a yacht was amended to read:

"A yacht shall be defined as a vessel of not less than 16ft. L.W.L., and must carry not less than 300lbs. of ballast stowed under the platform or in lockers, or have a beam of not less than one-third of her L.W.L. length. She must have standing rigging or a fixed mast, and must be kept permanently on the water during the season, and must not be engaged in trade. Yachts built after Nov. 7, 1896, or brought to the Lakes after that date, shall comply with the restrictions on draft and size of timbers, keels, planking and other parts required by the rules."

Page 20, paragraph 2, amended to read:

"Each yacht shall be entitled to sail in her own class and in no other."

Page 20, Rule VII., restriction on draft, amended to read:

"The maximum draft of any yacht built after Nov. 7, 1896, or brought to the Lakes after that date, when in racing trim shall not exceed that specified for her class in the following table, exclusive of centerboard if it be not a board weighted for ballast:

"First class, 10ft. draft.; 45ft. class, 9ft. draft; 40ft. class, 8ft. draft; 35ft. class, 7ft. draft; 30ft. class, 6ft. draft; 25ft. class, 5ft. draft."

The balance of the rule was stricken out.

The list of classes in the official table of scantling was amended to conform to the class limits by the new rule.

The following officers were chosen for the ensuing year: Chairman, Charles E. Kremer, Lake Michigan Yachting Association, Chicago, Ill.; Secretary-Treasurer, J. Edmund Burroughs, Lake Yacht Racing Association of Lake Ontario, Rochester, N. Y.

Mr. Æmilius Jarvis was unanimously chosen as delegate to the Yacht Racing Union of North America, and Chairman Hower congratulated him upon the excellent work he had done for the Great Lakes at the numerous meetings.

A committee consisting of Æmilius Jarvis, E. W. Radder and W. R. Crawford, was appointed as an advisory committee on the Stephens scantling table.

Mr. Radder said that in view of the fact that the Chicago Y. C. had challenged the Royal Canadian Y. C. for the Canada's cup, and that such a race would undoubtedly stimulate the building and racing of yachts on the Great Lakes, if confined to a small class, that the Council recommend to the Royal Canadian Y. C. that the acceptance of the challenge be made on behalf of a yacht of 35ft. R.L., believing this to be in the best interest of yachting.

Meeting adjourned.

In the evening the visiting delegates were banqueted by the members of the Buffalo Y. C. at the Hotel Iroquois. Ex-Commodore Frank B. Hower presided as toastmaster, and Messrs. Jarvis, Lee H. Smith, Horace Noble, W. J. Conners, E. W. Radder and W. H. Crawford provided the "feast of reason," which compared favorably with the most excellent menu.

The Buffalo Y. C. boys know how to do other things besides sailing, and here's hoping that we meet there again.

J. E. BURROUGHS.

The Proa and Modern Designing.

NEW YORK, Nov. 1.—*Editor Forest and Stream:* In regard to the proa which you published in the issue of Oct. 22, as nearly as I can work it from the reproduction the sail area is 324sq.ft., displacement 1,240lbs., midship section 1.08sq.ft., lateral plane per square foot of sail .0.0.72. The ratio of sail area of displacement is almost the same as in the twenties. The peculiarity of form, that is the elongated ellipsis for the waterline with symmetrical entrance and run, is almost the same; the differences in the form, which are a reverse curve of the shear plan and a sharp entrance, would probably account for some of the differences in speed, and the balance could be accounted for by the increased resistance of the outrigged hull when it touches the water momentarily. It is interesting to note that nearly two years ago, when designing Akista, I decided on the elongated elliptical waterline and a practical symmetry of entrance and run for what was, I think, the largest yacht built on which it had been tried, and it is very mortifying to note that these principles, which are really fundamental in design, should have been known for nearly two centuries before we put them into application. It is about time for us to unload the useless lumber of the old rules of design and come down to five fundamental principles:

1. All waterlines more or less elongated ellipsis.
2. All buttock and shear lines either straight or convex.
3. The unchanged or approved form, with change of inclination of mast to a vertical line.
4. The lateral plane a true plane as far as possible.
5. Minimum of wetted surface for a given displacement. Any man who designs according to these rules must design a relatively fast yacht; any man who violates them will pay the penalty by having his yacht look pretty perhaps, but will be slow.

GEO. HILL.

YACHTING NEWS NOTES.

It is not through its merits or any fault of its own that yachting has almost invariably fared badly at the hands of the makers of encyclopedias. Its unfortunate initial inevitably brings it near to the end of the last volume, where space is precious, and it is consequently curtailed and compressed to a mere sketch. It has seemed that full justice would not be done to this subject, important as it is, until the usual method was reversed and the alphabet taken up in inverse order; but that such is not the case is fully proved by the last two numbers of the Encyclopedia of Sport, Parts XIX. and XX., completing the work as published by G. P. Putnam's Sons, New York. In this work, at least, yachting is accorded space in proportion to its importance, and the subject has been covered comprehensively and intelligently. The principal article, by Lord Dunraven, was written for the English edition, but it is supplemented by an article on yachting in America by Chas. Pryer, of New Rochelle. Similarly, the detail of ice yachting is treated from the British side by Mr. Herbert Crossley and from the American by Mr. Archibald Rogers. Lord Dunraven's history of yachting is comprehensive and very well written, and it cannot fail to interest American as well as British yachtsmen. The origin of the sport is described in detail, the growth of the different British clubs being traced down to the present day. The history of measurement legislation is clearly outlined, and then the principles and methods of yacht designing are described at length. While this branch of yachting is in nature and extent far beyond the possibilities of treatment in popular or encyclopedic form, its leading points are presented in a way that is fully adequate to the demands of the average reader. The details of designing are outlined very plainly, and such subjects as the making of the design and the model, the laying down, methods of construction, etc., are dealt with briefly but clearly. The materials and methods of sail-making, its history and principles, and the theory of the action of the wind on the sail, are treated at considerable length. After describing the general details and methods of yacht racing, the author takes up the actual history of yachting, and describes very fully the first pleasure vessels and their successors of one period and another down to the present day. The changes of type, as produced by alterations of the measurement rule and other controlling causes, are shown by representative vessels, a number of designs being given. The later development, under the original rating rule and the new linear rating rule, is particularly interesting in view of the recent adoption of the latter rule in this country. The new boats built under the rule for the 20-rating and other classes, as yet little known here, are described and compared. The subject of cruising comes in for mention, with the modern one-design classes, steam, etc. The present Y. R. A. rules are given in full.

Mr. Pryer's article traces the development of the yacht in this country down to the present day; the leading yachts of each era are described and illustrated by numerous diagrams. The English type of ice yacht is described by Mr. Crossley, with details of the sport. Mr. Rogers writes of sport as developed on the Hudson River to a science. The articles are illustrated by numerous diagrams and some very fine reproductions of yachting photos and paintings.

The racing of the Eastern Y. C. for the present season is summarized in printed form by the regatta committee, full records and details being given of the six races sailed. The report is interesting as making a permanent and public record of the work of the various yachts.

PUBLISHERS' DEPARTMENT.

Hunting and Fishing on the C. & O.

No necessity exists for a journey across the continent for the sportsman who is looking for an outing. Five hours from Washington, through the most beautiful mountain scenery this side of the Rockies, deer are almost as plentiful this year as they were in the days when the Old Dominion was first settled by white men.

Since the open season began, on Oct. 1, several parties have gone from Washington into Bath county, Virginia, and the reports which they bring back are such as to make the heart of the sportsman jump with expectancy. There is plenty of sport to be had with the rifle, the shotgun, the fly-rod, and none of the game bags or fish creels are brought back empty.

Within a radius of ten miles from Millboro, Va., there are literally hundreds of deer. Then too the Cowpasture River is teeming with bass, and a 2lb. small-mouth will make the disciple of old Izaak, who has played the big-mouth on 40yds. of line, think that he has a salmon at least on his hook.

Virginia at this season is the paradise of the sportsman, and the Chesapeake & Ohio trains leaving Washington at 2:20 P. M. and 11:10 P. M. carry him right into the heart of that paradise.

For information address H. W. Fuller, General Passenger Agent, Washington, D. C.—*Adv.*

Joseph Dixon Crucible Co.

THE Dixon Company was established in 1827, but during all of its more than three score years and ten of busy life no year has in any way equaled 1898 for volume of business; its plant has been running continuously, yet the Company is behind its orders in all departments.

As the Dixon Company's products go into every known field of industry: the iron workers, the brass workers, the printing trades, the stationers, the cycle manufacturers, the hat manufacturers, the paper mills, etc., the rise or the fall of the volume of business done by the Dixon Company may be taken as a very excellent standard or pointer on the condition of business generally.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, NOVEMBER 19, 1898.

VOL. LI.—No. 21. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

The Creeks regularly make a Burnt Offering of what they conceive to be the most delicious Parts of every Animal taken in Hunting, before they presume to taste a Mouthful. The Parts they commit to the Flames are proportional to the Size of the Animal, probably about 2 or 3 lb. from a Buffalo, and still less in a regular gradation down to the smallest Quadrupede, Fish or Bird.

John Pope's Tour, 1792.

FROM PLAGUE TO PROFIT.

THE problem of abating the rabbit nuisance of New Zealand, after having for so long taxed the ingenuity of the world, promises to be solved by the realization that the rabbit has a commercial value. The industry of converting the game—or vermin—into meat for export to European markets has assumed large proportions. One shipper was recently reported to be in receipt of from 15,000 to 20,000 rabbits per day, and to be paying to the trappers wages aggregating £800 and £1,000 per week. Thus has a plague been converted into a profit.

In this country a nuisance which has destroyed hundreds of thousands of dollars' worth of food fishes in inland waters is the refuse sawdust from sawmills. The sawdust is dumped into the stream as the readiest mode of disposing of it. Carried down by the current, when in suspension it kills the fish by lodging in and irritating their gills; and sinking to the bottom it overwhelms and ruins the spawning beds, and destroys both the aquatic vegetation in which the fish live and the minute forms of life upon which they subsist. Fish commission after fish commission has investigated the sawdust nuisance, and various expedients have been resorted to for its suppression. Laws have been enacted only to be ignored or set at defiance. Despite the known ruinous effects of sawdust, mill owners have gone on practically without let or hindrance dumping it into fishing waters and destroying native resources of inestimable value. Sawdust has been a waste product; the thing to do with a waste product is to get rid of it in the easiest possible way. If sawdust were found to have a value, the problem of its disposition would be solved, and we would hear no more of it as a fish destroying agency.

If the reported discovery which a Baltimore inventor, Mr. Victor L. Emerson, is reported to have made shall prove to be what is claimed for it, such a solution is just what we may look for. Mr. Emerson has devised a process for carbonizing sawdust and extracting the by-products. Certain mill owners on the Ottawa River, Canada, who had been ordered by the Government to discontinue dumping sawdust into the river, sought the services of Mr. Emerson, and built a plant for his experiments on a large scale. According to reports, the result of these tests is such as to have proved that "the 500 tons or more of sawdust and refuse that these mills have been throwing away daily for years have suddenly been discovered to be worth $30 a ton—in other words, equal in value to the highest grade of gold quartz." Iron and steel smelting works, white lead and printers' ink manufactories and calcium carbide works are to be operated in connection with the central plant; and the city is to be lighted and heated from the hydrogen gas given off during the process of carbonization. In short, there is to be a sawdust bonanza of the biggest kind; and so cheaply are all the products to be obtained that the capitalists behind the scheme already announce a determination to restrict production so as to provide against glutting the market and destroying prices. This indeed is the only somber shade in the golden prospect. Thirty-dollar-a-ton sawdust will be confined like gold to certain favored districts. The common sawdust pouring out every day from countless mills in countless tons into countless waters is still and still will be the worthless plague it has ever been.

THE FOREST RESERVES.

AN interesting and surprising indication of the recent change of public sentiment in the West concerning forestry matters comes to us in a report from Washington.

It will be remembered that when President Cleveland originally set aside the thirteen forest reservations in the West, no portion of the community was more outraged and none more bitter in its condemnation of this action than the people residing in the Black Hills. The columns of the local newspapers fairly overflowed with editorials on the subject, and the Senators and Representatives from South Dakota had great difficulty in finding language severe enough to fitly describe the injury that had been done to their constituents. The South Dakotans were urged to be patient and to take a little time to think about the matter, but they declined to do so. Now, however, we are told on high Washington authority that the people of the Black Hills have petitioned the authorities to have the size of the Black Hills forest reservation increased by 4,400,000 acres; that the surveys have been made; that Senator Pettigrew has washed off his war paint and laid aside his arms, declaring that the increase should be made; that the surveys for this increase have been completed, and have been approved by the Secretary of the Interior.

We believe that the time is coming, and coming soon, when the forest reserves of the Western country will have no more ardent defenders than those who dwell on and about them—the very people who a couple of years ago declared that the Federal Government had determined to create widespread ruin over the whole West. The change which has taken place in the feeling about these forest reserves is encouraging not only as to this especial matter, but also as giving evidence of the common sense of the American people when they have had time for sober second thought.

It is objected by some persons that the forest service is being turned into a huge political machine, which will be used to control elections in the States and Territories where these reservations exist. If this should prove true, it is greatly to be deplored; nevertheless the important thing is that we have now a forest service—a force of men appointed to care for our forests; whereas formerly there was no one whose duty it was to do this. If for any reason this service is not all that could be desired—as, of course, it is not—it is our business to strive by patient effort to reform it, and to make it as nearly perfect as may be possible.

At the head of the Forestry Bureau of the Department of Agriculture we have perhaps the most competent person in the country, and the steps which he is taking for interesting and instructing people in forestry matters, both in the East and in the West, cannot fail to have a most beneficial effect on the public mind.

SNAP SHOTS.

An exhibition of live snakes is an amusement novelty which is just now engaging the attention of New York. Specimens of numerous venomous and harmless species have been brought together from the snake thickets and holes and dens of the earth, and put on show in a public hall, to which visitors are cheerfully paying the admission fee. Incidentally human nature is on exhibition too; for nothing in the natural history of snakes is more curious than this fact, that while mankind abhors and fears the serpent, it cannot resist going to gaze upon the object of its dread and disgust. Whatever may be the snake's powers of fascination over birds and animals, it has had for man in all times and in all places a compelling interest, a repellant attractiveness. There are some people who, like Mr. Fred Mather, make pets of harmless snakes, and others who, like Dr. Ditmars, handle with composure and immunity the poisonous species; but such persons are the exception and not the rule. As for petting garter snakes and other innocent and beautiful creatures, they have reason and common sense on their side; but even reason will not avail against the stronger instinct of dread and alarm. Witness the confession made by Coahoma the other day. Here is a man who has for years been schooling himself to overcome the instinctive repugnance to snakes; who has by precept and example sought to stay the heel that would bruise the serpent's head; and yet in spite of it all is moved to acknowledge, "but reason will succumb to its parent, animal instinct; and the repulsiveness of snakes is as strong as ever."

Mr. C. H. Townsend, of the United States Fish Commission, who was deputed to investigate the condition of seal life on the Pribilof Islands during the past season, found the percentage of decrease of the seals more noticeable than in previous years, owing to the more marked effect of pelagic sealing on the diminished herd. The decrease of seals born on the island was for 1898 22 per cent. since 1897, against 11 per cent. for 1897 since that of 1896. A rational scheme of seal ranching is in course of development on the islands, but Mr. Townsend reports this will be powerless to preserve the seals from extermination if pelagic catching shall be continued. Should pelagic sealing cease, and land sealing be sufficiently restricted, the present stock of seals is such that at no distant day the supply might be restored to former proportions.

The rapidity with which a water or land species which has been pursued to the point of extermination will, when that pursuit ceases, multiply and replenish the earth, is one of the surprising phenomena of nature's resourcefulness. The beaver is a familiar example. In one region and another where it has been trapped until becoming so scarce that trapping became unprofitable and was abandoned, the unmolested remnant has thrived and developed into numerous colonies. We are told by returning moose hunters from the New Brunswick woods that the law on beaver in that Province, which has prevented their capture for several years, has resulted in restoring the species again to commercial importance. The law is up this year, and numerous trappers who have marked the beaver colonies are preparing to take them.

The principle is illustrated on a large scale by the fluctuations of the whale fisheries, which, after having sunk to a point where the pursuit was no longer profitable, and was accordingly abandoned, have now come up again and assumed a place in the world's commerce, to be measured by the fact that four Arctic whalers which reached San Francisco the other day brought into port catches aggregating a value of $750,000. And in the Antarctic another illustration is found in the case of the sea lions, which, having been depleted far below the point of profit to the sealers, have so far recovered that an expedition recently made for their oil proved a remunerative venture.

"Spoodler" is a fictitious name, but that is the only fictitious element of the moose episode reported in our game columns. The case was actually tried in court, and this is a transcript of the proceedings. To a New Bedford, Mass., man, we believe, belongs the credit of demonstrating to unsuccessful moose hunters the happy expedient of having their game snared and made secure for them by the guide in advance. This is a "dead sure thing," warranted to assure the veriest duffer his just quota of moose meat, if only the officious game wardens would not intervene as they did with the New Bedford man and the defendant in the Nova Scotia case. It takes all sorts of people to make up the world, and the Spoodlers are ever with us.

The signs of the times point to Alaska as the coming big game country to be exploited by the American sportsman. Indeed it is the only fresh territory left for him without invading the remote British Possessions. The big moose heads sent down from Alaska have excited the envy of scores of hunters; and since there are bigger moose heads in the woods than have ever been brought out of them, we confidently expect some day to illustrate in the FOREST AND STREAM a giant exceeding the seventy-two-inch head shown in our issue of October 22; and to print with it the portrait of the man who brings it down.

Announcement is given elsewhere of the fifth annual Sportsmen's Show, given by the National Sportsmen's Association, in Madison Square Garden next March. The exposition will be modeled in large measure upon the lines of the Boston show, which was so popular and profitable; and for the New York enterprise a similar success may be anticipated.

The Sportsman Tourist.

Jamestown Hunting and Fishing Club.

Maine Trip of 1898.

No better fortune can well befall a true sportsman than first to anticipate and then to realize the full pleasures of a hunting trip to the great forests of northern Maine. I venture the assertion that in no part of the United States east of the Rocky Mountains can game of such numerous variety as inhabits this State be found in greater quantity. Fortunate is he who can visit this great game field, for it is here that realization and anticipation come nearest to being synonymous terms.

The Jamestown Hunting and Fishing Club is composed of twenty-four members, all lovers of the gun and rod, who reside in and near the city of Jamestown, New York. It is the aim and one of the purposes of the club organization to take an outing at least once in each year, either on a hunting or fishing excursion, to enable its members to realize the relaxation from business cares so necessary to the health and well-being of business and professional men. Several years in succession our outings were taken on the Alleghany River in a house boat, and many delightful days have been spent in floating down the river and hunting and fishing by the way. In the fall of 1896 we visited the Adirondack Mountains in New York. Last year we visited the famous camps of "Jock" Darling on the Sebois Chain of lakes in northeastern Maine, going in by way of Patten. The trip was a delightful one, and successful to the extent of our killing fifteen deer and one moose. The weather was very dry and the woods noisy during our entire stay, but our success was all we had anticipated, and all were satisfied.

Even before the trip of 1897 was ended did speculation become rife as to where the next outing would be taken. Everybody talked of Maine. Upon arrival at Boston, where we spent twenty-four hours, Dr. E. M. Scofield, president of the club, fell in with M. Abbott Frazier, that prince of good fellows and noted taxidermist, who has a branch supply store at Greenfield Junction on Moosehead Lake. He extolled the Moosehead Lake region as a great game country, and advised us to go there. Subsequent correspondence with him and others induced us to make that our objective point this year, so our guides were engaged, and having made all preliminary arrangements, the date of departure was fixed, and on the morning of Sept. 28, with joyous hearts filled with pleasant anticipations, and with the best wishes of friends who had come to the depot to bid us "Godspeed," we boarded train 8 on the Erie Railroad bound for Greenville Junction via Boston. At 8 P. M. of the 30th we arrived at Greenville Junction, the end of our railroad travel, where we were met by Captain Samuel Cole, who had had charge of purchasing supplies, engaging transportation over the lake and making all necessary preparation for the trip into the woods. He told us, much to our gratification, that all preliminary arrangements had been completed, and that our provisions and the horse which we were to take into the woods for toting purposes were already at camp. We were then conducted to Moosehead Inn, where we were well taken care of for the night. At 8 o'clock the next morning we started on our steamboat ride over Moosehead Lake, on our way to camp, and the beauty of that clear, still, sunlight morning lent additional splendor to the most beautiful body of water and some of the finest scenery which most of us had ever seen. The lake is nearly forty miles long, and from one and one-half to thirteen miles in width, and wooded to its shores. The shore line is very rugged and irregular, and bays and coves are more than numerous. Islands, large and small, are to be seen on every hand in great numbers. Some of the smaller ones are nothing but barren rocks, while others are sparsely covered with timber. The larger ones are wooded and range to several hundred acres in extent. One is said to contain 3,000 acres. The hills and mountain peaks rise in every direction, particularly to the eastward. Half-way up the lake on the easterly shore Mount Kineo seems to rise directly out of the lake. Its southerly and easterly sides rise like perpendicular walls of rocks to a height of nearly 800ft. above it. On the northerly and westerly sides the slopes of the mountain are wooded and render it comparatively easy of ascent. Projecting from the southwesterly side of its base is a small cape, upon which is situated the Kineo House, built to accommodate about 250 people, and several cottages. A most beautiful place it is.

We reached the head of the lake at the northeast carry about 11 o'clock, and our outfit was soon loaded upon wagons to be taken two miles across the carry to the west branch of the famous Penobscot River. Here we met the remainder of our guides, Bert Doty, James Reynolds, Adelbert Harrington and Herbert Keith, with their canoes and a bateau. It was over this same noted carry that Henry D. Thoreau, the great writer and student of nature, passed about fifty years ago on his travels through Maine, which gave rise to the publication in 1864 of that interesting book written by him entitled "The Maine Woods." The difference in his mission and ours was the subject of thought and discussion by us at the time. We were there for the purpose of destroying nature's handiwork, and he was there, without firearms, for the purpose of observing and studying nature for his own gratification and the enlightenment of future generations. But one thought must have impressed us in common, and that the distance between the waters of those great rivers, the head waters of the Kennebec and of the Penobscot, only two miles apart, divided by a watershed which seemingly is not 50ft. in height above either, and each draining its own great section of territory and playing such important parts in the commerce of the country.

After taking dinner at Luce's Hotel, on the Penobscot, the canoes and bateau were loaded and we started, most of us on foot, for our guides had about all the load they could carry, for our destination, Caribou Camp, on Russell Stream, thirteen miles away. Two miles up the river we reached the mouth of the stream, and there had to abandon the bateau on account of the scarcity of water, and resort to canoes and horse power. It took two days to reach camp, and still another to get all our paraphernalia in. We stayed the first night at Mitchell Camp, about two miles up the stream from the river. Everybody was happy, for on the morrow the deer and caribou season would open. Inasmuch as the history of a hunting trip is largely made up from the personal experiences and reminiscences of the individuals composing the party, it will be well to understand who made up the party. They were Dr. E. M. Scofield, Judge V. E. Peckham, Judge F. S. Wheeler, Surrogate E. E. Woodbury, Assistant District Attorney H. L. Hunt, Alderman C. M. Nichols, Dr. A. E. Smith, Dr. E. A. Scofield, ex-Superintendent of the Poor M. T. Howard, Dr. H. W. Davis, Carver Hidecker, B. K. Soliday, E. W. Brownell, John C. Thomas, Attorney R. A. Hall, E. E. Wilcox and H. K. Thornton.

At Mitchell Camp we were the guests of John Holmes, a very intelligent, elderly gentleman, who is employed as clerk to a lumber company, and has been in the woods a great many years. He treated us with the utmost kindness, and greatly aided us in getting in and out of the woods, holding his tote teams one whole day for the purpose of helping us out the next. We were all very hungry and ate ravenously, but Judge Peckham seemed to overstep the bounds of hospitality when, after eating at two tables, he sat back and expressed regret that he had eaten, saying that he would like to eat again. The number of the party and the paraphernalia that we had brought along had caused our guides to doubt our prowess as hunters of big game, and from all appearances they seemed to regret having engaged with us, but when after we had eaten and repaired to the front yard parlor and sung a few songs, each in his own voice, tune and time, their disgust was evident, we were quietly informed that such noise would scare all the game out of the country. Well, we promised to behave better when we were encamped, but gave them to understand that we were out for recreation and relaxation from business, and our good time wasn't dependent upon the quantity of game killed. I think the truth of this assertion was subsequently impressed upon them, and I know that we enjoyed ourselves very much.

The next day was spent principally in getting into camp and making things comfortable, although in the morning Dr. Davis shot a doe and Judge Wheeler a spikehorn buck. The latter was shot from a canoe on Russell Pond, on our way to camp. The following two days were also used up principally in the work of camp-making, although some hunting was done on the second day, Dr. E. A. Scofield killing a five-point buck having a very fine head.

Our camp consisted of a good log house, in size about 16 by 20ft., built by Captain Cole for a Mr. Jackson, of New York, in 1893. It had a cook stove, good bunks and a table; a cosy log hut about 6 by 8ft. in size, built at the same time for the use of guides. Then we had two tents with sheet iron stoves, one 12 by 20, and the other about 10 by 12. This hut was taken possession of and managed by Judge Peckham, who, after getting in about 1ft. of boughs and an old kettle with a small hole in the bottom for a stove, and finding a cover for it and stove pipe, did indeed have as comfortable quarters as any Nimrod could ask. The hospitality of this hut was also enjoyed by Dr. Davis, Hunt and Thornton, and a merry crew were they. The kettle weighed at least 25lbs., but is now a relic in the Judge's office in Jamestown, where it will serve as a gas stove.

Camp had scarcely been made when the only incident occurred to mar the pleasures of the trip, and which cast a gloom over the entire camp. Mr. Howard, who had been sick himself so that he had not been away from camp, received a telegram by special messenger one evening just about dark announcing the serious illness of his wife and calling for his return home. Knowing that Mrs. Howard had been in poor health for some time, the worst was feared. Mr. Howard started for home at 3 o'clock the following morning, and on arrival found that his wife had passed away the day he left camp. It was a great shock to him and to us, because Mrs. Howard had been better and more comfortable when he left home than for a long time before, and strongly insisted upon his going.

It would be useless to undertake to recall all of the interesting incidents of the trip, and it would not be profitable to relate them if I could. Dr. Davis is a great case to circle, and sometimes he circles to his own discomfiture. I remember meeting him one evening about sundown on an old road about one and one-half miles from camp, and traveling away from it. I asked him what he was doing there, and he said he was on his way to camp. I laughed and asked him if he wasn't lost. Just then he looked up and saw a bridge across the stream away north of the camp. A sort of sickly smile crept across his face as he said he knew where he was, he could see the bridge, and then reversed his course and started on his back track for camp. He was stopped and given a seat in the canoe.

Carver Hidecker is an old lumberman. He one day started out to hunt a bit (quite an unusual thing for him) along a newly blazed line, leading to Little Russell Pond, intending to meet his companions at the pond. He wandered off his course, and then endeavored to take a short cut to the pond. When he discovered himself he was in one of those fearful blow-downs common in northern Maine. He failed to find the pond, but arrived in camp some time during the afternoon. He still insists that it was the pond that got lost and not himself. On another occasion he was out with a guide and both became queered, but on this occasion he sat down and perused a novel, while the guide did the hunting to discover themselves.

Mr. Thomas, the patriarch of the party, being sixty-eight years of age, saw more game than all of the boys. Besides seeing a large number of deer, he saw two caribou, seven or eight moose and a bear. He had his principal experience with the bear. The bear, a very large one, was seen standing beside an old tote road with her head and forward shoulders extending into the road. He fired and she tumbled to the ground, but got up and wabbled off into the swamp. Investigation revealed the fact that the bear was seriously injured, and was bleeding considerably, but as there was no snow it was impossible to follow her but a short distance. Mr. Thomas was using an old .44-40 Winchester, and it didn't do the execution necessary to bring this large game to bag, as would likely have been done by one of the modern strong shooting guns.

Assistant District Attorney Hunt had his experience with a caribou. He had two standing shots. The caribou was standing broadside to him in an old road about twenty rods distant. He failed to kill or hit, said he was nervous. His statement wasn't doubted. This nervous feeling has at times come over others, as I am informed.

Dr. E. M. Scofield killed the only moose which was taken by our party. The head was not large, nor a very good specimen, but as it was the only one the Doctor ever killed, or shot at, he was naturally gratified at results, especially as he fired all his shots at a range of from seventy to eighty rods. He used a .30-30 smokeless, and is in love with it.

R. A. Hall, in company with James Reynolds as guide, probably had the most exciting experience. He was encamped on Scott Brook, with a few companions, taking a short side-hunt. About 4 o'clock in the afternoon he and his guide were on the brook in a canoe, when they discovered a monstrous bull moose standing in the water. The guide had no gun, and Mr. Hall was using a .44-40 Winchester, and something was wrong even with that, as it was totally wanting in penetrating force. The guide rowed Mr. Hall up to within 30 or 40ft. of the moose, and he then commenced pumping the lead into him. Eleven shots were fired at him in the water and upon the shore, and probably every one hit him, and yet he got away. The next day they followed the moose a long ways, but were unable to find him. Mr. Hall says the only time the moose showed any evidence of being hurt was when a shot struck him just back of the ear, when he shook his head and started to charge. Both Mr. Hall and the guide say that the spread of his antlers was at least 5ft.

Judge Wheeler killed his second buck and secured a fine set of antlers. I mention this because of the fact that the Judge has but one leg, having lost the other in celebrating the victory of Harrison in 1888, and to show you that a man of pluck and energy can kill game in Maine even though he be thus greatly handicapped.

Mr. Soliday had charge of the culinary department, and the responsibility resting upon his shoulders was enough to crush any ordinary man, but he withstood it all, and how we did live! Such meats, such johnny cake and bread, pies and any number of other good things! Yet notwithstanding all this responsibility he found time to kill his two deer, and one was a buck with a beautiful set of horns.

Dr. Smith, who cannot live any length of time without his "toast bread," killed his two deer within hallooing distance of camp.

It would cease to be interesting and make this article too long to follow the fortunes and luck or ill-luck of each individual member. Altogether we killed twenty-nine deer and one moose, besides a goodly supply of ruffed grouse, which were delicious for a change of diet. We saw one bear and another was driven out of an old hunter's camp, three caribou, sixteen moose and approximately 500 deer. Many were the standing shots at deer offered at a range of from five to eight rods which were not taken. They were does or fawns, and we had no use for them. Several good opportunities were offered for seeing and observing moose. The writer, in company with Bert Doty, the guide, sat on the shore of Little Russell Pond one evening just before sundown and saw a cow moose come out into the water and heard her call. In a short time a spike bull came out and the two had a splash and play in the water. Then going ashore they romped up and down the bank. Shortly after a bull, with a fair set of antlers, came out of the woods. The smaller bull was driven away, and the remaining two went into the water for a time, then went ashore again and more romping. Finally the cow went into the brush along the shore and the bull took to the pond and followed along down beside the bog splashing and making the water fly tremendously as he ran. The cow finally ran into the woods, and the bull returned to the pond. Here he stayed the greater part of the night. We camped by the shore of the pond that night by an open fire, without blankets, because we were six miles from camp, and it was too far to return. We could probably have killed the moose, but did not attempt to do so, as the season was not open. We had no canoe, and made no attempt to stalk them. Our mission to the pond was to see what the game prospects were, with the intention of returning later and bringing in a canoe if everything was satisfactory. This we did, but did not happen to see moose. After the moose season opened we did considerable hunting around the pond, and saw much sign made during the different nights, but as the weather was cold and raw, and the wind blowing every night, we did no night hunting. Dr. E. M. Scofield and Mr. Thomas had like opportunity of observing some cow moose in another pond near camp, and several were seen in Russell Pond by different members of the party.

Camp was broken Oct. 19, and we arrived at home on the 22d, in time to register, after spending a very pleasant day in Boston.

In closing, let me say that we were more than pleased with our guides. They were, one and all, extremely courteous and obliging, and anxious to do everything in their power to make our trip successful and pleasant, and fully succeeded in so doing. We can cheerfully recommend them to anyone desiring the services of guides.

Every member of our party has commented upon the hospitable manner in which the people of Maine receive and entertain their guests from without the State. We were, one and all, royally received and entertained by those with whom we came in contact, and made to feel that we were welcome to visit the greatest hunting and fishing grounds of this country. We expect to return.

E. E. WOODBURY.

In the Louisiana Lowlands.—IX.

BY FRED MATHER.

[*Continued from last week.*]

A LOT of crawfish had been gathered, and now was the time to utilize them. In the lobster country this small brother is not regarded as food, but it is very good, and in Germany it is bred for the table. To-day quite a number are sold in New York and New Orleans. But, as I am using a local name, it may be well to say that the English took the French name, ecrivesse, and turned it into "crayfish," and "crawfish" is a further corruption, but more popular. In some salt waters there is a spiny lobster without the large claws which is also called "crayfish." Our crayfish are almost miniature lobsters, living in fresh waters, some specimens burrowing through the levees and causing damage to the amount of millions of dollars, some living in streams under stones and some living on the prairies of Kansas, and burrowing down to water. Where Germans and Norwegians have settled they are called "crabs," after their German name "krebs." So much for the name, as necessary information to thousands who know the animal well, but never heard it called a crawfish. We have in America a verb from this noun, as "he crawfished," meaning that he backed out.

We had kept none under 5in., extreme length of body exclusive of claws, and had none over 7in., but we had about sixty. The water in the iron pot was boiling, and in they went, all alive and kicking. Dr. Gordon remarked: "They never make a kick after they strike the water, neither does a lobster, if the water is boiling. I believe it paralyzes the nerves, don't you think so?"

"Perhaps it does; they never stir after they strike boiling water, but perhaps they're used to it, as the eels are to being skinned. We eat fish which die from asphyxiation, although they would be better if killed at once, but a lobster that dies in the air is really poisonous, and that is why I always buy live lobsters and have them cooked."

"Now you've opened up a new subject which interests me. I have had to treat a case of lobster poisoning, and while you are frying the fish and boiling the crawfish I'll make the tea, set the table and listen."

The fish sputtered in the pan, and a big drop of boiling fat found rest between the thumb and forefinger of my left hand, and just then a change of wind filled my eyes with smoke. Here my notes are blurred and all remarks are lost. I only remember that Dr. Gordon stood looking at me for a moment and then remarked: "Language has its uses, but I do not remember to have heard it used as fuel before; you seem to be impatient with the process of cooking; fix your mind on Job and consider how patient he was for a long time, and here you let a trifling bit of smoke upset your temper."

Smarting in eyes and hand, the humor of the situation came to the fore at his reference to Job, and I said: "Job was all right in his day and time, and he was sorely tried, but he never camped out on the Atchefalaya River, and after days of mosquito stinging tried to cook his dinner with his eyes full of burning smoke and his hand burned with boiling fat at the same time that an old sawbones wants to know a lot about lobster poisoning. Go back to Job if you want to learn about boils, and perhaps you may learn how to boil lobsters."

Peace Spreads her Wings.

When all was ready we sat down to our dinner. The table, be it of mahogany, a stump, or a bit of canvas on the ground, is a treaty of amnesty; all hostilities are suspended and are temporarily forgotten. The man who brings up a disagreeable subject at table is an enemy to all mankind. This is the rule the world over. "Pistols and coffee for two." We may fight, but not at the table; there we bury the hatchet, if only for an hour.

We started in on the fried crappies at a safe distance from the smoke, which, Dr. Gordon remarked, "always follows beauty, and if the adage is true I wonder how it ever got into your eyes."

"That's dead easy, Doctor; it had no other way of avoiding you. Have another crappie; these are even better than the ones from Red River and Catahoula Lake. I wonder if they go down into brackish water; if they do, I don't know it."

When the crawfish were served there was a pause while I arranged the fillets of duck before the glowing coals, and the Doctor was awaiting my return. Said he: "I am in doubt just how these things should be eaten, whether shells and all, or how?"

I was pouring the tea and answered: "Open them and use them as if they were lobsters, that's all."

"I know nothing of the anatomy of a lobster, but have heard that there are poisonous parts. A while ago I ventured to speak of this, but between smoke and scalding fat you lost your temper so far as to speak disrespectfully of Job, and no doubt the equator might have come under your disapprobation at that time if any person had been rash enough to mention it."

Picking up a crawfish for illustration, I announced: "This is the first lecture on crustacean anatomy, the subject being the lobster and the related species. It will be short, for two reasons: First, the lecturer doesn't get a cent for his services; and second, his dinner is waiting. It is to be hoped that the audience will be attentive and will restrain their enthusiasm, for the rule of only one encore will be strictly enforced. Now, Doctor, you will observe that first I break off the head from the thorax, which in the lobster cannot be done, and throw it away. In the lobster we merely take out the stomach, which is just back of the eyes, and is one of the 'poisonous parts,' but as no one could eat it there is no chance of poisoning from it. It is something like a gizzard and has teeth, which when opened show the 'lady in the chair.' From the stomach there is no opening except the mouth, and as the owl ejects the skins and bones of mice, so does the lobster eject material that is not digestible. Then, all food that is assimilated is strained through that stomach, and forms green and white fats in the carapace, which are delicious in fresh lobster, but are lost when the meat is canned. Then, at the beginning of the abdomen, where the joints of what is called the 'tail' start, there is a green-colored drain-tube which runs to the vent, and this is the other so-called 'poisonous part,' but why any person should eat this intestine I don't know."

During this talk young Gawge came in camp. He was a "likely" boy of perhaps fourteen years old, and seemed diffident. He took off his hat and waited to be noticed. I had seen him standing behind the Doctor while giving the lecture on the lobster and its cousin the crawfish, and at a convenient time I noticed him and asked: "Is yo' young Gawge?"

"Yas, sah, I is, an' dey sayed yo' wanted fo' to go to de duck ma'sh, but didden' know whah he was."

"Yo's right, honey," said I, "an' yo' jess squatulate down heah an' fill yo' insides w'ile we gits ready."

"Pardon me," the Doctor interposed, "your disquisition on the lobster may be all right, but your attempt at darky dialect is a failure; the boy has no idea what you mean by 'squatulate;' that's some of your Northern coinage; let me try him. Ho, Gawge! Come heah an' stick yo' toof in owah poak an' chicken fixens."

He grinned, sat down and watched us eat crawfish; but when the Doctor offered him a dozen on a piece of bark he looked disgusted and said: "No, sah, I don' eat nun o' dem crawlahs; dey's p'ison."

He could not be induced to touch one; the argument that we had eaten them many times had no effect. Prejudice is a powerful thing, and is not to be put down by reasoning. The London boy in the country who wanted to go home and get good milk from the milkman because, "here they pull the milk out of a nahsty cow, I saw 'em do it," is a sample. An Arab, brought up on milk from mares, camels and asses, wonders why some people spleen against the milk of those animals, and we often run against a prejudice against frogs and eels, and all this is simply because they are unaccustomed foods to some people, who will not try to like them. George would not eat frogs, and here was a poor darky family living on hog and hominy, with an occasional fish or duck, declining to eat two things that are considered delicacies, the crawfish and the frog. The fried crappies were just to the boy's taste, and with the hardtack he made a meal before the ducks were served. But his appetite was of the full size ball-bearing, easy-running, self-lubricating, reversible action, non-assessable kind that, once started, was like Tennyson's "Brook," and as we had a desire to be hospitable the Doctor put in six more crappies that had been reserved for supper, for we intended to keep the teal for ourselves, as eating crawfish is as unsatisfactory as eating peanuts, one never gets enough, and can't stop until none are left.

The southern breeze that came up the river day and night made our camp delightful, because it kept off the mosquitoes, which, having no keel nor centerboard, can only go with the wind. After dinner we lay down and slept. What George did, or what he thought about an after-dinner nap, we did not know; but when I became conscious it was 4 P. M., and the boy was seated on a log with his bare feet dangling in the water. The Doctor soon aroused, and we arranged to go to the ma'sh where the ducks came at sundown; and here a new question arose.

"Doctor, this old tub of a boat is all right to float down stream in, but suppose this marsh is some miles down the river, how will we get back? In my younger life I thought myself a fair oarsman, but would have hesitated to take an old water-soaked packing box like ours a great way up stream."

The Doctor reflected a minute before he said: "The river is wide here; there is but little current, and the wind will be with us coming back. How far is the ma'sh, George?"

"Jess yandah, sah, awn de oder side in de grass you see aroun' de bend."

"Not a mile," the Doctor remarked, "we're good for that, I think; what do you say?"

"Of course we're good for that; I can swim that distance, and tow the old tub if you'll pole a little. Let's get the guns and ammunition aboard, and get over and build our blind. The only drawback is that we have no light boat to chase cripples and pick up the birds."

The boy said: "I'll swim out fo' de ducks."

Among the Ducks.

We had already limited our killing to six blue-winged teal to be taken to New Orleans, as has been related. The marsh was in a bend of the river, and covered several miles. We had no decoys, but we had some poles, over which we laid grass, and waited. Along about sundown the sharp-eyed boy jumped up and yelled: "Dah he come!" and a flock of pintails swerved to the east and passed us out of shot.

"George," said I, "many are the men and boys that I have killed for scaring game away, but I don't want to kill you, 'cause you's a good boy. But I'm a Yankee, an' a Yankee jess likes to kill a darky boy an' cook him fo' his dinnah. Didden yo' fader tole yo' I was a Yankee? If he didden, den heah's Dr. Gawden'll tell yo', an' if yo' yells out w'en de ducks is a-comin' in, Gawge, I'll hab to 'cide ef I has ducks fo' dinnah o' a roas' darky boy. I doan lak fo' to kill yo', but yo' mus' keep still an' not 'larm de ducks."

"Very good! Better dialect," said my friend. "Now George, you must keep down and keep still. When you see ducks coming say 'Mark!' in a low voice or our Yankee friend may do as he says, fo' he's a sho 'nuff Yankee, an' he might think that he would rather eat yo' than a duck. Yo's heard 'bout Yankees?"

With his eyes fixed in a stare on my face and almost a pallor on his face the horrified boy managed to say: "I'se heered 'bout 'em, but he doan look lak a Yankee. I'll keep still, but yo' ain' no Yankee, is you'?"

"Yes, I am a Yankee, but I don' eat colored boys now, 'less I hab to kill 'em fo' scarin' ducks away. If yo' keep quiet and do as Dr. Gordon says, yo' will go home to yo' mammy safe."

The ducks came in and we could have slain hundreds. Our forbearance puzzled the boy then, and perhaps he does not understand it to this day. Our limit was six blue-winged teal, for green-wings were scarce. But a flock of green-wings came over and we gathered in four of them.

Said the Doctor: "We did not count on these small ducks, hardly as large as a pigeon, but let us rate them at two for one blue-wing in weight of meat, how do you rank them in the epicurean sense?"

"Higher than the blue-wing, and that's very high. But tastes differ as well as ducks, and I know men who prefer green-wing teal to any duck." A flock of ducks was coming up, and we were watching them, when they whirled away over the stream and might have turned and come our way, behind the island, but the excitement was too great for George, who jumped and called out: "Yandah he go!" Then he caught my fixed gaze and collapsed. Every time he raised his eyes he met the same gaze. He picked at his fingers and was wishing himself safely on shore, but in all his after movements he kept the Doctor between him and that gaze.

A single duck came over and the Doctor winged it, and now George saw his chance, and in he plunged to catch it in water almost knee deep. The duck would dive, and the boy could see it in the shallow water and would rush to head it off, for with one wing broken it circled about, and once I might have shot it, but the boy was in the way. He splashed and tumbled after the bird for a while, but lost it in the marsh and returned with his two garments dripping. He spoke to the Doctor: "Sometime I mos' fotch him, an' den he gwine undah, an' I run hard fo' him an' 'spec' to fotch him w'en he come up, but I fall down an' he crawl in de grass, an' w'en I get dah he gawn." He would occasionally glance my way, but I had punished him enough, and no longer stared at him in a cannibalistic manner.

A Few fo' de Fambly.

We had our allotment of six blue-wings, or their equivalent, when I said: "Doctor, we have reached the limit where we agreed to stop shooting."

"All right, we'll go to camp."

"Doctah, mommy say w'en yo's got mo' ducks 'an yo' want, yo' might send some fo' de fambly."

"How many in yo' fambly, Gawge?" the Doctor asked.

"Dah's me an' Ben an' Pete an' Bill an' Jo an' Mose an' Kate an' Lucy an' Sue an' Lindy, I 'spec's dat's all."

"That's ten children, and the old folks make an even dozen. The ducks are coming in thicker now. What d' ye say, shall we load the boy up?"

"Yes, it's a fair excuse for more shooting; there will be no waste. Mark behind." A big flock of pintails came fairly over us, and the four barrels brought down seventeen ducks, of which only one got away, although we had to shoot two of them again. "Only eight more," said the Doctor, "to make just two apiece 'fo de fambly.'" That was a good start. The next flock yielded six "Two more," said the Doctor, and a bunch of blue-wings came past and left us seven. "And that's good measure," was the Doctor's remark.

As George lived on that side of the river and knew a short cut to the road, he gathered his ducks and proposed to carry them home. "Let's see," the Doctor soliloquized, "twenty-two sprigtails, twice two are four; and a half make 11lbs. more, that's fifty-five, and the teal." Then aloud: "Why, boy, there are over 60lbs. of ducks, and you've got four miles to go. You can't do it. Make two loads of them and you'll have all you want to carry then."

Concerning a Mink.

We strung half the ducks on a string through the under bill, and tying the ends of the string, put it over his left shoulder and under his right arm, as a soldier carries his blanket in the field, the ducks equally divided in front and rear. He wanted to leave the rest of the birds on a hummock until he returned. As he could not return under three hours, and the sun had gone down, I overruled his proposition by saying to the Doctor: "We have killed these ducks to be used as food, and we must see that they are so used. I will not agree to leave them in this marsh, for I know what occurs after dark here as well as I know what is sure to happen to an unprotected duck on the Bowery after the shades of night have fallen. One mink has a good nose, twenty minks have twenty good noses, and as soon as it is dark there be scores of mink hunting crippled ducks and other prey in this marsh, and coming on a pile of ducks there would not be one left beside the stake which we planted to mark the spot where the game was left. These ducks must go to our camp, where the boy can surely find them, even if he travels further."

"But," said the Doctor, "I have understood that the mink only sucks the blood of living creatures, and if so, why should he carry off ducks that are dead, and which yield no blood?"

The boy had gone, for I had spoken authoritively, and as we poled toward camp I found occasion to say: "You have a wrong understanding of the habits of the mink, but your view of the habits of this animal is the popular one. I can't work hard and talk at the same time. You pole over to the east side of the river, where you remarked that there was no current when we came down, and I will steer and unfold unto you the true character of the mink."

When we got into the slack water I resumed: "A mink loves warm blood, and if one gets into a hennery, a duckery or among other birds where it can load up on warm blood there is hardly a limit to the number of fowl that it will kill. Such an orgie seldom happens more than once in the life of an individual mink. If it comes to one it is the event of his lifetime. He enjoys it as Jack does a night in the Tenderloin after being penned up on a cruiser for six months. Fresh, warm blood in quantities *ad lib.* are in the nature of a grand carouse to a mink, but not any part of his every-day life. His food is meat, but he will discard meat for warm blood if it is on tap, just as we will discard our hardtack for soft bread when we get to New Orleans. I speak by the card, because in my younger life, as a trapper, I often took the mink with baits of chicken, fish and partridge, and they have killed my pet wood ducks by the dozen when they found an opening in the pens."

The Last Night on the River.

It was very dark when we reached camp, and it might have puzzled us to find it if the few coals from our fire had not indicated it. The moon was past the full and would not be up for some hours, and but few stars were visible.

"Doctor, we are hungry, and if you remember there is nothing to eat in camp but hard bread and butter. The fish that we had cleaned and laid by for supper you fried for that ever-hungry darky boy, there must have been a dozen at least. What will we do?"

"Eat bread and butter, I suppose, for the ducks are too freshly killed to eat. There are frogs enough bellowing around us, but it's too dark to get them. What do you say?"

"I say that bread, butter and tea are not enough, and as you say the ducks are too warm to eat. Just skin out the breast of one of the boy's pintails and I'll get a catfish supper out of this river in short order; they are night feeders, and while I fish you gather some wood and have everything else in order."

With a strong hand-line and a dozen fair-sized hooks I ran out a set-line baited with duck, for there was no time to fish in the regular way. The line was staked out at each end, and ran out a hundred feet. Then I went ashore and was seated by the fire when the Doctor came in with a load of dry wood.

"I thought you were fishing!"

"I am."

If the Doctor was curious to know how I was fishing he said no more, but peeled bark for plates, and went on with his work. Bark plates, burned after each meal, are away ahead of the tin abominations which need washing. After a while my watch said that the line had been fishing twenty minutes, and I jumped into the boat and took it in. Of the twelve hooks, four were skinned and the others had one big, soft-shelled turtle, two medium sized eels and five catfish weighing from 1 to 6 lbs. Here was supper and breakfast too, and I took the overcoats from those eels and from three of the smaller catfish in short order, for in boyhood days I always prepared my catch for mother's table, and I was expert in relieving a bullhead or an eel of his jacket, and the Doctor had them in the frying pan before they had time to make his acquaintance. An appetite is a thing that improves with age, up to a certain point, where it vanishes. The odor from Doctor Gordon's pan stimulated a rather fagged appetite and increased its energy.

"Don't you think they are done, Doctor?"

"Just about done. You pour the tea and I'll just fry a couple of these hardtack that I have soaked in water. Here's an eel to begin on."

Verily, Louisiana is a land of plenty. If a man could get along without bread he could live for years as we lived. The woods and the waters would furnish food, and if he lacked ammunition he could get fish and game by more primitive methods, if he knew how to spear and trap. The De Long party of wrecked arctic explorers perished in sight of game in Siberia because there was not a woodsman in the party. To them the footprints of the nocturnal arctic hare meant nothing; the deer did not stand to be shot, and they starved amid plenty. Perhaps the same party might have starved in the Louisiana lowlands, surrounded by a wealth of life, but we never came near the vanishing point of hunger, nothing more than what they call being "sharp set," across the water.

We had smoked, and were lying on the canvas after a full feed in what I call "hog comfort," and it must have been a full hour before my friend remarked: "It's about time the moon came up; it's nearly 11 now by my watch."

Voices across the river were coming nearer, and as we heard men getting into the flatboat we knew that some one was coming for the ducks. We listened and heard: "Yo', Mose, yo' ain' pushin' hahd; I kain stee'; an' ef yo' doan push, an' we'll go down de ribbah."

"I'se a-pushin' awn mah pole, but Ben and Pete is bofe awn he uddah side, an' I'se done ovah. I sees de fiah fum de camp an' I'se wuckin' to get dah, but dem boys boun' to push me down ribbah."

"Yo', dah, Ben an' Pete! Doan push so hahd ag'in Mose, o' we doan go 'cross."

When they landed, young George was not with the party. His father explained that the boy was afraid to come back for the ducks. "'Cause," he said, "dey was a man who said he was a Yankee and dat he sometime eat a cullud boy, an' he look at him 's if he like to chaw awn him. But I tell him dat Yankees is lak oddah people; but he doan want fo' to come."

We gave them the ducks, the turtle and the two big catfish, and as they left I called the Doctor's attention to the fact that there was nothing in camp for breakfast, and that we must be ready to start for Plaquemine some time to-morrow, and that it might be after dark when we got there, and being human we must eat on the way.

"My dear boy," said the Doctor, "the richness of the fried eels and catfish may disarrange your internal economy, and I advise that you take these pills. As for a supply of food, I have so far relied on you for it, and there seems to be no reason why I should not rely on the same source for what we need on the morrow."

"Thanks, Doctor; but if you will get up early and catch fish enough for breakfast I will feel that you have no reason to rely entirely upon me for our sustenance; good night."

[TO BE CONCLUDED NEXT WEEK.]

Mr. Lee's Alaska Game.

HUTCHINSON, Kan., Nov. 5.—*Editor Forest and Stream:* Your favor of Oct. 29 has just been forwarded to me at this place. As I am here for a few weeks, having some grand sport shooting quail and chickens, I note what you say about reprinting my interview with the Post-Intelligencer. There are some statemens in that interview which are not as I gave them. It states that each animal was shot behind the ear, which is not at all correct. I shot a few of the animals in the head, while others were shot through the neck and some back of the shoulder. You will kindly make this correction.

I shall send you a photograph, which I had taken at Seattle, as it gives a much finer view of the heads and with it shall send a description in full of my hunt, which I think might be interesting to brother sportsmen.

I have been a constant reader of FOREST AND STREAM for twelve years. HARRY E. LEE.

The Ascent of the Grand Teton.

ST. PAUL, Minn., Nov. 7.—*Editor Forest and Stream:* My letter to FOREST AND STREAM, which was published in your issue of Nov. 5, was written in reply to the letter of W. O. Owen which appeared in an earlier issue of your paper. I had not then read Mr. Owen's letter which appears in conjunction with mine in the Nov. 5 issue of FOREST AND STREAM.

This last letter of Mr. Owen contains so many glaring but artful untruths, which, if not denied, may be believed by your readers, that I ask in behalf of myself and the truth-loving mountain climbers of the clubs of America space sufficient to direct the attention of those who are most interested in this question to these misstatements.

In referring to my statement in Scribner's Magazine for June, 1873, relative to the knobs surrounding the Grand Teton, Mr. Owen says, "There are no surrounding knobs," etc. I answer that there are such knobs or pinnacles, and that the photograph taken by Mr. Owen, and published by him in the New York Herald of Sept. 18, shows three knobs or pinnacles in addition to the main summit.

In speaking of the ice sheet, Mr. Owen declares that in my Scribner article I say that Stevenson and I (I quote from Owen) "climbed over it for a distance of 175ft. by kicking steps with their feet in the *hard, blue ice.*" (The italics are Mr. Owen's.)

Mr. Owen here gives utterance to a plain falsehood; and to intensify the deception he italicizes the false quotation. There is no such statement as that which he pretends to quote to be found in my article. That magazine may be found in the public libraries, and I ask every one who desires to ascertain the truth to examine my article, when this false statement will be apparent.

On page 143 I speak of this ice sheet as "a coating of ice and snow"; and a fair inference from this statement and subsequent references to it, show that it was not "hard, blue ice," but a honeycombed mixture of ice and snow, such as we find on a mountain side, rapidly disappearing under the influence of the sun's rays. Mr. Owen also tries to make it appear that I assert that we climbed the face of this sheet of ice and snow. On page 144, line 6, I distinctly state that we climbed along the side or edge of the ice sheet, and made the ascent by "laying hold of the rocky points at the side."

Mr. Owen, in presenting what he claims is a plausible reason why I still maintain my claim to having reached the summit, says: "Capt. Langford at the time of his alleged ascent was chief of a division of the Hayden Survey."

This statement is absolutely untrue. I have never been even a member of the U. S. Geological Survey. The nearest approach to it by me was the suggestion of Dr. Hayden, made on the occasion of the union of the two branches of the Survey in 1872, that there be created an honorary membership, in which I might be included; but nothing ever resulted from this suggestion. My relations to the Survey at that time are shown from the following quotation from Dr. Hayden's report for 1872, page 5:

"N. P. Langford, C. L. Spencer and Dr. Reagles accompanied the Snake River Division from Fort Hall as guests."

Mr. Owen asserts that Beaver Dick was one of the ascending party, and to back up that assertion he publishes the affidavit of William A. Richards, who swears that Beaver Dick, on or about June 30, 1874, stated to him (I quote from the affidavit) "that he was one of the party, and knew just how far up the mountain Langford and Stevenson had gone, and knew that they had not reached the summit."

This statement illustrates the recklessness and disregard of truth with which Mr. Owen makes his most positive assertions. On page 140 in my Scribner article I say that our ascending party was composed of fourteen persons. Hon. Robert Adams, Jr., now Representative in Congress from the 2d Pennsylvania District, Philadelphia, was one of our ascending party. He was a member of the U. S. Geological Survey from 1871 to 1875, and in 1872 he was correspondent of the New York Herald. In a letter to that paper dated Aug. 1, 1872, a copy of which I have in my scrap book, where it may be seen by any interested person, he says: "The next morning the party of fourteen set out from camp: James Stevenson, Prof. Bradley, Mr. Taggart, Mr. Beckler, Mr. Hamp, Mr. Coulter (botanist), Mr. West, Mr. Langford, Dr. Curtis, Dr. Reagles, Messrs. Adams, Spencer, Keyser and Sherman."

Mr. Adams here gives the names of the fourteen of whom I speak in my Scribner article. Beaver Dick's name (Richard Leigh) is not in the list. Where then was Beaver Dick while we were making the ascent? Mr. Stevenson had sent him and Shep Medary in search of a feasible route over the mountains to the Firehole geysers, and on the day of our ascent, and for several days both prior and subsequent to it, he was engaged in this service. This statement is not an afterthought; the fact was recorded by me twenty-five years ago in my Scribner's Magazine article, on page 148, in the following words: "Beaver Dick and Shep Medary, who improved the time we had spent in visiting the Tetons by exploring a route for our train over the main range, returned into camp with the report that by following up Middle River we could pass over a divide at the head of that stream into the basin of the Firehole River."

Beaver Dick knew that he was not one of the party making the ascent, and it is evident that Gov. Richards did not rightly understand him. Beaver Dick was the guide of the Survey; but on the day of our ascent he was fifty miles away, as the above record clearly shows.

I have no doubt that Gov. Richards intended to state the exact truth when he made his affidavit on Oct. 4 of this year but a quarter of a century is a long time for a busy man in active political life to look back and to accurately recall the details of a conversation of this nature. In my opinion Beaver Dick's statement was misunderstood; but I leave the matter for all who are interested to judge whether Gov. Richards is probably mistaken or whether Beaver Dick's memory of these events had so failed that he made a statement which, on reflection, he would realize was incorrect.

Hon. Chas. N. Potter, Chief Justice of Wyoming, says of Mr. Cooper: "I would have no hesitation whatever in accepting implicitly any statement made by him."

Judge Potter's good opinion of Mr. Cooper will not be shared by everybody. Mr. Cooper swears that he was a member of the U. S. Geological Survey in 1872. Mr. Henry Gannett, Chief Geographer of the Survey, and a member of it in 1872, says that Mr. Cooper was not a member in 1872. Mr. Cooper also swears that he was a member of the Wheeler expedition in 1872. The Wheeler expedition of 1872 was under the direction of the War Department; that of Hayden was under the direction of the Interior Department, and they were not connected. Was Mr. Cooper at the same time a packer in both the Wheeler and Hayden Surveys, separated by long distances and mountain ranges?

Mr. Cooper also swears that at the time in 1872 and 1873 when he was with the Wheeler expeditions he was personally acquainted with me as one who had charge of a division. In regard to this I say, what the members of the Geological Survey know, that I was never in the field with the Survey except in the year 1872, and that I was never a member of the Survey, nor had charge of a division. During the entire summer of 1872 I was with the Stevenson branch of Hayden's Survey. I did not even know of the Wheeler expedition until long after. I now know that Cooper never saw me. His affidavit, well prepared in some respects, exhibits the inherent weakness of a declaration which, having a slight coloring of truth, is chiefly notorious for a disregard of facts.

Which of these statements of this reliable man would he have us believe? They cannot both be true, and yet he swears to both. Whether the one or the other be true, the oath of Mr. Cooper does not make either one more worthy of credence.

From Mr. Cooper's affidavit concerning his ascent of the Teton I quote the following: "The aneroid given me by Prof. Hayden, especially for this trip, showed an altitude slightly in excess of 13,000ft.—the exact figures I cannot recall, but I made a careful note of them at the time, and subsequently gave them to Prof. Hayden."

Does anybody believe that Mr. Cooper, a packer in the Survey, possessed the technical knowledge necessary to compute from an aneroid registration the height of a mountain, or that he made such a computation "at the time," as he swears? I leave the answer to this question to those who know how to make such computations, for I do not know how they are made.

As it is evident that very many of the statements made by Mr. Cooper in his affidavit are untrue, it becomes an open question which each interested person will answer for himself whether any portion of Mr. Cooper's affidavit is entitled to credence. An examination of it will furnish to any one who is interested only in discovering the truth abundant evidence that the declarations imputed to Mr. Stevenson were never made by him.

Mr. Owen, in support of his claim, quotes from a letter from Mr. Gannett, well knowing that Mr. Gannett had on investigation altered his views, and had so written to Mr. Owen. Mr. Gannett says in his letter to FOREST AND STREAM that Owen "should have told not only the truth, but the whole truth," and should not have quoted his first letter and omitted the second.

Mr. Gannett's recognized abilities and the responsible position he occupies in the Geological Survey entitle his opinion to the highest consideration. Mr. Owen's attempt to establish his contention by publishing as Mr. Gannett's opinion what he knows is not his opinion, and thus alleging to be true what he knows is not true in this respect, taken in connection with the other misstatements herein referred to, reveals the character of a man destitute of any high ideal of moral honesty.

The barometric computations from the aneroid which I carried were made by Mr. Gannett. They show that I reached the same elevation on the Teton as that attained by Mr. Owen. It is a fortunate circumstance that Mr. Gannett is still living to give to an interested public, and especially to the various mountain climbing clubs of America, the truth connected with the history of an event which, with the lapse of a quarter of a century, has passed out of the memory of nearly all those who were not directly connected with it.

Mr. Owen attempts to ridicule the statement that I carried an overcoat to the summit, and also that I found mosquitoes at that great elevation.

It was for the purpose of freeing myself from all unnecessary weight of clothing that I left in the camp my camping coat and wore a much lighter overcoat, and none other. Mr. Owen need not worry over the thought that I burdened myself with two coats.

Mr. Owen thinks that my statement that we found mosquitoes at our greatest elevation is conclusive evidence that we reached only the slab inclosure. On this point I have the testimony of Mr. Adams, who himself reached a point hundreds of feet above the line of perpetual snow. In his letter to the New York Herald he says: "Mosquitoes too extended far above the snow line, and undauntedly attacked us during our progress." If mosquitoes can live far above the snow line they can live on the top of the Grand Teton.

These straw arguments at which Mr. Owen grasps are too frivolous and puerile to demand respectful attention. It is incomprehensible how an intelligent man can present such as they are in trying to bolster up his claim.

Mr. Owen still seems to think that the strongest proof that Mr. Stevenson and I did not reach the summit is found in the fact that we erected no cairn nor monument. He says: "I desire to place especial emphasis on the fact that our most critical, conscientious and thorough search failed to reveal the slightest shadow of a former ascent. Not a stone was turned over, no cairn or monument erected."

I accept this challenge as a test of the fact at issue, and submit the matter to the judgment of the mountain climbing clubs of America.

Apropos of this argument, the following quotations, which I am permitted to make from a recent letter to Warren Upham, secretary of the Minnesota Historical Society, from Prof. Charles E. Fay, the editor of Appalachia, the journal of the Appalachian Mountain Club, is most interesting. Prof. Fay writes:

"On the occasion of a most attractive first ascent in

the Canadian Rockies this past summer, I failed to erect a cairn in evidence of this first appearance of man on the spot, familiar as I am with the fact that custom among mountaineers almost requires the formality. Had I not, by a not unmitigated misfortune, left behind me one of my pairs of goggles—the green glass of which is at least indestructible, and which may at the proper moment escape being covered with snow—our visit would lack all possible substantiation, if any one saw fit to assert that my series of photographs, made from the summit, were taken from points much below the same."

In Mr. Owen's disregard of facts, and in his attempt to gather and knit together these odd ends of defamation, having their origin for the most part in rumor and hearsay, for the purpose of piecing out a consistent calumny with a web of a little truth and more falsehood, we have a realization of the truth of a sentiment uttered, if I mistake not, by the distinguished Lord Clarendon. "The judgment of God," said that nobleman, "will be plainly visible in infatuating a party ripe and prepared for destruction." NATHANIEL P. LANGFORD.

Natural History.

About Trees.

BOSTON, Mass., Nov. 6.—*Editor Forest and Stream:* The article "About Trees" in your last issue is by one of the most careful observers and accurate reporters of things odd and interesting in nature. I should think more of his dictum than that of almost any other man personally known to me. If, as he thinks, the common notion that just as sap ascends in the spring it returns in the fall is wrong, Mr. Hardy has started a very interesting discussion, and one which I hope will stimulate observation and give us the result in FOREST AND STREAM. I am unable to contribute anything of value, having merely accepted the common idea that sap returns in the fall, though supposing it to be in much reduced volume. I have, like Mr. Hardy, heard of maple syrup being made from sap drawn in the fall, but supposed it was the returning sap, and that the fact that trees were seldom tapped at that time was because the fall flow was small. Mr. Hardy's arguments are strong. If growth and expansion depend on sap then the swelling of buds in fall and winter prove the presence of sap.

Mr. Hardy's experiments proving the enormous pressure required to "send sap up through solid wood" are most interesting. I, however, suspect the possibility of an error in his conclusion. It will be remembered that his bit-hole was plugged with dry poplar, and that when a piece 4in. long was tried the resistance was such that the "sap ceased to force its way through to the end and began to creep out at the sides about half an inch from the end." Now, I suspect that dry poplar and living rock maple are two very different things, and that in the latter the sap has not a resistance to overcome, but finds the lifting power itself, which draws it up, instead of a resistance to be overcome by some hypothetical vis a tergo. That the tremendous bursting or lateral pressure spoken of by Mr. Hardy exists there can be no doubt whatever; but I suspect that to explain it we shall have to know something of what "life" means. When we can tell just why water leaps up through a lump of dry sugar or in a capillary tube, in such direct opposition to its ordinary action in seeking the lowest level, we may have taken the first step in our explanation of the ascent of the sap in a tree, but is it not likely that another will be made when we know just what is involved in the phenomena of endosmose and exosmose, and still another, and the greatest of all, when we go beyond mechanics and find what life means and the exact difference between inanimate and animate tissue?

My suspicion is that sap is drawn up, and not pushed up. But whatever be the power and however it may be applied, it is certainly tremendous. The physical power of the plant organism we have all seen exerted where trees growing in the cleft of a ledge have pried apart, lifted and sometimes thrown over heavy masses of rock, and I believe a case is on record of a tree growing up through the hole in the center of an abandoned millstone, and eventually lifting the stone, and still growing, sustaining the whole weight of the stone on the expanded portion near the root. I cannot give chapter and verse for this, but often heard of it when a boy, and think the case was well known in my neighborhood. The discussion reminds me of an experiment made at the Amherst Agricultural College some twenty-five or more years ago to test the physical force exerted by a growing squash. As I recall it the test was made by placing a lever across a growing squash in such manner that by attaching weights to one end of the lever the pressure on the squash could be accurately computed, the weight being gradually increased until the squash, without rupture of tissue, lifted and sustained the surprising weight of nearly 3,000lbs.! The natural reflection of almost every one would be, I think, like that of a friend of mine, who vowed he should think it would "squash the squash."

If such a soft tissued thing as a squash plant has a sucking or pumping apparatus equal to such a performance, what may we not believe possible of such an iron-limbed tree as the rock maple of our Northern hills!

Since my letter, like Mr. Hardy's, is mainly "about trees," let me mention, as I did some years ago in these columns, the notion prevalent in some quarters that birch trees are never struck by lightning.

My old guide, T. W. Billings, of Brownville, Me., often spoke of the notion, and took delight in pointing out to me a practical refutation of it in the case of a tall young birch near the Gulf road, above Katahdin Iron Works, which had the telltale streak of a lightning bolt nearly the whole length of it, though it was still alive. During my recent trip to the Maine woods I discovered another undoubted instance of a lightning-marked white birch. Why the birch should ever have been considered "immune" from lightning I never knew.

Again, as to the more rapid rate of growth of the white pine as given by the college professor, I can corroborate Mr. Hardy. There is at this moment—unless cut within the past year—on a piece of land in Boscowen, N. H., adjoining what was my father's farm, and which was bare pasture when I was a boy, a sturdy growth of white pine, many of the trunks of which are at least 18in. in diameter a foot from the ground. This growth cannot be more than forty-five years old.

As to Mr. Hardy's inference, that because the same tree produces material so different as bark, leaves, nutshell and nut fruit, the sap must be of varying quality, I do not see why this follows any more than different qualities of blood in the human system are to be inferred because from the blood is drawn that which nourishes such diverse substances as the bones, nails, hair, muscle and nerve tissue, and the lenses and fluids of the eye.

Must we not in this case also look to the mysterious selective power of the organism, the attribute of life, for the explanation of what is accomplished?

It is true that I cannot answer Mr. Hardy's question, and that I am equally with him desirous of having it answered; but I am sure he will tolerate my suggestion that, however much we may learn of the mechanics of these wonderful performances of plants, we are likely to find that the final reason for them cannot be given in terms of mechanics. C. H. AMES.

The Shedding of Deer's Horns.

NEW YORK.—Will you kindly give us your decision on a discussion a number of us had. Do the deer drop their horns each winter, and go without horns for several months? Also, how soon do they grow again? Some of the party claimed that when they drop their horns new ones are immediately seen, in other words, the outer part of the horn peels off. The other party claimed that the entire horn falls off, and it takes several months for the new one to appear. By giving your opinion on the above, you will greatly oblige J. S. EHRICH.

[It is not a matter of opinion, but of observed facts. The deer drops its horns annually, in the fall or winter, or sometimes in the spring. As observed by Judge Caton, "When the antler is dropped in the fall or winter the periosteum which surrounds the pedicel, or the process of the skull on which the antler grows, the edge of which was left naked and bleeding when the old antler was cast off, commences extending itself over the naked end of the bone which it surrounds, and which constituted the seat of the antler, and in a few days at most it has closed over it, and consists of a thick vascular naked covering with a black cuticle, and in this condition it remains, just fairly filling the concavity which is left by the lower convex end of the discarded antler. This vascular covering forms no more during the winter, but the blood circulates moderately through it. This remains in a quiet state till spring, when vegetation begins to shoot forth and a scanty supply is procured by the deer. Then the top of the pedicel rises up in convex form, assuming first the appearance of a great blood blister. Now the antler commences a longitudinal growth, the top maintaining its convex form, while the beam attains at once its full diameter; and so it grows in length, but never appreciably in thickness. When the beam has attained the height where it is to throw off a branch, it first becomes flattened at the end, and then bifurcation takes place, and the two parts grow on pari passu, ever increasing in length, but not in diameter, that which is to be the longest growing faster than the other, and so on to the completion of the external growth, so that all the parts shall be completed about the same time. When this growth is finished externally, the circulation of blood along the antler becomes slower and at last ceases. The vascular covering, called the velvet, and which consists of the periosteum overlaid with a short, dense fur, is rubbed off by the animal against small trees or other convenient objects."

The process is described at length in Judge Caton's work "Antelope and Deer of America."]

A Note on Buffalo.

A PRIVATE letter dated in October, from Uinta county, Wyoming, gives the following notes on buffalo—or as they are more commonly called by mountain men bison—just outside the Yellowstone National Park. The announcement that a calf was following the cow is the more interesting because most reports this year from the Park affirm that no calves or signs of calves have been seen there this summer. We are disposed to think, however, that some calves have been born. The writer of the letter says: "This spring we saw where a buffalo cow had wintered in the Wind River range, and this spring she went back toward the Park, and had a calf with her. Also, one of the guides saw where some buffalo, three or four, were running between the Buffalo Fork of the Snake and the headwaters of the Gray Bull and Stinking Water.

"Bears are certainly increasing here. I suppose that it is owing to the small number of trappers, and the overflow from the Park. I hope that the Park will be enlarged."

A Maine White Deer.

Editor Forest and Stream:

Mr. J. R. Hegeman, Jr., the well-known sportsman and hunter, is the lucky man. For several years strange, weird stories have come from guides and hunters in the neighborhood of Mount Katahdin of a ghost or phantom buck of enormous size having been seen in this mountain. Many so-called crack shots had fired at the animal only to see a white object disappear into the forest. Guides became superstitious, believing the strange animal was protected against bullets by some special providence. However, such was not the case, as has been proved by Mr. Hegeman. He was hunting with his guide toward the top of the mountain, when they saw through the brush some strange white form standing between a good-sized pine tree and some large boulders. They could not distinguish just what the object was, as the tree and brush hid most of the body.

As the animal had not been startled, the hunter watched it breathlessly for a few moments. Suddenly a pale reddish-colored head of a buck with magnificent antlers marched down in the brush to nibble some food. The head surmounted a snow-white neck and shoulders, and looking the other side of the tree could be outlined the pure white hindquarters of the animal. The head partly disappeared again and left no shot except one which was most difficult to calculate on.

Carefully outlining the body, Mr. Hegeman figured out the position where the vital spot would come behind the tree, and taking careful aim, fired deliberately through the pine tree and into the buck. The ball, having flattened somewhat, entered the deer in the proper spot just back of the shoulder, dropping him in his tracks.

The deer was undoubtedly the long-hunted phantom, and is said to be the strangest specimen of an albino that has ever been seen or captured. The entire body is snow-white, with the exception of a few reddish spots on the shoulder. The head is a light reddish color, mixed with white hair reaching down to the nose and under jaw, which are also white. The feet are black as coal. The deer weighed 240lbs., when dressed, an exceptionally heavy weight. W. W. H.

A Red Squirrel which Turned White.

BREWER, Me., Nov. 8.—Yesterday I obtained a most remarkable specimen of red squirrel, not so much on account of his color as the fact that we have positive proof that since June he has changed from the common color to nearly white. Last June we saw a red squirrel in our garden. This is a very uncommon thing, as we are over a mile from any trees except shade trees, and do not see a squirrel here once in a good many years. He kept visiting us quite often. In September, when my daughter was picking crab apples, he several times came into the tree close to her, and then was quite light in color, and she saw and told me that he had a notch in one ear as if it had been bitten. Lately, men working for me have several times told me of seeing a white squirrel in my garden. Yesterday I shot it, and it proved to be the same one, as the notch in his ear proved conclusively. He had a quite dark head to the ears. All the rest of his body is white, tinged with reddish gray, but looking pure white a short distance off. His tint is like that of any red squirrel, but shows signs of changing color at the base.

I have seen a great many albinos of many kinds of animals and birds, but this is the first instance I have ever known where it could be proved that one became white by changing color. I omitted to say that his eyes were the common color, instead of being pink, as is usual in albinos. M. HARDY.

The Ways of Roots in the Ground.

Editor Forest and Stream:

A peculiar phenomenon, which might be classed as a case of "natural selection," has recently come under my observation, and might prove of interest to your readers. Some twenty years ago, my grandfather permitted the body of a person who died without relatives or friends to be placed in his burying lot. The lot having since become somewhat crowded, it was found necessary to remove this body, which had been placed in a simple wooden coffin for interment. When the grave was opened for the purpose of removing the body, it was found that nothing remained of it but a few teeth and some hair. But now comes the remarkable part. Near the head of the grave grows a medium-sized cedar tree, a root of which had entered the grave at its head, and had continued its growth throughout the length of the body, branching at the limbs and continuing throughout their length. Branches had also left the main root at the shoulders, and had assumed practically the shape of the arms. The root was detached from the tree and reinterred. WARREN.

MISSISSIPPI, Nov. 7.

[This comes with a letter from Coahama, who vouches for the reliability of Mr. Shelton's statements.]

Quadrupeds in Town.

ITHACA, N. Y.—Even the fragrant and thoroughly independent American skunk has apparently come to appreciate the educational advantages of this university city, and he is no longer a rare old visitor to the business center of the place. Within a few days two of these animals have been killed scarce a stone's throw from the principal street, and the death of the second one disclosed the fact that a happy family of five little skunks, snugly ensconced under a friendly barn, have been made orphans. But the city cat, after the manner of the municipal tabby the world over, has appeared upon the scene in quest of enjoyment, and daily gives the disconsolate family of skunkies a violent romp.

One morning recently a gray rabbit common to the covers about here came scudding down State street (the main business street), pursued by a foxhound in full cry, and for the length of two of the busiest blocks there was a fine example of enclosed coursing. Gaping clerks, clamorous fruit venders and blasé men about town elbowed each other ferociously for a view of the wildly exciting chase, which ended by bunny saving his white flag of truce under a yawning culvert.

M. CHILL.

A. O. U. Meeting.

THE sixteenth annual congress of the American Ornithologists' Union is being held this week in Washington, D. C. The first session, the business meeting, was held on Monday evening, Nov. 14, at 8 o'clock, at the Army Medical Museum, at which the active members of the Union considered the election of new members and such other business matters as came before them.

The public sessions of the Union are being held at the United States National Museum, commencing on the morning of Tuesday, Nov. 15, at 11 o'clock. These sessions are devoted to the reading and discussion of papers.

Game Bag and Gun.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

The "Brief's" Pictures.

THE illustrations in the current edition of Game Laws in Brief, Mr. Charles Hallock says, well represent America's wilderness sports. The Brief gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

Deer Hunting in the Alleghanies.

IT is to be hoped that the average reader does not care for tales merely giving statistics of great slaughter, and will permit me to recount some of the incidents of an expedition after deer without requiring me to make his senses swim in blood by details of the death of enough noble animals to load a freight car. I was educated to a large extent on Sir Gordon Cummings and Sir Samuel Baker, and the main objects of each of those estimable gentlemen seemed to be to creep upon game with gunbearers bringing along an arsenal, and then shoot and shoot until he reached for more guns and found that the rest of his bearers, being cowardly, had taken refuge in a tree, and consequently failed to kill enough to quite feed the heathen principality in which the hunter found himself. Therefore, if the reader will excuse us for not killing more deer, he may get some idea of the conditions of the sport of deer hunting in the Alleghanies by allowing me to give an account of a recent trial.

In the State of West Virginia a provident and thoughtful Legislature tried to insure sport for a future generation by closing the season for killing deer for five years and thus causing the average mountaineer to come to a state of mental revolution, to the extent that while the majority sullenly obey the law, a grand jury of sixteen citizens refuse to find indictments for violations of the game law, for fear of opportunity, which might make felons of them all in the twinkling of an eye. The law apparently lacks sanction, and I do not believe that any good can come in cutting off all sport from sportsmen, who alone insure fair play for deer. On account of this law we were compelled to cross the line into Virginia, to go away from Newcastle for coals, and we settled on the adjoining county of Bath, near the famous Hot Springs, where the millionaires and their satellites most do congregate. Think of going within the sound of the locomotive to hunt—we who know of many a perfect wilderness. It could not be helped, and we relied upon having a good time camping, with the remote possibility of getting a deer.

We proposed to chase with hounds, and as it seems to be necessary for the deer chaser to defend his position as against those who lie in wait and murder in cold blood, as a preface, I wish to file a plea of justification. First, the market-hunter is invariably a still-hunter. Second, the chase affords sport for a whole party, and the deer has the finest show of escaping he could ask, while the expert and idle tug or sangdigger spends month after month locating deer that he may shoot them down like sheep. Third, only a small portion of the forest lies in the right shape to be hunted with hounds, leaving vast regions where deer can breed in the quiet necessary for their rapid increase. Lastly, it is the only way in which men who have work to do, and are consequently the bone and sinew of the land, can ever hope to kill a deer.

There never was a time when a novice could approach a deer in the woods on a still-hunt, and if they legislate from now till doomsday they will never be able to go into the woods and shoot deer as they fondly imagine.

We had to raise a pack of hounds, and it having been against the laws in this State to chase for ten years, we had less difficulty in finding four deer hounds than you might imagine. Three of them showed a suspicious amount of business sense. The first we got from a man who was under obligations to us, and his twelve-year-old boy looked so pitiful when he saw his dog was to brave the dangers of poison and getting lost in a strange country that it was hard to take him. I am glad to state that the boy's bosom companion has been restored to him sound and well. This was Jack.

Old Lias Harmon, who once camped two nights on the trail of a deer, and carried it twenty miles home, gave us another, and he died before we started. May he rest in peace. He was a most destructive hunter. This parting gift we called Harmon until it was lengthened to Harmony by a man with some latent poetry in him. Harmony would run all right, but had a tramp streak in him that caused him to put up at the first house he came to, and as at this season of the year hounds are worth their weight in silver in Bath, he is still there.

The third acquisition was Rebecca. She put on too many airs, and was not only no good herself, but she evidently tried to make Jack, Harmony and Driver believe that chasing was very unhoundlike behavior.

Driver was the apple of the eye of the guide. How such a dog could know so much about chasing, and come from West Virginia, will remain one of the great mysteries to those who believe that laws, to be observed, must simply be enacted. Driver was the starter. Almost any old dog will run a deer when his blood is up, but Driver would work until the deer was jumped. And such a voice! It was a mellow roar to be heard a mile.

To render this account more intelligible, the personnel of the party must be noticed. The roster: the Captain of gang, a lawyer from the city of Charleston; the Judge; the Doctor; the Prosecuting Attorney, familiarly called the "Persecutor"; the Hermit, a stock-raiser; the old Colonel, and a sable functionary, the cook, Old Joe, who has gone with us dozens of trips and who is almost indispensable.

We got together our tents, blankets, food and necessaries, and sent them on in a road wagon in charge of the Colonel and Joe. We followed, and after a drive of thirty miles reached our camping place on the banks of Jackson's River, here about 30yds. wide. This stream is the head of the James River. We had obtained permission to hunt upon the 3,000 acres comprising the Warwick estate, and as we passed the fine old mansion we called to pay our respects to the lady of the manor and her charming daughter, who alone remain to occupy that spacious country seat, which was once the center of life and gayety. We had come up with the heavy freight and from thence we trailed up to the head of the place and found a suitable camping place at the mouth of Muddy Run, where wood and water were convenient. Then the Judge and Doctor arrived, and we pitched the big tent and got comfortable. We had breakfast before day, and waited for the guide, who was to start the dogs. He evidently had sized us up as an inexperienced, luxurious set, and we had to wait near an hour on him. He was on hand after that. As a matter of fact, we could see it sticking out of all the natives that we were imposters, when in reality we had all of us killed deer and had had long experience in hunting them. Even old black Joe, on one notable occasion, had thrown down a loaded gun and gone into the flood and drowned a deer that was struggling with the hounds.

The first morning we were deployed up and down Jackson's River. The stream at this point is a set of long, smooth rapids, slipping away at rate unknown in other mountain streams of its size. The driver disappeared in the woods with the hounds. I got to my stand, which was like the rest at a place where the rush of the waters conjured all manner of sounds. A dozen times I heard the deer plunge into the water or the cry of the hounds on the trail. After about five hours of anxious waiting, we all trailed into camp again. No deer. The dogs had started a big one and driven it into the river two miles above the first stander. That was the history of most of the chasing. The deer would run wild. We would go to our posts, fall into a pleasant train of thought, chew the bitter cud of reflection, or else read a book with our eyes off the page half the time. Reading on the deer stand is permissible in our gang, but is not encouraged. One of our friends who opposed such reading had the strong side of the argument until one day, when it turned out that he was asleep at the critical moment.

On the whole Jackson's River is too much in the world for good deer hunting. Cows come and look over your shoulder and shake their bells and make you uneasy. We built fires to warm on the cold mornings, supported by the Judge's theory that we needed the smoke as a deodorizer. He said there was a suspicion of scented soap about some of us that would disgust a deer. About the middle of the week we put a five-pointed buck into the river at the poor farm, and it was killed by a man who was husking corn. Under the custom of the country we were entitled to all of this deer except a ham to the man who killed it, but we did not know of the killing until the next day, by which time it had been marketed at the Hot Springs. All the week our bad luck in general continued the same—never failing to start and the deer running wide. We held a trial over our guide when it was suggested that he was doing us, and pronounced him honest. The more experienced had had such luck a number of times. But with it all we had meat in pot, and the way it came to pass was a little peculiar.

In the afternoon of the first day the party scattered to hunt small game for a few hours, tramping through the fields for partridges, or scanning fallen logs in the woods for grouse. The Doctor had a peculiar ambition, however, and that was to kill a wildcat (bay lynx). Why, no one knew, for of all underhanded, sneaking, spiteful, cowardly animals when alive, and carrion when dead, the wildcat heads the list. He is about as noble an animal as a mangy dog. But the guide promised the Doctor to show him a den where there was the hair of a wildcat on the rocks, and did so; but the Doctor pronounced it coon hair and was still disconsolate. They then hunted the woods, having separated. In a few minutes the guide saw a buck fawn and shot it through the skin right over the saddle, and his dog, a shepherd, caught it in a few jumps. It was as large as many a yearling deer, and it was eaten down to the last morsel.

On the second day we had made things comfortable in camp. I do not believe that one ever ceases to learn how to camp. I have often thought if our volunteers had had some experience as campers they would have known how to have remained contented and well in camp, and the most distressing part of the war would have been averted. We lived in a big wall tent with a good wood stove in the corner. A table and two benches were made. The beds were filled with straw, and we had nice clean blankets to wrap up in. At night, when one would wake and breath the air of that high-pitched tent, he felt that he was taking in life and health with every breath. You may open your windows at home, but such air does not come over the yard fence as seems to circulate through the tent in the night time. One night was most wonderfully windy, and the tent creaked as if it could not possibly stand the gusts, but the majority of us got reckless, built a big fire in the stove and surrendered ourselves to the comfort of lying warm and drowsy, and letting the wind do its worst. Not so the Judge. He feared that the tent would blow down and catch fire, though he did not show his fear. After everybody was asleep, the Judge thought of his $275 shotgun, and stealthily packed it in its case. Then he slept the sleep of the just with it at hand. Morning came and nobody was afraid then, but the guide could not find his gun. He was terribly distressed about it, and it was finally discovered packed in the Judge's case, and so the exposure came, how the Judge was scared and packed up the ordinary, every-day shotgun of the guide for his own noted gun.

A week passed in this manner, and those of the party who live in the city took the train one Sunday night from home, and the "Persecutor" said that we would test it to see if there was a hoodoo among that part of the gang by having one more day's hunt. There were but three left to cover the river where seven had left gaps. The Judge had said we needed a whole regiment. But Monday morning dawned soft and cloudy, and we sent the three hounds to the woods, and the "Persecutor" went to the Fish Trap to look after the interests down stream, and the Colonel and I took our horses and went up stream to two stands the deer had been going through. In an hour or so word came by a man passing down that a big buck had been run in above the poor farm, and five or six shots had been heard, and the guide wanted me to come up the river and back up our lawful claim to the body as our deer. The Colonel had already gone on, and we were all shifted to the uttermost ends of the hunting territory, when we found that the dogs had been putting in a five-pointed buck in the river at different points, and that the buck and hounds had a hurry call, and were taking a general direction down stream. I rode to hounds that day. My first place was The Pines, and the buck and dogs came within 50yds. of the river there when he winded me and kept down stream. Then came a wild race with the hounds in full cry in hearing down a narrow valley for three miles, over rocks and through brush and plunging through the fords in water girth deep. I had a good lead on the Colonel most of the way. My saddle girth had been broken the day before, and was tied with a shoe string, and I was carrying a heavy Winchester. It was desperate work. I lost my lead by hearing a house dog behing me, and turning back for a couple of hundred yards. Then the Colonel got by on a skinny bay colt, and he got to the "Persecutor's" stand just as the deer came through, and jumped into a cornfield.

He took three hasty shots, and the deer went out of sight in Cobbler Mountain, and the hounds raved by and we swept on for a couple of miles more to still lower stands.

Now the deer had run within twenty steps of the place where the "Persecutor" was standing, and we afterwards got his explanation why he should not be fined for his failure to shoot the deer. He is probably the most experienced deer hunter of the lot, and the coolest shot, but that morning he was the victim of a strange occurrence. Driver and Jack came down to the water, and by all precedent this could mean only one thing—that the deer had silently entered the water and stolen away. He went down a hundred yards and tried to call the hounds across to lay them on the trail, for if was a now or never time in our hunt. The hounds were unsatisfied, and went back in the mountain and brought in the deer right by where he ought to have been. Then it was the Colonel shot at distances from 200 to 300yds. What had happened was that the deer had been turned by a lot of hogs just as it was going in the river, and the hounds, as many highly-trained dogs will do, dashed into the stand regardless of the trail.

The deer, passing on to the next runway, met a boy hauling wood, and turned and came back and through the stand it had first attempted. The rest is soon told. The deer circled for ten minutes and came back into the field and dropped dead in a pond of water, with the three hounds at its heels making the woods ring. One of the Colonel's shots had raked it aft and fore. The Colonel and I were called in by two shots, and there lay a big, fat doe on the ground.

"There," said the "Persecutor," "you all have run all the horns off your buck."

We held an inquest, and it was decided that we had been chasing a big buck, and that he had run across a doe, and the hounds taking the new trail had put in the doe. This was abundantly proven by the fact that the dead deer showed no signs whatever of being hard run. We had liver for dinner, and the "Persecutor" went hunting and killed a wild turkey, and could not find the carcass. It was a bad day for him.

The next morning the tents were struck, and westward we took our way.

ANDREW PRICE.

MARLINTON, W. Va.

Ducks on Ottawa Marshes.

CLEVELAND, O., Nov. 4.—*Editor Forest and Stream:* A week ago last Tuesday the weather reports read: "Heavy snowstorms on Lake Superior," and predicted heavy gales on Lake Erie. I thought that this would mean a good duck shoot on the Ottawa marshes, so on Wednesday morning I took the 10:40 A. M. train for Fremont, O. Before leaving, I called up several of the members by telephone to see if I couldn't get some one to go up with me, but business was too pressing for most of them. When I called up two of the members' offices, the answer came back, "Gone to the marsh Monday morning," so I knew that there would be company when I arrived at the club house. As soon as I arrived at Fremont, I was told that word had come down from the marshes that the ducks were coming in in large numbers. It is about a ten-mile drive from Fremont to the club house, and I arrived there at 4 P. M. As the law in this State prevents shooting on Sunday and Monday of each week, this makes Tuesday an exceptionally good day, and generally each alternate day during the week is a good day. On arriving at the club house, I found six members there, some who had been there for a week or ten days, and others who had come up on Monday. They reported to me that they had had fine shooting on Tuesday, the party getting 135 ducks.

Wednesday the shooting was poor, only about thirty-five ducks being brought in. On Wednesday evening after dinner we brought up the question as to what time we would have breakfast the next morning; four of the party decided, as they were not feeling extra well, they would not get up early; so Mr. Laughlin, Charlie Scofield and myself decided that we would have our breakfast at 5 o'clock. So in the morning we were up bright and early, but being delayed by several little things we got away late, and it was almost 6 o'clock before we left the club house. The water had been so low the night before that the naphtha launch had to be anchored out in the river, as they could not get it into the boat house; so we went out to the naphtha launch in our duck boats, and after fastening them on behind the launch we all got into it and started down the Sandusky River for the mouth of South Creek, where we left the launch to go into the marshes. Our run down took us about half to three-quarters of an hour, for the distance was about four miles. Going in through South Creek to Peach

Island Cut, we found the water pretty fair, but my punter and I had to push hard with punt paddles all the way through Peach Island Cut, and upon turning into Channel No. 1 we found it nothing but a mud flat; so I got out and waded in the soft mud, which was above my knees, and it was slow work, as I had to take hold of the tops of my rubber boots to keep them from coming off, first hold of one and then the other, and in the meantime both of us were dragging the boat through the mud as well. We finally got to a cut that runs between Channel No. 1 and Channel No. 2, that has a dam on the Channel No. 1 end of it, and this keeps from draining out the water that is raised by our dam at Coon Creek. The Coon Creek dam raises the water on about 2,000 acres and insures good duck food all over this section. After getting our boat over the dam, we had good water, and we then went up Channel No. 2 to the upper end of it, and decided to blind in a cane blind that had been built at that point early in the season. The wind was blowing very strong from the southwest, so putting our decoys to the northeast of our blind, we had the wind over our backs and the pond stretching off to the northeast in front of us. I had figured that the ducks in coming in would come right up this pond against the wind, but they swerved off to the right of me a little.

To go back a little, when we came into the marshes it was a sight to see the ducks get up. There were thousands of them; they rose in flocks of all sizes and headed for Sandusky Bay. There were a great many long, yellow-legged plover all over the marshes, and the sandpipers had massed up ready to go South. There was one flock of sandpipers that flew by my blind in the middle of the day, and I asked my punter how many he thought there were in that flock, and he said that he thought there must be at least 5,000; it was like a small flock of blackbirds. It is funny what different estimates different people will put on the number of birds in a large flock. Every evening the blackbirds will pass over our marshes in dense flocks, sometimes a half a mile long, and I have heard people make estimates of the number in a flock, running all the way from hundreds up to millions. I was on the marsh one November day four years ago, and I saw a square mile of marsh that was frozen over that seemed to be just black with black mallards; there must have been tens of thousands, but of course there was room enough in that space for a great many times that number.

Well, to get back to my story, Scofield waded down through Channel No. 1 and located in a cane blind in a large open space south of that pond, and Mr. Laughlin located in another cane blind about 2,000ft. back of me in Mound Spring. It was about 9 o'clock when the ducks commenced to come back, and by that time I was ready for them. As Scofield and Laughlin were behind me and almost all the ducks passed either a little to the right or left of me, or right over me, I tried not to shoot at any ducks that were long range shots, as I did not want to spoil the others' shooting any more than I could help. I was right in the line of flight, and I had an awfully nice shoot. The pintails would come in very high, and some of them on seeing my decoys or hearing my call would circle once or twice and then would drop right down to my decoys. This was pretty shooting, and I did pretty well on pintail. The widgeon would circle round and round, and did not seem to care to come down; my shots at widgeon were few. A few green-winged teal and one gadwall alighted among my decoys before we saw them, these I scared up and knocked down before they could get away. The large flocks of mallards did not decoy very well, but every little while a lone mallard would come along and I called a good many of them close enough for good shooting; some I hit and a great many more I missed. By noon I had counted thirty that were down in sight, and my punter set them up on wires, which made my flock of decoys larger and more enticing.

I carry steel wires in my boat about 1/8in. in diameter and about 2ft. long, and we put these down in the mud and run the wire up through the duck's neck and into its head, and push the wire into the mud just far enough to allow the duck to rest on the water as though it was swimming. For my live decoys I have a wire crate that will hold six live ducks. On each duck's leg I sew a small band of light canvas that has a small ring attached to it; then I have a heavy piece of fish line, with a small snap on one end of it; then about 1ft. from the snap I put a small brass swivel; this keeps the line from getting tangled; then at the end of the line, which is about 8ft. long, I fasten about a pound weight. I take the duck out of the crate, snap the line to the ring on the duck's leg, throw the weight into the water and the duck after it. The water being anywhere from 6in. to 2ft. deep, this gives the duck a circle about 16ft. in diameter to play around in, and by throwing in a couple of handfuls of corn once in a while, it keeps them moving and makes a perfect decoy. I generally put out about two dozen Acme folding decoys with my six live decoys, as I consider them the next best decoy to a live duck. My live decoys I have raised at the marsh, using a small, gray duck without any white feathers in it.

After eating my lunch at noon, during which I had to drop my lunch once or twice to get a shot, I had good shooting almost all the afternoon. Sometimes there would be quite a wait between shots, but by dusk we counted up and I had fifty-five ducks; and take it all in all, I considered it one of the nicest duck shoots I had ever had. In looking over my shells, I found that I had shot about 150 shells of No. 5 shot, and my punter had used about fifty shells of No. 8 shot on cripples. I find that I generally shoot from three to five shells for every duck I get over decoys, and from five to ten shells for every duck I get in point shooting.

As I found after picking up our ducks and decoys I had a pretty fair load, I decided not to go to the club house that night, but pulled into John Thompson's farm-house on the lower end of our marshes, that we use for a club house when it is too stormy or too hard to get up to the upper club house.

The next morning I went back into a mallard hole in the heavy flag, and got seventeen nice big mallards by noon. That was fine shooting; they wanted to come down there to feed, and they dropped in like bees. I missed a good many as usual; but kept a few from getting away. As the indications were that there would be no ducks flying in the afternoon, as the wind had died away, and as we had about all the ducks we could carry in the boat with the other truck, we loaded up after eating our lunch and started for the upper club house, where we arrived at just 6 o'clock P. M., in time for a good dinner. I tell you it gives one a great appetite to be out in the marsh all day, with just a light lunch at noon, and you can generally do justice to a good dinner.

After dinner, by comparing notes, I found that Scofield had got forty ducks the day before, and Mr. Laughlin seventeen. I noticed that the ducks did not come very close to Mr. Laughlin; the shots he got were almost all very long ones, and he did some fine shooting. He was stationed out of the line of flight of the ducks.

The game register showed that the seven shooters had killed between 450 and 500 ducks during the week, not all the scores having been entered when I looked over it.

This is getting back to old-time shooting. We have not had as good shooting as this for about three years. As the water was so low in the marshes there was but very little duck food, and the ducks on their way South would soon eat what food there was, and would then leave for the better feeding grounds further south. The game register up to last Saturday showed about 1,200 ducks killed since Sept. 1, 1898.

From present indications this number will be about doubled before it freezes up. FRANK B. MANY.

Coon History.

As your contributors occasionally allude to coons, they remind me of things that I have known to occur. Coons occur, as it were, quite generally throughout all that part of this land with which I am acquainted.

One time, or that is to say, many times, I have aspired to coons and have acquired them now and again, sometimes with considerable difficulty and other trouble. Some of them that I have endeavored to attain escaped, and in that manner got away.

I am of the opinion, together with other persons of enlightenment, that most dogs who have not confined themselves to any special pedigree, or to collegiate education, enjoy the pursuit of coons. I have known many dogs who would work harder, run faster and ki-yi louder, and bark longer, in essaying coons, than they would in any other event of their mortal career. I believe a dog is happier of a cold night, when the moonlight glistens over frozen and frosted ground, barking himself hoarse at a coon tree or a treed coon, four miles from everywhere else, than he ever is upon any other occasion.

With this much for my private opinions, I shall cease to speculate and proceed to record a fragment of the true history of our commonwealth, which, by the way, is not as common to the general, according to socialistic ethics, as well as to apparentness, as might possibly be.

At a tavern where I sojourned for a time there were, among other things, a native of California of the aboriginal tribes (so far as we know), erroneously called Indians by those not overly choice in the phraseology of the times; and some four several dogs, no two of them being alike in size, color, style of locomotion, tone of ki-yi, or indeed in any particular or general attribute. In the comparative wilderness that surrounded the tavern there were, among other natural provisions, some coons.

Now, notwithstanding the diverse characteristics of the four dogs, they affiliated into unanimity almost as cohesive as the partisan press attains about the time of a general election, but instead of votes the dogs combined for coons; instead of barking up all trees but the right tree, the dogs also differed from the others by usually barking up the right tree. The difference in methods is creditable.

And so, one night when it was about as cold and dark as it gets, the dogs set up a remarkably unanimous pow-wow about a mile down the creek. After listening intently—as people are frequently reported doing—I was convinced that they were sincere, and that in all probability they had something up a tree. I summoned the aboriginal American, whose name was never Richard, but always Dick, and asked his opinion.

Dick said: "They're about a mile down the creek. Got something sure."

"All right; get a lantern and I'll get the shotgun."

With the faithfulness they are not always credited with, the red man was promptly prepared, and we set off in the plutonian darkness into the cold, frost-covered willows and undergrowth. Half an hour's walk with numerous stumbles brought us to the dogs that were clambering about the trunk of a large live oak, and sending up an assortment of yips, ki-yis and howls that made one of the most unmelodious aggregations of discords that I ever heard, for the number engaged—and I have attended camp meetings and operas.

The tree in the darkness, by the indifferent illumination of the farm lantern, seemed a few shades darker than a black cat, and the foliage was like a huge pyramid lost in eternal gloom. We walked around it many times, Dick holding the lantern and endeavoring to "shine the eyes" of whatever the dogs were so confident they had up the tree, and I following with the blunderbuss of a shotgun that was a relic of overland emigration.

It was no use. We built a brush fire and it went out without effect in illuminating the tree. Dick said: "They's something up there sure. Dogs too crazy to be fooled. I'll climb the tree and you can shoot when I'll hold the lantern."

This was a brave proposition for a man red or white to make. Dick had prospered, physically, in his connection with civilization, for he weighed about 200, and was not as nimble as others of his tribe; besides, he knew the shotgun, and that I would hit the tree—probably all of it. Nevertheless, after a great deal of clambering and puffing he reached the first branches, and I handed up the lantern.

After much struggling and crashing of small branches Dick got about two-thirds of the way up the tree. The lantern went out, and he was a long time in getting it relighted with his numb fingers. Meantime I was trying to keep my own from freezing to the combination of pot metal that was loaded from the top, and shot backward as well as in the other direction, whenever it was exploded.

The lantern having been relighted, Dick got up a few branches higher and shouted: "I see him! You see? It's a coon, a big fellow. Shoot when you see him—shoot high, shoot pretty high, he's in top of the tree—right in the top! You see me, don't you?"

The dogs became more animated and tried to increase the noise they had been making all the time. Four ambitious dogs of the kind, thinking of nothing else in the world, and executing all the phonetics they have, are about as audible as anything you want. I pulled up the hammer of the old gun carefully, to be sure that it stayed set, and shouted to Dick that I could see its eyes.

"All right," he shouted, "shoot pretty high!"

The noble but fat red man held up the lantern steadily without a tremor. I took aim at the two shining spots high up the tree, and amidst the loudest effort the dogs had yet achieved I pulled the 20lb. pull necessary to discharge the uncertain quantity of thunder and lightning that was reasonably certain to follow—or rather proceed.

The old gun shot forth a stream of fire that seemed to light up things like a battleship's searchlight for a single instant. I heard it boom above the yells of the dogs, and I knew also when it went off by the way it came back. There was then an instant of total darkness and silence, and then a commotion as though the tree itself was crashing to the earth. I never brought so much out of a tree at one shot, or otherwise, in my life before, and everything seemed to reach the earth exactly on time, or a trifle earlier. The dogs were game—they might have wavered an instant—but they jumped into the arena, and piled into whatever had come down.

Then there was an unmistakable grunt and a formidable protest in the tones of Dick. He proved more thoroughly civilized by his fluency of speech, in some of our obscure phrases, than I ever dreamed he would. Amidst the jingle of the glass and tin of the smashed lantern, the yelps of the dogs, and the departure of two dogs and an object that reached the creek and plunged into it with a splash, I was still overjoyed to think that some of the charge had missed Dick, or he would die quicker.

In the total darkness what was presumably Dick floundered near, and asked for matches and a fire. Fortunately I found some dry leaves and soon started a blaze, and with some driftwood made a good fire. An inventory of casualties then ensued, showing Dick to be alive, but bleeding. He didn't know how bad he was shot, and limped around, looking for the coon. He was quite certain the coon must be dead, for it came down with him, he said. Further investigation disclosed no coon, but all the dogs vainly swimming in the ice-cold creek and snarling their disappointment among themselves.

After warming at the fire, and an examination of Dick's head and neck, which were badly scratched, I concluded he was able to walk home, and he did so, somewhat sullenly.

"You must have put all of it in me," he said, "and I told you to shoot pretty high up in the tree."

On the day following Dick had to admit that he could find no shot in his personality anywhere. The coon had dropped or jumped on him at the firing of the gun, and had scratched him. Thinking he was shot, he let go, and fell 20ft. without other injury than some trifling bruises. And the coon was one that escaped by getting away—as far as the four dogs, Dick and myself could ascertain. RANSACKER.

CALIFORNIA.

A Tough Fox.

Editor Forest and Stream:

In my time I have killed a good many foxes in our New England manner of hunting them—something over 200 in all—and almost invariably have found them easy to kill. Three and one-eighth drams nitro and 1¼oz. No. 1 chilled shot in my 12-gauge gun stops the average fox at quite long distances when I get a side shot.

A day or two since I ran across a fox having more vitality than I ever found in one. My hound had been running a fox for about half an hour, and I was slowly walking along a ridge in an open pasture, when I thought I saw something move slightly on a small knoll about 100yds. away. I stopped at once, and carefully watched for some time, but failing to see anything concluded it was only a yellow leaf, as the leaves were constantly falling from a maple near by. I was on the point of moving, when I saw a fox raise its head from the spot I was looking at. The fox looked around; in fact, looked straight at me, as I stood in plain sight, but like other wild animals, seeing no movement on my part, he did not notice me, and lay down again. I bent slowly down and got behind a bunch of ferns and began calling him. It was very evident that that particular fox was not just then much interested in a mouse, and I worked the best I could for some time. Finally I induced him to raise his head, and then he sat up and yawned and stretched himself, just like a dog, and started toward me. When I thought him near enough I shot, and down he went, but was up in an instant, and ran past me about 45yds. away. I was surprised at not killing him the first shot, but shot a second time, rolling him up in a heap. Again he jumped up, and was out of my sight before I could get in another cartridge. I felt sure of finding him dead just over the ridge, but didn't see any signs of him. Just then my dog crossed one end of the pasture on the trail of the fox he was after, and I made out to head him, and slipping a cord on him led him to where I had shot at the fox, and in less that five minutes he caught the fox in a thick swamp; the fox was by no means dead, and the old dog had quite a time finishing him. I took off the pelt at once, carefully noting the effect of my two shots. The first struck him with four pellets; one in the corner of one eye, one broke a leg and two in neck and chest. The second put ten No. 1 pellets straight through him, seven going through his shoulders and neck.

I have dropped almost in his tracks many a fox which was not half so badly hit.

As this fox seemed very indifferent about coming to my call, I knew there must be some reason, and noticing that his stomach was pretty full I cut him open and found he was full of what looked like a chicken or a partridge. There were no feathers mixed up with what I found, but he may have been a dainty fox and removed feathers or skin from what he was about to eat. C. M. STARK.

DUNBARTON, N. H.

An Episode in Moose.

NEW GLASGOW, Nova Scotia, Nov. 1.—*Editor Forest and Stream:* Nova Scotia is the home of the moose. There are seasons when the laws of the Province forbids that he be slain; there are laws enacted under the auspices and recommendations of the Game Society how and when he shall not be slain; there is appointed by the Government a Chief Game Commissioner, whose duty it is to see that these laws are respected and that offenders are punished. For snaring, hunting with dogs, killing out of the prescribed season, there are heavy penalties, ranging from $25 to $200. Yet, notwithstanding all this, in outlying districts, miles away from the centers of civilization, as it were, there are occasional breaches of the law, and it is a very difficult matter to have the offenders brought to justice and punished.

Quite recently the game warden at New Glasgow received information that a notorious pot-hunter, some thirty miles distant, had brought home the carcass of a moose, a very large one, with the most magnificent antlers that had been seen for some time. The circumstances of the killing were reported as suspicious, and it was evident to the informant, although the animal had been shot and bore the marks of two bullets, that at the time of receiving these bullets the animal was standing helpless, caught in a snare. All incriminating marks that might have been made by this snare were, however, so skillfully removed from the carcass that it would be an utter impossibility for a casual witness to swear positively that the animal had been snared.

The young man who accompanied the hunter to the woods and helped him home with the venison, horns and hide, was something of a hunter himself, although it was not known that he had ever been successful or had brought home such large game as a moose.

The Commissioner was informed of the circumstances, and the suspicions of the warden that this particular animal had been unlawfully taken, and they had Mr. Spoodler summoned before the justice at New Glasgow, charging him with "setting snares for the destruction of moose, contrary to the statute in such case made and provided."

Mr. Cross, the young man who had been his companion on this expedition, was subpœnaed as a witness, and on the day of trial Mr. Spoodler was present with his attorney, expressing his determination "to fight it out."

It is hardly necessary for me to go into the full details of the trial, but parts of the evidence were of such an extraordinary nature, and so interesting to listen to by those who were concerned in the preservation of this noble game, that I shall give only a particular part.

The questions were asked the witness, Mr. Cross, by the attorney for the prosecution, and were about as follows:

Q. You are quite a hunter, are you not, Mr. Cross?
A. I've done a little of that in my time.
Q. Ever shoot a moose?
A. Yes.
Q. When?
A. Last Monday, week.
Q. How long ago since you first commenced to hunt moose?
A. Probably fifteen years.
Q. And this moose that you refer to is your first successful shot?
A. Yes.

And he continued: On the third day of October Mr. Spoodler asked me if I would like to accompany him that day to the woods. We took provisions for a couple of days, my rifle, a Winchester magazine, 15 shots, and some things in a bag which I did not see at the time of starting. We took Mr. Spoodler's horse and wagon, and drove eight or nine miles to Dunbar camp. Putting up our horse and wagon at the camp, we started through the woods, made horns of birch bark and commenced calling for moose; had proceeded about a quarter of a mile or so, when Mr. Spoodler shouted out, "Look ahead!"

Q. Shouted out loud, did you say?
A. Yes. I looked ahead; I distinctly observed up over the underbrush the horns, head and neck of a moose. I raised my gun and fired. Seeing that the head was in nearly the same position, I fired the second time, and the head disappeared.
Q. At about what distance, should you judge?
A. I would say about 50yds. Mr. Spoodler had no gun. Immediately after firing, Mr. Spoodler told me to run back to camp and prepare the dinner; that he would attend to the moose now, dress it and make it ready to carry in to camp. When dinner was ready, I was to come out and help him. In the course of half an hour I went back to the place. Mr. Spoodler had the carcass cut up and roped, ready to be carried in. With a pole through a loop of the rope, we slung it on our shoulders, and made three trips before we got it all in. We then loaded it up in the wagon and started for home, arriving there after dark.
Q. After you fired at the moose, you went up to examine what you had shot, didn't you?
A. No.
Q. For what reason?
A. Before starting on this trip, Mr. Spoodler instructed me, that to be successful in our hunt I should obey him in everything; in other words, I would be required to do what I was told by him, and ask no questions about it, as upon my obedience to orders depended entirely and altogether our success, and when he instructed me to proceed to camp I did so.
Q. Did Mr. Spoodler instruct you as to any further details?
A. He told me, after I had shot the moose, that it was not necessary that I should go up to where it was lying; it was getting late in the afternoon, and night would be upon us before we got home, unless we hurried up.
Q. Did you, when you first went to the place where the moose had fallen, observe anything pertaining to snares?
A. No, I did not see anything that would lead me to infer that I was in the vicinity of a snare.
Q. Did you observe any ropes, chains or poles?
A. There were poles kicking about there.
Q. Anything else?
A. Yes, bushes and blood and hair.
Q. In going through the woods after you left the camp, did you proceed noiselessly, picking your steps cautiously?
A. Not particularly cautious. We talked and laughed and smoked our pipes.
Q. Did you blow the calling horns?
A. Yes.
Q. Are you an adept in the art?
A. Not particularly so.
Q. Now, Mr. Cross, isn't it the practice of moose hunters in the woods and during the calling season to station themselves in one particular spot, near what is called a "yard," and call without moving from that spot?
A. Yes, I think so.
Q. But in this case you walked along, talking and laughing and smoking, until suddenly Mr. Spoodler shouted out, "Look ahead!"
A. Yes.
Q. Is it not your opinion, now, Mr. Cross, that this particular moose was at the time you fired the shots caught fast in a snare? (The justice ruled that "opinions" were not particularly wanted just then.)
Q. Are you certain that this moose, at the time you fired the shots, was free to jump and get out of the way as fast as moose generally do under such circumstances?
A. I cannot say.
Q. Did you ever see a moose in a snare?
A. Not that I am aware of.
Q. In what direction was the wind blowing when you started from the camp into the woods?
A. I did not observe.
Q. Did Mr. Spoodler make any remarks about the direction of the wind?
A. No.

There was a good deal of cross-firing here between the attorneys; they addressed the court for and against the respective clients, and awaited the decision.

Mr. Cross was the sole witness available to the prosecution, and it was evident that the Commissioner had not made out a case, although the circumstances pointed strongly in the direction of an infraction of the law, yet it was insufficient for conviction.

The justice read over the evidence. Then he commenced by saying that it was purely circumstantial. Fifteen years ago, if he recollected aright, from this same bench, Mr. Spoodler had been before him on a similar charge. On that occasion he had been convicted and fined in the sum of $25. From that day to this he was under the impression that fine had had its effect, and Mr. Spoodler had been a good and law-abiding citizen ever since. But in the statement of the witness on this occasion he felt bound, before giving a decision upon the case, to say something more than usual. It was simply an opinion, drawn from the evidence given to the court.

He proceeded by saying that he was something of a hunter himself. True, he had not aspired to anything larger or heavier than partridge, with an occasional duck, accidentally perhaps a wild goose or two during their season.

Upon one occasion a discussion arose as to the most exciting and ecstatic moment during the period of a successful hunt. First, whether it was when the game was sighted; second, when the trigger was being pulled; third, when the shooter ran out to ascertain the result. The decision was in favor of the third, although some of the boys afterward declared that the decision was faulty, and that the supreme and most exciting moment occurred when after returning to camp they were getting themselves outside of three or four fingers of good "hot Scotch."

"Be that as it may, however, I feel that I must say that here we have two hunters starting out for moose; they arrive at the camp; they take one gun, and a bag containing something else; they fashion the proverbial moose horn; they proceed to call; they keep right on through the woods, never halting for a moment to ascertain whether or not their call is being answered by the unsuspecting moose; they laugh and talk and smoke—things that the true hunter never thinks of doing when in pursuit of the game.

"All at once, according to the witness, Mr. Spoodler shouts—yes, actually shouts—'Look ahead!' Mr. Cross looks, and sees the horns, head and neck of a moose towering up over the underbrush. As I am informed and verily believe, no well regulated animal of this kind, wild in the woods, would have hesitated the fraction of a second before he had put sufficient distance between itself and that sound to have insured its escape; but it didn't do anything of the kind. We must infer that there were good and sufficient reasons.

"Mr. Cross raises his gun and fires at the head. Seeing that there was not a perceptible move, he fires again, and the head drops out of sight.

"In a Winchester rifle, such as he had, it takes very little time to drop the lever and insert a second cartridge; it works almost automatically, but there is a perceptible lapse of time—very short, it is true, but still sufficient for the animal shot at, if it were not killed dead at the first fire, to have moved, and moved a perceptible distance at least. But according to this witness, the animal still kept its postition, and it took the second shot to make it disappear.

"And now comes the most extraordinary part of the story of this witness. What does he do? He deliberately does as Mr. Spoodler tells him; he immediately goes back to camp, a quarter of a mile away, to prepare dinner, without a protest, without even manifesting a desire to ascertain the result of his shots.

"True, he had been cautioned by Mr. Spoodler that it was entirely necessary to obey the orders given him, that they might be successful in their hunt. Abjectly, like a child in its pinafore, when the most supreme and exciting moment had arrived, this witness was content to go from the vicinity of that successful shot, and after fifteen years of hunting for this opportunity—fifteen years of tiresome tramping through the forest in search of the very game he had just sighted, without seeking to ascertain the result of his shot. It must have been galling in the extreme.

"But why? The inference is plain, plainer by far than the ancient handwriting upon the wall—there was a purpose in all this. I am inclined to infer that this moose was, I was about to say, 'spellbound' by the sight of these two mighty Nimrods of the chase, and that he lost his presence of mind. That is not the case, however; the instincts of this animal never desert him when he is in danger and free to act.

"I infer, and I am bound to say that ninety-nine persons out of a hundred will coincide with me in the assumption, that this particular animal, and at this particular time, was anchored fast in a snare or trap of some kind, and it was ruthlessly shot down without a ghost of a chance for its life, and contrary to the habits of every genuine sportsman the world over.

"Mr. Cross was conveniently absent, and at the proper time to suit the hunter. He saw nothing at all—nothing incriminating—it was all removed, conveniently removed, I may say; and he appeared upon the scene of his exploit only when all evidence of the presence of a snare had been put out of sight, by whom I am unable to say.

"We can draw our inferences, but such inferences are not evidence.

"The charge against Mr. Spoodler is dismissed."

ARTHUR MAIN.

Boston Notes.

BOSTON, Nov. 7.—Dr. G. A. Suffa and Dr. Robbins, of Boston, have returned from a successful hunting trip to New Brunswick. Both bring back fine bull moose, though that of Dr. Robbins was not equal to his trophy exhibited at the sportsmen's show last spring, in the exhibit of the Megantic Club, I believe. That head was one of the best ever taken, with a remarkable spread. This year his moose was a young one of fewer prongs. Dr. Suffa's moose was a fine one, with beautiful antlers, and he is justly proud of his success. Both hunters are much pleased with moose hunting in New Brunswick, though they do not like to give away the location they visited to everybody. They saw twelve moose in all. They were on the ground early in September, though not as early as they will go again. The calling was good, though not what it is a week or two earlier, according to the opinion of the guides they met. They got repeated answers to the birch horn, but either the calling was not all it should be or the bulls already had mates. Dr. Suffa shot his moose in broad daylight, the guide paddling him up to the game in dead water. It took six shots from the Doctor's .30-30 expansive bullet, three of which hit him. The bobbing moting of the canoe made the shots go wild; but odd enough the great moose only turned as each shot struck him, and did not attempt to make off. The guide was much alarmed at the determination of the moose not to move, and expected the brute to charge the canoe. In another instance the guide was unwilling or afraid to paddle the canoe up to a bull moose, evidently standing his ground, just behind some alders that projected out from the shore of the same dead water where the other moose was taken. Both could hear the animal, but he could not be seen clearly enough for a shot. Mr. Suffa whispered, "For heaven's sake, put me on to that moose!" The canoe did not move. The hunter almost shouted this time, "Put he up to that moose!" The paddle splashed, and the moose was gone. In explanation, the guide declared that the moose behind the alders was a cow, but that there was a big bull just up the shore all ready to charge upon them had they troubled the cow. But Dr. Suffa is sure that he saw the horns of the one behind the alders, though indistinctly. He considers the location a remarkable one for moose, and I have no doubt but what he would point it out to one or two of the right sort of hunters, who might address him at Berkeley street, corner Boylston.

Mr. and Mrs. Geo. Boynton, of Lewiston, Me., and Mr. and Mrs. Dumfee, of Waltham, Mass., have returned from a hunting trip to the wilds of New Brunswick. They went about forty miles into the woods from Keswick, and lived in an improvised cabin. Mr. and Mrs. Boynton got two fine caribou, Mrs. B. shooting her share. She is an expert with the rifle, or proving such, having never used one till within a year or two. She succeeds in shooting off the heads of partridges almost every shot. To the list of successful Maine big game hunters there may be added: H. E. Hayes, Brookline, Mass., one deer; Edward Burbeck, Newton, Mass., two deer; Charles Rickenberg, Jamaica Plain, Mass., two deer; B. S. Tolman, Waltham, Mass., one deer; O. H. Hallett, Waltham, Mass., one deer; H. S. Milton, Waltham, Mass., one deer; all the above were taken at Eustis, Me. From the Megantic Preserve, A. W. Robinson, Mrs. A. W. Robinson, Mr. and Mrs. F. B. Staples, Mr. and Mrs. D. C. Pierce, H. W. Robinson and G. O. Currier, all of Boston, have brought out ten deer. Mrs. E. S. Briggs, of Boston, has taken a deer at Loon Lake, Rangeley. Geo. Russell and W. H. Kingsbury, of Everett, Mass., have taken three deer at Kennebago. Dr. and Mrs. W. H. Bradbury, of Chicopee, Mass., have taken two deer at Billy Soule's Pleasant Island camps. John Kennedy and Guy Kennedy, of Boston, have killed two deer at Round Mountain Lake camps. G. F. Foyle, of Boston; John Foster and E. A. Emerson, of Waltham, Mass., have been at Salmon Stream, Benedicta, Me., on a hunting trip. They secured six deer.

NOV. 14.—Considerable snow has lately fallen in the Maine woods; from 6 to 8in. reported in some sections. Yet it has not generally been very satisfactory to the big game hunters, being followed by crusts, and then rapidly melting away. Still it has covered the rustling leaves, and hunting has been better than before, and doubtless some big reports will be heard concerning the game taken when the hunters return.

Mr. W. C. Harding, of the Boston Herald, is out of the Maine woods, from a delightful trip into the Sebois region. Here he secured his moose and full allotment of deer. The claim is made that he shot his moose at a

distance of 300yds., near nightfall. He was accompanied by Theodore Ripley, of Somerville, who also secured his two deer. Mr. Kelley, of Worcester, has also secured a big moose in the same region. John Foster, E. A. Foy, A. E. Emerson and Z. S. Snyder, all of Boston, have also taken deer in the same region the past month. There may be added to the successful sportsmen from this section Judge Bolster, of Roxbury; Frank Ferdinand, of Boston; Z. H. Sullivan, of Franklin; J. S. McQuaid, of Webster, and James O'Donnell, of Hyde Park. This party brought out six deer. B. J. Mowry, S. H. Mowry, and M. W. Mowry, all of Boston, have also returned, bringing four deer and a moose. This animal was the property of B. J. Mowry.

The week's receipts of big game, up to Saturday last, at Bangor, Me., were 335 deer, eighteen moose and four caribou. Another bear was also added to the returns. For the season, up to Saturday, the total there of big game received was 1,567 deer, ninety-two moose and thirty-seven caribou.

NOV. 12.—Boston and Maine sportsmen with rod and gun will be pained to learn of the death of James F. Dwinell. For a number of years he visited Maine regularly, and very often twice a year. He was fond of casting a fly on Moosehead waters, and few fishermen were more successful than he. Still, his greatest treat was his annual visit to the Rangeley and Upton woods for partridge shooting. Later he confined his fall trips almost altogether to visiting Upton, where, with Lomin Sargeant for guide, he would spend his time in the woods. Kind and generous almost to a fault, no man ever guided Mr. Dwinell without being the richer in pocket for the trip. All the sorrows and pecuniary losses of his humble woods friends were taken up with a generosity and judgment that made his guides feel the superiority of the unassuming lover of the woods that they labored for. A mortgage on a humble home of one of his guides, about to be foreclosed, was once lifted, with the admonition to the guide that he should have ample time to repay; while it is more than probable that repayment was never exacted.

Smelt fishing is very popular with the Boston rod and line sportsmen who have had the good fortune to be initiated. The law that prevents netting smelt has had the good result of making the taking of smelt with rod and line in many of the off-shore inlets not only a possibility, but an enjoyment that is increasing. Mr. Elmer E. Tilden, whose present home is at the beach, near Point Allerton, has made several good catches this fall. His best one gave him 157 smelt for two and a half hours' fishing. He fished near the outlet of a creek or sluiceway running out of a little inclosed pond, caused by the grading of the Nantasket Beach Railway. The day was a dark and rainy one, but the smelt were biting gloriously. When the sport was over, Mr. Tilden was so tired and numb with the cold drizzle that he could scarcely stand, but his trophy was won and he was happy. Mr. Charles S. Robertson is another dweller at the beach of occasion, who makes smelt fishing his Saturday pastime, with some catches recorded that would make his friends open their eyes with wonder.

A friend gives me an account of a Maine shooting trip, made by a couple of his friends who do not desire their names published. They went to Norcross, and thence by water thirty or forty miles; then eighteen or twenty miles into their camping place. Here they secured six buck deer and three moose. They claim to have found a herd of moose in which there were eleven cows, besides the three bulls shot. They had no trouble in calling one of the big bulls, or rather their guide called him up within shooting distance. It is possible that the reading of this item carefully shows why the hunters do not desire their names published. The law allows but a couple of deer to each man, and a moose apiece.

SPECIAL.

CHICAGO AND THE WEST.

The Western Deer Season.

CHICAGO, Ill., Nov. 11.—Our Western deer season is progressing merrily, and it is gratifying to be able to state that the deer seem to be abundant enough to give pretty much everybody a show for venison. The towns of Drummond and Cable, Wis., are sending out a great many deer, and from any one of fifty similar points in upper Wisconsin and Michigan from two to a dozen carcasses are shipped daily. We have no means in this country of getting at the exact number of deer killed during the season. I presume there are 12,000 known hunters out in Wisconsin and Michigan this week, to say nothing of the residents and the market hunters who do not bother to take out licenses or mention their whereabouts. A good many of these hunters will not kill anything, but on the other hand some of the market men will kill from twelve to forty or fifty deer during the season. It is perhaps within bounds to say that each hunter will average his two deer, and therefore I presume that something like 25,000 deer will be killed this year in Wisconsin and Michigan alone. This does not include Michigan south peninsula. Of course, this is a mere guess, but I do not think it very far out of the way, though to many it may seem large.

There has been a flood of venison in the market of Chicago for some time, and of course there is no use saying that this stuff does not come out of Wisconsin and Michigan, because a great deal of it unquestionably does. It is not likely that all the underground railroad between Milwaukee and Chicago has yet been uncovered, and most of the deer shipped from our north woods are shipped to "Milwaukee." On one day last week there were seventy-five carcasses counted at Ashland, Wis., all of which were billed to "Milwaukee." On the day before the American Express Company handled forty carcasses at one load. The regulations of the law are contemptuously disregarded in probably the very great majority of cases. Quite aside from the fact that the Wisconsin game warden does not catch all the Chicago venison which goes to Milwaukee, there is a great deal of venison openly billed to Chicago which goes through without let or hindrance, and in spite of the pious protestations of the express companies, who have things pretty much all their own way. Thus from Chippewa Falls, Wis., Mr. J. V. Cunningham writes to the Milwaukee Sentinel:

"I am by no means a crank, as I do not approve of the non-resident license of $25, but would be glad to invite any sportsman from any State to visit our northern woods and kill his deer, or even two, and take them home with him, wherever that home may be, in or out of the State. The law provides, however, that no deer shall be shipped out of the State. I counted at the Wisconsin Central Depot here, last night, nineteen whole carcasses shipped to Chicago, and not one owner accompanying either carcass. To-night, at the same depot, are twenty-one carcasses and one saddle loaded on two trucks. The saddle is billed to Milwaukee, and all the rest to Chicago, and not one owner present. And this is only one station. It is safe to say fifty carcasses are shipped openly each day out of the State."

I have not heard of any enforcements of the deer shipping law in Wisconsin in this week, but there is to be recorded one attempt at the enforcement of the law. At Rhinelander, Wis., Deputy Shafer attempted to search one car on which he was told the express company had a lot of venison. He was put off the car at the point of a revolver, the express agent being aided by the trainmen. They told him he must have a warrant, or he could not search the car. As a railway car has a habit of changing its locality, it may be seen what chance a man has to seize illegal game in transit. Most of our laws are skillfully constructed, so that they can be evaded.

The season in Michigan did not open until Tuesday of this week, but the hunters have swarmed all over the upper peninsula. The counties of Marquette, Ontonagon, Goebic, Mackarac, Iron and Dickinson are getting perhaps the best of this north peninsula rush. The crowd of deer hunting travel has practically swamped the railroads. The towns in upper Wisconsin and Michigan have given up the hope of getting their mails regularly, so much are the trains delayed by the handling of this hunting traffic. Sometimes there will be 250 pieces of hunting baggage on one train. This sporting traffic is eagerly competed for by the railroads each year, and it seems to grow from year to year, in spite of license laws and everything else. The deer supply thus far has held out wonderfully well, and with care this vast body of pine lands in the Northwest ought to turn out an annual crop of many thousand deer. What the future will hold, however, is something which no man can tell, and it surely would seem probable that the great body of non-resident hunters who each fall are out after deer would, within a few years, use them up, unless there shall be a stricter observation of conservative measures.

It is stated that last year there were 3,500 deer killed in the upper peninsula of Michigan, that is to say, there were that many known to have been killed, not mentioning the unrecorded. Incidentally it is stated, also, that there were twelve hunters accidentally killed during the season in the north peninsula last fall. Thus far I have heard of but few accidents this season, though no doubt we shall later learn of plenty. Near Lakewood, Wis., last week, Mr. M. A. Barnes had a close call while hunting deer. A friend of his who was out with him wandered off to one side for a time, and later coming up through the woods saw the gun of Mr. Barnes glinting through the leaves, and took a shot at it just for luck. He hit the gun, and scared his friend out of a year's growth.

Among other items of interest gleaned in the deer hunting field this week I note one statement which is important if true. It seems that a shipment of nineteen deer was received by a Milwaukee commission house, among these one big buck which "had a large soft bullet all but buried in his antler." The reporter who describes this phenomenon says: "The lead was encrusted by the horn, and had evidently been fired by an old smoothbore many years ago. The buck had carried it through the woods until he received the shot that laid him low." It has been popularly supposed that a buck sheds his horns every year, and one is compelled to regretfully discredit the old smoothbore story.

Competition in the venison business is so strong that dealers are reluctantly obliged to violate the law in order to protect their business interests, even after they have their game in hand. Wisconsin law requires venison to be tagged, but the Milwaukee dealers have been removing the tags from the carcasses, in order to prevent rival dealers from learning the place from which they have received their game. Deputy Zinn has told them that they must leave the tags on their venison.

Another Game "Fence."

It seems that the underground railway idea, lately developed at Milwaukee, is not absolutely new. Out at Omaha there has been discovered another large case of "Mr. Hicks." The grouse and quail of the country west of Omaha are shipped into that city by the thousands of dozens, and they bring good prices in any amounts that can be offered. The city of Omaha and vicinity uses but a fraction of this immense amount of game, which cannot legally be shipped out of the State. The fact is that Omaha, exactly like Milwaukee, is nothing more nor less than a great clearing house for the Chicago commission trade.

Side-Hunts.

At Osage, Iowa, last week a number of shooters paired off and indulged in a big side-hunt. Nearly thirty men in all competed, there being an individual gold medal offered for top score. They shot for points, and presumably killed pretty much everything that came their way, the winning side scoring over 5,000 points.

At Bowling Green, Ill., there will be a big side-hunt on Thanksgiving Day, with nearly fifty starters, the losing side as usual to pay for the supper.

Wolves.

The cow men in the recently opened Indian lands east of the Black Hills are offering good bounty for wolves, and the professional wolfers are getting from $5 to $8 a head. One wolfer has killed forty-three gray wolves and 110 coyotes this fall, nearly half of which was done inside of ten days.

Ducks.

The duck flight is not yet over in this region, and the boys up in Wisconsin are still hammering away. The season along the Illinois River is still in progress, and I heard from Lake Senachwine that the flight is good. The birds are scattered all the way from here to the Gulf. Mr. A. E. Grimes writes from Green Ridge, Mo., that ducks have been flying there in numbers for the past two weeks. He reports chickens and quail as scarce in that locality.

Quail.

It is a splendid quail year. Illinois, Indiana and Michigan are showing plenty of birds. Three men, of whom Oswald von Lengerke was one, bagged seventy-six quail one day last week at a little country town in this State. There has been a heavy snow this week in lower Michigan and upper Indiana, but the birds should begin to move in a day or so now. The weather has been very bad around Chicago this week, and we may expect a freeze-up at any time which will end the duck season in these parts, and turn everybody's attention still more exclusively to quail.

Wisconsin Game.

Mr. Hascall, a FOREST AND STREAM friend, dropped in to-day on his way back from Wisconsin. He says they are killing a pile of game up in Wisconsin this week, the deer coming into Milwaukee fairly by carloads. He saw some grand bucks, and was pleased to note but few does. He tells me that up at Green Bay the duck shooting has been good lately. One gun killed 115 ducks one day recently, and others have bagged in the neighborhood of fifty daily. This is on the marshes, inland.

Indiana Game.

Fred Erb writes me from Lafayette on game and game law matters. He says: "You are about right, the game laws are not watched very close. It is best in Tippecanoe, Clinton, Benton and White counties. The first two named are the best in the State for quail and woodcock, and the last two are best for snipe, plover and chickens. These are all watched closely, and any gentleman can shoot there and not have any trouble. Would like you to come and see for yourself. Indiana is one of the best all-round game States of the country, if you could only get them up to having good game laws. The State League don't seem to bother much about it, they only want to hold a trap shoot of some kind. I tell you they have got to wake up or it will be only a little time before the game of this State will be done up. This last summer I was along the line between Illinois and Indiana, and to see and hear of the chickens that were shot and sent in to Chicago was a disgrace to sportsmen. I could have caught a lot of these violators in Illinois. I know a few wardens cannot watch all the shooters, but if they would watch the express companies that carry game from other States into your city, they could nail them all right. Our law will never amount to much till the express companies stop carrying illegal game. They are the ones that cause all the trouble. Now, what is to be done?"

There is much truth and justice in the above. It is the great express companies that do most of the mischief. If they were content to live as law-abiding members of society, as the rest of us are asked to do, or if they were in any way sincere in their protestations of a wish to help the wardens stop the illegal shipping of game, we should have the question of protection solved at once. This game that is being killed up in Wisconsin this week, of what earthly use would it be to the Chicago commission men if it were not carried here by the express companies? Now, you go to these people, and they say they are "heartily in sympathy" with you, and say they have "sent orders to their local agents not to receive any game for shipment." They would discharge any local agent who pretented to obey any such instructions, and the local agent knows it, so he goes right ahead taking and shipping the game, and the express companies know it, the dealers know it, and the wardens must also know it. All the talk of the express companies aiding the wardens is in substance fol de rol. They carry tons of game into this city every month. If they would only really be sincere and would really try to live within the law, there would be a sudden end to all the marketing of illegal game; for nearly every Western State now prohibits the shipping of its game to market. As to what we shall do, I imagine we shall do nothing. That is the American way. We love to be imposed upon by big corporations.

"Non-Export."

I wish that State Warden Chase S. Osborn, of Michigan, would tell us what is his construction of the non-export clause of the Michigan law. As to preventing the expressing or other shipping of game out of the State, the law is clear and cannot be enforced too strictly. But how about the man who comes over into Michigan, shoots a few birds, puts them in his pocket and brings them home to eat on his own table or to give to his own friends? I am a good deal of a crank, but how about that man? His sin is one on which the game law authorities have always looked with a good deal of leniency. Indeed, a former warden of Michigan once told me—and the warden of Wisconsin once told me the same thing—that if they caught anyone thus taking game home with him they looked the other way and did not try to make a case, for they did not believe the law would hold water, but would be proved unconstitutional on test. I have earlier called attention to the fight made on this clause of the Indiana law by the late Judge Knickerbocker, of the Tolles on Club, of Chicago. The Indiana law was knocked out, and ever since then sportsmen have openly carried their game out of that State. Indeed, I have always done this myself, and in common with all my friends never knew it was against any law at all. I have also lately cited the ruling of the law department of the State of Texas, on the county export clause of the Texas law. It was held that one may not ship, but he may carry or accompany his game. Cer-

tainly this would suit the sportsmen, even those of the most exacting class. All our shooting nowadays is more or less non-resident, and if a man may not take home a bird to eat, why should he go out to shoot it? At least half the sport is in coming home and letting on what a great fellow you are, to kill all this game that you display. In this way a man may be a good deal of a hero at home in his own family, where they don't know him very well; but if he comes home and says that he killed a lot of game, but didn't bring home a bird for the dear ones he left behind him, aforesaid dear ones are apt to tell him he is another, and that he never did kill anything at all. In practice this clause of the law is violated very much and very often, and I have very little sympathy with a State law myself which allows a man to come and shoot birds, but not to use them for himself. If I kill my twenty-five quail down in Indiana, what shall I do, sit down and eat them on the spot?

The Reward of Virtue.

We have all heard of the good young man who, because he was good, one day found a purse containing $4,000,000 in gold, and who was thus enabled to marry the daughter of the rich candy woman, whom he had long adored. Somewhat in this line are a couple of shooting stories which appear in the daily press this week, and which show how good a thing it is to be a true sportsman. In one case a hunter was chasing a rabbit, which took refuge in a hole in a stone wall. The hunter reached his hand into the hole after the rabbit, but drew forth, instead of the game, a long lost marriage certificate, which had, by reason of its absence, caused for some years a distinct family disturbance. In another case a poor but honest sportsman was out squirrel hunting. He shot and wounded a squirrel, and in return for his kindness the squirrel ran into a hollow tree. Reaching down into the hollow, the sportsman pulled out a box full of gold coins of ancient date, but of much intrinsic value. There are many of us who have hunted for many years and have never found either a marriage certificate or a box of gold, but we should not be discouraged. If we are good we shall perhaps some day be rewarded by some such discovery.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

Gun Flints.

ORIN BELKNAP'S story of the old flintlock gun, which he found in a pile of rubbish, reminds me of a circumstance which occurred away back in the twenties, in a newly-settled part of Erie county, New York. It was here that a man, while cutting out a new road, had occasion to roll out an old rotten log, which lay bedded in the decayed leaves and rubbish, under which lay a rifled gun, the barrel and lock covered with rust and the stock mostly rotted off. Near by was a blacksmith shop built of logs, owned and occupied by an old uncle of mine, not so very old, however, at that time, as it was about seventy-five years ago. The shop was quite a resort on rainy days, and several men had gathered here, when along came the man with the old gun barrel, and stuck the breech end into the red hot forge, thinking perhaps by heating he might get the breech pin out. As it became sufficiently heated the barrel did not go off, but the charge did, and sent a bullet into one of the hardwood side logs of the building, barely missing two or three men in its course. The surprise could better be imagined than described. Of course there was no clue as to how or when the gun had been left there. It had evidently been secreted for some purpose, and nothing more was ever learned about it.

I am sorry that Mr. Belknap should have to quarry his flints out of volcanic rock, as it must come far short of the genuine flint. Cannot some enterprising member of the FOREST AND STREAM family find some gun flints among some relics of the past age, and send the old hunter a half-dozen or so by mail?

In my boyhood days, when I began my shooting, it was only flintlocks that were known or used, and every store kept gun flints in plenty, and they sold cheap, at one, two or three cents each, as near as I can remember.

I never could learn how or where they were manufactured from the rough material. There were two sizes, the larger for muskets and the smaller for the rifles, and they were nearly uniform in shape and had the appearance of being cut out.

It was on some rare occasions that I was compelled to break out my own flints, but they were ill-shaped, and sometimes I had to break up a peck of flint stones before I could get one in shape to answer the purpose.

ANTLER.

GRAND VIEW, Tenn.

One word in regard to Mr. Orin Belknap's quest for a genuine old-fashioned gun flint. As it happened, Mr. Hardy, of whom I have just spoken, showed me only a few days ago a few of the veritable old-time flints, and very interesting and familiar they looked; and he showed me something much rarer, viz., a couple of old hand steels, against which the flint was struck for the spark which was to ignite the tow or punk for the kindling of a fire. I confess these last were unfamiliar to me, and I did not know their use till it was explained.

I know another man who must have some gun flints, and will tell Mr. Belknap his name if he cares for it. But will not some of the brethren tell us the source of the old supply of flints, and how they were given just that convenient form which they all had. Their manufacture must have been a regular industry somewhere seventy-five years ago. My own impression is that they came from the chalk cliffs in the south of England, where the same quality of flint occurs plentifully in nodules, though some American source may have been drawn upon for the American supply.

I have heard that the Kineo flint of the Moosehead Lake region was used at least by the Indians for fire-making and gun flint purposes. I feel sure Mr. Hardy could tell us about that. I have been told that Kineo is the Indian name for flint; also that it was the name of an Indian chief who made his favorite camp on Kineo cliff.

It seems to me, by the way, that nearly all the Indians of tradition were chiefs. One is tempted to wonder how among so many there were enough followers to make the chieftainship worth much. However that may be, count me as one who wants to know more "about trees" and "gun flints."

C. H. AMES.

Dreams and Dreamers.

Editor Forest and Stream:

While many appreciative commendations must come to Mr. Mather for his admirable articles in FOREST AND STREAM, to which I would add my own, yet mostly his must be the

> "Thanks untraced to lips unknown,
> That greet him like the odors blown
> From unseen meadows newly mown,"

which, in a greater or less degree, every writer receives. In his No. VII., Nov. 5, article, "In the Louisiana Lowlands," he speaks of the persistent peculiarity in his dreams of not being able, after game was sighted, to fire the gun, and has often wondered if this happens with other dreamers. My own experience coincides with his, and I think may be too general to be peculiar.

An older brother, however, once had a different experience. The gun of our earlier boyhood days was an old flintlock Queen's arm, that had the power to shoot off a tree top, and an almost equal reverse force. It was the idol as well as the terror of our young lives, and was carried over the New Hampshire hills with heroic feelings.

One night, in the stillness of the later hours, there was a tremendous jar in our sleeping room, as if a heavy body had been violently thrown down. Paterfamilias, aroused by the shock, came rushing in just as my brother, in a semi-somnolent condition, was slowly gathering himself up from the floor to regain his place in bed, from which he had dropped a moment before. Father exclaimed: "Bill, what is the matter?" to which Bill drowsily replied: "I dreamt I fired the old gun and it kicked me out of bed." It was emphatic enough to him to be peculiar.

CORPORAL.

NORTH CHELMSFORD, Mass.

ST. AUGUSTINE, Nov. 11.—*Editor Forest and Stream:* In one of Fred Mather's interesting articles a week or two ago he expressed a wish to know whether any one but himself had been troubled by being unable to fire a gun when hunting in his sleep.

"Misery loves company," and it may gratify him to know that I have had the same experience many a time and oft, and have been so savage that if the trigger had not been protected by a guard something would have given way.

I have never been able to account for it, unless it be that because we hear no report we imagine the charge has failed to explode.

DIDYMUS.

New York Sportsmen's Show.

THE fifth annual exposition will be given by the National Sportsmen's Association, in Madison Square Garden, New York, March 2 to 11, 1899. The managers announce an intention to give a genuine sportsmen's show, abounding in features and demonstrations of life in the woods. Prominent among the most interesting features will be an artificial lake, 75ft. long, 40 ft. wide and 8ft. deep, containing 200,000 gals. of water, for the purpose of holding water polo, swimming contests and other competitive matches of interest to sportsmen, as well as for the exhibition of launches, ducking boats, canoes and yachts.

The water sports will be under the supervision and management of Mr. J. E. Sullivan, president of the New Jersey Athletic Club and secretary of the A. A. U.; Mr. Harry Cornish, of the Knickerbocker Athletic Club, and Mr. Samuel Armstrong Nelson, who have been prominently identified with athletic sports for many years.

Log cabins and tents, presided over by experienced guides and hunters, properly equipped, portraying life in the woods.

Sportsmen's camps will be represented by their owners, who will entertain their friends.

Indian camps, occupied by families of Indians engaged in building canoes, snowshoes, bead work and basket making.

Revolver and rifle ranges will be under competent management, who will arrange matches and tournaments. Bowling alleys will be under the management of experts.

Association championship and other events at inanimate targets will be held on the roof of the Madison Square Garden, under the skillful management of Mr. Elmer E. Shaner, who is recognized as the manager of this class of sport.

Dr. Heber Bishop will represent the Association in Maine and Canada.

Big game park, enclosing in a miniature forest live specimens of buffalo, moose, caribou, elk, deer, antelope and other large game animals, mostly prized by sportsmen. Native game birds, live specimens from all sections of the country. Native game fish will form a very attractive exhibit.

It is the intention of the management that the decorations will be in conformity with a sportsman's ideas. There are many other features under consideration that will make this show probably the best one that has ever been held in this country; it certainly embodies features that have never been attempted at any other show, and will be the only sportsmen's show in this country in 1899. Mr. J. A. H. Dressel is the secretary-treasurer, 280 Broadway, New York City.

New Brunswick Grouse Market.

ST. JOHNS, N. B., Nov. 5.—This year the Provincial Government have withdrawn the restrictions re selling partridge; consequently the market is flooded; every countryman is shooting birds for the market. This will exterminate this noble bird in a season or two in New Brunswick.

H. H. H.

A New Brunswick Moose.

EDMUNDSTON, New Brunswick, Oct. 8.—Several parties have been out after moose in our country, and all have succeeded in getting their game. Two boys from this town were out three days, when they got a fine moose, bringing the whole animal home with them; another townsman was out two weeks with the same results, each reporting plenty of moose and caribou, but not many deer.

John Eagles took his wife along with two guides for a trip after a moose. He chose a route by water all the way, excepting one carry of four miles. Before reaching the lake they started a moose and saw him, but were not quick enough to shoot. Reaching the lake at 2 in the afternoon, tents were pitched and preparations made for a stay of some days. As sunset drew near they got into the canoe and paddled across the lake, about half a mile. The moose call was given, and they stood quiet listening, but no sound broke the stillness. Again the peculiar sound rang forth, but nothing took up the answer except the echo. After waiting the proper time, again they sounded the eik-eik-eik-coughoo-o-h. Before the echo died away there was heard from the hilltop the hoarse bellow they were so anxious to hear. Down the hill he came, like a torrent in its wrath, seeming, by the sound of breaking wood, to be crushing everything in the way. Soon he came out into the open in all the pride and vigor of his forest life, standing a perfect picture of nature's majesty, reveling in his might, unconscious of fear. Jack, who is really a good shot, was rattled. The magazine of his Winchester was quickly emptied, and not a shot touched the moose. While the firing was going on the game was only 50yds. away, but while the gun was being reloaded the moose had moved further away. This was bad for him, as the former bullets had been going over him, and he had gone just far enough so that the first shot hit him in the shoulder; the next struck him back of the shoulder in a vital part; when he began to sway like a great tree just before its fall, and down he fell right in his glory and prime. Truly I felt sorry to see the life taken so quickly from the great, magnificent beast. Then more moose were seen, and two caribou; but they were not molested, as they were not wanted.

All the meat was brought in, and Jack and his wife departed for their home well pleased with his ten days' vacation and his moose hunt near here.

S. J. RAYMOND.

Died while Bear Hunting.

S. E. L. GREWS, an Englishman, of Mingo, West Virginia, died of cold and exhaustion on Cheat Mountain on the night of Oct. 27. He, with three companions, had pursued a bear in a light tracking snow all day, and at dusk his companions left him in sight of his house, their ways diverging. He was found the next morning dead within a few hundred yards of the place his friends had left him. He was in a sitting posture at the foot of a tree, with his gun across his lap. The evidence at the inquest was to the effect that he seemed no more tired than the rest of the party.

It is believed that his death was due to overtraining. Sept. 24 he ran a Marathon race of twenty-four miles from Mingo to Marlinton, over two mountains, in two hours and fifty-nine minutes. He had trained for two months for this race. He told some of his friends a short time before his death that he could not run five minutes since the race.

His friends believe that he was tired to death, but was too gritty to show it, and those who knew him think this is the solution of the trouble. He had a peculiarly strong pride in not showing distress in athletic exercise.

The deceased was twenty-six years old, and had lived in America for six years. He was much loved and respected by all who knew him. He was the owner of a fine grazing estate. The night was bitterly cold, and there was considerable snow on the ground, the point being nearly 4,000ft. altitude.

MARLINTON, W. Va.

Currituck Ducks.

CURRITUCK, N. C., Nov. 6.—*Editor Forest and Stream:* As predicted by your correspondent some days ago, the shooting at Currituck, which opened Tuesday, Nov. 1, was excellent. The day was a fine one, with a light breeze from the northwest. I give below a few bags made on the first day, which shooting was repeated with few exceptions on the second. Hon. Pierce Hampton, 158, 114 of which were redheads; Humphries Lewark, 80 (50 redheads); James Hampton, 81 (50 redheads); while the writer bagged 33, nearly all redheads. This is an average of the bags made, and the number killed all over the Sound would foot up about 3,000, with perhaps 2,500 the second day, or Thursday, Nov. 3.

For some unaccountable reason, all the ducks are in the north end of the Sound. The food is abundant everywhere, and we do not understand it. There was only a sprinkling of canvasbacks the first two days, but the weather is rather warm for them yet. As I write I can see from my house large flocks of redheads coming in, and anticipate a keen day's sport to-morrow. Altogether I think we shall have a good season.

MORE ANON.

That Sly Old Coon.

ENOUGH has been said already to disprove some one's statement that the raccoon cannot be trapped save in one way, and never in the woods; yet another instance drawn from my own limited experience may be of interest to some. Once when a young fellow I set a line of deadfalls for mink along the bank of Louis Creek, under the direction and with the help of an old fur trapper. The traps were made with a straight smooth sapling for the fall, shutting evenly upon short bed pieces of like diameter between four smooth guide stakes, at the extremities a cob-house of weathered strips or bark. When set the fall was upheld by an upright, which rested on a spindle which held the bait of muskrat flesh. When completed the whole affair looks quite woodsy and unsuspicious, but no pains were taken to eliminate or disguise the taint of human scent. When I looked the

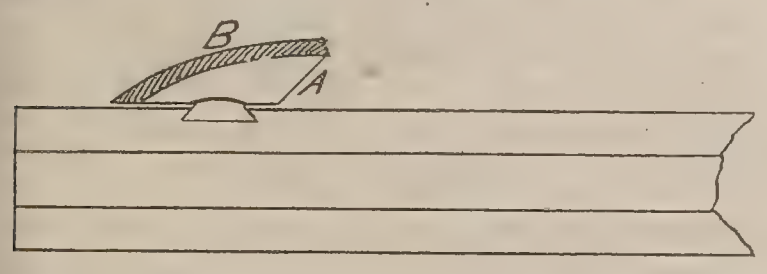
line over two days later I was not a little surprised to find one very large raccoon crouching in under the trap as natural as life, so natural indeed that I could not believe him to be dead until I touched his rigid body. The heavily weighted fall had killed him so quickly that there was not a sign of a struggle.

During the season I caught a skunk in the same trap, and he too was killed so instantaneously that he had not been given time to fire a parting salute; and his fur was as scentless as a lady's muff. From this experience I always thought that if I were to trap skunks I would set only deadfalls for them.

For the benefit of young trappers I will add that I did not catch mink in all my deadfalls, but caught several in steel traps set along the same line, and four in one set in the lucky place where the raccoon and the skunk were taken.

I know old coon trappers trap this animal successfully in the entrance to the dens in made places with bait under water, and that they do not consider them by any means the most wary of fur bearers.

AWAHSOOSE.



A Virginia Game Country.

SOUTH BOSTON, Va., Nov. 5.—*Editor Forest and Stream:* Under the heading of "Why Plantations are Posted" Mr. Chas. J. Means said some very good things, and some that every true sportsman should make note of, but which I venture to say too few will ever think of again. But, my dear shooting friends, that sort of treatment is not the only reason we have for posting our plantations. If our lands were not posted we would not have anything to hunt, nor would we be able to get any work done here during the open season, for the negro is a very persistent market-hunter, and will kill more birds in one day than will one of our Northern friends in three. I do not mean to reflect on the ability of our visitors, but as they are out for sport and not for slaughter they do not exterminate the game like our own pot-hunters. We have here in Halifax county some very good hunting, and if the birds are not hunted too late next spring will have a splendid supply next year. Turkeys are also on the increase here, as are woodcock. Should any one wish to try their luck in this locality, I feel assured that they can have all the quail shooting they are looking for. There are good hotel accommodations and three liveries; but our dogs are few and scarce, for there was an epidemic here last summer which killed the best of them. Some very large bags have been made in this locality, all full grown and well developed birds.

H. P. WILDER.

A Rifle Sight.

I STOOD the rifle against a tree for a moment, a gust of wind caused it to fall, and when I took it up I found that the Lyman sight had lost its bead, and was as unsatisfactory to use as could be imagined. On reaching

camp I knocked it out and put in a sight of my own make fashioned from a silver half-dollar. I have never used any other sight that proved so good in all lights. The under bevel, A, is always in shadow, and the upper, B, always in the light. Almost any German silver sight can be cut into the same shape easily. The upper edge can be thinned down as much as desired.

KTAADN.

Camp-Fire Flickerings.

"That reminds me."

An Old, Old Story.

THE Philadelphia Saturday Post printed last week this story, ostensibly as an original anecdote:

Ole Hanson had trouble with a bellicose dog belonging to his neighbor—a Russian by the name of Havva Drenkovitskey. The Swede shot the dog as soon as he discovered that he was not friendly to him, and the sequel found him in a justice's court.

When Ole was propounded interrogatories by the attorney for the prosecution, he evidenced a sense of justice in framing replies that is rarely witnessed. "What sort of a gun did you have, Mr. Hanson?" inquired the attorney. "Es var two-hole shotgun." "Don't you think you could have scared him away?" "Aye might ef aye had not bane scare so lak deckens maesal." "Why didn't you take the other end of the gun and scare him away?" "Val, master lawyer, vy dedn' de dog com for mae oder end first ef hae vant to hav' mae do det vay vid him vid de gun?"

The Post is, we believe, entitled to the claim of being the oldest paper in the United States, but about 200 years before Ben. Franklin started the Post this story was told, or another one having the same point, in a book entitled "Pasquil's Jests, with the Merriment of Mother Bunch," printed at London in 1650; and nobody knows how long it had been current before Mother Bunch got hold of it:

A Country Tanner that was running hastily through Eastcheape and having a long Pike-Staffe on his shoulder, one of the Butchers dogs caught him by the breech. The fellow got loose, and ranne his pike into the Dogs throat, and killed him. The Butcher seeing that his Dog was killed tooke hold of the Tanner, and carried him before the Deputy, who asked him, What reason he had to kill the dogge? For mine owne defence (quoth the Tanner). Why, quoth the Deputy, hast thou no other defence but present death? Sir, quoth the Tanner, London fashions are not like the Countries, for here the stones are fast in the street, and the dogs are loose, but in the Country, the dogs are fast tied, and the stones are loose to throw at them; and what should a man do in this extremity, but use his staffe for his own defence? Marry (quoth the Deputy) if a man will needs use his staffe, he might use his blunt end, and not the sharp spike. True, Master Deputy, quoth the Tanner, but you must consider, if the Dog had used his blunt end, and runne his tail at me, then had there good reason for me to do the like; but I vow Master Deputy, the Dogge came sharp at me, and fastened his teeth in my breech, and I again ranne sharp at him, and thrust my pike into his belly. By my faith a crafty knave, quoth the Deputy, if you will both stand to my verdict, send for a quart of wine, be friends, and so you are both discharged.

Sea and River Fishing.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

New Jersey Pound Nets.

From the forthcoming report of the New Jersey Fish and Game Commission.

Your commission has on previous occasions called attention to the existence along the coast of this State of large numbers of pound nets, and has urged the passage of some legislation restrictive of the operation of these nets. It is but a few years ago since hundreds of hardy fishermen earned their living either by taking fish with hook and line or by sweeping the sea with seines. The many residents along the shore, especially during the summer time, were thus supplied with an abundance of fresh fish. The same was true of some of the larger inland waters, estuaries of the ocean. As early as 1842 the Legislature passed a law restricting the size of net and mesh used in Barnegat Bay, the argument used to secure the passage of the law being that the fish were being so reduced in number in consequence of continual netting, that their practical extermination was a question of only a very short time. The law then passed was in force for a number of years, and the benefits derived therefrom were recognized by all, so much so that in later years when, despite the limited size of net and mesh, the number of fish were again on the decrease, the Legislature passed a law still further restricting the operations of the netters. The protection afforded the fish in Barnegat Bay worked excellently, and none would now care to see the law repealed, and a mere suggestion of such a proceeding would cause an uprising which would quickly indicate the feelings of all persons interested. The protection afforded brought to Barnegat Bay hundreds of wealthy people from other States, and the income derived by Jerseymen from these now equals in a week more than the total value of the product of the netting formerly would have aggregated in a year.

The fish that came to Barnegat Bay came from the ocean, where the high surf prevented the operation of destructive nets. It was while the fishermen along the coast were supplying the hotels and residents with fish that the pound net was devised. At first one was constructed, and the profits arising therefrom soon attracted other men of means, and soon our coast was lined with these nets. The individual fisherman had been driven to secure other employment, for he could not begin to compete with the huge nets, for not only did these nets take fish in enormous quantities, but they prevented the fish from coming in shore near enough to be within reach of the angler or the user of the seine. The pound nets were supplying fish at a lower price, and the benefit to large numbers of consumers of fish was offset against the hardships of the individual fisherman. But it was soon apparent that the supply far exceeded the demand, and it was necessary to devise other means of disposing of the fish taken. It was then that fish began to be used for fertilizing purposes, and the question arose whether the ocean, large as it is, could withstand any such drain. Not satisfied with their profits from the sale of fish for both food and fertilizing material, the pound net owners increased the size of their nets until they reached so far into the ocean that it was impossible to raise the pockets excepting when the water was comparatively calm. The construction of these nets precludes the possibility of any fish getting out after they have once been imprisoned in the pockets. The result of the increased size of the nets was that annually thousands of tons of fish died in the pockets; when the latter were raised these fish were dumped into the ocean, and many tons of them were washed ashore by the tide, creating not only serious detriment to the seaside resorts, but in some cases nuisances injurious to health. So great had this nuisance become two years ago that a bill was introduced in the lower house prohibiting the use of pound nets altogether; the measure was opposed by the lobbyists of the trust which to-day controls all the pound nets, but it came within one vote of passing.

Your commission had the previous year advocated the passage of restrictive measures, but the pound net owners argued that they had invested thousands of dollars in nets, and all they asked for was the privilege of using up these nets, which would be done in one year's time. The elements then came to the assistance of the people living along the shore, and last year every net was swept away by a storm. The same has taken place this year, and consequently the present seems to be a very good time in which to pass some restrictive measure, which, while not interfering with the supply of cheap fish, will effectually prevent the abuse of the right to net. Fish come to the shores for the purpose of seeking the estuaries for spawning purposes, and your commission believes that restrictive legislation something like that passed in 1842 for the benefit of Barnegat Bay would result in similar benefit for the thousands who crowd our ocean shores during the warm weather.

The statute recommended by the commission requires every pound net to be licensed, fee $100; forbids erection of pounds with leader nearer shore than 1,000ft. at low water mark, or with leader of less than 5½in. mesh, or with pocket of less than 3in. mesh; for violation of these provisions license to be revoked and net removed. The commissioners may refuse to license any net, because of unsuitable location or of applicant's previous conviction for law violation.

Cuvier Club.

THE Cuviers are still bagging new game, and adding largely every day to their ranks of membership. Only a few days ago a list of eighteen new members was made public, and yesterday twenty-six more prominent citizens were elected members of the famous organization.

President Starbuck predicts that all records will be broken this year in membership, and would not be surprised to see other clubs in the city outranked in number of members. The club possesses a meritorious object—the preservation of fish and game—and is deserving of the popularity it has achieved. The annual banquet, which is scheduled for Tuesday evening, Nov. 22, will be a triumph of the culinary art. It will be under care of Chef Max Basse, who has similarly presided for years. All the toothsome game that is then in season will be on the menu, as well as the delicious salmon and muscalonge that cleave the cold waters of Lake Superior and the St. Lawrence River.

Mr. Washington van Hamm, through Dr. T. C. Minor, has presented to the Cuvier Club a beautiful case of hummingbirds, once the property of Dr. N. B. Wolfe. These tiny birds are an admirable creation from almost every point of view—as delicate as the cobweb that can cause its death, of such emotional intensity that even terror alone may quench its life, of ethereal mold and resplendent color, this tropical atom is, notwithstanding, lion-hearted to attack even a man in defense of its nest. Valor and grace ne'er found a more unique companionship. And what a great little traveler the hummingbird is, darting like an electric spark from torrid climes far up into the arctic regions with each returning spring, and back in the fall—the merest mote in the vast blue expanse. They are gems of infinite beauty and are, in consequence of their brilliant plumage, used in my lady's hat with pleasing effect.—Cincinnati Commercial-Tribune, Oct. 30.

The annual banquet of the Cuviers will be held next Tuesday evening, Nov. 22, when the reception committee of seventy members appointed by President Starbuck will give a characteristically cordial welcome to the favored guests

A Salmon Freak.

ST. JOHNS, N. B., Nov. 5.—*Editor Forest and Stream:* I enclose a clipping which I cut out of last night's St. Johns Globe. It may be interesting to some of the readers of FOREST AND STREAM; the slip will give all information. The salmon are caught and put in this pond, then stripped and let go again into the salt water, and the eggs are sent to the hatcheries.

"An exceedingly interesting fact came under the notice of the men employed in stripping the salmon at the Carleton Pond. One fine looking salmon was provided with both roe and milt, and thus was practically of both sexes. There could be no doubt whatever of the fact, and the men say that such a thing never before came under their notice. The fish was carefully saved and will be kept as a curiosity for Prof. Prince, of the Fisheries Department, who may come here at any day. The fish in its exterior appearance was not different from the others in the pond. The work of stripping the salmon has been completed and the experts left to-day for their homes. Something more than a million eggs were secured, and these have been sent to the hatcheries at Grand Falls and Bedford."

H. H. H.

A Fly and Mosquito Dope.

BOSTON, Nov. 8.—*Editor Forest and Stream:* I have noticed recently several allusions by Mr. Hough to a fly and mosquito dope. To get a good one, nay, to get the best, is the desire of all who go into the woods where these "pesky critters" abound. But nearly all these formulas have tar as the leading ingredient. Now, tar is villainous stuff at best, and I used it for many years until I found a better thing.

Many years ago—it was on my first trip to Amasa Ward's camps at Hellgate Falls, Dead Diamond River, that Ward gave me a trial of a mixture that he had used for years, and here it is: A 6oz. vial is made up of oil of pennyroyal, 1oz.; ammonia, 1oz.; sweet oil, 2oz.; glycerine, 2oz.; larger or smaller quantities in the same proportion. It is the best, as well as the cleanest, preparation I have ever used, and I have given it to many friends, who have used it with great satisfaction. The pests of the woods don't like it a little bit, and I confidently recommend all sportsmen to give it a trial.

WM. B. SMART.

Mr. Robert Graham, of New York, told the Merchants' Association of the commercial fishery opportunities in Porto Rico: "The consumption of codfish on the island is simply enormous. I should think it is a very large factor in the ordinary diet of all classes. While the adjacent waters teem with fish, there is very little caught, only small lots, which are sold in the market places by local fishermen for immediate consumption, as there are no means of keeping it for transportation. The salt fish is shipped from Nova Scotian provinces; it was formerly shipped from the United States, but changes in the tariff and other laws have destroyed that business for us."

NOTICE TO SUBSCRIBERS.

The address label on the wrapper shows the date of the close of the term for which the subscription is paid. The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

Indiana Field Trial Club's Trials.

A GENIAL party of sportsmen began to assemble Sunday, Nov. 6, at Squire Buckle's famous hostelry at Bicknell, and by Monday morning quite a crowd were in attendance on the historic field trial grounds of Bicknell. A more congenial gathering was probably never held in the same interest. While the crowd was not so large as in the former years of trials at Bicknell, it improved in numbers over the past two years at Carlisle. As is well known, there is no better grounds for the purpose of holding trials in the country. Birds were found in abundance, the horses were the usual average, and the hotel accommodations were excellent.

The farmers who so kindly took an interest in allowing the club the privilege of running the trials on their grounds are to be commended for the courteous treatment of club members and those in attendance. Many thanks for the privilege are extended to them, no doubt, by all concerned. The club is especially indebted to Messrs. J. Emory Horn, its president; Cliff Horn and John Horn, for many accommodations.

Mr. S. H. Socwell made an efficient secretary, and the club feels indebted to him for his painstaking work. An affable gentleman, his words were always courteous and his actions accommodating to all that approached him.

The judges in the Derby were Messrs. Gil. T. Kerr and S. H. Socwell, of Indianapolis, and John Horn, of Bicknell. The latter officiated in the saddle for the first time with much credit to himself. In the All-Age Stake Messrs. Kerr and Horn officiated during the first series; when Mr. Socwell's dog was not continued in the second series, he was asked to assist. Their decisions met with general approval, and their management was fair, skillfully and painstakingly done.

Quite a number of entries in both stakes did not start, several were reported sick and one injured, thus the starters were cut down somewhat. The quality of those started would hardly be excelled in the land, and was of decidedly excellent merit.

The regular club meeting was held Monday night. The officers for next year were elected as follows: President, Mr. J. Emory Horn, Bicknell; First Vice-President, Dr. C. I. Shoop, Racine, Wis.; Second Vice-President, Mr. Geo. D. Maxfield, Indianapolis, Ind.; Secretary-Treasurer, Mr. S. H. Socwell, Indianapolis, Ind. It was decided to hold trials in '99 at the same place on the first Monday in November, as heretofore.

The gentlemen named as follows were interested spectators during the running: Mr. C. W. Harris, Mattoon, Ill.; Dr. C. I. Shoop, Racine, Wis.; Messrs Geo. W. Maxfield, P. T. Madison, G. T. Kerr, S. H. Socwell, H. S. Humphrey, Dr. B. H. Sellers and Capt. C. S. Tarleton, all of Indianapolis; Messrs. J. Emory Horn, Cliff Horn, John Horn, Simpson Bicknell, Obadiah Holmes, Uncle John McLin and quite a number of other gentlemen of Bicknell, whose names I did not get. The handlers in attendance were J. H. Johnson, of Carlisle, Ind.; B. W. Butterfield, of Brooklyn, Ind.; R. W. Riley, of Indianapolis, and George and Joe McLin, of Bicknell.

Taken all in all it has never been my lot to attend a field trial where there was less friction than at this. I must properly remark that I did not hear a real kick or notice any clash during the progress of these trials. The "kicker" was conspicuous by his absence, and matters all through were of the most pleasant character. One of the most enjoyable of treats were the many reminiscences of years gone by told by several of the party around the hotel office in the evening. Many a happy laugh was created at the expense of some of the veteran handlers of the past.

The Derby.

In this stake there were but four starters, however, it seemed as though their owners knew what were the right sort to start. There was not a poor one in the lot, and it may be remarked that anyone of the three first placed would give the strongest competition anywhere should they show the superior form here exhibited. What was lacking in quality was undoubtedly made up in merit of truly a high class order.

The drawing resulted as follows:

Dr. B. H. Seller's black, white and tan setter bitch Beaut Gladstone; whelped June 27, '97, by Rodfield—Brownie Gladstone, handled by Joe McLin, with G. F. Poulson and C. W. Criswell's black and white setter dog Rodfield Gladstone, whelped May 16, '97, by Rodfield—Florence Gladstone, handled by Geo. McLin.

A. E. Schilling's orange and white setter bitch Nancy Gladstone, whelped July 27, '97, by Count Gladstone IV.—Hopp's Hunter, handled by Joe McLin, with Dr. B. H. Seller's black, white and tan setter bitch Rod's Pansy, whelped Jan. 2, 97, by Rodfield—Kate N., handled by Geo. McLin.

JINGO'S JOHNNY—THIRD IN ALL-AGE.
Photo during his work by H. S. Humphrey.

Monday Morning.

After the drawing, which occurred immediately following breakfast, the party mounted their horses, and were soon at the edge of the Cliff Horn farm. The weather was all that could have been desired, with the exception that a high wind was blowing, which was decidedly unfavorable for point work. The sun shone bright and clear, and the plentiful rains, which had occurred a day or two beforehand, left the ground in an almost perfect condition for scent, had not the high wind interfered.

First Round.

Beaut Gladstone—Rodfield Gladstone.—They were put down in a weed field at 8:25. Both went merrily to work, Rod showing the best range and speed. Beaut hunted her ground carefully, and quartered nicely. Both going at a good clip should have found a bevy, which they passed, that was afterward flushed by their handlers or the judges. The birds were not followed. Over the fence into another stubble, the field was drawn blank. Arriving at an old corn crib, dogs were sent down a likely looking fence next to a cornfield, where Rod secured a bevy point. Beaut coming up pointed also. The scattered birds went to the high corn with the exception of two outlying birds, which were afterward flushed by Beaut, who was steady to wing. Ordered up at 9. Rod having the best of it. He is fast, with a wide, stylish manner of going. Beaut proving a nice stylish little one, with but moderate speed.

Nancy Gladstone—Rod's Pansy.—Cast away in stubble at 9:05. Both going handsomely. Some scattered birds were flushed by McLin. Nancy coming up steady to wing. Sent on, roaded to a bevy point in gully, where she was nicely backed by Pansy. McLin flushed the birds which flew to scrub oaks. Both steady. Going up the hillside, Nancy scored points on singles, right and left, steady to wing. Pansy having made for the oaks soon found and pointed single in ravine. Steady to wing. On the hillside Pansy wheeled to point on a single bird, which flew to the corn. Sent on. Pansy made game near a brier patch on edge of the woods. She soon roaded to a bevy point, where she was backed by Nancy. McLin ordered to shoot, both were steady. Birds going well into a thick woods. Sent back along the other side of scrub oak patch for the remaining singles of previous bevy, Nancy was soon roading to a point. The bird flushed wild. Nancy steady. Pansy was a bit wider ranger and hunted out her ground well. Both very speedy. Nancy excelled a little in style. The heat was well contested, Pansy having the advantage.

Second Round.

Rodfield Gladstone—Rod's Pansy—Started at 9:57 in stubble, after allowing Pansy twenty minutes' rest. Down the hillside, Rod soon found a bevy which he pointed stanchly. Pansy immediately wheeled to point close by, where her handler started a rabbit. McLin ordered to flush from Rod's point, a nice bevy arose which scattered in same field. Both were steady to wing. Sent on, Rod flushed a single, steady to wing, and Pansy to the left roaded to a flush on single, also steady to wing. Along a rail fence Pansy secured a nice point on a single. McLin ordered to shoot. Pansy steady. Down ravine, in briers, Parsy wheeled to a point on bevy, where she was backed by Rod. Following scattered birds, Rod made game and pointed a single. His handler flushed; Rod showed an anxiety to follow, but was restrained. Pansy, to the right, pointed single and was steady. Taken up at 10:29. Pansy having easily the best of it, she being a consistent worker, and showing a finished order of going. She staved well out and showed the better judgment at her work, her point work being of a higher form than Rod's, who also got a bit the worst of it in speed and quartering.

Beaut Gladstone—Nancy Gladstone.—Got away at 10:33 in stubble. Both dogs were lacking range. Nancy the speedier. Some scattered birds were flushed by spectators. They were not followed. Drawing several stubbles without finding birds, they were sent on to the woods, with no better success. No birds were found by the dogs during this heat, and they were called in at 10:56. Both evinced style and quartered well, but Nancy was far the best in speed and range. The judges then consulted and it was decided to go to the hotel for luncheon. After partaking of same, the judges announced the winners as follows: First, Rod's Pansy; second, Rodfield Gladstone; third, Nancy Gladstone; fourth, Beaut Gladstone.

The All-Age Stake.

Seven dogs filled for the All-Age. As in the Derby the quality was of the first order. The stiff wind which had been blowing earlier in the day had died down considerably since morning, thus making better chances for work on birds. Immediately after luncheon the drawing was held. Following is the order in which they ran:

Geo. D. Maxfield's black, white and tan setter dog Rod Gladstone, whelped July 23, '95, by Rodfield—Sue Gladstone, handled by Geo. McLin, with Dr. C. I. Shoop's black and white pointer dog Hal Pointer, whelped Aug. 25, '91, by King of Kent—Daisy, handled by J. H. Johnson.

C. W. Harris' lemon and white pointer dog Jingo's Johnny, whelped June 24, '91, by Jingo—Goldie Croxteth, handled by B. W. Butterfield with S. H. Socwell's black, white and tan setter dog Rodfield's Mark, whelped Aug. 27, '04, by Rodfield—Queen, handled by Geo. McLin.

Alex. B. Meier's black, white and tan setter dog St. Cloud, whelped June 26, '06, by Judge Scarlett—Lillian, handled by Geo. McLin, with J. R. Hayes' black pointer

WHILE THE JUDGES WERE CONSULTING.
Beginning at the left, are: R. W. Riley, P. T. Madison, Dr. C. I. Shoop, Joe McLin, Geo. McLin (with St. Cloud, winner of fourth, All-Age Stake), J. H. Johnson (handler of Hal Pointer).
Taken by H. S. Humphrey.

ROD'S PANSY—FIRST IN DERBY.
Photo during her work by H. S. Humphrey.

dog Keno, whelped Nov. 0, '96, by Don Ritchie—Nelly K., handled by R. W. Riley.

Fishback and Baughn's orange and white setter dog White Line, whelped Dec. 1, '96, by Rodfield—Gath's Belle, handled by Geo. McLin, a bye.

Monday Afternoon.

First Round.

Rod Gladstone—Hal Pointer.—This brace was cast off in stubble at 1:25 at the Cliff Horn farm, on which the morning start was made. Rod made a magnificent cast down wind, leaving the stubble to hunt a long hedge, Hal quartering speedily in the stubble. Rod coming back, both dogs hunted out their ground with plenty of movement. Continuing down the field and into another stubble, both were drawn blank. Hal was soon out of sight into a large cornfield, where he was soon joined by Rod. Hal's handler found him in time to see him making game, where he roaded in his high-headed way to a bevy, which flushed wild 20ft. ahead of the dog. Rod coming up, started to back. Continuing in the corn, Rod found and flushed a bevy. They were then taken to the stubble, where, in a hollow thicket, Hal nailed a single stanchly, which was flushed by Johnson. Hal steady to shot. On the hillside both passed within 10ft. of a single, which was afterward flushed by your reporter. Taken in tow at 2:38, Hal having slightly the best of the heat in point work. Both went a clipping gait, and never have I seen a higher-headed dog than the pointer. They were a magnificent brace as regards style, speed and range, and it was most to be regretted that they did not handle their birds better, even though their opportunities were limited.

Jingo's Johnny—Rodfield's Mark.—Got under way at 2:52. Mark pointed on foot scent, where birds had been running a short time before. None were flushed. In range, Johnny was getting a bit the best of it. Later Mark pointed where a bevy had arisen during the day; fresh droppings were the indications. Sent on, Johnny wheeled to point on feeding bevy, where he was handsomely backed by Mark. Both steady to wing. Birds flew to high corn, where they were not followed. Over the fence into scrub oaks, Johnny established point on part of a bevy which had been scattered in the morning. Steady to wing. Following down the brier patch Johnny pointed a single, which Butterfield flushed. Johnny steady to shot. Into the woods Mark pointed a single bird, and was steady to wing. Coming back on the other side of the oaks Mark pointed a small bevy, probably the other half of Johnny's last bevy, and Johnny refused to back. Both steady to wing. They were stopped at 3:35. Johnny having the best of it in range and speed. Both dogs hunted their ground well, doing excellent quartering. Mark is a dog that has been heavily shot over in the past, which has probably cut his range down some. Johnny and Mark are both very stylish dogs, and the pointer proved especially stylish on point.

St. Cloud—Keno.—At 3:58 this brace was sent into a fresh stubble, which had not been worked during the day. Down a branch St. Cloud turned to a stanch point on a stray bird. McLin flushed, and Cloud was steady. Keno was coming up, but was not in time. Passing on to the Horn orchard, it was drawn blank, and the dogs were ordered back to the stubble. St. Cloud then pointed some scattered birds. Keno proved slightly unruly, but was held in check by Riley. In next field Cloud pointed a bevy. Keno arriving helped himself to a point on the same bevy. Both were steady to shot. Sent on, Keno pointed a rabbit, but did not follow. St. Cloud then roaded to point on scattered birds: they were flushed. Darkness coming on ended the day's work. They were a speedy pair, St. Cloud having a little the best of it in range and style of going. Keno is a nice little dog with plenty of movement, hunting his ground cleverly, but did not get much chance on birds.

Tuesday.

A late start was made for the J. E. Horn farm, where the old familiar sugar camp was made the scene of the starting rendezvous. While waiting for the wagons, R. W. Riley went on a "self-hunt," coming back with four rabbits and his revolver empty. Rabbits were so plentiful that at several stages of the trials the work of the dogs was somewhat impaired. The weather was cloudy and moderately cold, the wind not so high as on Monday, but blowing enough to make matters uncomfortable.

White Line, a bye.—Got away in a clover and weed field at 9:33. His first move was to eat part of a dead rabbit, for which he was reproved. He moved away very cleverly, and soon roaded to a point in which an outlying bird flushed wild. He soon located the bevy up the ravine, on which he cleverly wheeled to a point. The birds were flushed by McLin. White Line steady to wing. Over the hill into a weed field he pointed a single, which flushed wild. Steady to wing. His range and speed were improving every minute. Then a small orchard was drawn empty. Starting down a woods ravine, White Line pointed. McLin started a rabbit. Down the draw a short distance he secured a bevy point and was steady. Birds flew into heavier timber, and were not followed. A large stubble was then drawn blank. Put on chain at 10:04. White Line did not know his handler, having been sent to him but three days before the trials. His speed and range were above average, and his work throughout very clever.

Second Round.

After a short consultation the judges decided that five dogs were to be taken in to the second round.

Rod Gladstone—Jingo's Johnny were put down in a deadening at 10:38. Both went with excellent pace and range. Rod, making game, pointed rather indifferently, to which a lark was flushed by McLin. Going on, Johnny then pointed stanchly, but nothing was found until your reporter, coming up, flushed a crippled bird, which he tried to catch, the bird getting into dense briers. The dogs then came to a large barren field, which was drawn blank: nothing in sight but winter wheat. The dogs were ordered temporarily up. They were then put down in a long stretch of deadening marsh, with the water shoe-top deep in many places; nothing was found. Approaching a weed field, the dogs were sent on, going magnificently. This was also drawn blank. It was unfortunate for Rod not to be able to improve his bird work, as otherwise he stood well for place. Ordered up 11:47, with reserve to continue after lunch. The party adjourned to the kennels of Geo. McLin for lunch. It may here be properly remarked that the writer never saw a large number of dogs in nearer perfect condition than McLin's string, which were examined shortly after the inner man was satisfied.

Tuesday Afternoon.

Rod Gladstone—Jingo's Johnny heat continued. Went away at 1:40 on the Cliff Horn farm. Up a draw, a bevy flushed wild, most of the birds going to the corn. On the hillside Johnny pointed stanchly, but Butterfield could not flush the bird. Coming up a few seconds afterward, one of the judges flushed it. Several birds were here flushed by the overanxiety of both handlers, which scattered down the scrub oaks. Crossing the fence, Johnny went clippingly down the hill, and reaching the other side, wheeled to a bevy point. Rod was going well, but was evidently off nose. Johnny to the left soon nailed a single; steady to wing. Going on, both dogs pointed, but nothing was flushed to either point. Continuing to the woods, no birds were found. Upon returning down the clearing, Johnny pointed a single in perfect style, which point, taken by your reporter is the subject of the photograph. Johnny was steady to shot and wing. Up at 2:15, Johnny having the best of it.

Hal Pointer—White Line.—At 2:29 the sun came out, after it having been behind the clouds all day, to witness one of the star heats of field trial history. Both dogs going magnificently, White Line improved greatly over his bye heat and had only a bit the best of Hal in range and speed. White Line roaded the distance of 30yds. on a running bevy in the corn, which he gamely pointed. McLin flushed; Line steady. Sent on, Line wheeled to point on outlying birds, where he was slightly unsteady to wing. Hal was unruly, and was being duly administered to by Johnson. Sent ahead Hal pointed a single, and was steady to shot. McLin then called point, but no bird was found. Hal, going on, overran a single, which was probably the bird Line was previously pointing. In the edge of briers Hal pointed a bevy which flushed wild; Hal steady. Continuing, Hal pointed a single, backed by Line in good style. Further down the line both dogs pointed a bevy in good shape; Line steady; Hal a bit unruly. Sent on, Hal pointed a single. Immediately after McLin called point for Line. Hal, coming up, stole point. Both steady to shot. In the woods Line pointed a single in dead tree; Hal, a few feet away, passed within 2yds. of a bird, which flush wild. Sent back to the corn, Line soon had a bevy point, and was soon up pointing the scattered birds right and left, doing the highest class of work in a field trial heat ever seen by a majority of the spectators. Hal was under poor control, having been only two weeks in preparation. Even at that, he should have had the edge on Line, who arrived in McLin's hands only a day or two previous to his work. This was a clever brace. Hal full of style and go, high-headed and with plenty of range. Line handled his birds in a truly excellent manner, went a clipping gait, stayed out at his work, and certainly hunted his ground in a finished style. Ordered up at 3:07.

St. Cloud, a bye, was accompanied by Jingo's Johnny, the judges wanting to see more of Johnny's work on birds. Into the stubble both went away at a clipping gait. Johnny soon left for the corn, and Cloud, going down the fence into high weeds, nailed a bevy in good shape; steady to shot. Johnny coming up they were sent to an old orchard, planted in corn, where Cloud made two points on singles, Johnny getting one. Going ahead, both handlers called point, to which nothing was found. Later Johnny pointed scattered birds and was steady to wing. Continuing, Johnny wheeled to a stylish point on a brace, and was steady. This ended the heat at 4:12, as well as the work of the trials Johnny having run four long, tiresome heats that day, three of them in the afternoon, and he seemed ready for more. Johnny was the best of the two in speed, range and style. Shortly after supper the judges announced White Line, first; Hal Pointer, second; Jingo's Johnny, third; St. Cloud, fourth. These awards seemingly were very satisfactory.

The Derby Winners.

Rod's Pansy, winner of first, is a medium-sized, white, black and tan bitch, of rangy character, clever in the way she handles birds, quartering nicely, and showing qualities that would be a credit to an all-age dog. She was superior in staying at work, and hunted her ground in a knowing way. She was first, with not an abundance to spare, yet clearly so.

Rodfield Gladstone, winner of second, is a medium-sized, heavily ticked, black and white dog who went a clipping race; is stylish and snappy, and has plenty of endurance. With his high-headed, wide way of going, we expect to hear from him in the future.

Nancy Gladstone, winner of third, is also a medium-sized one, orange and white, full of style, snap and vigor; is a consistent worker, with no very bad faults. Her speed and range were above moderate.

Beaut Gladstone, winner of fourth, is a small blue belton bitch, has clear style, moderate range, and fair nose. The awards in this stake were properly decided.

The All-Age Winners.

White Line, winner of first, is a medium-built one, orange and white, and is in every sense of the word a crackerjack. His way of going is a very merry, clipping style, with plenty of movement. He is certainly the best of his age the writer has had the pleasure of seeing. Line was only one month too old for the Derby. His work on birds was of the most finished order, and he was clearly the winner, outclassing the others. He is undoubtedly among the first flight, and will no doubt demonstrate it again in the future.

Hal Pointer, winner of second, is a fair-sized black, white and ticked pointer, of very gamy character. He is one of the highest headed dogs I have even seen, having plenty of movement, is speedy, and quarters nicely. He showed evident lack of work, and his opportunities on birds were limited. He is a high-class individual, reminding one of Kent Elgin, of former glory, and is his half brother.

Jingo's Johnny, winner of third, is a large lemon and white pointer, with superabundance of speed, style and range. He was under good control, and certainly has more endurance than the greater majority. On point he is particularly stylish. He is a consistent worker, goes like the wind, withal being perfectly stanch and certainly belongs to the stem-winder class.

St. Cloud, winner of fourth, is a white, black and tan setter, a bit above medium in size, and a merry worker, possessing speed and range, is excellent in quartering and stylish on point. He is a handsome dog, of the right type, and was properly placed. H. S. Humphrey.

E. F. T. C. Trials.

The Members' Stake.

The advance guard of the Eastern Field Trial Club were assembled in St. Hubert's Inn, Newton, N. C., on Thursday evening, Nov. 10.

The number of starters were not quite up to what was expected. Mr. Pierre Lorillard, Jr., who has been a staunch supporter of the Members' and other stakes, was absent at the opening competition this year, much to the disappointment of the other members, all of whom are desirous of keen competition.

The evening of Nov. 10 was most pleasantly spent in reminiscent chat, making the entries, drawing the order of running and admiring the beautiful prizes, of which there were four, a beautiful silver cup being first prize; a cut glass silver claret pitcher second prize, and a beautiful silver flask and silver cork screw, with a silver-mounted horn handle, third and fourth. Also, Mr. Edmund H. Osthaus donated one of his beautiful paintings to the winner of first, and it is hardly necessary to add that each competitor eagerly desired the honors accompanied by such rare trophies.

The trials of this year in a way seemed to be most naturally linked to the trials of a year ago, for on the blackboard in the hallway of St. Hubert's Inn was the list of winners of each stake, as it had been marked in chalk by the hand of one of the judges the year before. It set forth the list as follows: "Members' Stake, 1st, Ripsey; 2d, Artonia; 3d, Shadow; vhc., Roland, H. C., Molly B. Derby, 1st, Zeb; 2d, Pearl R.; 3d, Why Not. All-Age Stake, 1st, Count Gloster; 2d, Anne of Abbottsford; 3d, Elgin's Dash. Subscription Stake, 1st, Tony's Gale; 2d, Young Rip Rap; 3d, Elgin's Dash."

It is interesting to note that the winners of first and second last year, Ripsey and Antonia, repeated their good performance and again appear in the winning list.

So far as the grounds are concerned, the available area for competitive work is much lessened, owing to the large acreage sowed to wheat, large stretches being this year cultivated for that purpose. The routes therefore were considerably narrowed as compared with those followed in previous years in the day's competition.

The judges were Mr. S. C. Bradley, the club's secretary, and Col. Arthur Merriman, of Memphis, Tenn. Both gentlemen are thoroughly experienced and proficient in judging, and they managed the competition with the ease and accuracy which only comes from a thorough schooling in field trial matters.

Mr. George F. Nesbitt, of Wilkes-Barre, Pa., a famous trap shooter of that section; Dr. D. Fitzgerald, of Baltimore; Messrs. M. Bulkley, Southport, Conn.; F. E. Arend, of Trenton, N. J., and F. J. Arend, of New York, were present.

Messrs. Osthaus, Meares, Bradley, Fox, Sturgis and Dr. Brown were the members present. Mr. R. V. Fox recently became a member. Two ladies graced the event with their presence on the first day. They were Miss Parmelee, and Miss E. B. Bradley, the secretary's daughter.

Ripsey, liver and white pointer bitch, by Rio Rap—Dolly B., won first on a most excellent all-round performance. She worked with excellent judgment and fidelity to the gun. Her range was conducted with great skill, and was quite wide enough for practical work, being about midway between the wide and narrow, just right for a high-class practical working dog. Her locating and point work were notably skillful and successful. She uniformly went to her birds in the right manner, and pointed them at the right distance. She was free from the "hard luck" happenings so frequent with some dogs; that is to say, flushes across wind, etc. The reason of her success could be found in the diligent manner in which she constantly used her good nose, and the good judgment she used in following up the scent to find and locate. She goes with spirit, points in good style, and works to the gun perfectly in all details without orders. She is a very finished worker.

Antonia, black, white and tan setter bitch, by Antonio—Miss Nellie Y., won second. She also was very skillful and accurate in her finding and pointing, and made an admirable competition. She ranged very well at times, but on the whole her range is narrower than what one could desire. She proved herself an excellent worker on birds, and also in her observance of the requirements of the gun. Her class of work, however, did not rate with that of Ripsey.

Molly B. won third. She is black, white and tan, and is by Rodrigo—Lily B. Her point work rated very high, being sharp, accurate and quick. She is very skillful in locating and pointing, and worked very faithfully to every requirement of the gun. Her range is good, but she mars it by coming in unnecessarily to her handler at times. As with the winners of first and second, she was thoroughly broken, and worked perfectly to the details of brace requirements, backing promptly and cheerfully, doing her part with most pleasing faithfulness. I preferred her for second place.

Ned B., black and white pointer by Rip—Lady Grace, showed a great deal of natural ability, but his work to the gun was faulty. He was hard to handle, and in brace work he showed a disposition to take all the leading parts to himself. He needs more discipline in working to the gun. His range and judgment were good. His work on birds was lacking in accuracy and finish.

The handling was done quietly and skillfully, as it should be done, whether by amateur or professional, with

the difference, however, that the professional would seem to be the one to handle with the greatest skill, and therefore with the least fuss and noise.

The Members' Stake was a most pleasing introductory to the trials, and as a feature should receive the staunch support of the members, and should be placed in the position of the most important event of the trials.

This stake was run on Friday and Saturday, Nov. 11 and 12, at Newton, N. C. There were nine starters, run in the following order:

W. B. Meares' liver and white pointer dog Fitz (Tick Boy—Abdallah Romp) with Edm. H. Osthaus' liver and white pointer bitch Ripsey (Rip Rap—Dolly B.).

Dr. J. Spencer Brown's black, white and tan setter bitch Molly B. (Roderigo—Lilly B.) with R. V. Fox's black, white and tan setter dog Forzando (Gath's Mark—Countess Rush).

Theo. Sturgis' black, white and tan setter bitch Vivian (Gath's Mark—Gossip) with W. B. Meares' liver and white pointer dog Glenn (— — —).

Dr. J. Spencer Brown's black and white pointer dog Ned B. (Rip Rap—Lady Grace) with Theo. Sturgis' black, white and tan setter bitch Antonia (Antonio—Miss Sally Y.).

W. B. Meares' liver and white pointer dog Don (— — —), a bye.

Friday, Nov. 11.

The weather was cool and bracing. A moderately stiff wind blew throughout the day. The sun shone clear and bright. Taken all in all, it was a model field trial day in respect to weather. Birds were found in sufficient numbers to meet the requirements of the competition. The work as a whole averaged fairly good, though it varied a great deal in character, some of it being superior, while a part of it was quite inferior.

The handling was done most pleasingly, courteously and skillfully. A start was made at Gibson's well, and the day's competition ended near Conover.

First Series.

Ripsey and Fitz began at 8:45. The morning was charmingly pleasant and favorable for good work. Ripsey pointed at a place where a bevy had been seen to flush from. In pine woods, Ripsey pointed a bevy, and was steady to shot. Soon after being sent on she pointed another bevy. The dogs were worked some minutes afterward, when in open weeds Ripsey found and nicely pointed a bevy. Fitz going down wind flushed it. Both were steady to shot. They were ordered up at 9:40. Ripsey was decidedly better in every respect. Fitz seemed to be lacking in working knowledge, although he sought with diligence. Ripsey made a very clean, finished performance, working most pleasingly to the gun. She was sweetly obedient, though few orders were necessary at any time.

Mollie B. and Forzando were started at 9:55. Forzando made a point, which was handsomely backed by Mollie; nothing found. Sent on. Mollie pointed a bevy prettily and accurately. Her work on birds was reliable and quick. The birds were followed into woods, and Forzando pointed a single. Up at 10:52. Each ranged fast. Forzando was difficult to handle. Mollie worked neatly to the gun, and was promptly obedient. All in all, she had much the better of the heat.

Vivian and Glenn were cast off at 11:05. Vivian soon pointed a bevy in sedge. Sent on. Glenn found a bevy in open stubble; Vivian backed promptly and prettily. In spite of much cautioning by his handler, Glenn broke shot. Sent on. He again pointed a bevy and broke in. Vivian was promptly reliable on back. On some marked birds in sedge, each made a point and lost several opportunities on remaining birds. The heat ended at 11:58. Vivian displayed good judgment in locating and pointing, and was reliably stanch. Her range was narrow. Glenn's performance was lacking in finish and in reliability to the gun.

Ned B. and Antonia were started at 1:05. Antonia made a good point on a bevy in open weeds and grass, while Judge Bradley's gun-shy horse waltzed around in anticipation of being scared when the gun was fired. At the same time, Ned made a point on a bevy a short distance away. When the birds were flushed Ned marked them, followed and secured a good point on a single. In the meantime Antonia was held up till Ned was brought back to the course. Sent on. Antonia made a good point on scattered birds in weeds. Ned was not near to back. Antonia next made two more good points on two bevies, though her range at the time was of moderate scope. Up at 2:08. Ned was hard to handle. His speed and manner of going were pleasing. He covered a good range, but was not so attentive to the requirements of the gun as is necessary.

Don, the bye dog, ran alone from 2:16 to 2:40. On birds he acted badly. He showed lack of discipline, and was deficient in stanchness. He was industrious without much reference to the needs of the gun.

Second Series.

Six dogs were quite correctly taken into the second series. They were run as appears in the following description of the heats:

Ripsey and Mollie B. started at 3:05 and ran the star heat of the day. They were worked about to some birds which were marked down in pine woods. Mollie pointed the scattered birds and Ripsey backed promptly and well. Both were steady to shot. Next, Ripsey pointed a single and Mollie backed well. In woods each made separate points on singles. Sent on. Soon in the pine woods each pointed. Mollie had a single bird by the edge of the woods; Ripsey roaded accurately to a point on the single from the woods into the open. Next, in short, thin weeds, in the open, Ripsey flushed excusably. Sent on. Ripsey pointed a bevy and Mollie backed. On the scattered birds, Ripsey made two points on singles. Mollie, at the end of the cover, a few yards away, seemed to be in mischief for a moment, as some scattered birds flushed near her and she came out in their wake, but resumed work promptly when cautioned. Up at 3:30. It was a heat notable for its clean, accurate work to the gun, and the pleasant promptitude with which each dog observed the details of brace work, in backing instantly and reliably on occasion. There was a total absence of all jealousy. Mollie was a little more dashing in going to her birds, but was not equal to the pointer in painstaking accuracy in finding and locating.

Antonia and Fitz began at 3:36. Antonia found and pointed a bevy nicely. Sent on. Soon Fitz pointed a bevy at the edge of some corn by a ditch, and Antonia backed or pointed close by him. Next, Antonia pointed a bevy in cotton; she next secured a point on the scattered birds. Up at 4:20. Antonia was covering but a moderate range. Fitz showed signs of inexperience. Antonia's bird work was very good.

Forzando and Ned B. began at 4:29. Forzando stopped to a flush on a single bird of a bevy marked down in woods. Ned had passed across wind close by the bevy in the open without happening to catch scent of it. Next Forzando in woods made two single-bird points, the bird flushing each time while the dog was standing. In the open Ned pointed a bevy well. The birds were followed. Both pointed about the same time, moved on and flushed. Next Forzando pointed a single in the open and Ned backed to caution. Sent on. In the open, Ned apparently pointed a bevy and Forzando backed; at least, their positions would indicate that such was the case, though it cannot be so stated positively, as Ned was a bit shaky in backing, and the first part of this work was not seen. Dr. Brown killed a bird very dead to Ned's point. Forzando pointed; Ned refused to back; nothing found. Neither one worked with proper regard for the gun. They handled hard and their work on birds was lacking in precision and finish. Up at 5:16. This ended the day's competition.

Saturday, Nov. 12.

Third Series.

Five dogs were retained in the running, namely Ripsey, Antonia, Molly B., Ned B. and Fitz, although the judges qualified the matter with a statement that it might not be necessary to run all the dogs mentioned. The weather was clear and cool. A gentle bracing breeze blew betimes. The sun shone bright. Everything was favorable for good work. A start was made at Gibson's well.

Ripsey and Antonia were cast off at 9:15. They ran forty-one minutes. Near a house by the edge of a sorghum patch, Ripsey pointed and Antonia backed. Some poultry was found close by. Sent on. Ripsey pointed a bevy stanchly in open weeds; Antonia coming up caught scent and pointed independently on the same bevy. They held their points with admirable stanchness while being photographed. Antonia ranged much better than she did on the previous day. Ripsey covered a good scope of ground, and beat it out with judgment.

Ned B. and Fitz started at 10:10. Fitz going across wind close by a growth of briers flushed a bevy. Sent on. Ned pointed a bevy, concealed in heavy cover, just a moment before it flushed. The dogs showed some jealousy of each other in ranging, and they were hard to handle. Up at 10:40.

The judges announced the winners as follows: First, Ripsey; second, Antonia; third, Molly B.; fourth, Ned B.

Mr. Osthaus, having won first, donated the picture to the winner of second. The entrance was $10 each, divided 50, 30 and 20 per cent.

Central Beagle Club Trials.

The Central Beagle Club's field trials began on Tuesday of this week, at Latrobe, Pa. A report of the running will be given in our next issue.

Yachting.

Messrs. Gardner and Cox are already very busy with yachts for next season, the list including four large steam yachts and one schooner. The steam yachts are one of 140ft. l.w.l., for J. G. Cassatt, to replace the Eugenia; one of 140ft. l.w.l., for Eugene Tompkins, to replace the Illawarra; one of 120ft. l.w.l., for Richard Stevens, to replace the Aileen, and one of 200ft. over all for A. E. Tower. The schooner will be of steel, 80ft. l.w.l., for J. Berre King, owner of Elsemarie. She will be of the deep centerboard type, for racing.

Emerald, schr., has just been sold by J. R. Maxwell to W. E. Iselin, who will use her for cruising.

Society of Naval Architects and Marine Engineers.

Sixth Annual Meeting.

New York—Nov. 10-11.

The sixth annual meeting of the Society of Naval Architects and Marine Engineers took place in New York last week, the session practically covering three instead of the usual two days, as on the third day about 100 of the members were the guests of the Bethlehem Iron Company, visiting the works of the company at Bethlehem, Pa. This all-day trip gave even greater opportunity than the regular sessions for social intercourse and informal interchange of ideas.

The sessions were held as usual in the house of the American Society of Mechanical Engineers, the auditorium, which is well suited for such a use, being very well filled. President Griscom opened the meeting at 10:30 A. M. on Thursday, the report of the council being read by Sec'y-Treas. Bowles. The report showed a handsome balance in the treasury and a good membership, increased by the election of about fifty candidates. The officers were re-elected, Mr. G. W. Dickie being elected to fill the vacancy caused by the death of the late John F. Pankhurst, of the council.

In his opening address Pres. Griscom spoke of the impossibility of creating a navy at short notice, and of the importance of timely preparation in all directions, as well as the great value of a prosperous merchant marine as a reserve on which to draw for ships and men. He also spoke of the importance of the newly acquired insular territory as an aid to the adequate extension of American commerce.

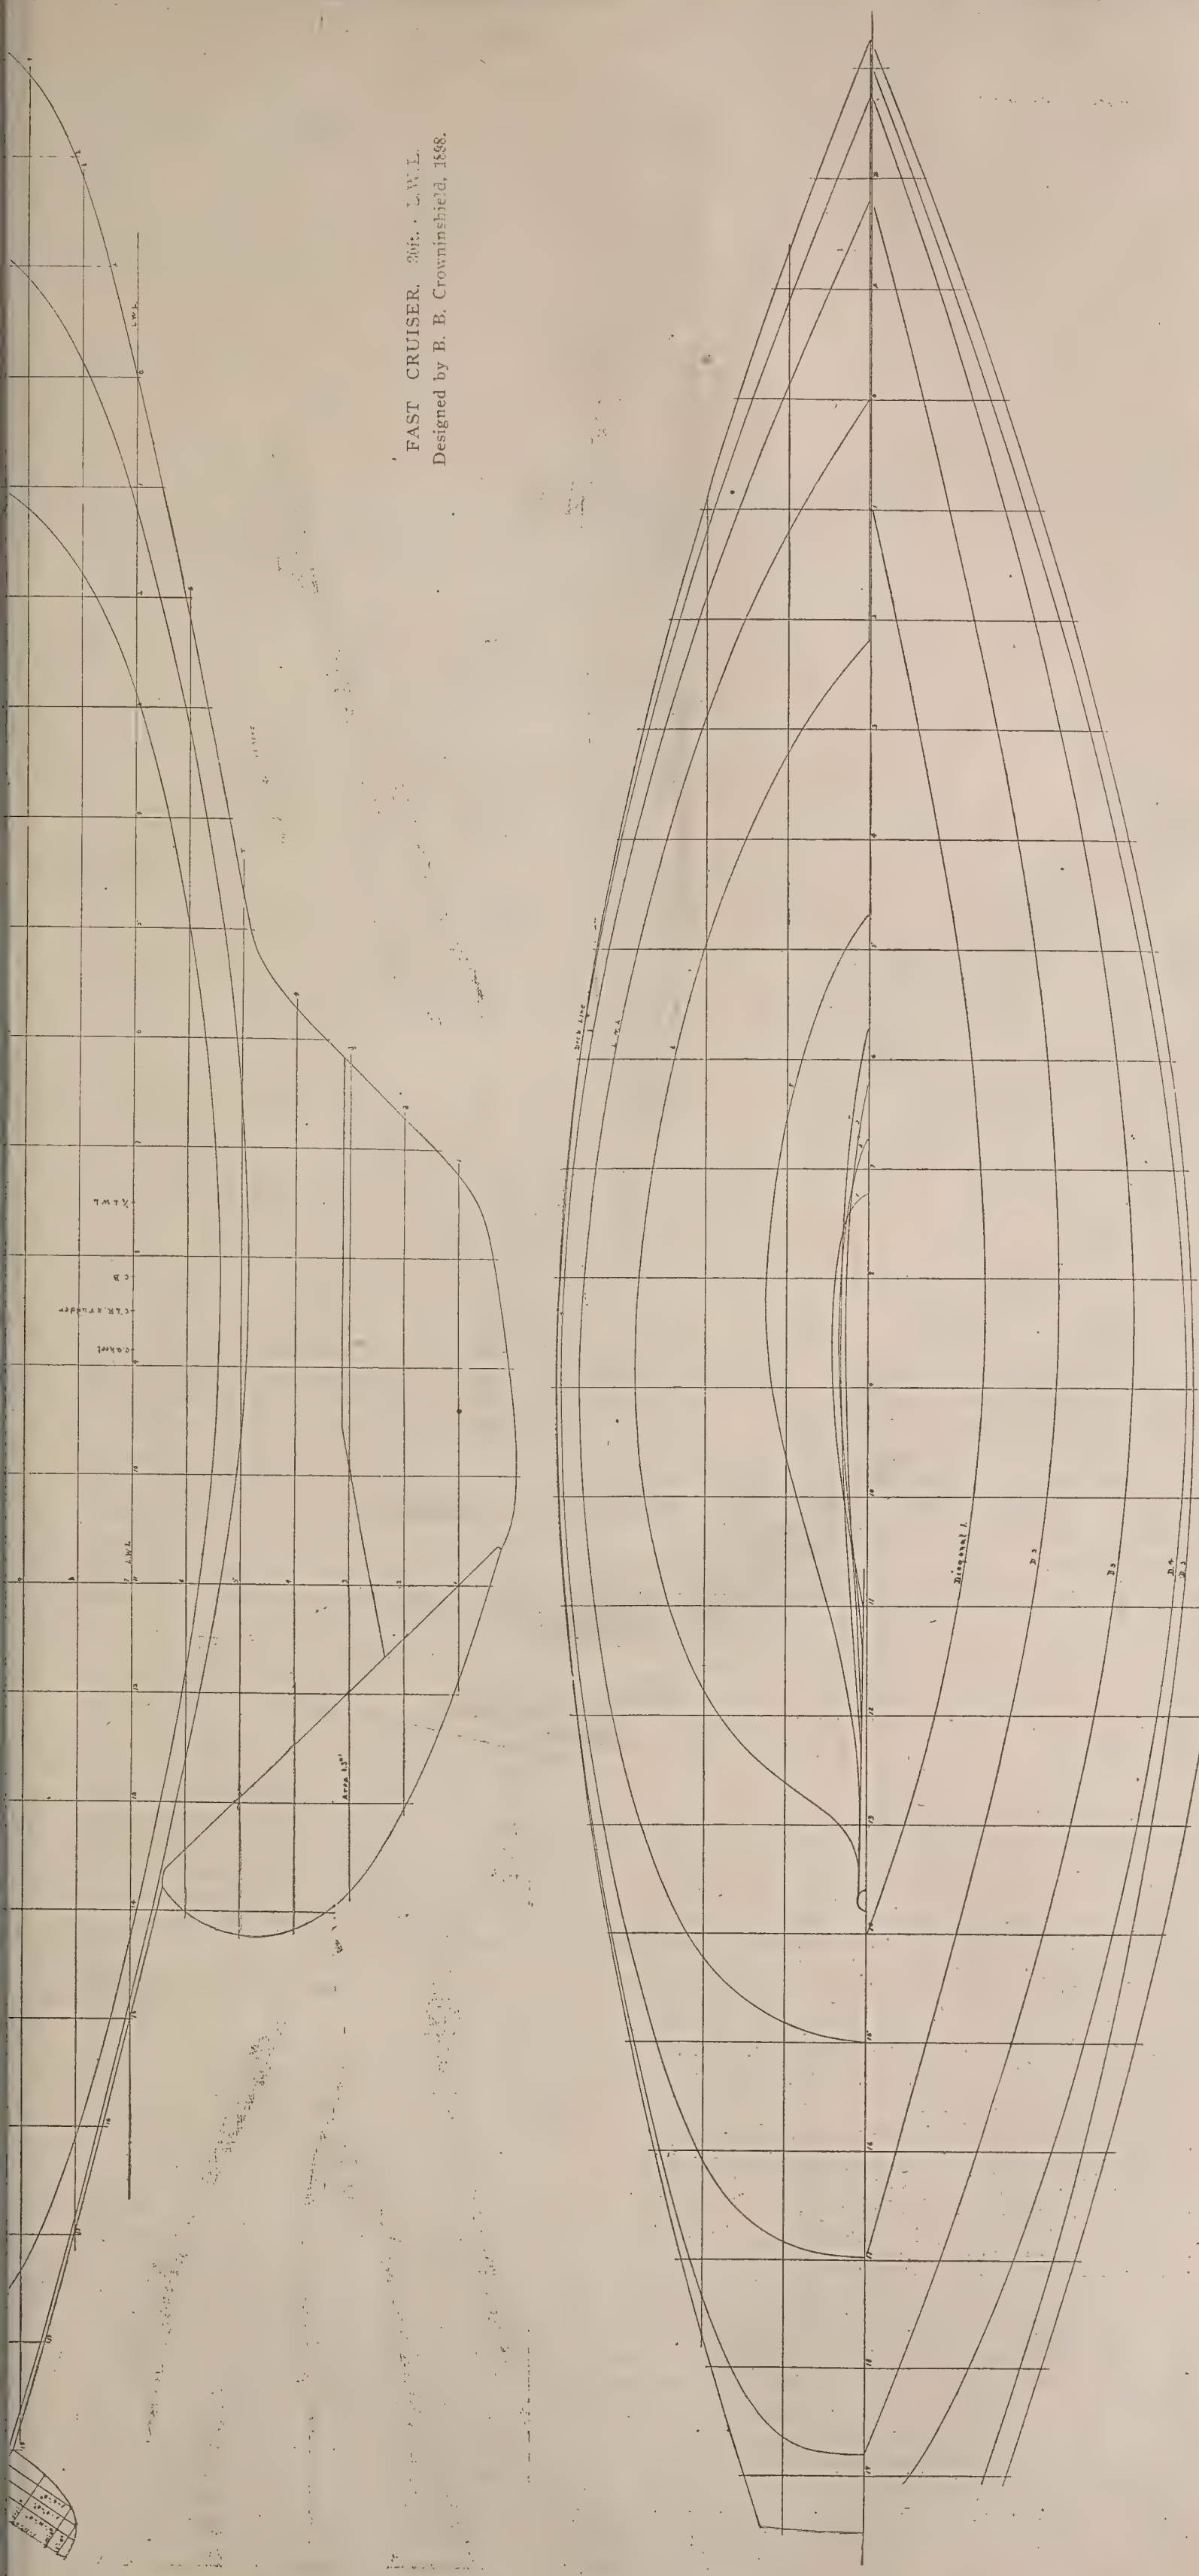
The first paper taken up was "The Standard Navy Boats," by Arthur B. Cassidy, Esq., member. In the absence of Mr. Cassidy, the paper was read by Naval Constructor J. G. Tawresey, of the Portsmouth Navy Yard. The standard navy boats, launches, cutters, whaleboats, gigs and dinghies, were described; and in addition the lines, construction plans and photographs of nearly all of the different boats were given.

The second paper was read by Prof. W. F. Durant, in the absence of the author, now on the Pacific Coast: "Bilge Keels and Rolling Experiments U. S. S. Oregon," by Asst. Naval Constructor Lawrence Spear, U. S. N., member. The addition of bilge keels to the Oregon, the experimental tests of the ship before and after the keels were added, and the observed results, were fully described, the paper being illustrated by diagrams and photo reproductions. The third paper, read by the author, was "Portable Pneumatic Riveters in Shipbuilding," by W. I. Babcock, Esq., member. The new system of pneumatic riveting, by which hand labor is almost entirely displaced in the works of the Chicago Shipbuilding Company, of which Mr. Babcock is manager, was described in detail.

After a recess for lunch, Capt. W. H. Jaques exhibited a number of lantern slide views of submarine torpedo vessels, of different nationalities, described by a brief summary of a paper read by him before the British Institute of Naval Architects. Following this, Sec'y Bowles, in the absence of the author, read the next paper, "Torpedo Boat Destroyers for Sea Service, with Special Reference to the Conditions that Prevail on the Pacific Coast," by G. W. Dickie, Esq., member. Mr. Dickie, manager of the Union Iron Works, of San Francisco, described a special type of fast torpedo gunboat designed to meet the conditions of the Pacific Coast, where harbors are few and long sea voyages are necessary. The paper was illustrated by a sketch design of the proposed type. In connection with a very interesting discussion of this paper, the first of the scheduled questions for topical discussion, "The Utility of Torpedo Boats, and has the Submarine Boat a Place?" was taken up. The session closed with a paper by F. M. Wheeler, Esq., member, "Steam Economy Test of a Unique Form of Feed Pump."

The first paper on Friday was "The Steam Yacht as a Naval Auxiliary," by William P. Stephens, Esq., associate. The work of the steam yachts in the late war was described, with partial plans and photos of some of the leading yachts, and suggestions were made as to the future value of the yacht fleet in war.

In the absence of Chief Constructor Philip Hichborn, U. S. N., his paper was read by Sec'y Bowles, "Designs of New Vessels for the U. S. Navy." The paper was very completely illustrated by plans of the new battleships, monitors, torpedo boats, destroyers and the training ship now under construction. The following two papers, being closely connected, were read by their authors so as to be discussed at once: "Methods of Securing Water-Tight Work," by Asst. Naval Constructor H. G. Smith, U. S. N., associate; "Tests of the Strength of a Longitudinal Bulkhead Separating Two Engine Rooms," by Naval Constructor J. J. Woodward, U. S. N., member. The final paper was "Stability of a Battleship Under Damaged Conditions," by Prof. Cecil H. Peabody, member. Owing to the late hour, one paper, "An Electrically Operatedy 150-Ton Revolving Derrick," by Walter A. Post, Esq., associate, was read by title, and but two of the special subjects were discussed:



First. Under the circumstances of the blockade at Santiago, which was the more economical method of maintaining the boilers in readiness for immediate action—banking the fires or keeping them spread, but very thin?

Second. Can you give any data as to the cost in coal of maintaining the engines and boilers in readiness for immediate service?

Just prior to adjournment, Mr. Lewis Nixon made a motion that the Society should invite papers on the subject of ships' boats and other methods of saving life at sea, to be prepared before the next meeting, and the best two to be read and discussed.

The annual dinner of the Society followed in the evening, at Delmonico's, a large number being present. Early on Saturday morning the members met at the Pennsylvania station in Jersey City, where they were received by the representatives of the Bethlehem Iron Works. Two special cars were provided, each of which was filled. When the party reached Bethlehem, at about 11 A. M., a train of three flat cars provided with temporary seats was backed down and all hands boarded it. The train was then run slowly through the various shops of the company, stopping at each point of special interest. The programme was so arranged that the visitors were able to witness a number of special operations, the casting of a huge steel ingot under hydraulic pressure, the forging of a jacket for a 12in. gun, the forging of an armor plate, the straightening of an armor plate, the tempering of a plate, and the oil tempering of a gun jacket. At various points all left the train and passed through the shops on foot. The largest machine shop was crowded with work of all kinds, the 12in. guns for coast defense, completed and in course of construction, with their disappearing carriages, immense shafts for street railway work, and shafts and crank shafts for yachts and other vessels. One piece of fine work that was generally admired was the four-throw crankshaft for the new steam yacht designed by C. D. Mosher for Chas. E. Flint, every part being hollow. The armor plate shop, with its special saws and other tools for shaping the plate, and with much work in progress for the new battleships Alabama, Kearsage and Kentucky, was specially interesting. After an elaborate luncheon, served in the offices of the company, the guests returned to the train and were landed in New York about 7 o'clock, more than satisfied with their hospitable reception, and the opportunity thus afforded to study the manufacture of armor plate, guns and the other products of the great plant.

The meeting of the Society throughout was most interesting and successful, a result very largely due to the care and the untiring labors of its secretary.

Lake Y. R. A. Annual Meeting.

Kingston, Nov. 5.

THE annual meeting of the Lake Yacht Racing Association was held on Saturday, Nov. 5, at the Hotel Fontenac, Kingston. The first session was called to order at 11 in the forenoon, with the following present:

President Frank Strange, Hon. Secretary-Treasurer Frank M. Gray.

Delegates—Kingston Y. C.: Dr. Black, H. H. Gildersleeve, W. C. Kent.

Royal Canadian Y. C.—Æmilius Jarvis, J. Carl Reed, Temple McMurdich.

Queen City Y. C.—Owain Martin, W. Q. Phillips.

Royal Hamilton Y. C.—E. H. Ambrose, W. J. Brigger.

The Victoria, Oswego and Buffalo yacht clubs were unrepresented. The delegates from the Rochester Y. C., J. E. Burroughs and T. B. Pritchard, arrived in the afternoon.

The minutes of the last annual meeting were read and approved. The financial report was presented, and the secretary, Mr. Gray, announced that whereas there was a deficit of $40 in the treasury last year, there was $118 to the good this year, with some places to hear from.

It was decided to purchase a dozen mushroom anchors for buoys to mark courses.

The Genesee Y. C. applied for admission into the L. Y. R. A., but as it did not fulfill the conditions laid down for entrance, no action was taken.

Mr. Jarvis addressed the meeting with regard to the recent challenge for the Canada cup, stating that the new 36ft. linear rating class would be selected for the races, and urging that every Canadian yacht club furnish a candidate for the defense, adding that the Buffalo Y. C. would send a boat to Chicago to compete in the trial races for the selection of a challenger.

An informal discussion was held on the knockabout class and the proposed alterations to the measurement rule.

The members then adjourned for lunch.

The afternoon session was called for 2 o'clock, Messrs. Burroughs and Pritchard, of the Rochester Y. C., were present, and the meeting proceeded to formally consider the vote on the various amendments offered.

The following additional restrictions were imposed on the 22ft. knockabout class, the present length and sail area measurement being retained for this class in any event.

The freeboard at the lowest point must not be less than 21in.

The extreme beam for keel craft must not exceed 8ft. 3in., and shall not at any point exceed the waterline beam by more than 15 per cent.

Neither forward nor after overhang shall exceed 40 per cent. of the extreme load waterline.

The cabin shall have a height of 4ft. 6in. for a distance, fore and aft, equal to one-third of the waterline.

The area of sail abaft the mainmast shall not exceed 85 per cent. of the total sail area.

Mr. Jarvis introduced the girth rule, the formula of which is:

$$\frac{\text{L.W.L.}+\text{B.}+.75\text{G}+.5\sqrt{\text{S.A.}}}{2}$$

proposing to apply it to all except the knockabout class, together with the following classification, as adopted by the Union of the Great Lakes:

First class, all over 45ft., linear rating; 45ft. class, all over 40ft. and under 45ft.; 40ft. class, all over 35ft. and under 40ft.; 35ft. class, all over 30ft. and under 35ft.; 30ft. class, all over 25ft. and under 30ft.; 25ft. class, all under 25ft.

A general discussion followed regarding the adoption of the rules, which were in the main approved; but some difference of opinion was expressed with regard to the necessary change in classification and the proposal to introduce a certain measure of time allowance.

Mr. Jarvis explained that the classification had been adopted by the two American unions, and that it was altogether desirable, if not a moral obligation, for the Association to accept it.

Generally speaking, this would keep boats in their present classes, but there would be some over the new class limits, notably the Kestrel and Verona, now in the 27ft. class, which would run over the new limit of 30ft., owing to the penalizing effect of the new rule on their midship sections. To overcome this difficulty, in fairness to all concerned, it was proposed to allow all yachts to remain in classes as at present, time allowance being exacted from those over the limit.

Mr. Martin expressed himself as strongly opposed to any time allowance, regarding it as a backward step that would discredit the policy and record of the Association.

Mr. Phillips was opposed to any exceptions to classification, and suggested a general resumption of time allowance for a year as an alternative measure.

Mr. Ambrose considered that both time allowance and the proposed exceptions to the classification necessary under the circumstances, and offered a formal amendment to bring these into effect, providing as follows:

Existing yachts to remain in their classes as at present; time allowance to be computed on their racing lengths, except that any yacht within 1 per cent. of the upper limit of its class be rated at that limit.

Yachts built or brought to the Lake after Nov. 5, 1898, and existing yachts which may increase their measurements for the purpose of entering a higher class, to be rated at the upper limit of the class.

Mr. Martin offered an amendment, deprecating the principle of time allowance, but conceding it from yachts over the class limits only.

The amendment was lost.

Mr. Ambrose's amendment was then put to the meeting and carried.

The proposed measurement rule was then adopted without dissent.

Mr. Pritchard, Rochester Y. C., spoke about the Fisher challenge cup, which is held by Onward, of Rochester. He wanted proper conditions arranged, so that the races for the cup could be properly carried out. A committee, consisting of F. M. Gray, E. H. Ambrose and T. B. Pritchard, were appointed to attend to the matter.

SAIL PLAN OF FAST CRUISER—DESIGNED BY B. B. CROWNINSHIELD, 1898.

Rochester was named as the next place for the annual meeting.

The following officers were elected: Pres., A. G. Wright, Rochester Y. C.; Vice-Pres., F. B. Hower, Buffalo Y. C.; Hon. Sec'y-Treas., Frank M. Gray, Royal Canadian Y. C., Toronto; Council: Messrs. John Mott, Oswego Y. C.; E. H. Ambrose, Royal Hamilton Y. C.; T. L. Stephens, Victoria Y. C., Hamilton; Owain Martin, Queen City Y. C., Toronto; Frank Strange, Kingston Y. C.

The following delegates were appointed for the Yacht Racing Union of the Great Lakes: Messrs. J. E. Burroughs, Toronto; F. Monck, Hamilton.

Mr. Æmilius Jarvis was appointed delegate for the annual meeting of the Y. R. U. of N. A.

The meeting then adjourned, the delegates being very handsomely entertained at dinner by the Kingston Y. C.

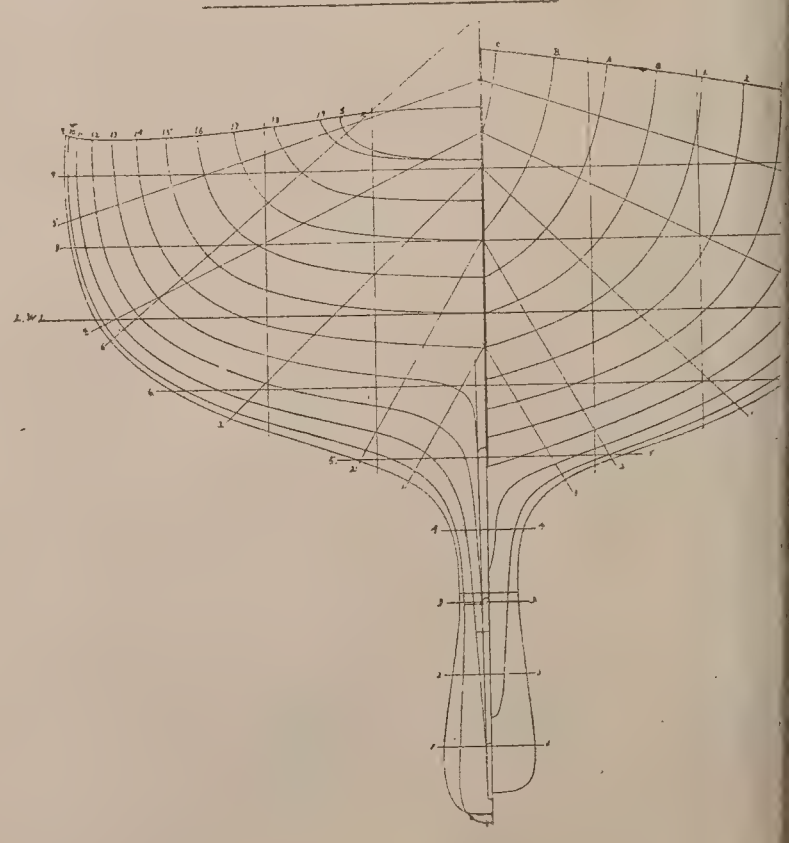
Rules and Restrictions.

Editor Forest and Stream:

In your issue of Nov. 12 you have at last brought forward what has been for the past three years my pet solution of the measurement question.

You indorse the action of the Y. R. A. of Long Island Sound, taken on Nov. 3, on the ground that at present it can at least do no harm; but why not go further and seriously discuss the merits of a rule which would not only put a stop to flimsy construction, but also insure the patient owner a sensible, usable type of boat? Briefly, let us adopt a table of scantling for each class, and then let us restrict what I may call the fundamental dimensions, including a demand for a certain area of mid section, or mean, of a number of sections, and a certain amount of ballast. We have the rules of the Knockabout Association as a basis to work upon, and to my mind with a very few changes in these rules we would develop two very good types of boats, one keel and the other centerboard. Finally, let us adopt these rules for a term of years, say five; certainly not less than three.

These rules would govern the regular classes, for which the regular prizes are given; and any boat failing to comply with these rules would be debarred from racing. Vested interests should not be taken into consideration. If we are going to make new rules, and good rules, let us go to the root of the matter.



Partly to give existing boats a chance, however, and in order that the designers may make experiments, let us make special classes (to take the place of the present one-design classes), governed by the present Seawanhaka rule, or by a simple waterline rule.

Of course, the foregoing is a suggestion, and not what we are looking for, i. e., a rule; but we have any number of committees made up of experienced men, to whom the task of picking out some good existing boat as a standard should not be so very difficult, or should they fail to find such a standard let the designers get up two boats, one centerboard and the other keel, and let the committee select their standard from the designs submitted.

This may seem like a lame conclusion after all these years of figuring on rules of from 1in. to 1ft. long in ordinary type, but it is the simplest way of getting at the root of the difficulty, and it has been arrived at after some little figuring at the aforesaid "factor" rules.

We want good, honest, inexpensive and fairly fast boats. If we pick out a good standard and are forced to stick fairly close to it we will get them, and they will be more useful than one-design boats, because they will have individuality, and therefore building to the classes will go on until at the end of a few years we should have a dozen good boats in each class; and if I am not mistaken that is what we want.

B. T.

The Capabilities of Small Yachts.

APROPOS of the noted yawl Spray, Capt. Joshua Slocum, which craft, by the way, is now high and dry at low water in the little creek of the Erie Basin dry docks, a correspondent of the Field has started a very interesting discussion of the capabilities of small yachts. The subject is by no means local, and should appeal to many on this side of the water, where unequaled facilities for Corinthian and single-hand cruising are to be found. We reprint from the Field the following letters in the hope that they may lead to a further discussion of the subject of small cruising craft, their design, use, outfit, etc.:

Editor The Field:

It would be interesting to have a discussion in your columns as regards the real capacity and power of small vessels. Capt. Slocum's voyage suggests that decked boats of 6 to 15 tons, if strongly built on good seagoing lines, stoutly rigged, and properly handled, can keep the sea in all weathers, including under that phrase the sea and wind ordinarily to be met with in winter, but excluding, of course, tidal waves and such violent sea disturbances as arise in tide races in certain well-known localities, and excluding also winds of exceptional violence, such as may reach a speed of eighty to a hundred miles an hour. The opinions of those who should know seem to vary considerably as regards the safety of small craft in gales of wind. In the late Mr. R. T. Macmullen's judgment it was only by the exercise of great skill and watchfulness, combined with unusual powers of endurance, that it was possible to "come through" such weather in a small vessel. Mr. E. F. Knight seems to be of the same opinion, and advocates close attention to the barometer in waiting for a "slant" before attempting even a run across the Channel in a small yacht. Some skippers of large experience, to whom I have put the question, thought that nothing short of 20 tons was at all fit to keep the sea, except in fine weather. My own boat Corsair, a converted lifeboat, 21ft. length, 8ft. 6in. beam, and 4ft. 6in. draft, has done some fairly extended cruising from the North Minch to the Solent. During four years summer cruising we had only what we considered one severe brush with wind and sea in the open—off the North of Ireland, crossing from Islay to Lorne—described by the Meteorological Office as "7, a moderate gale." It was two years since, the night before Swansea regatta, which some yachtsmen will recall, was postponed, as few even of the larger boats arrived in time. My companions (we had no paid hand), Mr. L. B. Chatwyn and Dr. O. J. Kauffmann, who are both "cruising" yachtsmen, agree with me that it was an experience we are not anxious to repeat, and that, but for the power of the boat, we should not have come through it. The question seems to be: Does a small vessel really escape all heavy weather on deck if she possesses a long, flat floor, great lifting power forward and aft, and is hove to in time, rides to a drogue, or is run with extremely moderate canvas. We did so on the occasion spoken of, but we have not sufficient experience to say more, and no thirst to make the necessary experiments to enable us to do so. We should like to take the opinions of some experienced yachtsmen among the readers of The Field in respect of the sea-keeping capacity of small yachts, and the type best suited to really hard cruising in open water. W. Macneil Dixon.

Mason College, Birmingham.

Editor The Field:

A most interesting question, and likely to prove profitable to all concerned in cruising. May I venture to record an experience, although the boat to be spoken of is slightly over the limit mentioned by Mr. Dixon. In 1874 John H. Cooper, builder of pilot boats, at Pill, near Bristol, for over fifty years now, built and launched a cutter yacht on his pilot boat lines, 48ft. l.o.a., 43ft. 1in. between perpendiculars, 12ft. 9in. beam, about 8ft. 5in. draft, and 17 tons Customs tonnage. Soon afterward she was bought by Mr. Ellis, a Pill pilot of renown, who reduced her spars and sails from yacht dimensions to those suitable for piloting. The boat, called Christabel, had a long, flattish floor and good full lifting ends.

At the end of September, 1875, I sailed with Ellis for the westward of Lundy Island "seeking." I remember that on a Friday afternoon, after being at sea a week, dirty weather brewed up from about S.W., the wind increased in force through the night, and on Saturday forenoon, finding we could no longer with advantage sail the vessel, we hove her to under very shortest canvas. At this time we were probably about forty to fifty miles westward of the island, as we expected a New York mail steamer. I will not say the force of the wind, but from previous experiences in that and other channels and seas I knew it to be more than a moderate gale. On Sunday morning, still hove to, with a heavy sea running, bright and sunny aloft, but blowing guns all the same, we sighted a large bark quite near us before the wind under close-reefed foretopsail and two staysails; several other sails were stowed in tatters. I was lying on a coil aft under the weather rail, the cabin hatch was open, and our decks had only a few trickles of water on them occasionally, and we laid snug and comfortable, and as buoyant and dry as a "murre," if I may be permitted the phrase. As the bark rose on a sea, laboring heavily, her foretopsail and mainstaysail went to ribbons out of the bolt ropes, and we very soon lost sight of her. In the evening the wind moderated and we bore up for Lundy, and about midnight brought up in the midst of a small fleet sheltering under the island. Before this, while running up to the Shutters on the west face, the boat ran very dry and easily, and made astonishingly good weather in the midst of a nasty, confused sea.

About 3 o'clock A. M. Monday the wind flew round, and we all had to slip and clear, for Lundy is not a charming spot under such conditions. Monday evening, having missed the "mailer," we put Ellis aboard another homeward bound bark, which showed signs of having been in the late disturbances, and we then bore up for Ilfracombe to wait our pilot's return, to go "seeking" again.

We were four all told aboard the Christabel, but one of us, the pilot's son, had been there before, and remained hors de combat throughout the breeze, I think he had only been one trip to sea before. We had no consultation about drogues or sea anchors, and I do not remember seeing one aboard. We simply rode it out, secure in a good ship and gear, and on looking back I can truly say that, during the years that have passed, although I have since piloted off the Wolf and Lizard, and knocked about a bit generally, I never found myself aboard a better form of cruiser than the 17-tonner Christabel; and if I could afford some elements a trifle difficult to acquire, I would hie me to Pill, and try and persuade Mr. Cooper to build me a cutter, or perhaps a ketch, from his fifty years' storehouse, secure (peace be with modern designers!) that I should have a real knockabout cruiser. As to size and for pleasure work as against piloting in all seasons—well, in this respect of size and draft, chacun à son goût.

May I add, that in my humble judgment, Charles Livingston's Geneth, designed for Russell Allen recently, is very like the type of pilot boat, bar modern overhang, rake of sternpost, and draft under foot, which, no doubt, are improvements for those who like them; but, after all, it is a curious commentary that we cannot much better Mr. Cooper's methods, save and except speed, perhaps. F. Cecil Lane.

Plymouth.

Editor The Field:

I was interested in the two letters on the above subject that appeared in your last two numbers, and now add my own, or, at least, three of my own, experiences to the list.

The first happened about seven years ago in a 3-ton cutter called Spray which belonged to my brother and myself. She was 24ft. o.a., 20ft. l.w.l., 6ft. beam, and 5ft. 3in. draft; she was a full-bodied boat, with a displacement of 5 tons.

We were sheltering from a gale of S. wind in Loch Ryan on our way back to the Clyde from a Channel cruise, and left it one morning in a very light N.W. wind and a very heavy sea (owing to the gale of the two days before) as soon as we got outside. We at first thought of putting back, but after watching the shore for a bit found we were slowly leaving it, so decided to carry on. About an hour and a half after getting out of the loch we lost sight of land, owing to rain coming on, and plenty of wind along with it. The latter, getting stronger and stronger till it was blowing a gale, and of course making a very nasty sea, coming as it did across the swell left by the southerly gale of the two previous days. We got two reefs down, and would have hauled down the third, but by this time the sea was rather heavy, and one of the crew (which consisted of three all told) was too frightened to do anything, and the seas were coming over forward in lumps, about 2ft. of solid green water, a good part of which washed right aft, but very little came into the cockpit, which was a water-tight, self-emptying one. Our compass having gone wrong that trip, we were not quite sure where we would make our landfall, but knew that if we kept her close-hauled we would make it some part of the coast of Arran. The course was to windward of Ailsa Craig, but owing to the very heavy sea and the boat being so small I expected that she would make so much leeway that we should be to leeward of it when we sighted it; you may therefore judge our surprise when we sighted it on the lee beam, about two miles distant, feeling very thankful to be able to give her sheet and run into the lee. On arriving there the squalls were simply awful, and in every conceivable direction. The boat was gibed five or six times in as many seconds. We let go the anchor in about five fathoms very close in, and got all sails off as quickly as possible, very glad of a rest after coming through the biggest sea we had ever seen up to that time. The three big waves which always follow each other in heavy seas seemed to be about the height of our crosstrees. I several times saw the curling crests of them over the peak of the mainsail when I was sitting steering. The head lightkeeper on the craig told us he had (in summer) been seven years on the rock, and had never seen it blowing so hard. But throughout the whole passage I had no fear of anything, as the boat was getting to windward, and I knew all the gear was good, having fitted it myself.

My next experience was coming from Belfast Lough to the Clyde in a 2.5-rater, built by Fyfe, of Fairlie, for racing. She had her big racing mainsail on, and we had no topsail, so had to sail her with her long, heavy boom over the side and a long bowsprit that shook the whole boat every dive she took, even though we had no jib set on it, as we sailed her under three-reefed mainsail and staysail. This time we had not so much wind as on the former occasion, but owing to the big, heavy spars, we made much worse weather of it; it was the very worst experience I ever had in a yacht. The crew again on this occasion consisted of three, and one of them got so seasick that I actually thought he was dead once when I went to see how he was getting on, which fact of course gave me a fright. Well, we battered at it all night, the wind being N.E., the owner of the boat hoping he would not carry away his bowsprit, and I wishing every dive she took that it would snap, as she would have been so much more comfortable without it. We could not get it reefed in, as the rigging was steel, and spliced to the exact lengths to shackle in, and therefore could not be shortened. By daybreak in the morning (the month was April) we were about two miles to leeward of Ailsa Craig, and our sick companion was so bad that we thought something more than seasickness was wrong with him, so we decided to run back to Loch Ryan and get a doctor to him; but as soon as we got into the smooth water he got better.

This trip proved very conclusively that racing spars are not the things to do Channel passages with; also that, for a very heavy sea, a boat with a heavy displacement is far the best, as I also found again in August last, when making a passage in my own 5 ton cutter Petrel from Douglas, Isle of Man, to Bangor, Belfast Lough. We left Douglas with one reef down, wind S.W. and freshening; off the point of Ayre we had to take down two more and put the spitfire jib on the bowsprit, also house the topmast; then started to run up Channel, the sea getting bigger and bigger as we left the Isle of Man, and the wind still freshening, till we had to lower the throat till the jaws of the gaff were right down on the boom. We put her on a broad reach for the Irish coast, so as to smoothen the water as soon as possible; made a landfall at Skull Martin Lightship, then ran up the shore to the Copelands, and round to Bangor, where we let go at 4 A. M. One of our crew on this occasion distinguished himself by making tea by holding the kettle on the Primus stove (I do not know to this day how he managed it), and after it was made it was almost as difficult to get it into mugs and drink it. After all hands had a sleep I went ashore and got a paper, and found one article headed "Gale in the Channel," which, on reading, I found was the notice of the gale we had been in the night before, saving the Channel steamers had all had rough passages, etc. An old boatman we met while ashore amused us by his reply to us. He asked us where we had come from; on our telling him, he said, "Well, yez would have plenty of weather in the Channel last night, I know." Petrel, like the old Spray, is a full-bodied boat, with cruising sails and spars, and last, not least, a very short bowsprit. She is 5 tons by Lloyds' register, but 7 displacement; and all that night she hardly took any green water. Robert S. Banner.

Gourock Slip, Gourock, N. B.

Editor The Field:

Mr. Dixon, in his letter, raises points concerning the behavior of small craft at sea on which I should much like to be enlightened.

When we speak of a seaworthy vessel, I think it is as well to know exactly what we mean. Now, personally, I should define a thoroughly seaworthy small craft (that is to say, a vessel not exceeding 10 tons) as a yacht, which possesses the following characteristics, each of them being brought to the highest efficiency in the craft in question, and neither being placed before or after another: 1. Capacity to lie to in safety throughout the biggest breeze and sea which can possibly occur during an intended voyage. 2. Capacity to claw off a lee shore under adverse circumstances in similar weather. 3. The highest possible power of running in safety before a heavy wind and sea. I say highest possible because I take it there is always a point at which a yacht will be pooped even if specially built for running, and that one therefore cannot have perfection in running powers.

If to these qualities can be added general handiness so much the better, but in my opinion the three essentials should not be sacrificed in a seagoing small cruiser for any unreasonable amount of handiness. Certainty of staying under all conditions is all that is required. I do not wish to lay down the law in these matters, but this is how the case stands in my opinion.

Now, my friend Mr Dixon is dealing with No. 1, and I should like the opinion of your readers on Nos. 2 and 3. I am quite convinced that the proper thing for a small cruiser to do, if possible, is to run for it. No advantage can be obtained in a small cruiser in heaving to if a comfortable harbor can be obtained under one's lee, though one may be caught on a lee shore, as I have been when running, is an impossibility. Now what, in your readers' opinions, are the essentials for a safely running boat? Is there a point at which the counter-sterned boat will be pooped when the sharp stern will run free? If so, then all small boats should be built with sharp sterns. Now, I can find nothing for or against a counter as a cruising adjunct for small craft in "Yacht and Boat Sailing," unless we take the remark on Clyde sailing boats on page 358, that "it is questionable whether a short, neat counter could not be made 'to pay,' at least in heavy weather," and this probably refers to the boats from a racing more than a cruising point of view. Mr. E. F. Knight, in his "Sailing," calls a counter an abomination, and the reverse of an ornament, and so do many other writers. If this is the case, I am at a loss to understand why design after design for small yachts is published, each of them adorned with a counter stern, while in the "Yachtsman" designing competitions what appears to me a most serviceable form of sharp stern is termed unconventional. I do not seek to criticise, but merely ask for information, though from my experiences on Mr. Dixon's Corsair I have the greatest respect for her lifeboat stern.

I should like also to write on my second point, but my letter is already too long. The only question I will ask is this: Why is a boat which is cut away fore and aft supposed to point higher to windward than a boat with a moderate forefoot? Are the crack racing yachts cut away merely to reduce their wetted surface and to assist their staying powers, or do they claw to windward better on this account than the yacht with the tolerably long keel. Overhang forward in moderation is also most valuable, as I have learnt from my cruising this summer; but how far can it be carried out with advantage? L. Boughton Chatwin.

41 Waterloo street, Birmingham.

A Fast Cruiser.

THERE is at the present time a strong indication of a reaction against the extreme scow and fin types in favor of yachts in which accommodation is a distinctive feature. The lines here given show a yacht of the fast cruiser type, well cut away below in accordance with speed requirements, but at the same time giving very satisfactory accommodation for cruising. She was designed by Mr. B. B. Crowninshield, of Boston, and will be built at once. Mr. Crowninshield has now in hand several designs for cruisers of various sizes. The dimensions and further details will appear next week.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Varuna.

THE steam yacht Varuna, Eugene Higgins, arrived at New York on Nov. 14 from Bordeaux, after a cruise of just two weeks less than a year. Sailing from New York on Nov. 27, 1897, she visited the Mediterranean and Black Sea, and on the breaking out of the war she was laid up at Venice, her owner traveling in Europe. She was recently fitted out and on Nov. 1 Mr. Higgins joined her at Bordeaux, in company with Messrs. Alan Arthur, Leslie Cotton, Wood and Dr. Mitchell. The following is a summary of the log:

Left Bordeaux at 7:30 A. M. Tuesday, Nov. 1, and took departure from whistle buoy, outside Gironde; moderate breeze and fine weather. Distance run from Bordeaux down river from departure, sixty-four miles.

Saturday, Nov. 5, light and variable winds; 3 A. M. arrived off Funchal Bay, and anchored 3:10 A. M. Distance run from yesterday noon, 205 miles.

Total distance from Bordeaux to Madeira, 1,185 miles; average speed from departure to Madeira, thirteen miles per hour; time of passage, three days, thirteen and a half hours; including one hour difference in time, three days and fourteen and a half hours.

Total distance Madeira to Sandy Hook, 2,893 miles. Time of passage, eight days and eighteen hours, including three and a half hours' difference in time. Average speed, 13 78 miles per hour.

Capt. Troyler is still in command of the yacht.

Gilberts Bar Y. C.

WAVELAND, Fla., Nov. 8.—The Gilberts Bar Y. C. held their usual monthly regatta on Nov. 5, the wind being southeast and very light.

First Class.

Rifle Range and Gallery.

Louisville Revolver Club.

LOUISVILLE, Ky., Nov. 8.—Louisville Revolver Club was reorganized on Oct. 15, with sixty members. A splendid range has been secured at 112 Third avenue, and no expense will be spared to fit it up handsomely, and to make it the finest in the country. The room is 30 by 125ft.. A new steel target box and bullet catcher has been placed in the range and the first official shoot took place Oct. 27. There will be three official shooting nights each week—Tuesday, Thursday and Saturday—when all scores will be recorded in the various contests. Twenty gas jets will give ample light around the front of the target, and at each distance an arm of five jets, protected by a hood, will be placed. The cleaning table will allow twenty members at one time, past experience having taught that an extra large table is necessary, as each member cleans his revolver thoroughly before going home for the night.

The walls will be painted black and adorned with pictures. A railing separates the cleaning table from the range proper. Revolvers are loaded only when members' names are read out to take position on the firing point, and every caution has been taken to avoid accidents. When in position on the firing point at any distance the shooter's back is turned to the part of club room filled with members, and new beginners are not as nervous as when members are standing at their sides offering suggestions. This rattles the person considerably, and our new arrangement overcomes this. Sportsmen when visiting our city are always welcome to visit our club room and range. The following gentlemen were elected to office for one year: R. S. Witherspoon, President; Dr. B. G. Rees, Vice-President; Eugene B. Dye, Secretary; Mead Board, Treasurer, and Sim Watkins, Official Scorer. Board of Directors: H. S. Gilbert, H. G. Walker, Sim Watkins, W. C. Magruder and Geo. C. Benedict.

Detectives Hickey and Donahue joined at the last meeting, and are anxious to become expert shots. Dr. B. G. Rees is at Cumberland River, fishing for bass. He writes to the angler members of the club that he is having fine sport.

The following are the scores of the first official shoot, standard American target, 10yds.:

E. B. Dye 86, Dr. T. J. J. Meder 85, R. T. Chapman 75, H. S. Gilbert 68, F. M. Taylor 64, D. C. Hagerman 48, Mead Board 34, A. J. Schulten 39, Henry Young, Jr., 39, J. C. Grinstead 22, J. D. Hughes 26, O. W. McCarty 25, H. G. Walker 10.

Twenty yards, Standard American target: H. S. Gilbert 72, E. B. Dye 69, Dr. T. J. J. Meder 65, W. C. Magruder 46, F. M. Taylor 46, J. D. Hughes 16, Ed F. Herms 12, J. C. Grinstead 11.

E. B. DYE, Sec'y.

Cincinnati Rifle Association.

CINCINNATI, O., Nov. 13.—The following scores were made in regular competition by members of the Cincinnati Rifle Association, at Four-Mile House, Reading Road. Conditions, 200yds., off-hand, at the German ring target. Payne was declared king with a score of 214. Payne was high for the Uckotter trophy with a score of 227. Hasenzahl and Payne began a series of 50-shot matches last shoot, the former making 1,034, the latter 1,057. In to-day's match Payne scored 1,041, Hasenzahl 996. Scores:

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

Nov. 16-17.—Sioux City, Ia.—Soo Gun Club's tournament; live birds and targets. E. R. Chapman, Sec'y.

Nov. 15-17.—Eau Claire, Wis.—Dan R. Scammon's tournament; two days at targets; one at live birds.

Nov. 16.—Singac, N. J.—Twenty-five bird handicap at Bunn's; $15 entrance, birds included. Commences at 12 o'clock.

Nov. 21-22.—Ottumwa, Ia.—Annual tournament of the Ottumwa Gun Club; targets. Walter Gephart, Sec'y.

Nov. 22-23.—Bernhart, Pa.—Annual fall tournament at Spring Valley Shooting Park. Targets and live birds. Arthur A. Fink, Manager.

Nov. 23.—Hackensack, N. J.—All-day target tournament. C. O. Gardner, Jr., Sec'y.

Nov. 23-24.—Pueblo, Col.—Tenth semi-annual State tournament of the Colorado State Fish and Game Protective Association; $100 added each day. C. L. Funk, President.

Nov. 24.—Buffalo, N. Y.—Thanksgiving Day shoot of the Bison Gun Club; targets. John E. Wilson, Sec'y.

Nov. 24.—Rutherford, N. J.—Thanksgiving Day Turkey shoot of the Boiling Springs Gun Club. W. H. Huck, Sec'y.

Nov. 24.—Pawling, N. Y.—Thanksgiving Day shoot of the Pawling Rod and Gun Club. Geo. S. Williams, Sec'y.

Nov. 24.—Holmesburg Junction, Pa.—Thanksgiving Day shoot of the Keystone Shooting League; live birds.

Nov. 24.—Newark, N. J.—Thanksgiving Day shoot of the East Side Gun Club; live birds. L. H. Schortemeier, Captain.

Nov. 24.—Pottstown, Pa.—All-day open tournament, under the auspices of the Shuler Shooting Club. W. I. Grubb, Captain.

Nov. 24.—Dansville, N. Y.—All-day shoot of the Dansville Gun Club.

Dec. 3-4.—Milwaukee, Wis.—Tournament of Milwaukee Gun Club; live birds and targets.

Dec. 7-8.—Kewanee, Ill.—Tournament; live birds and targets. E. E. Baker, Manager.

Dec. 13.—Burnside Crossing, Ill.—John Watson's tournament; live birds only.

Dec. 19-23.—Indianapolis, Ind.—Grand Central Handicap; targets first day; sparrows two days; pigeons two days. H. T. Hearsey, Sec'y.

Dec. 27-30.—St. Thomas, Can.—Tournament of St. Thomas Gun Club. Jack Parker, Manager.

1899.

Jan. 17-19.—Hamilton, Ont.—Annual tournament and grand Canadian handicap of the Hamilton Gun Club; $1,000 guaranteed. H. Graham, Sec'y.

April 4-7.—Baltimore, Md.—Tournament of Baltimore shooting Association; targets and live birds; money added. Geo. L. Harrison, Sec'y.

April 11-13.—Elkwood Park, Long Branch, N. J.—The Interstate Association's seventh annual Grand American Handicap tournament.

April 18-20.—Lincoln, Neb.—The Lincoln Gun Club's second annual interstate tournament; targets and live birds; $500 added. Geo. L. Carter, Sec'y.

April 18-21.—Baltimore, Md.—Prospect Park Shooting Association's tournament; added money. H. A. Brehm, Pres.

May 15-21.—St. Louis, Mo.—Tournament of the Missouri State Fish and Game Protective Association. W. R. Nold, Cor. Sec'y.

May 24-25.—Greenwood, S. C.—Annual live-bird tournament of the Greenwood Gun Club; 25-bird Southern Handicap. R. G. McCants, Sec'y.

June 7-9.—Columbus, O.—Tournament of the Ohio Trap-Shooters' League, under the auspices of the Sherman Rod and Gun Club. J. C. Porterfield, Sec'y, O. T. S. L.

DRIVERS AND TWISTERS.

The Limited Gun Club, of Indianapolis, have issued an attractive programme of their second Grand Central Handicap tournament, to be held Dec. 19-23, at Indianapolis. The tournament is open to all, 10-gauge guns and black powder barred. The first day will be devoted to targets, and there will be eight 20-bird events, each $2.50, money divided into 30, 25, 20, 15 and 10 per cent. Known experts will be required to pay $2 each on this day, which will be divided among the amateurs shooting through the eight events. Second day, sparrows, class shooting, four 20-bird races, $6 each, 10 per cent. to be deducted from net purses and divided among five high guns shooting through the day's programme, 30, 25, 20, 15 and 10 per cent. divisions. The second day's programme will be duplicated on the third day. Fourth day, pigeons. Event No. 1, 7 birds, $7 entry; No. 2, 10 pigeons, $10 entry; No. 3, 10 pigeons, class shooting, $10 entry, three moneys, 40, 35 and 25 per cent., three misses out, 30yds. rise. Fifth day, Grand Central Handicap, $600 guaranteed, all surplus added, 25 pigeons, $25 entry; ten or more high guns; distance handicap, 26 to 31yds.; three misses out. Programmes can be had from H. T. Hearsey, Sec'y, 216 North Pennsylvania street, Indianapolis, Ind.

Elmer E. Shaner has been in the mountains of Pennsylvania for a couple of weeks, forming one of a party known as "The Rainmakers." Not that the party use black powder; their nickname came to them from their usual bad luck in the matter of rainy weather while on their annual camp hunt. Mr. Shaner will next be heard from at the annual meeting of the Interstate Association, to be held early in December. It may not be generally known that the tournament at Haverhill, Mass., was the fiftieth tournament managed by Mr. Shaner for the Association, viz., six Grand American Handicaps and forty-four target tournaments.

J. S. S. Remsen, president of the Brooklyn Gun Club, has returned from his trip to Maine. While the party he was with did not get a moose trophy, they had a good time, and could have killed any quantity of deer. Moose they report as very scarce; that is, bull moose, for they saw nine cow and calf moose during their stay in the woods. One of Mr. Remsen's party killed a caribou, while another brought home an albino deer with a very pretty hide.

It will be good news to many people to learn that Noel E. Money, late secretary of The American E. C. & Schultze Gun Powder Company, is in all probability now on his way to visit this country, business calling him to make the trip to San Francisco. His stay here will be short, as business interests in Europe demand his attention the greater part of the year. It will be necessary therefore to be thankful for small mercies.

It is understood that the Carteret Club has issued challenges for four-men team races at live birds to the Riverton Gun Club, the Herron Hill Gun Club, of Pittsburg, Pa., and to the Chicago Gun Club. In all probability favorable answers will be received from at least two of the challenged clubs. The races ought to prove very interesting and close, as both Riverton and the Herron Hill gun clubs can get together strong teams of four men on a side.

The proposed exhibition of fancy shooting by Rolla Heikes and Fred Gilbert on the grounds of the Riverton Gun Club, Philadelphia, Pa., has been postponed indefinitely. The exhibition was to have taken place on the 18th inst., but was found to clash with the tournament at Blooming Grove Park, which will be a big event in amateur circles.

U. M. C. Thomas, who, with Mrs. Thomas, has been visiting the exhibition at Omaha, and other Western points for the past few weeks, has returned to Bridgeport well satisfied with his trip. He remarks that you can't keep good people down, and incidentally adds that the factory at Bridgeport is working five nights each week.

Lou Harrison, of Minneapolis, Minn., is once more in New York. He has come East for his usual winter visit, and made his debut for this season at the live-bird shoot of the New Utrecht Gun Club, held on Saturday last, Nov. 12, at Woodlawn, L. I. Mr. Harrison is always a welcome guest at any club gathering around New York.

The Keystone Shooting League announces a Thanksgiving Day shoot, to be held on the club's grounds at Holmesburg Junction, Philadelphia, Pa. The shooting will commence at 10:30 A. M. There will be a 25-bird handicap, $10 entry, $150 guaranteed, divided 50, 30 and 20 per cent., birds extra, and numerous sweeps.

It has been found necessary to postpone the shoot announced for Nov. 23 by the Bergen County Gun Club, of Hackensack, N. J., on account of its occurring one day before Thanksgiving Day. It will probably be brought off on the 30th inst., or on Dec. 7, the exact date to be announced next week.

The Philadelphia Trap-Shooters' League will hold their monthly team match and open tournament on the grounds of the Florists' Gun Club, at Wissinoming, on Saturday, Nov. 19. The shoot will be under the auspices of the Delaware Gun Club. Fifteen target events are on the programme.

The Thanksgiving Day shoot of the Boiling Springs Gun Club at Rutherford, N. J., will be one of the usually large holiday gatherings to be found on the grounds of this popular club. One hundred pounds of turkey meat "in the feather" will be distributed as prizes to the lucky winners.

Thos. Donley has secured 5,000 live birds for his tournament, to be held at St. Thomas, Ontario, Can., on Dec. 27-30. There will also be target events. Added money and guaranteed purses will be announced later in the programmes. Jack Parker will manage this shoot.

Gil Hatfield, the ex-New York baseball player, is making rapid strides as a trap-shooter. One year ago he couldn't hit a barn, as the saying goes, and liberal handicaps were his lot. During the whole of last season he practiced assiduously, and made good progress. During the summer months of this year he played ball, leaving his gun and the target traps severely alone, only to blossom forth last Saturday at the Brooklyn Gun Club's shoot with 47 out of 50 in the club handicap, in which he had an allowance of 13 extra target to shoot at! He broke 3 straight of that allowance, and walked away from the score with his hat on one side and a chip on his right shoulder!

Justus von Lengerke hunts just as regularly this season as he has done in the past. But "birds are scarce this year," and Justus' game pockets do not bulge as in former years. Birds must indeed be scarce when he cannot bring them home.

Where is Ed Taylor, of the Laflin & Rand Powder Company? He has not been seen around "sporting goods row" for over a week. Report has it that he is taking a well-earned vacation, and bagging a few quail on the side.

John L. Lequin, secretary of the Hazard Powder Company, in company with Harry Palmer, et alia, purposes making a trip into the country the latter end of this week, quail and grouse being the objects sought by the party.

In the six-men team races between teams of the University of Pennsylvania and Harvard, at Cambridge, Mass., last week, the former won by a total of 140 against 134, each man shooting at 30 targets.

The tournament of the Eau Claire Gun Club takes place this week, Nov. 15-17, at Eau Claire, Wis. Two days will be devoted to targets, and one to live birds. The tournament is open to all.

On Nov. 8 John Rothacker defeated Felix by a score of 82 to 79, in a race at 100 live birds.

BERNARD WATERS.

The Limited Gun Club.

INDIANAPOLIS, Ind., Nov. 8.—I again ask your indulgence on behalf of Mr. John M. Lilly, who is manager of our tournament, and this date is final. Our Grand Central American tournament will take place Dec. 19 to 23. Please cancel the previous dates asked for, and announce these dates in your fixtures. Our programme will be out the latter part of this week, and I will mail you the first copy

Inclosed you will find score of our shoot, held Nov. 2 and 3, at targets:

First Day.

Stillwell	..	..	..	..	..	..	..	..	..	..	10	..

* Grand Hotel cup; won by Dr. O. F. Britton. Dr. Britton also won the highest average for the both days, as follows: Dr. Britton broke 370, T. H. Parry 364, Geo. C. Beck 362.

The attendance was light, the weather fine, and we had a pleasant time.

N. T. HEARSEY, Sec'y.

Soo Gun Club.

SIOUX CITY, Ia., Nov. 10.—The Soo Gun Club had for a visitor to its shoot to-day Philip Sousa, the great composer and bandmaster. Mr. Sousa can handle a gun almost as well as a baton, and his scores compared favorably with the best of those made to-day. Seven events were shot, one of which was at live birds, five at single targets, and one at pairs. The scores:

	No. 1, 15 singles.	No. 2, 15 singles.
Hoberg	111101101101000 — 9	110110110111110—11
Duncan	111111111100111—13	111111111111111—15

Wiley	01012222211022112221021211 11 —24

RAVELRIGG.

The Intercollegiate Championship.

MONMOUTH JUNCTION, N. J., Nov. 12.—The annual contest for the intercollegiate championship at targets was decided to-day on the grounds at this place. Yale proved the winners, but by the narrowest of margins, as both Harvard and Pennsylvania, who tied for second honors, were only one break behind the winners. The scores were: Yale 108, Harvard and Pennsylvania 107, Princeton 95.

The winners took away a handsome silver trophy, emblematic of the intercollegiate championship, and also five smaller trophies, one for each member of the winning team. Bancroft, of Harvard, won the prize for highest individual score in the match, his total of 27 out of 30 going a long way toward placing his team in second place. Yale's win was the result of good team work, each member making a good average, while in the case of both Harvard and University of Pennsylvania there were weak spots in the teams. The scores were:

Yale.

Eastman	10111111101101010111111111111—24
Knowlton	10111011110111101011111111110010—22
Brooks	01011010011110111011111011111011—21
Schley	10111111010100011101111111101011—21
Loomis	00100111111101001101011111111110—20—108

Harvard.

Bancroft	11111011111111101111111011111111—27
Kinney	11111110111100111111011111111101—25
Blake	11001101111011110110110110111111—22
Campbell	10111001001110110111001111111111—21
Saxford	00111011000000100100111000011 0—12—107

Pennsylvania.

Paul	11011111110111111110011111111111—26
Singer	11011111111111011101111001101 11—24
Steel	11101110010011111111111001101 01—21
Parish	11011000001000110111011111111111—19
Nielson	11011001010101001101101001111 0—17—107

Princeton.

Elbert	11001111110110011111111011111111—24
Laughlin	11111111000111111011101110110 10—22
Young	10110110011101111111100111101111—22
Kendall	00111001010110011100011110000 0—14
Cass	01100110011111000000011001 1001—13—95

Each man shot at 30 singles, or 150 per team. Thus, Yale's average was 72 per cent., while Harvard and Pennsylvania were close up with .713.

Harvard was the winner of the championship last year, with Yale second, Pennsylvania third, and Princeton fourth, as in this year's contest.

Audubon Gun Club.

BUFFALO, N. Y., Nov. 5.—The fourth series of shoots for the R. H. Hebard trophy was the feature of the Audubon Gun Club shoot of to-day, and was won by Geo. P. McArthur, who scored 27 out of 30 shot at, with 3 birds added, making him a total of 30. No. 3 event was the club badge shoot. E. C. Burkhardt won Class A badge, Jacobs won Class B, and U. E. Storey won Class C. No. 4 was for the Hebard trophy:

Events:	1	2	3	4	6
Targets:	15	15			5p
C Burkhardt	12	10	18	27	6
R Hebard	12	9	14	23	2

E. C. BURKHARDT, Sec'y.

Trap around Reading.

READING, Pa., Nov. 10.—A private shooting match at live birds was held on the new Spring Valley shooting grounds, near this city to-day between Robert Welsh, of Philadelphia, and Midget, a well-known shot of this city. Each man shot at 100 live birds, 30yds. rise. The birds were all fine flyers, and went off like streaks when liberated from the traps. The new underground traps of Mr. Seidel's invention worked finely. Mr. Seidel has spent $1,500 this season to make these grounds one of the finest in the country, and has succeeded. Mr. Welsh killed 95, while Midget shot rather poorly, scoring only 88 killed, with 5 dead out of bounds.

Norristown, Pa., Nov. 12.—The monthly medal shoot of the Penn Gun Club, of this place, was held to-day. Mr. J. R. Yost was the successful contestant. A sweep at 25 targets followed. Scores: Cassel 23, Kriebel 21, Jenkins 21, Franklin 21, J. R. Yost 20, Keherer 16, Ritter 15, Gleason 16, Penn 16, Derr 15.

Mohrsville, Pa., Nov. 11.—A preliminary meeting was held at the Central Hotel, this place, to organize a gun club, and already thirty-five names are on the list of membership. Temporary officers were chosen, and a committee appointed to purchase three traps and 1,000 targets. It was also decided to hold the first shoot on Nov. 24, on the new grounds, which a friend has kindly donated to the club free of charge.

Pottstown, Pa.—At a recent meeting of the Shuler Shooting Club, of this place, it was decided to hold an all-day target tournament on Nov. 24. If the weather should prove unfavorable the shoot will be held on the 30th, on the club's grounds at West End. This tournament is open to all, no shooters barred. As there is a shoot at Spring Valley Shooting Grounds, near Reading, on the 22d and 23d, this tournament of the Shuler Club should attract quite a number to Pottstown on Thanksgiving Day. As yet the manager of the Shuler tournament has not been selected. It is very probable that manager Arthur A. Fink, of Reading, will be selected by the committee, as his name has been mentioned for the position. The Shuler Club has fine grounds, with an excellent background for target shooting, and all shooters who happen to get to Pottstown will receive a hearty welcome and a good time.

DUSTER.

East Side, of Newark.

Editor Forest and Stream:

The East Side Gun Club, of Newark, N. J., will hold another live-bird handicap, similar to the most successful one shot on Election day, on Thursday, Nov. 24, Thanksgiving Day, at their grounds, run by Smith Bros., at Foundry street and Plank Road, Newark. This will be the fifth handicap held by the club this year, and each one has been a success. Regarding the quality of the birds, suffice it to say that but 76 per cent. were killed at the contest on Election day, and no straight scores were made by any one of the entries on that day. The grounds are as fast as any in the State of New Jersey, and the birds, as supplied by the Messrs. Smith Bros., are as good as can be obtained anywhere. The handicap will be, as heretofore, a yard added to winners of first money, and one-half yard added to winners of second money in previous handicaps; newcomers to be handicapped by officers of the club. These handicaps favor the novice in live-bird shooting, as the entrance is small, and as the purses are divided by the Rose system in proportion of 6, 3, and 1 if less than ten entries, and 6, 3, 2 and 1 for ten entries or over, the expert shooting anywhere near the rear handicap has no cause to complain. At the before-mentioned class handicap the 14s divided first money, or $15 each; second money was $7.50; third $5, and fourth $2.50 each. The entrance will be $5 each, 15 birds, price of birds extra at 25 cents each, as in the previous handicap. Shooting begins at 10 o'clock A. M., and the main or handicap event will begin as soon as ten entries or over are obtained for it approximately at 1 o'clock P. M., those arriving later may enter up to the 10th round. The days are now getting short, remember, and it behooves the lover of live-bird shooting to get there on time. Plenty of birds will be on hand for side matches or sweepstakes up to the time of the main event. Get there at 10 o'clock, if possible.

LOUIS H. SCHORTEMEIER, Capt.

Confabulations of the Cadi.—XIII.

THE committee of the Egyptian Gun Club had reported to the club proper, at a meeting held the previous day, called specially for the purpose of hearing the report, that it was making progress, recommended about a hundred matters for the club's consideration, and asked for more time to perfect sundry matters of unfinished business. It covered many pages of closely written foolscap, and was chiefly devoted to a recountal of their many and arduous labors, their devotion and loyalty to the club's interests, and the thousand obstacles they were encountering at every attempt in arranging tournament matters. About three lines sufficed to recount what work the committee had definitely accomplished. Indeed, the members of the committee fell into the ways of expert committeemen with a deft ability which indicated an innate fitness for the work.

The club was fortunate in having members so enthusiastic and ardent in promoting its work; men whose esprit du corps was so great that they would let personal interests rest in abeyance while those of the club were engaging their best effort.

The Storks.

Several of the committee had ensconced themselves in the shade of the lodge, and assuaged their thirsts with several gulpings from the cider bucket while waiting the arrival of Moke and Ephraim, one or the other of whom were needed to make a quorum. At length Moke arrived, looking much disturbed. He walked straight to the bucket and took a generous drink, which as to size would not have been a discredit to a large, thirsty farm mule.

"You are very late, Moke," said the Cadi, in pleasant rebuke, "and have kept the meeting waiting a long time on you and Ephraim. We needed you to make a quorum. Punctuality is the very soul of business, my good friend. You may have a right to squander your own time, but you have no right to squander your neighbor's. But where's Ephraim?"

"He's not coming to-day, nor for several days, Cadi. Things have happened," Moke replied in tones of sorrow.

"Something serious has happened, I'm sure," commented the Cadi, and his manner betrayed great concern over the absence of his friend and co-worker. "It cannot be that he has wearied of club-work? No; for there is plenty of cider on hand, and therefore—but what is the matter, good Moke? Speak out, man."

"The storks have come," replied Moke sententiously.

"Oh," grunted the Cadi.

"Oh," echoed Le Loup.

"What! again?" queried Coxey, in indignant tones.

"And when club matters are so much in need of attention, too," added Moke.

"Gentlemen," said the Cadi, in mild but firm tones, "the matters concerning the storks are not to be classified as exclamatory or interrogatory. They are not 'what-agains,' nor are they to be considered as preceding club matters in interest or importance. Each event of that kind is a distinct beneficent happening. It is, not to be considered as referring to the past, present or future events of a like kind. It is indeed a happy, happy day for our good friend Ephraim, and we will set aside a few minutes in which we all may rejoice at his good fortune. I will refill the cider bucket, and we will toast him many happy returns. Ah! happy, happy day! Good Ephraim! Fortunate Ephraim!" and the Cadi bustled away for the cider, warbling in a badly damaged voice:

"'She is a winsome wee thing,
She is a handsome wee thing,
She is a bonny wee thing,
This sweet wee wife of mine.'

"Beneficent happenings, indeed," commented Le Loup, as he tilted his nose scornfully in the air. "When a fellow has to be cook and dishwasher himself for several weeks, it's bad enough; add to that the duties of a nurse, and it's much worse. The Cadi doesn't know as much about these matters as he might, for Hopie Jane never misses more than half an hour of time, and keeps on working just the same, storks or no storks. But here is the Cadi returning, and we must fall in with his humor, boys, or there'll be a cut in the cider allowance."

"Here is to the health of the young trap-shooter," exclaimed the Cadi, as he held the bucket aloft.

"For a better understanding, I hasten to remark that it isn't a trap-shooter," interposed Moke.

"Oh," said the Cadi, "that's different.

"Quite different," assented Coxey.

"Much different," added Moke.

"We're glad anyhow," said the Cadi. "Here's to the young queen of some future trap-shooter's happy household."

"It's two queens," said Moke.

"Drat it!" said the Cadi. "Here's to all young queens in number from one to a dozen, and may Ephraim have many happy returns."

Each member drank with much fervor, as would have been the case whether they were drinking to a toast or to nothing, such was the excellent and durable quality of their thirsts.

Demosthenes Brown.

"We will now proceed with the business of the meeting, my friends. The club is somewhat impatient over our slow progress, and they hint that we are not working with due diligence. Come to order, gentlemen," and the Cadi rapped his pipe on a log as a sign that he had on the robes of office.

"I move you, Cadi, that we appoint one of our members a subcommittee of one to solicit local advertisements," said Le Loup.

"I second the motion, and nominate Mr. Le Loup," said Montague.

"Gentlemen, I have so many business matters to look after that I haven't the time to spare, even if I had the necessary ability. Our worthy secretary, Moke, is a man of great popularity, and has had great success in securing local advertising. I take great pleasure in giving this deserved testimony; and I nominate the good, sweet Moke in my place.

"I thank Le Loup," exclaimed Moke, as he rose hastily, "for his high praise, and I would blush with pleasure if I were only able to blush at all; but I have so many business cares to engage my time and attention that, anxious as I am to serve the club, I am unable to do so in this matter. I take pleasure in nominating Mr. Coxey as a substitute for my own."

"Gentlemen and ladies," said Coxey, "when there's any real hard work to do, I allow as how I'm just as busy as anybody else. I'm too busy to work for nothing, same as the rest of you. You all say in a nice way that you are sorry you can't do this work for the club. You know you could give ninety-nine good excuses, and the hundredth one, which you all keep to yourselves, would be the truthful one. The truthful one is the one I'm a-tellin'. I don't want to do this here hard work for nothin', and I hain't a-goin' to do it neither. I'm awful sorry I can't. I'm just as sorry as you all are. I nominates the Cadi," and Coxey sat down grinning.

"I think," said the Cadi, "that the better way is to make a contract with Demosthenes Brown, advertising solicitor, and give him 25 per cent. commission on all advertising secured, same as we did last year. The secretary will give him a letter to every man in town who is more or less dependent on our patronage and influence, asking him to do his best for us. In that way the advertisers will be paying us for advertising, and paying our agent at the same time. In this way you will be promoting good sport in the usual good club manner, where the financial part includes manufacturers, manufacturers' agents, local tradesmen, etc., as a source of revenue."

"That's the right thing," said Moke. "We are sure of the hotel proprietors, for if they do not advertise we will influence the visiting sportsmen to go elsewhere. The same with the soda water men, and the other concocters of bromo seltzer and other pleasant summer morning drinks."

"The motion is carried," ruled the Cadi.

"What motion?" queried Le Loup.

"Pay attention to the business of the meeting and you will know what the motions are," retorted the Cadi.

Targets.

"What targets will we use?" queried Montague.

"I have fully attended to that part," said Moke, somewhat curtly.

"I'd like to know the name of the target all the same, Moke," said Montague.

"Tell us about it, Moke. There is nothing to conceal. What target will we use?" queried the Cadi.

"I don't know," Moke retorted peevishly.

"He has attended fully to that part, and he don't know anything about it! Very strange," commented Montague.

"If you must know, gentlemen, I have written to three different target manufacturers, telling them plainly that we expect them to furnish targets free for use in our tournament. I have shown them that the advertising which their goods will thereby receive will more than repay them for the outlay. Out of the three I expect one at least will comply with our demand. We will assure the shooters that the target we use is the best in the land. That is the way to have the simon-pure, sporty competition."

"Suppose they all refuse?" ventured Coxey.

"They will not all refuse," replied Moke, calmly. "If one of the manufacturers does not give us the targets outright, some one of the others will offer us them at a very reduced rate; for the sandbag and the boycott are bugaboos which are very potent. If they do not give us the targets or make us a rate at cost, we would buy the targets, but the bugaboos never fail."

"I am glad to note that tournaments are on such a sterling base of good sport," said Le Loup. "We sandbag the manufacturers for merchandise and for advertising in our programme; we assess their agents for the privilege of shooting; we sandbag the local tradesmen for their contributions, and we sandbag for free targets."

"It is all very unlike Bret Harte's Heathen Chinee," said the Cadi, with an abstract air. "The Heathen Chinee was peculiar for tricks that are vain. All tricks are not vain. The Chinee has much to learn."

In re Handicap.

"Do you intend to take any action concerning a handicap, or will you run the tournament in the same old manner; that is to say, all shoot together on precisely the same terms, regardless of relative ability?" queried the Cadi.

"I am in favor of running in the old manner," promptly responded Le Loup. "If we experiment with handicaps and other novelties of any kind, we may make some mistakes. At all events, we are sure to offend the most skillful shooters, for to them a handicap signifies impairment of their revenue. It is much better for them to have a small tournament with no handicaps than a big one with handicaps. One is a revenue to a certainty; the other is as it may happen. The business features must be considered before those of sport."

"I think we might try some kind of a handicap which didn't make much change; for instance, place the professional amateurs—that is, the novices—at 14yds., the semi-experts at 16yds., and the experts at 18yds. What do you think of that, Cadi?" Moke queried.

"I don't think that makes much difference," the Cadi replied. "The average expert, after firing a few shots to get the range, will smash targets at 18yds. about as well as he will at 16. The difference is not sufficient to add to the difficulties of his shooting to any appreciable extent, hence it practically amounts to nothing as a handicap. On the other hand, the novice, who cannot break targets at 16yds., cannot break them at 14. The mere change of a yard or two in distance in no wise compensates for the latter's lack of skill. There will be very little difference in the scores of a number of men, all standing at 16yds., when compared with scores made when they are divided up, some men standing at 14yds., some at 16 and others at 18yds. On the other hand, all the men who are classed as experts at the 16yd. mark cannot be put back to the same distance, since some are slower shots than others, and the slower ones would not need to be set back far before the gun is handicapped instead of the man.

"If you give each one of the weaker shooters a certain number of extra targets to shoot at, you then give no handicap at all. You merely give the shooter an opportunity to obtain a handicap, but then the handicap is contingent on his ability to take advantage of the opportunity. Thus, two shooters whose shooting averaged alike might have five extra targets to shoot at in a certain event. One might break the five; the other might miss the five; thus one had a handicap of five and the other, as it turned out, had no handicap at all. The handicap should be an arbitrary fixed quantity. If five is to be given, let five misses count as five breaks. Give a handicap in reality. The weight a horse carries, the yards a sprinter has over his fellow competitors, etc., are all fixed arbitrarily, and count from the very beginning. There is a great deal of fallacy in the managements of handicaps as applied to target shooting. For instance, if a man is classed as being 80 per cent. in skill, the handicapper is likely to give him 20 extra targets to shoot at in a, let us say, 100-target race. At the first glance that appears fair. But the 80 per cent. man will get but 80 per cent. of the next 20; that is to say, he will break 15, for he is only an 80 per cent. man in either instance. At best then he can get but 95 out of 100. Class your men according to their known ability as shown in several weeks of shooting, and give them a fixed number of misses as breaks. If you give him an extra number to shoot at you give him an opportunity, but you do not give him a handicap. You are merely dangling the prizes a little closer, but still dangling them out of reach.

"As a general proposition, you will find that the experts are loth to give a handicap of this kind, though cheerfully willing, if need be, to give the other handicaps, such as an extra target or two to shoot at, or an extra yard or two in distance. We are always pleased to put bait on our hooks."

"Let us put off the handicap matter till some other time," said Moke. "If we adopt a handicap now, the semi-experts and experts might not come, and the novices would be sure to quit after a short time, regardless of who won. Let us stick to the faith of our daddies, and if we can't eat corn we can eat hay."

"It has taken a long time to prove that the earth is not flat," said the Cadi, sadly. "It isn't fully proved yet to the satisfaction of all people, and even if it was it would not add a mite to their wisdom or happiness. Let us consider money matters, and then our opinions will concur," and the Cadi scratched his head thoughtfully, after the manner of the aboriginal ancestor.

Droppers Barred.

"I move you, Cadi, that dropping for place not be tolerated," said Coxey.

"That is well thought of, Coxey. We came near forgetting that. It has a good, round, sonorous sound, significant of a rectitude which would withstand a cyclone of assault from all the wicked shooters in the world. A tournament which is evolved by us with so much business probity should not be marred by any sharp practices of the shooters. I don't know why dropping for place is wrong, but I do know that it is wrong to use the sandbag and the boycott," said the Cadi.

"It doesn't matter in the least," said Le Loup, "whether we adopt it or not, so far as dropping for place is concerned. Men will drop if they wish to, and we will not know the difference. But it has a pretty sound, and gives a good flavoring to everything else, so I think we should adopt it. It denotes that we are not as other men are."

"Motion carried," said the Cadi. "We will now call on our good friend Ephraim as a committee of the whole, and condole with him. He thinks that:

"'The booby father craves a booby son,
And by heaven's blessing thinks himself undone,'

but we'll try to make him think different."

BERNARD WATERS.

Tournament at Sinking Spring, Pa.

SINKING SPRING, Pa., Nov. 2.—The annual fall target tournament of the Independent Gun Club, of Sinking Spring, Pa., was held to-day on the club's shooting grounds, at J. W. Hainly's Hotel, at this place. The weather was just the kind wanted for target shooting, a light wind blowing over the traps, which carried the targets swiftly. The tournament was a grand success, and netted the club a handsome profit. The management was attended to by Arthur A. Fink, of Reading, Pa., who deserves credit for the fine manner in which all the events were run off.

The principal event of the day was the individual championship of Berks and adjoining counties for a handsome silver trophy valued at $25, and donated by the Independent Gun Club. A 1lb. can of Gold Dust powder was also given for second and third prizes, donated by the U. S. Smokeless Powder Company, of Batavia, New York. The winner of the trophy turned out to be Mr. Francis Yost, of the South End Gun Club, of Reading, Pa., who, after shooting a tie with J. W. Hainly, of Sinking Spring, each breaking 40 out of 50, shot at 25 in a shoot-off, Yost hitting 18 to Hainly's 17, and thus won the handsome trophy. Mr. Yost, although high in the seventies in years, can give the trap-shooters of this community a lesson both in trap and field shooting. At present Mr. Yost holds the office of captain of the South End Gun Club, of Reading, and besides this trophy holds several other individual prizes, which he has won at the trap. Among the Berks county shooters he is better known as Pop Yost.

Among the shooters present were Fred Coleman, of Hegins, Pa.; W. J. Irwin, of Pottstown; Jack, Greener, Francis Yost and Mart. Eshelman, of the South End Gun Club, of Reading; L. Wertz, of Limekiln P. O.; also Hainly, Spatz, Huntsicker, Young Kautner, and Ruth, of the Independent Gun Club, of Sinking Spring.

The scores were as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Targets:	10	10	10	10	10	10	10	10	10	10	10	15	10	10	10	10
Irwin	6	6	9	9	9	9	9	8	8	6	12	8	8	6	6	4
Coleman	6	5	7	8	6	7	9	7	7	6	7	11	6	8	6	8
Jack	..	..	..	..	..	..	7	6	7	9	9	8	9	8	10	4
Hainly	6	7	6	8	6	6	7	..	5	..	..	7	..	..	..	..
Greener	..	..	..	..	..	..	..	..	8	8	8	8	8	8	3	6
Spatz	7	8	7	7	6	6	..	..	7	7	..	..	7	4	..	..
Wertz	8	9	8	6	8	5	0	9	0	..	8	..	..	..	..	..
Yost	..	..	..	..	..	..	7	9	6	..	..	11	..	..	..	..
Huntsicker	5	8	5	8	5	..	..	..	6	..	..	..	..	..	..	..
Eshelman	..	..	..	..	..	..	..	..	..	..	..	..	..	..	6	7
Young	..	..	..	..	..	..	..	..	..	6	..	..	6	..	..	..

The scores of the individual championship follow:

Event 10, individual championship of Berks and adjoining counties, 50 targets, $1.50 entrance, first prize, a handsome silver trophy, valued at $25; second prize, a 1lb. can of Gold Dust powder; third prize, a 1lb. can of Gold Dust powder: Jack, of Reading, 32; Greener, of Reading, 36; Coleman, of Hegins, 33; Yost, of Reading, 40; Irwin, of Pottstown, 37; Hainly, of Sinking Spring, 40; Wertz, of Limekiln, 38; Young, of Sinking Spring, 35; Spatz, of Sinking Spring, 31; Eshelman, of Reading, 34.

Shoot-off, to decide first between Yost and Hainly at 25 targets each: Yost 18, Hainly 17.

The Independent Gun Club after the tournament held a business meeting, and decided to engage manager Arthur A. Fink to manage another shoot, to be held at the same place, under the auspices of the Independent Gun Club, some time in December, the date to be selected later on.

DUSTER.

A Grab Bag Shoot.

NEW YORK, Nov. 5.—*Editor Forest and Stream:* Paul North dropped into my office yesterday afternoon to say "good-by" prior to his starting on a two months' trip to England and the continent of Europe. While discussing our views as to the coming Grand American Handicap—which, by the way, are precisely similar—Mr. North told me of a new scheme for a sociable shoot. It had been introduced into Cleveland by Mr. Alexander Forrester, of the Audubon Gun Club, of Buffalo, N. Y. The scheme is such a good one, particularly for a holiday shoot, that I think it worth while making it public. Here it is:

An event is arranged at 50 targets, entrance $1 (price of targets), with an additional condition that each entrant must bring a prize with him, the value of the said prize not to be more than $1. As each man makes his entrance good for the 50-target event, he hands to the cashier or committee his prize, carefully done up in paper and tagged with the donor's name in full. When the entrances are all made, the prizes are numbered by the committee or cashier.

After the event has been shot out, numbers corresponding to those on the prizes are put into a hat, the high man having the first draw out of the hat; the second highest, the second draw; and so on. Low man takes the number left in the hat. Everybody gets a prize.

Then the fun begins. The prizes are allotted according to the numbers drawn by the contestants, and sometimes a man gets his own prize. He naturally gets roasted with something like the following: "Serves you right for bringing such a measly old prize."

Of course there's no money to be made in the shoot for the shooters; but if they're out for fun, they'll get it, and their full money's worth.

EDWARD BANKS.

Lincoln Interstate in 1899.

LINCOLN, Neb., Nov. 9.—*Editor Forest and Stream:* On April 19, 20 and 21, last, we held out first tournament, adding $225 to the purses. The shooters in this trans-Mississippi valley seemed to appreciate our effort to the extent that we immediately decided to make our tournament an annual affair, and at that time claimed out dates for 1899, when we will add $500 to the purses. We will therefore ask you to insert in FOREST AND STREAM fixtures our claim for April 18, 19 and 20.

LINCOLN GUN CLUB.

ON LONG ISLAND.

Brooklyn Gun Club.

Nov. 12.—The Brooklyn Gun Club's regular monthly shoot was held this afternoon, in glorious fall weather, just the conditions for good scores. There were fourteen shooters on the grounds, and it required some hustling to get through a programme calling for 115 targets before the short afternoon shut down on the sport.

Among those present were: U. M. C. Hallowell, lately returned from Omaha, Belle Meade, Cincinnati, etc.; C. C. Beveridge (The Dominie), also a new arrival from the wilds of Pennsylvania; Edward Banks, C. W. Billings, Platt Adams, W. M. Harding, C. W. Dudley, J. S. S. Remsen, Gil Hatfield, etc. In the club handicap event Gil Hatfield, with 13 handicap allowance, was the surprise party of the afternoon, scoring 47 out of 50, and then only requiring 3 of his allowance to make up his highest possible. Harding broke 7 out of 9 in his allowance of 10, and also landed with 50, as did Billings, who required to break all his 5 extra targets to get into the tie. This tie will be shot off on Dec. 10, the club's next regular shoot. None of the others in the event could get 50, so did not shoot off their allowances. Banks missed his first bird, and then ran 49 straight. During the afternoon he broke 104 out of 105 at unknown angles, and also broke 9 out of 10, Long Island rules, gun below the elbow. Scores in the club event were as follows:

Fifty targets, unknown angles:

E Banks, 0 ..01111111111111111111111111111111111111111111111111 —49
Dominie, 3...01001111111111111011111111111111001111111111111111 —44

111 — 3—50

* Guest.

The following table gives the totals made by each shooter in the six events decided during the afternoon:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
Targets:	10	15	15	50	10	15	Targets:	10	15	15	50	10	15
Banks	10	15	15	49	9	15	Adams	8	14	12	39	7	..
Dominie	9	15	13	44	10	13	Lane	9	12	10	..	3	..
Billings	8	14	14	45	..	12	Hatfield	..	11	9	47	..	..
Dudley	8	11	15	41	5	10	Harding	..	..	8	43	6	12
J Remsen	8	14	15	44	..	12	G Remsen	..	..	..	..	5	..
Hallowell	8	15	13	45	9	15	Smith	..	..	..	..	9	9
Sanders	5	7	..	15	0	9	Davis	..	..	..	..	..	11

No. 5 was at 10 targets, gun below the elbow until the target was in the air. The Dominie won the silver flask put up as a prize by the management for the high man in that event; he broke 10 straight and well earned his victory.

No. 6 was a handicap prize event at 15 targets per man, allowance of misses as breaks. Hallowell and Banks, who shot for "targets only" during the whole afternoon, did not compete for the prize. When the allowances had been added to the scores made by those in for the prize (silver spoons), it was found that Harding (2) and Saunders (5) were tied on 14; they divided the spoons, as it was took dark to shoot off. The other totals were: Dominie (0), Remsen (1) and Billings (1) 13; Dr. Smith (3) 12; Dudley (1) 11.

Spring Hill Rod and Gun Club.

Nov. 5.—The first monthly shoot of the Spring Hill Rod and Gun Club was held to-day at Spring Hill, Corona. Eight members took part in the shooting, which was at 10 live birds. The scores:

Voehringer .....0211112212— 9
Moe .....1221202122— 9
Sands .....2202222222— 9
Walters .....0221210211— 8
Mager .....2200011221— 7
Simon .....0122012012— 7
Brust .....0120202102— 6
Geibel .....2012021002— 6

IN NEW JERSEY.

East Side Gun Club.

Newark, N. J., Nov. 3.—The East Side Gun Club held its club shoot here to-day. The shoot was a 25-target event, known angles, point system. After the regular club event a number of sweeps were shot. The scores:

Fairmount, 20 .....0111110011111111111101011—20
Hassinger, 18 .....1011101111111011111100110—19
Perment, 18 .....0111111110011111110111100—19
Koeller, 15 .....1011101101111000001110111—16
Richards, 18 .....0001000010010110011101010—10

Sweepstakes, 10 targets each:

Perment	5	10	7	5	6	5	Fairmount	8	8	9	10	8	9
Koeller	7	7	7	7	6	..	Hassinger	..	..	..	..	..	6
Richards	5	9	7	5	5	..							

Newark, N. J., Nov. 8.—The weather favored the shoot of the East Side Gun Club to-day. The weather was cool, with a stiff wind blowing up to and partially through the main event, which was begun about 1 o'clock. The feature of the event was Harold Money's excellent shooting. He shot with admirable precision, time and finish, killing some 48 birds out of 50, missing but 2 throughout the shoot. Several minor events were shot before the main event began. Many of the birds were big, strong, lusty fellows, apparently iron-clad, for some of them went out of bounds after staggering to the shock of two charges of shot. Hallowell was distinctly unfortunate, for several of his birds were smashed with both barrels, and still went out of bounds. The Rose system, four moneys, prevailed. The club holds a Thanksgiving Day shoot Nov. 24, with much the same programme. The main event, 15 birds, $5 entrance, birds extra:

H Money, 28½.222111212221011—14
H Otten, 28...2121012121112112—14
Larkey, 28½...2200111112111222—13

New Jersey Central League.

Plainfield, N. J., Nov. 12.—The last shoot of the season under the direction of the New Jersey Central League was held to-day on the Climax Gun Club's grounds, at Fanwood. Four teams competed, but only two presented the regular five-men teams. The Dunellen Club shot with four men, and the Reservoir Club, of New Brunswick, had only three men on the grounds. Climax won with a score of 69, and Dunellen, with one man missing, beat out Bound Brook by 1 target. Each man shot at 25 targets under the Sergeant system. The Climax Gun Club also held its regular club shoot to-day. The scores:

Climax.

C Smith .....0111111101111001111011101—18

Washington Heights Gun Club.

Guttenburg, N. J., Nov. 5.—The first out-of-town shoot of the Washington Heights Gun Club was held at the old Guttenburg race track to-day. For over twenty years the club has held its shoots at 170th street and Kingsbridge avenue, New York, but buildings are now being erected on these grounds, and the club has chosen Guttenburg as temporary grounds. To-day's shoot was at 12 live birds per man, for yearly prizes. The scores:

Dr Friedenberg..110111222111—11
Dillinck .....222211202211—11

Cincinnati Gun Club.

Cincinnati, O., Nov. 4.—*Editor Forest and Stream:* The Cincinnati Gun Club has leased for a period of ten years a beautiful plot of ground containing four acres, fronting on Ross Lake, a body of water consisting of forty-two acres, which the club also controls, and which it will shortly stock with bass; so that it will not be all of shooting that the Cincinnati Gun Club will offer to its members. Furthermore, a bathing beach is to be added next summer. On these grounds the club has erected a model club house, a magnificent structure of two stories. Each of these is 32 by 32, and the lower one is subdivided into five compartments. The larger one is 32 by 20, which is the main club room. This, being located directly back of the shooting stands, permits one to witness the shooting from within, as the windows are of large proportion. To the rear is the gun locker and toilet room for the shooters, and adjoining this is a room set aside for the use of the manager, while to the left as one faces the grounds in a wing are two smaller rooms, the front one being utilized as a cashier's office and the rear one as a kitchen. On the upper floor is one large room of the same dimensions as the main club room; this is used as ladies' reception room, and when occasions require dinner and lunch are served here. The other three rooms are set aside for sleeping apartments for the manager and his family. There is also a veranda the entire length of the building, and here on pleasant days one can obtain a most delightful view of the shooting. Old-fashioned fireplaces are used to heat the large rooms.

The grounds are equipped with two batteries of target traps, one of these consisting of three expert traps arranged on the Sergeant system, while the other is a magautrap. These are encased in brick structures 7ft. wide, with ample room for the traps, and enough additional space to permit the storing of 7,000 targets. The advantages of this will be readily understood, as it means that there will be no interruption of shooting during the day in order to allow the trappers to replenish their exhausted supply of targets. Then add to this fact that the tops of these structures barely protrude above the ground and you will have an idea of what an up-to-date arrangement for target shooting this progressive club has. But this is not all, for when it comes to live birds the arrangements are equally complete. The underground system is of course in vogue here, but the pit is of such dimensions as to permit not only the trappers and birds, but there is ample room for two or three dogs and an additional man to look after these. Furthermore, room for a small stove has not been overlooked, and one will be put in to add to the comfort of the trappers and also to prevent the birds from becoming chilled on cold days. Just in the rear of the pit the ground has been a trifle raised, and in this is fitted a pane of glass of about 6in. square and 2in. in diameter. From this those in the pit can obtain a view of the score, and thereby know when to release the dogs to do the retrieving. In this manner 200 birds can be shot in an hour. This arrangement is according to plans submitted by Mr. E. D. Fulford, who will equip these grounds with his new traps, which are far superior to any that have yet come under my observation, and accomplish everything its enthusiastic inventor claims for them. It was the intention of the club to use these traps on this occasion, but unfortunately the set the club had ordered was lost en route from Utica. However, Mr. Fulford had one that he was carrying around as a sample, and this was used on this occasion, being placed in the center, and when it is properly manipulated sitters are out of the question.

One other thing that the club possesses worth mentioning is a magnificent flag. [illegible] This first saw service on a [illegible] the Jacob Strader, and [illegible] East End Gun Club then came [illegible] Waddell was at that time president [illegible], and upon its amalgamation into the present [illegible] on the staff came with it. Messrs. Mosby and Waddell offered to donate a flag if some one would put up the staff. Mr. Henry Robinson, one of the club's most active shooting members, generously offered to perform this service. Then on the formal opening of the club grounds, Oct. 7, the occasion of the team race between Dayton and Cincinnati clubs, forty shooters gathered around this staff, and at the drop of the handkerchief Old Glory went aloft to the salute of the forty guns, and has proudly waved from the staff ever since.

With such model arranged grounds and 1 cent targets and good live birds at 20 cents to practice on any day of the year, the members of this organization have reason to feel proud, and it is nothing surprising that the club roll now shows something like 215 names (J. J. Hallowell being the latest addition), many of whom hold the most responsible positions in their respective vocations.

The grounds are reached by the electric line. It is only twenty-five minutes' ride from Fountain Square, where all the cars meet.

Paul R. Litzke.

WESTERN TRAPS.

Hicks—Palmer.

Chicago, Ill., Nov. 12.—Silas Palmer successfully defended his title to the Chicago challenge trophy last Tuesday afternoon, easily defeating T. P. Hicks. The day was cloudy and the wind strong. Half a dozen spectators witnessed the race. Mr. Hicks stood at scratch, Mr. Palmer being conceded 2yds. and 2 birds; not 3yds. and 2 birds, as was erroneously reported in a local paper. Mr. Palmer shot a good race on stiff birds, and easily won over Mr. Hicks, who seemed not at his best. Score:

Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

S Palmer, 28, 2..1 1 2 1 2 1 2 1 1 * 1 * 2 0 1 * 1 1 1 1 2 2 1 2 0 1 2—22

Mr. A. C. Paterson will probably be next to shoot Mr. Palmer. C. P. Richards, of a local sporting paper, replaces Mr. Mussey on the trustees of the "Chicago" emblem.

Eureka Live-Bird Shoots.

Mr. C. C. Hess, secretary of Eureka Gun Club, of Chicago, issues the following schedule of the series of live-bird contests of that club, which well be held during the coming winter:

"There will be given, by the Eureka Gun Club, of Chicago, a series of live-bird contests during the winter, shoots to be held the first and third Saturdays of each month, at 1 P. M., from Nov. 19, 1898, to March 18, 1899, inclusive, at Watson's Park, Burnside.

"Conditions: 15 live birds, with handicaps ranging from 26 to 32yds., as handicapping committee may decide.

"Entrance fee $2 for each contestant for the season; each shooter to pay for his birds.

"Three medals are to be awarded, one in each class for the highest five scores during the season.

"It will be necessary for each contestant to participate in six contests to be eligible.

"You will be advised of your handicap at each contest by Capt. Paterson or John Watson."

Kentucky Gun Club.

Mr. H. J. Lyons, with a score of 23 out of 25, won the target medal of the Kentucky Gun Club, of Louisville, in the last shoot. The live-bird medal in the last contest was won by De Long, 9 out of 10.

Waterloo.

E. W. Coburn won the main medal of the Waterloo, Ia., Gun Club in the club shoot this week, scoring 20 straight. H. Steege won the minor prizes, once with 20 and once with 18.

Peoria.

In the contest for the Crawford medal at Peoria, Nov. 7, W. F. Meidroth won under somewhat novel conditions. Meidroth broke 37 out of 50, and William Webber 44 out of 50. They then shot at the number of targets they had missed, Meidroth breaking 11 out of his 13 and Webber 3 out of his 6, the former being declared winner.

Marshalltown.

Marshalltown Gun Club, of Iowa, will hold a big shoot Thanksgiving Day. There will be a team contest between Marshalltown and Des Moines, and it is expected that the attendance will be good.

Pike's Peak Gun Club.

Once the travelers watched it for hundreds of miles and now they shoot asphalt targets there. The Pike's Peak Gun Club held its regular monthly medal shoot this week, at the grounds on Knob Hill, Colorado Springs, in a storm that was more than half a gale. The scores were not high, but were good for the weather. Garrett won the medal with 43 out of 50, Lawton second, 42.

Kentucky Gun Club.

The last medal shoot of the Kentucky Gun Club to date was turned off this week on the pleasant Louisville grounds, and resulted in a deferred tie. Lyons dropped out, and Schultz and Chadwick remained tied. They agreed to shoot off the tie on strings of 3 birds, and they kept on killing three 3 straight until they had gone through nine strings, and until darkness called a halt. They remained tied at the close of hostilities, having killed 36 straight each.

St. Paul Shoot.

St. Paul Gun Club, of Minnesota, will hold a State tournament Nov. 16, putting up all the club badges and offering team races of two and three-men teams, representative of the cities competing. It is thought there will be a good State showing, and the occasion is sure to be a very pleasant one.

E. Hough.

1200 Boyce Building, Chicago, Ill.

Chicago, Nov. 12.—John Watson announces to the shooters that he will give a live-bird tournament on his grounds at Burnside Crossing, beginning Monday, Dec. 12, and continuing throughout the week. The grounds have recently been rearranged, and an extra set of live-bird traps have been put in, making it more available in accommodating a large number of shooters. On each day, aside from the regular events, will be given a 15-bird contest, in which the money will be divided on the equitable system. On the concluding day a 25-bird handicap contest will take place, the handicaps being yards, and ranging from 25 to 32. To the winner of this contest will be given a unique medal valued at $150, and the money divided as follows: Twenty entries, four moneys; thirty entries, five moneys; forty entries, six moneys. Birds will be trapped at 20 cents each. A large number of participants are expected to be in attendance.

A. C. Paterson.

Answers to Correspondents.

No notice taken of anonymous communications.

W. S.—The European roe deer and the American red deer are two distinct species.

J. E. S., Jersey City.—Will you kindly inform a reader the effect it has on a she dog if you change its collar? Does it change her disposition in any way, has it any effect on her hearing, or does it make her dumb or fond of figthing, or does it affect her in any other way? Ans. Probably not, if the new collar fits.

W. G. Frost, Portland.—Wild rice is very prolific, and grows annually on the same grounds, requiring no care to cultivate. It will grow well in almost any water that has a muddy bottom, is not too cold, and has not a strong current and is not more than 8ft. deep. It will succeed in any of the Middle States, and northwest as far as latitude 50°. Rice has been found doing well on the prairie sloughs of Minnesota, the water of which is tinctured more or less with alkali; it has been successfully introduced into many of the salt marshes of the Hudson River and Long Island, and it grows well in fresh-water marshes and on the banks of slow-running streams. The proper time for sowing the seeds is immediately after it is gathered ripe, i. e., in September. The plant is hardy, prolific and aggressive, and usually more than maintains a footing once established. Its failure to grow in so many cases is due to the fact that the seed has been impaired by too long keeping, and in a number of cases the seed used has been threshed by the Indians, who scorch the grain to facilitate the operation. A few months seems sufficient to destroy the vital germ, so that, though spring sowing has succeeded in some few cases, the trial of winter storage is usually too much for this delicate grain.

PUBLISHERS' DEPARTMENT.

Hunting and Fishing on the C. & O.

No necessity exists for a journey across the continent for the sportsman who is looking for an outing. Five hours from Washington, through the most beautiful mountain scenery this side of the Rockies, deer are almost as plentiful this year as they were in the days when the Old Dominion was first settled by white men.

Since the open season began, on Oct. 1, several parties have gone from Washington into Bath county, Virginia, and the reports which they bring back are such as to make the heart of the sportsman jump with expectancy. There is plenty of sport to be had with the rifle, the shotgun, the fly-rod, and none of the game bags or fish creels are brought back empty.

Within a radius of ten miles from Millboro, Va., there are literally hundreds of deer. Then too the Cowpasture River is teeming with bass, and a 2lb. small-mouth will make the disciple of old Izaak, who has played the big-mouth on 40yds. of line, think that he has a salmon at least on his hook.

Virginia at this season is the paradise of the sportsman, and the Chesapeake & Ohio trains leaving Washington at 2:20 P. M. and 11:10 P. M. carry him right into the heart of that paradise.

For information address H. W. Fuller, General Passenger Agent, Washington, D. C.—*Adv.*

Gun Barrels Protected from Rust.

The "Singer treatment" is a process devised for protecting the barrels of firearms from rust and leading. The treatment is chemical; it hardens the surface and penetrates the pores of the metal, preventing the entering of moisture and corroding agents. Guns thus treated do not require cleaning; not even when subject to the influences of water, salt or fresh. The treatment is administered by the Gun Bore Treatment Co., of No. 7 Warren street, New York.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, NOVEMBER 26, 1898.

VOL. LI.—No. 22. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

The Forest and Stream Platform Plank.

"The sale of game should be forbidden at all seasons."
—FOREST AND STREAM, Feb. 3, 1894.

THE TUNNY-FISHERS.

In rude log-cabin by the lone sea-shore
Two aged fishers slept the sleep of toil.
Rough was their life, and scant their household-
store,
Scarce aught but hooks and nets and seamen's coil.
To one of these came visions of strange spoil;
He caught a fish—such fish as none before
Caught ever, bright with sheen and glittering foil,
A golden fish; and made high vows no more
To sail the seas, but spend the troven gold;
Then woke and wept to starve or be forsworn.
To whom his fellow: "Surely, being old,
Thou drivellest. Vow and vision both are born
Of air. Catch living fish or die." And cold
Through eastern windows crept the ashy dawn.

THEOCRITUS (B. C. 270), Lefroy's Translation.

AMATEUR PHOTOGRAPHY.

THE FOREST AND STREAM'S announcement of prizes for amateur photographs is given elsewhere.

THE DISTRIBUTION OF FISH AND OF RAILROAD TICKETS.

WE observe with interest the pother some well-meaning folks are making over United States Fish Commissioner Bowers and sundry railroad tickets. Commissioner Bowers is charged with having distributed one hundred and fifty railroad tickets to as many Government employees in Washington, that they might go home to West Virginia to vote in the late election. Now Sec. 14 of the Civil Service Act provides:

> That no officer, clerk, or other person in the service of the United States shall, directly or indirectly, give or hand over to any other officer, clerk, or person in the service of the United States, or to any Senator or member of the House of Representatives, or Territorial delegate, any money or other valuable thing on account of or to be applied to the promotion of any political object whatever.

Further, Paragraph 2 of Rule II. provides that "No person in the executive civil service shall use his official authority or official influence for the purpose of interfering with an election or controlling the result thereof." But the Commissioner is charged with "having sent a letter urging John B. Conaway, an employee at the Navy Yard, to go to his home and vote; and also with having sent to Conaway a railroad ticket."

It is reported that Commissioner Bowers has admitted the facts as stated; and the matter is now before the Civil Service Commission. The penalty prescribed for such acts, the accused having been by due process of law proved guilty, is a fine or imprisonment, or both, and dismissal from office.

But no one is so simple as to believe that, railroad tickets or no railroad tickets, it would ever actually come to this with Commissioner Bowers. Mr. Bowers was given his place in violation of law by the President, and holds it only by continued and continuous violation of that law; and when the master sets such an example what may you expect of the servant? The law required that the President should appoint to the office of Fish Commissioner "a person of scientific and practical acquaintance with the fish and fisheries." Mr. Bowers was a West Virginia politician who was devoid of the legally required qualifications. He was given the place in fulfillment of a bargain to that effect, made by Mr. McKinley when a candidate for the Presidency with Senator Elkins of West Virginia. Nobody on earth knows better than Commissioner Bowers himself just what influence put him where he is, and would keep him there despite unlawful use of railroad tickets. Knowing this, he would be an ingrate should he refuse to distribute a few railroad tickets where they might do the most good, and no less a fool, if, having sped the voters on their way, he were to worry about what the Civil Service Commissioners might determine would be the proper thing to do to him if they could.

THE GAME FOR THE SPORTSMAN.

THAT section of the New York game law which restricts the transportation of woodcock, ruffed grouse (or partridge) and quail forbids the shipment of these birds "from any one point to another point within or without the State from or through any of the counties thereof," except when accompanied by the owner; and even then one person may not carry more than twelve of each at any one time, or thirty-six of each in a season. (The meaning of the text is indefinite as to whether it means twelve of each or twelve of all; but the game protectors construe it as meaning twelve of each separate species.) A similar provision restricts the transportation of deer to a single carcass, which must be accompanied by the owner.

Such regulations are not original with New York. This State has copied them from the codes of others, where they have been in force for years. The Republican-Watchman, of Greenport, Long Island, asks for an explanation of the underlying motive which prompted the enactment of such a law. The motive first underlying was to stop the shipment of game to market; the motive next underlying was to stop the killing of game for market; the next stratum of motive consisted of an intention to stop the cleaning out of the game covers, and to maintain a parent and self-replenishing supply of game; and the foundation bed-rock motive was to give the game to the sportsman—the sportsman of to-day and of to-morrow, not to the sportsman of the town alone, but to him of the country as well, to the Greenporter quite as much as to the New Yorker or Brooklynite. Despite the way the Watchman puts it, the sole privileges of "local gunner" and of "city [illegible]" are "What do you think of [illegible] game; each may kill a like number [illegible]rence," the [illegible] home with him. Each is accorded so much [illegible] ake the game of the State, and so much freedom to do with it what he may please, as in the judgment of the Legislature is consistent with a due conservation of public interest.

The game of this continent, East and West, North and South, rightly belongs to that element of the community which makes pursuit of it for sport and not for profit. This is the irrefutable principle, the bed-rock sure foundation "underlying motive" of all wise game protective legislation. One after another, State by State, those who inspire and frame game laws are coming to an intelligent comprehension of the principle, and giving expression to it in the restrictions of these laws. The Platform Plank promulgated in these columns in 1894 has just this aim. In that year it was advanced doctrine. To-day, as we are drawing near to the close of 1898, it is a familiar principle, in which the public recognizes in large measure the solution of the game protection problem. Who shall say that with the beginning of the new century the Plank shall not have place in the codes of a majority of the States?

We sympathize with the Long Island gunners, if any find themselves cut off from what they undoubtedly in good faith believe to their just right to market game. But theirs is only the local and personal hardship incident to every reform which affects the community at large, and to every changed condition which makes for an enforcement of the inexorable rule of the greatest good for the greatest number. The market-hunter, the killer of game for profit, belongs, as a factor to be given consideration in game legislation, to a past age. The only class whose interest may now reasonably be taken into account is that of the sportsman. The term sportsman's class may not have a very definite meaning to journalists who are given to denunciation of game laws. To understand intelligently what the term sportsman means in this country, as applied to the gunner or angler, it must be remembered that the American sportsman spends on the average less than a fortnight all told per annum in the field or on the stream. For the rest of the twelve months of the year he is "chained to business," to as many businesses, vocations, trades, professions, occupations, industries, employments, as make up the activities of organized society. When, then, the community resolves to protect the game for the sportsman, that is only another way of resolving to protect the game for itself; and when the community cuts off the shipment of game to market, that is only putting into effect its determination to have the game in the field, to-day and to-morrow and always, as lure for an outing, rather than on the market stalls for consumption to-day and done with it. In other words, the game is for the sportsman.

SNAP SHOTS.

Pursuit of game in Australia has so diminished the stock as to excite genuine concern among sportsmen, and ways and means are sought to check the destruction. The prevailing interest in the subject is well indicated in a letter referred to us by Messrs. Hartley & Graham, of this city, written by the secretary of the Australasian Gun and Game Association, to elicit information respecting the means adopted in this country to preserve our game. The protective system which provides a force of paid wardens or protectors is the only one which has ever amounted to anything in the United States; and our cousins in Australia would do well to labor for the adoption of like methods.

One weak point in the system with us is the influence of politics. In New York, for instance, we have a vicious breed of politicians, who by devious means win their way into the Legislature, and take part in making fish and game laws, and then encourage their violation. In certain localities and as to certain people the protectors do not pretend to enforce the laws; they even refuse to enforce them when urged to do this by honest citizens. The reason is that the law violators have votes, the politicians want these votes, and to make sure of them shield the law breakers and stand between them and the protector. So we sometimes hear it openly given out—and the declaration provokes no special remark—that such and such a fish and game protector will make no arrests which will antagonize votes. And there are districts along the inland lakes where the netters go unmolested because Senator So-and-so needs their votes, and in exchange secures them immunity to defy the laws. These politicians carry their heads high in public places, but honest men know them for what they are, and to know them is to have contempt for them. One might much sooner intrust the interests of the widow and the orphan to the roughly-clad illicit fish netter than to the silk-hatted politician who mortgages his soul to get to Albany.

This paragraph is devoted to the memory of Jacobus Barhydt, *obiit* 1844, a man wise beyond his day and generation. In the old days Barhydt owned the Saratoga Springs property now famous as Mr. Spencer Trask's Yaddo. The lake on the estate was then known as Barhydt's Lake, and on its shores Barhydt kept a public house, which between 1820 and 1835 was a favorite resort. The waters were well stocked with trout, and attracted anglers from near and far. In those days fishermen were not accustomed to be hampered in their sport by restrictions of law or of thrifty proprietors; but to Jacobus was given the uncommon sense to impose on his guests rules and regulations intended to maintain the fishing resources of Barhydt Lake. Writing to the New York Commercial Advertiser in 1835, Wm. L. Stone, the author of a volume of "Reminiscences of Saratoga," said: "At Barhydt's the sportsman is obliged to throw all the trout he may take back into their native element again, and pay by the hour for the privileges besides. He may, however, retain enough for his own dinner, provided he allows it to be cooked there and pays pretty well for that into the bargain." According to N. P. Willis, however, the old man was not grasping. "He will give you a dram or cook you a dinner of trout," Willis writes, "and seems not only indifferent whether you like his fish or his liquor, but quite as indifferent whether or what you pay him." But the essential fact, and the point of this paragraph, is that here in the Saratoga wilderness was an innkeeper who put in practice a scheme of fish preservation which was hardly more novel then than it is to-day.

The Sportsman Tourist.

A Thanksgiving Dinner in the Woods.

As Thanksgiving draws near I am reminded how we boys were wont to spend the day, in the times when each Governor independently exercised the right of his sovereignty in appointing for the feast whatever day it pleased him. Then the holiday was likely enough to dribble through the several commonwealths during the whole of November and over into December, so that if one's kinsfolks were properly distributed he might have the luck to eat three or four Thanksgiving dinners in one year. But we wildwoods ranging boys were lucky if we got more than the cold remnants of one at eventide, or rather were apt to count ourselves unlucky if we were obliged to waste a rare holiday in idle home staying and mere gorging. Better a crust in the woods and contentment therewith than a stuffed turkey in a house with continual longing to be abroad. So if the morning was not too stormy, our company was pretty sure to muster at some convenient central point, each member provided with a pocketable scant ration of bread and butter and a little salt, and each armed with a gun of some sort, upon which we depended for game to eke out our stores. Sometimes good fortune more than skill gave us a partridge or a hare, and we feasted savagely, but if only squirrels furnished our roast we were quite content, and scoffed at home dainties.

Thus we met on one particular Thanksgiving morning, a particularly cold and sour one, with a chilling northerly air astir and a gray, sunless sky that boded snow. Certainly our good Governor had been unfortunate in his choice of a day, and we blamed him for it; but since we had got away from home before it snowed, and now had the freedom of the woods for the whole day, we were not greatly dissatisfied. There were four of us, George, nicknamed Apple Tree, for some unknown cause; Charley, called Spry because he was not; Lias, rechristened Ben Hardin, after Davy Crockett's comrade; and another, hailed as Little Man, because his father so called him when he had grown so tall that the pet name was ridiculous.

"Well, our ol' Gov'nor do' know much," George remarked. "Just look what a Thanksgiving the Gov'nor o' York State picked out last week, right in Injin summer."

"Guess our Gov'nor wouldn't have us Green Mountain boys givin' thanks the same day York State was."

"Oh, this is good enough day for us," Lias shouted in the joy of freedom from work.

"Oumph!" Charley grunted, as he tumbled over a cradle knoll, and the grunt passed as a remark that might be taken either way.

The hemlock woods were gloomy and solemn enough to have awed any one of us had he been alone, but not so as we were, and we broke their brooding silence with merry gabble and laughter, until a frightened partridge, bursting to flight unseen and far out of range, made us aware that game was not to be got by such noisy stalking. Then we separated and hunted more stealthily, each imagining himself a Leather Stocking or a Last Mohican. But we gained nothing from it but a conviction that the partridge was the last of its kind to depart to some place distant and unknown, where perhaps all the tribe had gathered to celebrate the day in safe sequestration.

To such remoteness too the hares and the squirrels seemed to have betaken themselves. Not one timid, crouching form, conspicuous in winter disguise on the brown floor of the woods, not one savory tawny-coated fugitive darting up a gray trunk or cocked on a horizontal branch, was to be seen anywhere. Apparently the woods were deserted by all but us and one uneatable old horned owl, a hermit whom we came upon moping in the dim shadow of an evergreen. At last Lias did by some chance find and slaughter one red squirrel.

It was past noon, and we dressed our meager quarry and prepared for its roasting a most disproportionately generous fire on an old coal-pit bottom, where there was no danger of setting the woods afire. Poor little fellow, he looked lonesome enough, impaled on his roasting stakes, tilted against the great fire, and exceedingly small, considering a quarter to each of four hungry boys. Charley grunted and gave other audible expression to his longing for the flesh pots of home, but his jolly brother Lias declared that enough was as good as a feast, and for his part he was not meat hungry, while I, though sharing the grumbler's feelings, admired his brother's cheerful philosophy.

George, the bravest hunter of us all, had some time since gone aloof from us according to his wont, and now we heard the unmistakable voice of the long gun away over toward Louis Creek—the lucky old gun which his grandfather had brought from Rhode Island, and had killed a deer with at Thompson's Point, and with which one uncle had killed an otter with in Louis Creek and another a silver-gray fox on Mount Philo; and still something was sure to come down when that old gun spoke. With one accord we lifted up our voices, and with a great shout called George to a very small dinner. Then we turned the squirrel, and each took a sniff at the fragrance that made us hungrier, and sat waiting deploring the scarcity of game in that too thickly settled country, and unanimously agreeing that we would go to the wildest West as soon as we got old enough. None of us have ever got old enough. By and by George silently materialized out of the shadows of the woods, bearing two skinny things headless and footless.

"What be they, Apple Tree?" Lias asked.

"I'll tell you when we've eat 'em," he answered.

"Mushrat, I'll bet," Charley ventured too disgustedly, for his palate was not yet educated to that delicacy.

"D'ye ever see a two-legged muskrat?" George asked, exhibiting the evidence in a pair of legs and a pair of wings to each of his trophies.

"They hain't crows, be they?" Lias asked, suspiciously.

"You don't suppose I'd eat crows, an' I'm a-goin' to eat some o' these ere," George answered, settling that question.

So without further spoken objection the unknown fowl were spitted, basted with butter scraped from our bread, as they had timely turns over the glowing coals, and after what seemed an unnecessarily long time were pronounced done by Charley, who was always cook, and made the best pohnnycakes I ever ate since my grandmother's, which were baked on a board. Then the birds were served upon birch bark, with abundant Spartan sauce, which had been for hours accumulating, and we fell to, tooth, nail and jackknife. The first and last could not well be too sharp for the service required, for the meat was inordinately tough, and the sauce could not quite disguise a certain rank and suspiciously fishlike flavor. Nevertheless we made away with them down to the bones, and as we polished these we demanded of George the name of the original owners.

"Well," he answered, as he tossed a scoured thigh bone into the fire, "they was sheldrake."

"Oumph," Charley groaned, rather than grunted, for he was fastidious.

"Well, by grab, sheldrake is almighty good," Lias declared.

Dear comrades of that happy day, how are ye scattered about the wide and dreary world, and out of it. How long ago, yet what a little while since we feasted on fish and fowl, and were thankful.

ROWLAND E. ROBINSON.

Just About a Boy.—XIV.

"SAY, I reckon that ain't more'n haff bad fer one night's work, huh?" said the boy as he finished stretching the last muskrat hide over a bent willow stick and hung it in company with a dozen of its kindred, a couple of coon skins and five fine beaver pelts that dangled from the low elm limb in front of the shanty.

"That's whut I c'nsider a purty fair night's work—that is seein' that trappin' ain't nuthin' like it ust to be when old man Hagey trapped up 'n' down th' river here—he ust to git fifteen 'r twenty beaver 'n a night, 'n' never took no 'count o' mussrats 'n' such stuff. Them was trappin' times, but now they's so many folks cum in 'n' settled 'long th' river that trappin's petered out complete.

"I missed one old beaver up there by that old cottonwood log—guess I set the trap a little too deep fer him, maybe—anyways it was sprung 'n' on'y a few hairs in th' jaws.

"He'll be mighty cute now, 'n' I dunno if I kin git him right away er not. Gee, I'm hungry—bin up since daylight, 'n' I like to froze 'fore I got warm pullin' up to th' traps. This north wind has got a mighty snowy feel to it, 'n' ducks are thick on th' river this mornin', so I wouldn't be s'prised if we git snowed up here good 'n' plenty 'fore we know it. Got plenty o' grub though, so let 'er snow, whut d' we care, huh?"

I had breakfast all ready when the boy finished his hide stretching operations, and after a dip in the icy current of the river and a scrub with a rough towel the youngster came in to the table, his face aglow with health, and his appetite in keeping with his looks.

"Say, I'll tell yeh whut less do after breakfast—less go 'n' git some ducks 'n' have a reg'lar barbecue—whut d'ye say?"

"All right, I'm with you. Won't you have anything more to do with the traps to-day?"

"No, I left 'em all set when I cum down, 'n' I'll go look at 'em juss 'fore dark again, 'n' set them other two er three mussrat traps, nen I guess they'll do the rest."

Breakfast over, we got the guns, and crossing the river, were soon tramping through the sighing woods in the direction of a string of ponds that the boy knew of.

"We don't want to hunt along th' river, cos the more racket we make the more we are li'ble to scare the beaver I'm after," said the young trapper.

About noon the chill wind that had been moaning among the trees all day lulled itself to comparative quiet, and a few big flakes of snow floated down through the gray branches.

"Less git back to camp. We got ducks nuff, 'n' it's goin' to snow plenty. We better git a stock o' wood up to camp 'fore it comes too—hard work, yeh know, huntin' wood when the snow's got it all buried up. I don't like the looks o' this weather a whole lot, cos I figger a good, old-time storm's a-comin' sure, 'n' if it does we'll juss haff to hoof it back to town when it clears up, 'n' leave th' boat 'n' outfit tull the ice gits hard 'nuff to bring 'em back on a sled."

We were walking back toward the boat as we talked and by mid-afternoon had crossed the river again amid a flying swirl of downy flakes that half hid the fast whitening landscape, and after our guns and game were stowed away inside the cabin we put in the rest of the afternoon hustling good, dry wood, and building a rough pole and grass shelter over it to keep the snow off.

"Well, I'm goin' 'round to see if th' traps is all right—goin' 'long?" asked the boy, as the signs of evening came into the sky.

A good deal of scraping and brushing of snow was necessary before we got the old "mud hen" in shape for the journey, but in time she slipped out into midstream and pushed her now icy nose up the current amid a cloud of flying flakes until we reached the beaver grounds.

The river looked strangely black in the new white of the rest of the landscape, and every solid object bore a great burden of snow where the wind did not sweep it off as fast as it fell. Our voices sounded muffled and echoless in the increasing storm, and there was a strange hurrying sound in the air that rushed along above the tree tops.

When the traps were all inspected, the boy cast a quick glance aloft and around the sky, and said: "We're goin' to have a chance to break ice along shore in th' mornin' when we look at these traps, 'n' I wouldn't wonder if to-night's the last of it till it freezes up solid 'nuff to travel on skates—looks that way 't any rate, so we might 's well git ready to break camp to-morrow, 'less you want to stay tell it freezes up."

An hour later we were snug inside the cabin, with a booming blaze in the dug-out fireplace, giving a cheerful warmth to the little home in the white wilderness.

"Say, when are we goin' to take that trip west?" said the boy, as he finished hanging his stock of green pelts up over the fireplace so they would dry, and then pitched a huge section of dry limb on to the blaze, so it would need no more attention for some time.

"In the spring, I suppose; say when grass gets good—about the last of May or first of June," I answered.

"Where'll we head for? I'd like to go to them Black Hills, up there 'n Wyoming, where you was—that's a good huntin' country, ain't it—'n' mount'ins 'n' pine timber 'nuff too, I reckon—less go up there."

"All right, that suits me. It isn't so far away as the main chain, and it's as good a game country as there is in the States to-day. Besides, it has this advantage, we can drive all over the country up there with a wagon, which makes it a mighty pleasant place to spend the summer in. The water isn't anything to brag about, but we don't need to go into the alkali country much if we don't want to; the water in the hills is all right, except in a few places, and I know where they are."

"All right then, that's a go. How'll we go, wagon or pack horses?"

"I think a wagon the better. Take a good broncho team and a light outfit that won't wear the horses out and then travel slowly, and we will be all right for the summer if we want to stay that long. There is plenty of good mineral in the hills, and we might do a little prospecting too if we want to as we go along. Who knows, we might strike a gold mine before we get back."

"Well, I dunno much about rocks 'n' stuff, but I reckon I kin learn, an' I'll prospect all right. I reckon I'd know a chunk o' gold if I see it growin' on a tree, anyhow; so I'll try it with yeh. What I want more than anything else, though, is to git a crack at them deer 'n' elk 'n' bears up there."

"Well, we can get our outfit together this winter and hit the trail as soon as grass is good. The details we can figure on as we go along, and we'll be ready before we know it. What do you say to getting this barbecue of ours going about now?"

"That's so; I'd furgot all about that bunch o' ducks. What'll we do, chuck the ducks 'n' squirrels 'n' snipes all in together 'n' make a potpie of 'em?"

"I reckon I'm good for half of that kind of a stew if you can handle the rest," I answered.

"Here they go then. You get the 'taters 'n' onions 'n' things ready, 'n' I'll yank the pelts off this bunch o' game while yeh wait, as th' shoemaker sez 'bout half-solin' shoes down 'n town."

The big stew kettle was soon giving forth savory odors, and we hustled around, fixing up a camp supper that was good for hungry outdoor folks, but probably a little rich for dyspeptics to sleep on.

"Gee! we're sure in fer it now, snow's a foot deep this minit, 'n' still comin' down like th' ole scratch," said the boy, as he opened the door and squinted out into the night with the air of one who knew the signs.

EL COMANCHO.

A Tennessee Thanksgiving.

MEMPHIS, Tenn.—*Editor Forest and Stream:* I cannot resist the temptation of giving to our brethren an account of a bird hunt I had the pleasure of participating in one Thanksgiving Day. Until that year I have never known what Thanksgiving Day meant. It means that it is one of the few days that are set aside in this busy nation of ours to try and act as a lock, or scotch, or breakwater, or hindrance to keep the American people from working themselves to death.

For weeks my good friend, Sam Wester, and I had had this hunt "cut and dried," to use an old expression. We found a Mr. Alfred Swind, who is a sportsman, and owned four fine bird dogs, and soon persuaded him to take his dogs and go with us; or rather, allow us to go with him. We had all arrangements made to meet Mr. Swind at the depot at 5 o'clock of the evening before Thanksgiving. About noon on that day I read a note from Mr. Swind, requesting that I call to see him at once. I grabbed my hat and made a break for his place of business, as I "smelled a rat," and knew something was the matter about our hunt. I found Mr. Swind was very sick, and would be unable to keep his appointment. My heart sank, and I think my face must have shown it, for Mr. Swind laughed and said not to be disappointed; but to take two of his dogs and go anyway. He said we were welcome to all four of them; but only two would hunt with strangers. I was somewhat dubious about the work we would get out of the dogs, and regretted deeply that we would be deprived of Mr. Swind's company. Wester and I were at the depot with the two dogs, and a happier pair never boarded a train for a day's outing.

We reached Collierville, Tenn., and after supper at the hotel we were preparing to walk around and try to pick up a few points about localities, when we were called upon by Mr. Joe Irby, a cousin of my wife, who had received word from his brother in Memphis that we were coming out to hunt on Thanksgiving, so he had made all arrangements for us. To say that we were pleased is putting it mildly. If my reader has never hunted in Mississippi or west Tennessee, as the guest of some friend, he just does not know what clever treatment is. Now I had never seen Mr. Irby in my life, just knew of the relationship that existed between his family and that of my wife, and had gone to Collierville on my own hook, and was not his invited guest at all. So when I found that he had been notified by his brother, and had all arrangements made to insure us a pleasant time, I was both grateful and delighted. Well, the horses were all ready, the lunch was prepared, and we were to have a negro go with us to hold our horses, and Mr. Irby and his friend, Mr. Hart, were to accompany us, thus giving to each a shooting companion who knew the covers and best routes to get at the birds.

The weather was fine, the moon shone her silvery beams upon the little city, and the planets, from red-eyed Mars to blue-eyed Venus, and even old stern-faced Jupiter, smiled benignly upon us. We were happy, and as anticipation is half the pleasure, we slept soundly. But in the morning, as we climbed out of bed, our spirits were much subdued. The sky was dark and threatening, and old Æolus had opened his flood gates and was now pouring his pent up winds upon us. How

they howled as they rushed from the far-off grottoes and caverns of the West and swept over this flat country. Well! we were almost paralyzed. Our only day, and just look at the weather. We decided that we would go anyway, even if we got wet, and Messrs. Irby and Hart were good natured enough to humor us. So about 7 A. M. we got on the road.

We had five good dogs, three Llewellyn setters and two pointers. Two of the setters belonged to Mr. Irby, and one pointer to Mr. Hart, and we had brought one setter and one pointer from Memphis with us. We were well equipped in horses, dogs, guns, lunch and everything that went to make a pleasant and successful day, all we lacked was propitious weather.

We traveled about three miles down the road, when one of the dogs jumped a fence, and as he landed on the other side flushed a covey of quail. We all started afoot after them, and soon one of the setters, Fanny, belonging to Mr. Swind, had them. Then the other dogs came up one by one and supported her, until all five dogs were circled around that covey of quail. Gracious, what a picture! Five dogs rigid as death, four men standing with guns at rest admiring the beautiful scene. That picture was worth our trouble, and all expressed the thought that if we did not see another bird that day we had been amply repaid. Finally Cap, Mr. Hart's pointer, seemed to think it was time for action, and dived into the covey. Birds went in every direction. Three guns fired and two birds fell; Hart got one, Irby one, and I missed; or feathered my bird, which is worse.

We concluded that there were too many men and dogs to hunt well all in one bunch, so we would separate in pairs.

Irby and Wester and Wester's little boy Sam, whom I forgot to mention was with us, went one way and took Dick, the negro, to hold their horses. Hart and I went in a different direction. Irby and Wester had Mr. Irby's two setters, Prince and Cleveland, with them. We had Mr. Swind's setter Fanny, his pointer Chess, and Mr. Hart's pointer Cap with us. It was awfully hot and dry, and the wind kept the dust blowing in a regular gale over the cotton and stubble fields. Hart said we would hunt this covey out and then go to the swamp along the creek bottom, as all the birds would be in the thickets on such a day as this.

We had not gone 100yds. when Fanny came down on a single. She is a regular jewel, and has a magnificent nose, besides a very quaint habit of dropping flat when she points. We walked up the bird, and I took the first shot and feathered it, and Hart killed it. I was shooting a light load of smokeless powder and No. 8 shot, which was not effective enough in the strong wind that was blowing. I never will believe that smokeless powder is as strong as a good quality of black powder. I know many experts pronounce it stronger, but when I want to kill birds at long range, and kill them dead, and not feather them, I will take black powder. I borrowed a box of black powder shells from Mr. Hart, giving him all my smokeless shells to use at some future day when there was no wind. We proceeded, and soon Fanny had birds again, and Chess and Cap came up and backstood or supported her in fine style. Hart insisted on my shooting first. That is the way all West Tennesseeans treat strangers, he said. We sent Cap into the brush to score out what we thought was a single bird, and were surprised when he flushed a new covey. I killed my bird, and Hart said: "I hit one very hard, and think we will find it out yonder." I sent old Chess after my bird, and soon heard him in the briers scratching and gnawing at something. I went in to see what he was up to, and found him rolling a rabbit trap over and over, and exerting all his talents and strength to tear one of the boards from the side of it. It seems that Chess must have gotten after the wounded bird and it had run into this rabbit trap to get away from him, and the door of the trap had snapped on the bird, thus shutting it in completely. Old Chess was determined to have that bird, so he had set to work very industriously to tear the trap to pieces. I patted him on the head, and then took the bird out of the trap. Hart had a good laugh at me. He said I was determined not to go home empty handed, as I not only shot birds, but afterward caught them in traps.

Well, we went on, and soon Cap had birds. The dog was standing stiff, and was pointing right down between his two front paws. Hart called my attention to the position of the dog, and after looking carefully for a moment we saw the bird within 10in. of the dog's nose, crouched low under a tuft of grass. I never in all my life saw a dog get so close to a bird without flushing it. I really believe he could have caught the bird had he jumped upon it. Hart insisted on my taking the shot, and I walked up and missed beautifully, and Hart smashed it down. I was beginning to get rattled or something. At first I thought it was the light loads and the white powder. Now I was missing with heavy loads and black powder. Well, I grit my teeth and resolved to do better. Hart "let me down easy" by saying, "We all miss sometimes."

We had gone only a few rods when Chess pointed, and when sent in he sprang upon a dead bird, the one Hart had hit in the flush of the covey. We started again, and soon Fanny found birds, and dropped flat on her stomach, the prettiest point I ever saw made by any dog. She would not go in, so Hart stepped up and put up the bird, which flew directly over his head and behind him. He could not shoot, as I was in his range; but I turned in time to knock it down. This gave me confidence in myself, and I did not miss another shot that day, but I did not have very many more chances. The wind was blowing a perfect gale, and the wonder to me is that we killed at all.

We now went down to the creek, and it was not long until Fanny had birds again. She pointed in the thick switch cane, and I got one as the birds flushed. We hunted out this covey as thoroughly as the ground and circumstances would permit, and got several more birds. I sort of had it on Hart in the woods and brush, as I always could kill a bird with greater ease to snap shoot it in a thicket than I could to take deliberate aim out in an open field.

We now started to find the other party, as we were getting pretty hungry, and they had the lunch basket with them. In a short time we came up with them seated at a well, near a farmhouse that belonged to Mr. Irby. They had just finished eating their lunch, but the basket was brought out again and the menu, simple as it was, should have satisfied a king.

We found that Wester and Irby had eleven birds and we ten, and that each had killed about his quota. The wind was so high that no birds could be found, excepting along the creek in the brush and cane, so we agreed to hunt toward town and not go any further. We started as soon as all were rested and refreshed, and Hart and I rode away, leaving Wester and Irby banging away at birds down in the bottom. We got back to town without starting any more birds, as we left the bottom and rode through the open cotton fields. After a while Wester and Irby came in and reported that they had bagged four more birds, making a total of twenty-five birds to the four guns, an extremely light bag for this section of the country. One hundred or 150 birds to four guns would have been a good day's hunt if the weather had been suitable. Mr. Hart told me that twelve miles from Collierville on his brother-in-law's plantation he had often started twenty-five coveys in one day's hunt. We counted twelve coveys that we had found on a very dry and extremely windy day. Several of the coveys were not fired at, owing to the extreme thickness of the cover where they were found. Wester and Irby had got into a regular nest of birds after lunch, and soon after we had left them. Wester said they found four large coveys in a patch of cane less than an acre in size, but the wind was blowing so hard, and the cane and bushes were so thick, they could scarcely shoot at all. They managed to bag four birds, however, and then gave it up as a bad job.

Neither Mr. Hart nor Mr. Irby would have a single bird, but just compelled Wester and me to take them all, so we had a dozen large, fat quail each to take home to our families, and best of all we had had a day of unalloyed, unequaled pleasure. And last, but by no means least, we met and enjoyed the kindness and hospitality of three of the biggest-hearted, most whole-souled gentlemen that ever trod mother earth, namely, Mr. Hart and the Irby brothers. To form the acquaintance of three such men would be worth a dozen trips if not a feather had been seen.

Now, kind reader, if ever you have a chance to come to West Tennessee or Mississippi you just come. It don't make a whit's difference from where or whence you come, if you are a sportsman and a gentleman, you will receive treatment that will always make you glad you are both. If you are a gentleman only, you will receive a cordial welcome.

We boarded our train for home at 6 P. M., and were at our respective firesides an hour later. Now I know what Thanksgiving Day means to the busy man, and I thank God for having given it to me, as well as others. The day following my outing the air was sweeter, the flowers brighter, everyone seemed to wear a smile instead of the frown of yesterday. The very rattle of the drays upon the stony streets chimed music instead of discord.

A. B. WINGFIELD.

Yukon Indians.

THE Indians on the Yukon are good-natured and harmless. In many ways they remind one of the Southern negro. They sing "My Girl's a High Born Lady" and all the latest Bowery airs. It is said that the British drum beat sounds around the world, but nowadays popular songs do the same thing, and in a very much more thorough way. At Guam, our new possession in the Ladrones, the newspapers tell us the natives sing "Ta-ra-ra Boom-de-aye," and this air is often heard along the Yukon. No doubt it has penetrated to Timbuctoo, and the sacred city of Thibet. Judging from the Yukon, native music seems to be dying out. The catchy airs of the music hall are supplying a world music.

The Indians have very keen ears, though their voices can hardly be called melodious. Some of them will catch an air after hearing it once, and reproduce it correctly by humming or on the mouth organ. I never heard an Indian whistle or sing at the full extent of his lungs, though very likely they do both.

Give an Indian a mouth organ, "juice harp," as Huckleberry Finn's negro had it, or an accordion, and you will insure his happiness, no matter if he is cold or starving. The Indian is as yet ignorant of the banjo, but when he is once introduced to it I think it will be his favorite instrument, as it is with his sable brother. It must be borne in mind that I am speaking of the interior Indians. The coast Indians are a very different breed. They are fighters and quarrelsome, robbing the white man by exorbitant packing charges now that they have learned it isn't wise to do the thing by force of arms. It was these Indians who, by right of their possession of the passes, made the interior an unknown country for so long to the white man. Up to a very recent date they effectually monopolized the trade of the Yukon. They even checkmated the Hudson Bay Company when it attempted to gain an entrance into the country from the east, capturing and burning the post established at Fort Selkirk in 1852. These Indians are powerfully built, and a twelve-year-old girl will trudge along with as heavy a pack as the average white man can carry, while their skookum packers carry as much as a horse.

About 300 Indians make their headquarters at Fort Selkirk. They call themselves Yukon Indians, and consider the name Stick Indians (which Dr. Dawson applies to them) an insult. "Me no Stick," they say with disgust, "me Yukon Indian." Instead, they apply the name Stick to the Tagish Indians, whose headquarters are on Lake Marsh, and who, while they resemble the other interior Indians in manners and customs, are undoubtedly a branch of the coast Indians.

The Indian in Camp.

The Fort Selkirk Indians are the Gens des Bois, or Wood Indians, of the fur traders. They are poor boatmen as a rule, but have a wonderful knowledge of woodcraft, and particularly of the twin arts of keeping warm with very little protection from the weather, and keeping alive on next to no food in periods of scarcity. Recently they have to a certain extent taken to living in houses, and are suffering seriously as a consequence from pulmonary diseases. They are seen to best advantage under natural conditions, living in their brush lean-tos and subsisting on the game. While on the hunting trail in winter their camps are designed chiefly for the purpose of breaking the wind. Two or more families commonly travel together, and the camps are built facing each other. The sides and back are built up to a height of 2 or 3ft. with spruce boughs, and over the pole rafters, which rise to the height of a man's head in front, a piece of drilling or other light material is thrown for a roof. The roof keeps out the snow, and serves to reflect and utilize a portion of the heat. Between the two camps is a passageway, which also serves for the fireplace. The camps are located sideways to the direction of the wind, which passes directly down the passageway and carries off the smoke. The fire itself is maintained in the hollow which it melts in the snow. Green logs are laid at either side, and across these split pieces of green wood are placed, which are renewed as they burn out. It is a combination of Nessmuk's outdoor fireplace and the Buzzacott idea. Indians make camp early—say at 2 in the afternoon when it grows dark at 4—and they are very careful not to be caught out late on a cold night without firewood.

They carry their food and outfit on toboggans drawn by the dogs and female members of the party. The dogs, like their masters, can get along on very little food, and one of the chief articles of diet of the true Indian dog is ordure. They are perfect scavengers in this respect, and no filth is ever left around an Indian camp where dogs are, unless by chance it becomes so frozen that it cannot be eaten.

Moose and Caribou.

The mainstay of the Indians in the way of game is the caribou. Oddly enough they often call caribou moose, and when talking with the Indians one has to question closely to make sure which animal is meant. When they have meat to sell it is generally "moose meat," though in nine cases out of ten it was cut from a caribou.

The reason of this interchange of names is due, I think, to the confusion in the terminology of the white men when alluding to caribou. The Hudson Bay men and Canadians, who come from a country having no Virginia deer, call the caribou a deer. Mr. Harper, the founder of the existing trading store at Fort Selkirk, tells newcomers that there are no caribou in the country, and that the correct name for the animal is deer. The men from the States, who are in the vast majority as regards numbers, are unfamiliar with caribou, but they all know the common deer, and know that the caribou of the Yukon is a different animal. Some of them call it a reindeer, but many others saddle the name of moose on it. Moose and caribou are a good deal the same thing, they fallaciously argue, and anyhow by calling the caribou a moose they won't get into an argument with a redheaded Scotchman as to whether or not it's a deer.

The Indians kill both the woodland and barren ground caribou. The horns and skins of some killed early in the winter near Fort Selkirk were those of the familiar woodland caribou. I believe, however, that their main dependence is the barren ground caribou, which penetrates the country at the sources of the Yukon in midwinter.

I mentioned elsewhere the herd of barren ground caribou, estimated to number 10,000, which crossed Twelve-Mile Creek late in December, and out of which Quin Taylor, of Seattle, killed forty-five, which he packed into Dawson and sold. This herd was on the wrong side of the Yukon, according to precedent, and many of the Tanana Indians who expected to intercept it on the other side starved as a consequence. They had such implicit confidence that it would turn up on its accustomed route of migration that they waited long after prudence dictated going elsewhere, and not till they had eaten their dogs and moccasins did they lose faith in the integrity of the caribou.

Food Economics.

When the Indians find such a herd they follow along in the rear with the wolves and foxes, in very much the same way that our Western Indians used to follow the buffalo. They kill all they can, and what meat they are unable to dispose of on the spot they cache in trees. In this way they accumulate depots of supplies over a large extent of country, and as the air is pure and very dry, the meat remains edible for considerable periods even in warm weather.

Indians are not very particular about the condition of their food, and will dispose of some pretty rank messes, but one thing they will not eat is wolf. More surprising still, if true, is the reported fact that Indian dogs will not eat wolf. These dogs rob white men's caches, tearing open sacks and gorging on raw flour and oatmeal, and nothing from soap to sulphur matches is safe from their depredations. Wanting to dispose of the carcasses of the wolves we killed below Selkirk, I asked the Indians if they could use them. They said no. I suggested feeding to the dogs, and they shook their heads again. "Dog no muck muck wolf," they said. "Todder way, wolf muck muck dog."

When the time comes for starving, the Indian takes it as a matter of fact, and contentedly. Only once in a while is there a weak-livered one who cries and says: "Muck muck all gone. 'Fraid poor Indian die." They peel the bark from pine and even popple trees and eat the softer inner portion. The pine bark is full of resin and nasty stuff, and there is certainly no nutriment in it. It serves, however, to fill the stomach and lessen the gnawing at the inwards. One can travel for miles along the Yukon and never be out of sight of peeled trees, marked with the characteristic arrow-shaped blaze. The fact signifies the frequency of periods of starvation, for there are only a few hundred Indians in all on the whole length of the upper river.

Through the kindness of Mr. Pitts, we occupied a cabin at Fort Selkirk for two weeks, while searching for our lost boats, and this cabin was a great center of attraction with the Indians. They came there at all hours of the day and night, men, women and children,

and nothing we did was too trivial to escape comment. It amused them to see us comb our hair, and we remembered this suspicious fact when they wanted to try on our hats. I never saw Mac madder than once when he caught a bushy-headed Indian strutting around in his new fur cap, that he had just gotten out from his clothing bag to forestall the colder weather.

They were very vain, and next to white flour and sugar and fat, "gree" they called it, they desired articles of personal adornment. When we left for the coast we held an auction sale to dispose of our surplus outfit. This was patronized by the Indians, and nothing went so well as little fancy articles. The women bought suspenders and men's colored socks, and they hung oil cans and nickel wrenches around their necks as ornaments. Pocket handkerchiefs and towels and any little metal articles were in great demand. A fancy leather belt brought as much money as a good light weight overcoat, and the oil cans and medicines were the star bargains of the lot.

Indian Financiers.

The Indians had plenty of money, for they had earlier in the season sold meat and dogs at exorbitant prices. In a general way they knew its value, but they prized silver a good deal above the sixteen to one ratio. When they wanted to drive a good bargain they always specified that the price was to be paid in "silver money," and similarly they hated to part with their plunkers. They seemed relieved when we accepted their gold pieces at par, and when they got silver money in change they tried hard to conceal their satisfaction for fear we would find out the mistake we were making in parting with it.

There are very few pennies in circulation on the Yukon, the bit being the unit of value, and the Indians have not yet learned how to place them.

One of the Indians named Bailey tried to purchase a rifle with six cents he had in some way accumulated.

The Indians are suspicious in their bargains, and afraid of being cheated, and in our desire to do the square thing by them we suffered financially. Instead of getting many times the value of the articles sold, the price received for the better class of things, as a rule, was below the real value.

The Indians are honest in their way, but not moral. Early in our stay at Selkirk I traded a new pair of trousers for a caribou skin, that we might sleep the more comfortably at night. It took the Indian nearly two hours to complete the bargain, and he had thumbed over the trousers in the meanwhile till they looked as if they had had a week's wear, and discussed something like a hundred permutations and combinations with all the other articles of our property he could see or imagine. He got nothing to boot that way, however.

The next day an entirely different Indian came to the cabin with the trousers on his arm and a very serious expression on his face. He turned them over and over, and finally pointed out some very minute flaws in the cloth, and solemnly shaking his head said: "No good!"

Then he laid down the trousers and walked over to where the caribou skin hung and made a motion to pull it down. Mac promptly interfered, and it looked as if there was going to be a fight then and there, for the Indian seemed bent on repudiating the exchange. Thinking, however, he had carried his bluff far enough, the Indian suggested that Mac's hat suited him very well, and intimated if we would give him that he would overlook the defect in the trousers. It was a flim-flam game pure and simple, and we showed that Indian the door in a way that surprised him.

Forty Dollar Snowshoes.

The Indians have one uniform business rule in their dealings with white men. They raise their prices when opportunity offers, but they never come down. Snowshoes at the Pelly are now $40 a pair, because a white man with more money than brains tried to buy from an Indian woman a pair which did not belong to her.

He offered her $10 first, and when she said, "No sell um," raised the price by fives to $40, and then the woman told the other Indians that white men give $40 for snowshoes, and the price has been that ever since.

We had previously bought two pair of snowshoes for $25, and the Indians came around and tried to collect the difference. When we refused to pay and turned them out they seemed to think they had been cheated.

[TO BE CONTINUED.]

The Twenty-third Trip to Maine.

A BUSY Boston man writes:

My trip to Maine this year was an attempt to mix oil and water; that is, work and rest. I did not care much about the hunting, though I got one little buck, mainly out of shame because of the letters of my children, asking if I had shot anything, and if I was going to. The truth is I took down hundreds of pages of manuscript to work over, and did spend most of my time quietly in camp, feeling that the relief from things done, things which have been present and have grown to be a nightmare, was more vacation than anything else. Then came an attack of the grippe, which laid me out. Fortunately my companion, the owner of the camp, was a first-class nurse, and he pulled me out, but my twenty-third trip to the Maine woods was not all I could wish, though the camp and country and the weather were.

There were plenty of deer in the woods and a few moose. I was at Little Benson Pond, a dozen miles or so west of Katahdin Iron Works. Our cook shot a deer after I left without going out of the camp yard, and the trains on the Canadian Pacific, which ran within a quarter of a mile, did not seem to do any harm, and the cleared up space along the road seemed to be the favorite stamping ground of the deer.

Minister (on his way home from church, to little boy fishing): "Oh, you wicked little boy, to fish to-day! Do you not know that it is Sunday?" Little Boy (unabashed): "No, it ain't wicked, mister; I ain't caught nothing."

Natural History.

New York Zoological Park.

THE work of preparing the grounds of the New York Zoological Society's Park, which was begun last July, is progressing rapidly, under the superintendence of the executive committee of the Society. Mr. W. T. Hornaday, the director, has taken up his quarters in the Park in a comfortable office, and spends all his time in personal direction of the operations.

A number of the low spots in the Park, which are to be used as lakes and pools for various purposes, are being excavated, and on the beaver pond, the pond for other aquatic rodents, one of the wildfowl ponds and the elk pool, much of the excavation has been done. The plans for the enclosures for buffalo and mountain sheep, with their shelter houses, have been determined on, and work commenced on them. The wolf dens are being arranged, and the foundations for a number of the bear dens, with their tanks and the plumbing which is to supply the tanks with water, are in position. The foundations for the reptile house are above the ground, and the walls of the bird house are rapidly growing.

Even though the work has only just begun, a visit to the Park will well repay anyone interested either in zoology or in the progress of New York toward better things. While as yet only a beginning has been made, anyone familiar with the plans of the Society, as explained in its last annual report, can gain a very good notion of what will be seen here in the course of the next year or two. South Bronx Park is still unimproved. There are no roads, no paths, no water system nor sewerage; but all these things are being provided for, and all will go on together with the building, so that in a comparatively short time a great transformation will be worked in this beautiful spot.

Every effort is being made by the executive committee of the Society to carry forward the work as rapidly as possible, and it is greatly to be desired that members of the Society should show their appreciation of this energy and their interest in the work by visiting the grounds and keeping themselves informed of what is being done. The director will no doubt take great pleasure in affording to any member who may call on him every facility for inspecting the work, and in offering full explanation to the Society's plan and purposes.

American Ornithologists' Union.

THE sixteenth congress of the American Ornithologists' Union convened in Washington, D. C., Nov. 14, and continued until Thursday, the 17th.

The evening or business session was held at the Army Medical Museum, the public meetings, commencing Tuesday, Nov. 15, being held at the U. S. Nat. Museum, the Eastern High School and the Cosmos Club.

The active members present were: Drs. Coues, Merriam, Merrill, Gill, Fisher, Richmond and Shufeldt, and Messrs. F. A. Lucas, E. W. Nelson and Wm. Palmer, of Washington, D. C.; Drs. J. A. Allen, Jonathan Dwight, Jr., and Messrs. Frank M. Chapman and William Dutcher, of New York city; Chas. B. Corey, of Boston; Ruthven Deane, of Chicago; Dr. Thos. S. Roberts, of Minneapolis; Witmer Stone, of Philadelphia; and John H. Sage, of Portland, Conn.

The associate members present during the session were: Mrs. Olive Thorne Miller, Mrs. Julia Stockton Robins, Vernon Bailey, Outram Bangs, Job Barnard, Paul Bartsch, J. Newton Baskett, Prof. F. E. L. Beal, R. P. Currie, R. H. Dean, H. W. Fowler, Louis Agassiz Fuertes, W P. Hay, A. H. Howell, W. A. Johnson, Sylvester D. Judd, F. C. Kirkwood, Dr. F. H. Knowlton, Colton Maynard, G. S. Miller, Jr., Harry C. Oberholser, H. W. Olds, W. H. Osgood, Dr. T. S. Palmer, E. A. Preble, Dr. W. L. Ralph, Jos. H. Riley, Dr. W. C. Rives, Dr. Hugh M. Smith, W. E. C. Todd, C. H. Townsend, John Van Denburg, Nelson R. Wood, Sam'l N. Rhoads, A. E. Colburn, John W. Daniels, Jr., W. L. Baily, Prof. B. W. Evermann.

Robert Ridgway, of Washington, D. C., was elected President; Dr. C. Hart Merriam, of Washington, D. C., and Chas. B. Cory, of Boston, Vice-Presidents; John H. Sage, of Portland, Conn., Secretary; William Dutcher, of New York city, Treasurer; Charles F. Batchelder, Witmer Stone, Ruthven Deane, Jonathan Dwight, Jr., A. K. Fisher, L. Stejneger and Frank M. Chapman, Members of the Council.

Mr. William Palmer, of Washington, D. C., was elected an active member, and the Hon. Walter Rothschild, of Tring Museum, England, a corresponding member of the Union. One hundred and one associate members were elected, the largest number in any one year since the foundation of the Union.

Mr. Witmer Stone, chairman of the committee on protection of North American birds, read a most interesting report of the work done by his committee during the past year. The report will be published in The Auk, the official organ of the Union, and reprinted as a separate pamphlet to be sold at a very low price.

Through the kindness of Prof. W. B. Powell, Supt. of Schools of Washington, a hall at the Central High School was placed at the disposal of the Union Wednesday afternoon. Certain papers illustrated with lantern slides were read there before a large audience.

On Wednesday evening the Union met at the Assembly Hall of the Cosmos Club, by courtesy of that club. Here several communications, illustrated with lantern slides, were read.

Two members of the Union, Messrs. Nelson R. Wood and Louis Agassiz Fuertes, by special request gave imitations of the notes of birds. Another interesting feature was the graphophone demonstration of a brown thrasher's song by Sylvester D. Judd.

Resolutions were passed thanking the regents of the Smithsonian Institution, the Army Medical Museum, Prof. W. B. Powell and the Cosmos Club for the use of halls under control for a meeting place of the Union, and thanking the Washington members for the cordial welcome and generous hospitality extended to the visiting members.

The character of the papers read was higher and the attendance much larger than at any previous congress of the Union.

It was voted to hold the next annual meeting in Philadelphia, commencing Nov. 13, 1899.

Following is a list of the papers read at the sessions:

1. Among the Birds in Nevada—Harry C. Oberholser.
2. The Moult of Passerine Species in the Vicinity of New York City—Jonathan Dwight, Jr.
3. A Brown Thrasher's Song per Graphophone—Sylvester D. Judd.
4. The Distribution and Relationships of Ammodramus maritimus—Frank M. Chapman.
5. The Geographical Distribution of the Wrens of the Bewickii Group—Harry C. Oberholser.
6. Polygamy among Oscines—F. E. L. Beal.
7. The Prothonotary Warbler (P. citrea), a Common Summer Resident of Southeastern Minnesota—Thos. S. Roberts.
8. Some Early Philadelphia Collectors and Collections—Witmer Stone.
9. Chadbourne on Individual Dichromatism in Megascops asio, with Some Evidence in the Question—William Palmer.
10. Some Characteristics of Neossoptiles—William Palmer.
11. The Bird Rocks of the Gulf of St. Lawrence (illustrated with lantern slides)—Frank M. Chapman.
12. Exhibition of lantern slides of birds, birds' nests and nesting haunts—Thos. S. Roberts.
13. Exhibition of lantern slides—William Dutcher.
14. Exhibition of lantern slides—Wm. L. Baily.
15. On the Nesting Habits of the Brown Pelican on Pelican Island, Florida (illustrated with lantern slides)—Frank M. Chapman.
16. A Chapter in the Life of the Canada Jay (illustrated with lantern slides)—Oscar Bird Warren.
17. Clarke's Crows and Oregon Jays on Mt. Hood (illustrated with lantern slides)—Florence A. Merriam.
18. Crow Roosts in Eastern Pennsylvania and New Jersey—Witmer Stone.
19. The Generic Names Pediocætes and Poocætes—Theo. Gill.
20. The Blue Honey-creepers of Tropical America—Harry C. Oberholser.
21. The Water Ouzel on Mt. Shasta—Florence A. Merriam.
22. The Nocturnal Flight of Migrating Birds—O. G. Libby.

About Trees.

Editor Forest and Stream:

Much of the information sought by the writers of articles "About Trees" in your issues, Nov. 5 and 19, can be found in "The Pruning Book," by L. H. Bailey, The Macmillan Company, publishers, New York.

The common belief that sap ascends in the spring from the roots to the ends of the limbs, and that a return current exists at the end of the season, is no doubt true, but seems far from being the whole truth. Accepted authorities agree that water holding in solution matter adapted to the growth of the tree, and called sap, ascends throughout the growing season to the leaves, and is there by chemical action changed into food for the growth of the tree, and descends throughout the growing season, to be deposited between the sapwood and the bark of the tree, in "the cambrium layer, the active living tissue, the inside of which by the growth of cells produces wood, and the outside produces the inner bark, expanding the outer bark to make room for the new growth."

An experiment can be easily made with a white pine. Select a tree say 3 to 6in. diameter of trunk and remove all the limbs to a height of 3 to 5ft., and girdle the trunk of the tree just below the first remaining limbs by removing the bark a few inches in width all around the trunk, leaving the wood bare. The tree will live several years. The trunk below the girdling will increase little if any in size; the part of the tree above the girdling will continue to grow with somewhat reduced vigor, but the part of the trunk next above the girdling will increase much in size. A tree treated in this way two years ago is 11in. in circumference next below the girdling, 9¼in. where girdled, and 14in. next above the girdling; thus showing that the sap must have ascended through the sap wood and little if any of the food elaborated at the leaves descended below the place where the tree was girdled.

N. M.

PLYMOUTH, Mass., Nov. 19.

NEWBURYPORT, Nov. 7.—*Editor Forest and Stream:* In your paper of Nov. 5, Mr. Hardy, in an article about trees, asks, if the sap in a tree is all of the same quality how it happens that part makes bark and part leaves. I would like to ask Mr. Hardy how it happens if the blood in his body is all of the same quality that part makes hair, part makes eyes, and part makes teeth?

H. M. A.

[This is putting one question not in answer, but in avoidance of another one.]

A Bird's Nest in a Buffalo Head.

NEW YORK, Nov. 12.—*Editor Forest and Stream:* I have been much interested in Mr. Grinnell's account of the stories told him by Blackfeet Indians about snowbirds nesting in the head of a buffalo bull. In 1884 I had for some time as a hunting companion an Indian—I think a Cree, though possibly it may have been a Sioux—from a little Indian reservation south of Deloraine, Manitoba. This man told me that sometimes, though very, very rarely, snowbirds' nests were found in the heads of buffalo.

These snowbirds are little birds of the prairie, which go in flocks. They are gray above, have a black crescent on the breast, and are elsewhere whitish beneath. The males sometimes show little black horns sticking up on each side of the head. I confess that when I heard it I put down the Indian's story as fable, but now it is confirmed by the Blackfeet Indians I am very much disposed to believe it. When one thinks of the thick and deep mat of hair between the horns of a buffalo, there seems no reason why this situation should not be a safe and desirable one for a small bird's nest.

E. G. B. HAYMON.

Game Bag and Gun.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

The "Brief's" Pictures.

THE illustrations in the current edition of Game Laws in Brief, Mr. Charles Hallock says, well represent America's wilderness sports. The Brief gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

A Red-Letter Day.

IN telling one's experience in the field, it must naturally afford greater satisfaction to the narrator to describe successful trips than to try to give entertaining descriptions of unsuccessful outings. As a rule no trip in the open air is entirely disappointing to me; yet some prove dry in the telling.

While my undying hobby is for boats (constructed on FOREST AND STREAM ideas) and the water, circumstances make it impossible to indulge that propensity. Next to yachting come forest, stream and field. A permanent residence in the country affords me ample opportunity to spend many days and half-days with gun or rod. Measured by the amount of game or trout secured, most of these trips could be set down as failures. Yet, game or no game, fish or no fish, I derive great satisfaction and pleasure from such rambles. I shall tell in this paper of one of those red-letter days when all the elements were propitious for a day afield.

It was one of those clear October mornings when all nature seems to rejoice, and men are thankful to be alive. Out of the rosy east the morning sun sent long, mellow shafts of gold aslant the autumn tinted fields, and reflected countless glittering sparkles from the frost-jewels that lavishly scattered on every hand. The foliage of a bunch of young maples, alders and white birches, in a nearby swamp, burned under a bewildering profusion of colors. The hills, clothed from foot to summit in raiment whose colors rivaled the choicest hues of the rainbow, formed a fit frame for the glorious panorama that stretched from their feet. The crisp, life-giving air was sweet to breathe.

Such a morning was it that greeted Sam and me as we stepped from the old farmhouse into the open air, bound in quest of gray squirrels. Climbing over a rickety rail fence, we entered a field which had been sowed to rye a month or so before, and had sprouted in such luxuriance as to assure a heavy crop the next summer. Keen flashes among the green blades were thrown out by the frosty diamonds, and the frozen vegetation scrunched musically underfoot. Clambering over an old stone wall, and passing through a field of corn stubble, we reached a marshy place, densely covered with small trees, underbrush and greenbriers. So thick was this tangled vegetation that it was almost impossible to penetrate it. We fought our way through for a mile, however, and finally emerged into a huckleberry pasture, where a number of old apple trees were growing.

We had half-crossed the field when an animal ran skurrying over the ground and up the side of a dead tree, and we saw that it was a large gray. I stayed where I was, while Sam worked cautiously in the direction of the tree. As soon as in range he slowly raised his gun and I was anticipating its report, when the squirrel suddenly vanished back of the tree. Sam approached the tree and I walked to where he had stood. He had hardly reached a point where he could see the back of the tree, when there was a quick flash of gray and the squirrel appeared on my side. I was not quick enough; the sly little rascal observed my movement and slipped to the other side. Sam's gun spoke, and as the echoes reverberated among the painted hillsides he picked up the first squirrel of the day.

We entered another lot, and had nearly reached a corner formed by a stone wall and woods, when a black object dashed out of the grass ahead. Like an ebony streak it made for the wall, and as it gained the top two reports rang out as one, and the animal disappeared from view. We ran to the wall just in time to see a cat scurry for dear life across the next field. I climbed over the wall and picked from among the fallen autumn leaves a headless gray squirrel. It was still warm, and we had surprised the cat at breakfast. I dropped the squirrel into my hunting coat pocket, and we moved on into the patch of woodland.

We had hardly gone 100ft. into the woods when a partridge whirred almost from underfoot. Sam didn't offer to raise his gun, but as a streak of brown flashed across a golden bar of sunlight, my gun instinctively flew to my shoulder, and I pulled the trigger with no hope of success. Indeed, I aimed in a vague manner, for with the exception of that momentary flash of brown I could see no bird. Far away we saw a swiftly-moving object tower high above the painted leaves, then there was a thump, and all was still. Sam gazed in open-mouthed amazement for a moment, then exclaimed: "That was the best shot I ever saw." and away he scampered through the underbrush to where the bird had fallen.

We searched long in the underbrush, and were on the point of giving up when my eyes rested on a stunted bunch of laurel. On the ground, directly in the center of the laurel, lay the partridge, stone dead. I quickly retrieved the bird, and upon examining it was surprised to find only one shot mark. That shot had entered the eye, and penetrating the brain had caused instant death.

We passed through the strip of woods, without seeing any more game, and entered another lot. Here the brush had been cut a year or so before, and the foliage of the young growth presented a confused mixture of entrancing coloring. On every hand were signs which told of a thrifty farm in the long ago; probably when deer roamed over this section and the nearby stream was swarming with trout. Mossy stumps here and there showed where the apple orchard had flourished, and an old tumbled-down foundation marked the site of the ancient New England home which once had stood there. The bright bars of sunlight seemed to fall more tenderly than elsewhere on these venerable relics of bygone days, and as we tarried by the side of the old filled-in well, and gazed about us, our minds deserted the present for visions of the past. Imagination saw the deer, the result of a day's hunt, hanging by the door side of the old home, and heard the drowsy hum of the spinning wheel. With other thoughts came reflections of the seasons of those olden times, and I found myself unconsciously repeating those lines of Whittier:

"The house-dog, on his paws outspread,
Laid to the fire his drowsy head;
The cat's dark silhouette on the wall
A couchant tiger's seemed to fall.
And, for the winter fireside meet,
Between the andiron's straddling feet,
The mug of cider simmered slow,
The apples sputtered in a row,
And close at hand the basket stood
With nuts from brown October's wood."

We passed through a number of fields without meeting game, and the morning was well advanced when we came to a point directly opposite a famous squirrel forest on the other side of the mountain. Selecting an easy place, we climbed to the top of the cliffs. By this time the sun's rays were very warm; and as we had been compelled to scramble over loose, jagged rocks, and through thick laurels and other underbrush, we voted to rest awhile; so we reclined on the edge of the cliffs and enjoyed the panorama. Alternating patches of woods and meadow extended for miles, and the sun cast a mellow blanket over oceans of bewilderingly beautiful autumn colors. A small stream flowing through a meadow resembled a trembling band of silver stretched through a sea of gold. A dreamy, Indian summer haze hid from view the distant City of Elms and Long Island Sound. After an hour's rest we struck off through the dense underbrush of the mountain's top, and had gone but a short way when a partridge darted almost from under out feet. The guns roared simultaneously. The bird went on.

From the western edge of the rock we descended into a forest of giant oak, chestnut and hickory trees. Partly hidden by the variegated foliage could be seen many bunches of dry leaves in the crotches of the trees, far above the ground, and we now realized that we had reached the most noted place in this section for squirrels, so, selecting seats among the laurels, we devoted our time to watching nests and treetops. One by one the minutes slipped by. No word was spoken, and my neck was beginning to ache from the steady gazing into the treetops. Finally I grew lax in my vigil and was on the point of going to sleep, when I heard the bark of a gray in the top of a tree over near Sam. Then a chestnut burr rattled down through the foliage and struck the ground. Sam was stirring, and I saw him crouching and working through the laurel in the direction of the squirrel. Stealthily he approached, and as the squirrel's bark echoed once more his stooping form assumed the perpendicular; he raised his gun, and far above the charge of No. 6 cut loose a bunch of brilliant leaves to rain down in a golden shower. Down too came a big gray, which Sam, with a satisfied chuckle, stored away in his hunting coat pocket. I shouted congratulations, then silence settled over the woods again. Exceping the far-off crow of a farmyard fowl, no sound could be heard. I had decided that Sam had shot the only squirrel abroad, and was on the point of proposing that we move on to some other place, when what appeared to be a shadow glided up the trunk of a tree directly in front of me, and not more than 20yds. away. I perceived the shadow to be a large gray, and quickly brought him to bag.

As it was now nearly noon we decided to have dinner, and agreed that it must be a warm one. So we went to the side of a small rill, where the water trickled down the mossy face of a large rock into a limpid, icy pool at the base. On the emerald carpet surrounding the pool we built our fire. Each then produced a long, tin shallow box. From one of the boxes we took a generous porterhouse steak, four potatoes, and some pepper and salt. The other box contained tea, sugar, and bread and butter. As soon as we had a bed of coals, the potatoes were buried, one of the tins was filled from the pool, and tea was started. Then, after awhile, the steak was broiled on crotches of birch, and we soon sat down to a meal fit for a king. The tin boxes answered for tea cups. A red squirrel could not have made a meal of the scraps that were left.

Then we took up our watch again under likely looking trees. The faintest breath of an autumn breeze rustled the leaves far up in the tops of the trees, and caused their variegated hues to shimmer in the slanting rays of the sun. Many times I imagined I saw a gray moving, but closer observation would prove that what I had taken for a squirrel was only a flickering leaf. My cigar had nearly assumed the proportions of a stub before any sign of a squirrel was seen. Something falling through the foliage landed on the ground back of me. A look into the treetops in that direction revealed two large grays running among the topmost branches of a large chestnut. Scrambling to my feet, I shouted for Sam, and made my way in the direction of the chestnut as quickly as the thick, tangled underbrush would permit. Reaching the tree almost together, we stood with ready guns and closely examined the top, but the squirrels had disappeared. Sam moved to the opposite side of the tree, and I caught sight of one as it slipped around a branch. I fired and expected to see the squirrel drop, but it dashed off through the foliage. As soon as the chance came I fired again, but much to my surprise the gray continued its aerial flight. Sam fired at the other one, which had started to run in the opposite direction, but his shot too was unsuccessful, for he soon used the other barrel. Stumbling and scrambling through the thick underbrush in a wild chase after my squirrel, I raised the gun half a dozen times, but the little rascal was too quick for me. He managed to place a limb between him and me every time I aimed. Finally, in jumping from one branch to another, he misjudged his distance and lost his grip. He caught another limb, however, but before he had fully recovered his footing I had caught an aim, and the game fell to the ground. With the greatest confidence I walked to the spot where that squirrel fell; I could tell almost to the very inch where he lay, but search among the laurels failed to discover him. Hunt as I would, there was nowhere any sign of him. Presently Sam joined in the search, but after twenty minutes spent in kicking and scraping among the leaves we gave it up. Sam had met with better success, for he had had no trouble in finding his.

We shot several more that afternoon, and the light and shade had ceased to play hide and seek in the forest aisles and among the richly colored tree tops before we started for the farm; the sun had set over an hour before we gained the mountain top; and as we looked down from the ledges we had climbed in the morning night had fallen. Yet, like a dream of fairyland, the hills, woods, fields and stream lay fully revealed to our vision; for a great, full-orbed moon flooded the landscape with a soft and silvery radiance. The faint tinkle of a bell floated up from the pasture below, and lights glimmered from the windows of peaceful farmhouses. As we stood silently enjoying the entrancing scene, a beautiful meteor in a blaze of splendor flashed athwart the eastern heavens, burst and scattered a shimmering shower of gems on the autumn night.

"A red-letter-day—long to be remembered," said Sam, as we began our descent down the ledges; and so it was.

WILLIAM H. AVIS.

In Nebraska Bottom Lands.—II.

WHAT a change it was for all three of us. We, who for years had not raised a gun to our shoulders, and had been stooping over our desks grinding away, trying to forget the good times we had had every year with partridges, quail and rabbits, when living in the country.

The four days' feasting upon ducks and snipe, to say nothing of our regular morning diet of fish and buckwheat cakes, had tightened our waistcoats to an alarming degree.

These fish I must mention; perhaps some one will recognize the species. They are delicious; the flesh is of a lightish pink, and in flavor very much like salmon. They are speckled and have a long snout like a pickerel's. Here is their history: "About fifteen years ago two cars containing fish in glass tanks were wrecked at Jackson Lake, and the finny occupants, true to instinct, flopped into the water. It was a sad day for other denizens of Jackson Lake; the newcomers waged a relentless war upon all species, until now they have everything to themselves. In warm weather they bite upon a hook, taking a piece of raw meat better than anything else. Later in the season they are caught in nets. Some fish have been taken that weighed over 16lbs." I am quoting my friend C. in all but the eating part.

C. had two of the finest cocker spaniels in the country, Nip and Tuck. They were thoroughly broken in every way, and willing to hunt for anybody who knew how to handle a gun. Tuck couldn't stand having a gun pointed at her, and would instantly sneak out of range if a down-turned barrel happened to point in her direction. On account of business C. was obliged to stay home on the day we had decided to hunt chickens—so he gave us these directions: "Strike right across the prairie a half-mile to Plum Creek; hunt up the creek for wood ducks till you come to a firebreak. Walk across the firebreak for quail till you come to a slough. Look out for ducks in the slough. Then to the north, hunt across that partly submerged piece of alkali bottom for snipe and plover, around to the east toward the Elkhorn, and hunt the rolling ground back toward the ranch."

Such a meaty prospect as this set the blood tingling in our veins. Each took fifty shells (ten loaded with 4s, twenty with 7s and twenty with 8s) and our 12-bore guns. We struck into Plum Creek and picked up four wood ducks within the first hundred yards. Nip didn't much like retrieving in water, but Tuck braved the icy bath and retrieved beautifully. We left the creek to keep out of temptation, following along down toward the firebreak. Before we reached it, Tuck, ranging on ahead, came to a point. Nip came up, sniffed a little and kept on toward the scent, putting up a little prairie sparrow. So Nip redeemed himself from failing to retrieve the wood ducks. Whenever we had a doubtful point from Tuck, Nip would settle the question in short order. Quail were very numerous in the break, and either one or both of the dogs were on the stand continually. Long before we reached the slough we were forced to leave the quail grounds with twenty-eight birds. The slough was literally alive with wildfowl—mallards, canvasbacks, widgeon, teal, pintails, mudhens, bittern and quawks. We crawled through the tall grass to the edge, and feasted our eyes on the sportsman's elysium. Then having picked out a certain bunch of canvasbacks about 20yds. from the shore, at a signal all three stood up. What a whistling swirl of wings! Our canvasbacks were swallowed up in the mass of ducks taking wing. I sighted one off to my left, and a widgeon got mixed up in the pattern in some way, and both came down together. I fired again at a mallard which was slow in getting up, and scored a clean miss. B. got a canvasback and a teal with his first barrel, missing with his second. Poor H. neglected to remove his 8s, and got a handful of feathers as his reward. Some of the ducks in the upper end of the slough refused to leave, even after the fusillade; and continued to upend as though nothing had happened. We crossed over toward the alkali bottom, picked out several golden plover and surprised a bunch of seven mallards fast asleep with their heads doubled under their wings. We managed to get within 50yds.; then they rose, towering, and we fired, killing two and tipping a third, which Nip finally bagged. We now had to our credit four wood ducks, two canvasbacks, three mallards, and five plover. We were weighed down already, and before reaching the chicken grounds.

We turned as C. had directed down toward the Elkhorn and the cornfields. Nip made a stand on the edge of the corn, toward a tumble-down shock, and thinking it was another flock of quail, we didn't attempt to shoot. Right from under our feet flew a big flock of prairie chickens. We had resolved to let the chickens

go for another day, but this was more than human nature could stand. I volunteered to shoulder H.'s and B.'s ducks, and we continued on down through the field. Tuck made a pretty point, which being verified by Nip, put B. and H. on the qui vive. Whirr! eight fat beauties. A pretty double by B. and a mussy single by H., in no way helped by the second barrel. Having marked down the first flock, we soon came up with it, adding two more to our load. Then we divided up weights even, and made a cast iron resolve not to shoot again, which, to our credit, we kept.

We raked out from under our quail in our hunting coats a well-warmed and bloodied lunch of pickled tongue sandwiches, cheese and ginger snaps, which we dispatched to the last crumb. Then we trudged home through flocks and flocks of chickens and quail—perfectly satisfied that in spite of our heavy load of game we had kept within the bounds of fair sportsmen.

C. G. BLANDFORD.

Mr. Wakefield's Moose.

BOSTON, Nov. 16.—*Editor Forest and Stream:* Although I am not a regular subscriber to your esteemed sportsman's journal, scarcely an issue escapes being read by me from cover to cover, even the advertisements. FOREST AND STREAM is too well established I presume for you to be interested in expressions by any one of opinion as to its merits, but feeling obliged to address you upon the matter which is to follow, I take pleasure in expressing to you my feelings upon the subject.

Upon page 391 of your last issue there is a short article upon "Game from the State of Maine," said article being signed Special. In that article you state that E. F. Wakefield, of Boston, shot a calf moose at Stacyville, on the Bangor & Aroostook Railroad; that said moose was seized by the game warden at Bangor, and that Mr. Wakefield "plead guilty," was sentenced and appealed, furnishing bonds for his appearance at the February term of court. In justice to Mr. Wakefield, who is, I am sure, a thorough sportsman, as well as an exceedingly good fellow, I wish you would kindly correct this misstatement of his case. It is true that Mr. Wakefield shot a young moose in the vicinity of Stacyville, and that upon his arrival in Bangor the same was seized by the game wardens as a calf moose, but it is not true that Mr. Wakefield "plead guilty." He plead "not guilty," was sentenced, and appealed to the Superior Court, which meets in February, and he furnished bonds for his appearance at that time.

Now as to the moose in question, the following are the facts: Mr. Wakefield was in the woods with Fred Gilman as guide, who is one of the well-known guides in Maine. They followed this moose for several days and nights, and on getting near enough discovered that he was a young moose, but that he had horns several inches long. They hesitated some time before shooting him, but finally decided that he must be at least a year and a half or two years old. He weighed between 350 and 400lbs. Now the game law in Maine reads that a cow or calf moose shall not be killed under certain penalty, but it does not describe what shall be considered a calf moose, that is to say, whether his age shall be three months, six months, or a year. Among the sportsmen with whom I am acquainted there has prevailed the opinion that a calf moose was one without any horns, so it seems to me in the case under consideration the court will have considerable trouble to convict Mr. Wakefield, under the law as it now stands, of having killed a calf moose. I was on the train with Mr. Wakefield, returning from a week's hunting in Aroostook county, at the time that this affair took place. I heard the facts stated to one of the game wardens, who was present, and he expressed his opinion that the warden who seized the moose had made a mistake. The part which I wished especially to correct, however, was the statement that Mr. Wakefield "plead guilty," which would lead people to believe that he knew at the time he made the shot that he was transgressing the law; such was not the case, as he is not the sort of a man who goes into the woods for that purpose.

I trust that you will kindly publish such parts of this letter as will correct that statement and the impression that might follow from it. HOWARD F. BUTLER.

Ontario Deer.

MR. W. E. DAVIS, General Passenger Agent of the Grand Trunk Railway, writes from Montreal under date of Nov. 17:

Editor Forest and Stream:

Inclosed I send you an item which appeared in the Toronto Evening News, relative to the deer hunting in the northern part of the Province of Ontario:

"Fully 6,000 sportsmen are now ranging the northern hunting grounds in chase of deer. This is the estimate of Chief Game Warden Tinsley, based upon the number of licenses issued this season to hunters and settlers. This official further calculates that each of these 6,000 sportsmen kills at least one deer on an average.

" 'At that rate,' said the reporter, 'the deer ought to be decreasing, ought they not?'

" 'On the contrary,' replied the game warden, 'they are increasing. The clearing of large timber tracts and their replacement in the course of nature by thick undergrowth is one of the prime factors in this increase, for it not only affords protection to the deer in places impenetrable by hunsmen, but also gives them a better supply of food. Nobody can gauge the vast number of deer in the north, as they are scattered over such a wide district.' "

That the deer are increasing each year throughout the part of the country referred to is owing to the fact that the open season only runs from Nov. 1 to 15, and during the close season the game wardens and inspectors are very much alert for any breach of the law.

The close season being so long, one would naturally think that the deer would be exceedingly wild and hard to approach, but the fact is that it is quite the opposite, and to illustrate this fact I am instructing our photographer at Norway, Me., to send you copy of a snapshot photograph of a deer taken in the Muskoka Lakes district this fall.

The Quebec Club's Fortieth Annual

MONTREAL, Nov. 15.—It is a well-known fact that when a number of keen and enthusiastic sportsmen gather together in festivity the occasion cannot fail to be an exceptionally merry one, and no more ample proof of this could be given than that furnished by the fortieth annual dinner of the Fish and Game Protection Club of the Province of Quebec, held in the St. Lawrence Hall last night, which will linger in the memories of those who were fortunate enough to be present as being in its nature one of the most successful and enjoyable dinners they had ever attended.

This is certainly the case so far as the club itself is concerned, as both as far as the numbers who attended, and the enthusiasm which pervaded the whole gathering throughout the evening, were concerned, the dinner was one of the most representative and successful held during its history.

The members and guests, numbering upward of eighty in all, were accompanied on their entry to the dining room, which had been carefully and tastefully decorated for the occasion, by the inspiriting strains of the pipes, which were continued at intervals during the evening.

Mr. J. T. Finnie, M. D., the president of the club, presided at the head of the table, having at either side of him the guests of the evening, namely, His Worship Mayor Prefontaine, Mr. W. E. Davis, Major Gourdeau, Deputy Minister of Marine and Fisheries; C. E. E. Ussher, C. P. R., and Dr. Drummond.

After the toast of the Queen had been proposed and enthusiastically honored, Dr. Finnie rose to propose the toast of the Fish and Game Club. He traced briefly the history of the club since its origin forty years ago. He referred with feelings of gratification to the gentlemen who had stood by the club throughout its many vicissitudes. Commenting upon the recent accounts published of the wholesale slaughter of game carried on in the Province, he believed that in order to cope at all with the difficulty it would be necessary to reframe entirely the law dealing with the killing of game in the Province of Quebec. He thought that if the game laws were carried out as they ought to be, the number of sportsmen who would visit Canada and the good that would be done the country thereby would be largely increased.

Dr. Drummond, in replying to this toast, said that there has never been a time in the history of our Province when these interests required more sharp and aggressive guarding than they do at the present moment. He then quoted the report of the wholesale slaughter of fish and game in the county of Ottawa, Quebec.

"This horrible slaughter of the innocents," he said, "is seldom done for the purpose of appeasing the pangs of hunger. We don't read in the papers that settlers in the neighborhood of Labelle or other parts of Quebec have been compelled to kill so many deer and catch so many fish in order to avoid starvation. No—and I question very much if the hard working pioneer of the forest is as a rule responsible for the destruction of more game and fish than he actually requires for his temporary wants, and if he does sin to any appreciable extent, it is largely because of ignorance, and the hereditary training which has taught him that the fish and game are his to take whenever he sees fit to do so. The poor settler, although of necessity an all-round craftsman, and capable of making nearly everything pertaining to his daily wants, has not yet mastered the art of manufacturing powder and lead; with him, too, money is a scarce commodity, and he certainly has neither time, nor I trust inclination, to go out every day on a wholesale butchering expedition. But the individuals whom I do blame are those fiends in human shape who are largely recruited from the towns and cities, and who go into the woods or on the lakes and streams to make a record.

"In conclusion, I would respectfully, but firmly urge upon the French and English press, city and rural, continually to keep their readers in touch with everything pertaining to the fish and game of the Province, and due observance of the laws regarding the same.

"We have as Canadians a God-given heritage, of which we, as honest and intelligent men, are the natural guardians; it is a great trust, a tremendous responsibility, and if we fail to render a faithful stewardship, it will be to our national shame and disgrace."

Dr. Drummond, who is the author of the book of Canadian verse entitled "The Habitant," and containing "The Wreck of the Jule Laplante," concluded with this happy bit of verse, intended to hold up to ridicule, and point out as a type of huntsman to be abhorred, that excrescence of the true sportsman who is known by the self-applied and truly descriptive characterization of "sport."

Deer Hunting.

By an Expert.

You see I was there on the runway
Just near where it enters the lake.
Couldn't get better place if I tried,
For the deer would be certain to take
To the water the moment he saw it,
And then I could pump in the lead
At ten or a dozen yards' distance
Till I couldn't help killing him dead.
(Oh, 'twas great sport.)

(And the excitement!)
There I sat watching and waiting
For maybe an hour or two;
I could hear my poor heart go a' throbbing,
And once when a chipmunk drew
Near to my trembling ambush,
I had almost pulled trigger, when
He ran up a silver birch tree,
And I saw 'twas a chipmunk then.
(But 'twas great!)

I could see the bright leaves of the autumn
Sprinkling the forest floor,
Each leaf all bespattered with crimson
As if dip't in the blood of more
Than a thousand innocent victims;
But pshaw! 'twas the frost and rain,
So I said to myself, "Old Fellow,
Brace up! Be a man again!"
(And I braced.)

Then suddenly over the hillside,
Where the hounds killed a fawn last year,
An echo kept ringing, ringing,
'Twas the baying of "Chanticleer."
"He's got him at last," I murmur,
"And the old dog will make him jump,"
So my hold on the rifle tightened,
While my heart went thumpety-thump.

(Holy murder!)
Here he comes down the pathway,
Good Lord! how he must have run.
But with "Chanty" let out on the homestretch,
Don't suppose he enjoyed the fun,
Hardly able to bring his legs with him.
Well! don't get excited yet.
Just wait till he reaches the water,
Then "fill" him before he gets wet.

Keep still! Why, I hear him breathing,
And now he has passed so close
The point of my rifle could touch him
And easily give him a dose.
Just see how he jumped when he smelt me,
And look how he struggles and pants,
But I'll wait till he gets to the water
And give a poor devil a chance.
(That's right, isn't it?)

And now he has entered the water,
And when he's gone ten yards or so
I bang away. Bang! with the Marlin,
Till I find that I've killed a doe.
But a nice little doe, I can tell you,
Is better than nothing at all,
So if Providence only spares me
I'll try it again next fall.
(D. V.)

Vice-Chairman I. H. Stearns, in proposing the health of the guests, referred in terms of high praise to Mayor Prefontaine, and the other distinguished gentlemen who were present as guests. His Worship the Mayor replied to the toast in a few felicitous sentences. He did not speak, he said, as mayor of Montreal, but as a member of the club, and as a sportsman. He had often wondered why in the Province of Quebec, the premier Province for sport in the Dominion, the laws governing the killing of fish and game were not in a better condition. He thought that the people of this Province were not yet fully alive to the situation, and pointed out that the wholesale shipping of fish and game into the United States, as at present carried on, was doing an almost irreparable injury to the interest of sport in this country. He suggested that at the next session of the Legislature of Quebec the club should advance a plea asking that a law be passed prohibiting the sale of game into the United States, and added that he was ready to go with them and support and give them whatever help lay in his power to gain their end.

His Worship's remarks were received with much applause. Major Gourdeau and Mr. Ussher and Mr. Davidson also replied for the guests. The toasts of the Ladies and the Press were also made and suitably responded to.

During the evening a number of choice musical selections and enjoyable songs and recitations by members of the club were rendered, adding much to the pleasure of the festivities, which continued until an early hour in the morning.

The Doctor's Doubles.

DOCTOR HORNBLOWER was a crack shot. That is a fact. The Doctor himself said so, and what the Doctor says "goes." Yes, I know there are some things that "go" without doing very much after all—squibs, and firecrackers, and bad eggs, and tin horns, and toot, pop, splutter, and—this is a very senseless digression, as it has nothing whatever to do with the story. I repeat it—nothing whatever. He certainly was a crack shot, and took much pleasure in the chase, as many crack shots do.

Now in the good and quiet city wherein the Doctor lived dwelt many others of the sons of men whose heartstrings twanged responsively to the whir of wing and crack of gun, and ever and anon would the genial Doctor say unto certain of these, "Come, let us gather ourselves together, beat our plowshares into weapons, gird up our loins and go forth to seek the grouse in his lair." And for a time many went forth rejoicing. But the Doctor was a man of might and wondrous skill, and although of them who went with him there were many who, in other company, cut down the swift-winged birds with fatal regularity, yet with the Doctor they prevailed not at all; for, though they were quick, the Doctor was quicker, and was moreover very keen and skillful in the difficult practice of simultaneous discharges—that "why! did you shoot?" custom. It was one of his pleasant little jokes to pull trigger just as his companion's gun cracked, and then to say with a benevolent smile, as he picked up the bird (he always did his own retrieving), "What's that? Your bird? You didn't hear me shoot? Why, my dear boy, I shot just as you did. I don't think you touched it, for I saw just where my shot struck it, and yours clipped a bush just behind its tail. Never mind, don't get discouraged; you'll have better luck next time. Charming day for sport—charming."

Now this policy was very fine—for the Doctor—but—well, yes—it was discouraging to his companions. It happened every time. Even when they thought the Doctor was out of sight, he would often step from behind a bush, smile, explain, retrieve and pocket.

After a time the Doctor had to find new companions for every hunt; and after that again he found the habit of going alone. For a while he prospered not so well; had bad luck, aye, worse, no luck. But there came a day, and on the evening of that day—about the eighth hour of the P. M. part of the day—the proud and skillful Doctor strode into a lounging place of sportsmen bearing half a score and four of most plump and excellent grouse.

"Well, Doctor, that is a fine bunch. Shoot them all to-day?"

"Yes, indeed; the best bag I have made this year; and it is some time since I had done as good shooting. It may astonish you, but I killed these birds with just fourteen shots. They flushed beautifully—six doubles and two singles. First I killed a single, then the six doubles, and then a single brought down the last bird of the brood. It was—yes, if I do say it myself—it was good shooting."

Everybody in the room seemed to think so too, but they didn't say so. In fact, nobody said a word, but each lounger seemed to remember something he had forgotten, and went out to see about it.

There was once an honored custom, in obedience to which, after a round of stories, everyone used to go out, leaving the teller of the biggest tale alone in the room, monarch of all he surveyed. I don't know whether the Doctor was cognizant of this ancient custom, but when everyone had left but the proprietor and a sturdy old veteran, Hank D's, he turned to them and said, "Would you suppose that intelligent men would display such jealousy?" And then he walked out with his birds, to find a more appreciative audience.

Now in the after days (and about the tenth one after) a certain sportsman went forth in the country to sport, and he procured for hire a farmer lad who went with him afield to show the likely nooks and corners of the cover; and as they walked the lad talked, as lads will.

"Y' orter see the feller kill 'em up here 'bout two weeks ago. Gosh! but he knocked 'em; killed twelve in no time."

"That was a good bag. How did he do it?"

"Why, easier'n nuthin'. I had my little dog Touz. He's a good un, half-cow and half-spaniel, and the rest most everything, but he's slick on birds and skunks and mushrats. The city feller said ef I'd show him birds he'd kill 'em and pay me ten cents fer ev'ry one he killed. Fur a while I thought I wa'n't goin' ter make nuthin', cause he shot and shot, and couldn't hit a bale o' hay. Bye 'n' bye he did hit one, though; and then it begin snowin' and snowin'; and pritty quick we come to some evergreens, and Touz run in and barked, and up flew a hull bunch of pa'tridges and lit in some big hemlocks, and I never see such stupid fool birds, and the ole feller kep' shootin', and Touz barkin', and I'm durned ef he didn't kill twelve birds right there out of them trees, and I soon see he wuz a good deal better shot at 'em sittin' than he wuz at 'em flyin'. And then we went along, and on the way home he killed one more. He told me not to tell about the trees; and I thought at ten cents a bird I would git quite a lot o' cash; so I said I wouldn't. But when he come to go he just give me a quarter, and told me ef I ever come to town to be sure to come to his Sunday-school."

"Didn't tell you his name, did he?"

"Yes, but it was so dumb long I furgot it. Seems as ef it ended up with 'blow.' Somethin' like 'Tooter' er 'Blower,' er—

"Hornblower?"

"That's it; that's it, sure! Do you know him?"

"Yes, a little."

Well, when this sportsman came to town he brought the story with him, and told it to the same crowd who had heard the story from the Doctor; and a great shout went up from the people. And it came to pass that old Hank, meeting the Doctor the next day, bespoke the gentleman thus: "Doctor, what makes you such a liar?" And lo! it smote the Doctor like a blow, and he glared and demanded what manner of speech was this. "Well," said the sturdy Hank, "any man that will pot twelve birds out of trees and then come to town and tell honest, anti-pothunting sportsmen that he made six consecutive doubles, what can you call him?"

And the Doctor tarried not, but went his way.

TEN-BORE.

Notes from New Brunswick.

FREDERICTON, N. B., Nov. 14.—Now the local sportsman's fancy lightly turns to thoughts of deer. There has been a good enough tracking snow for the past three days, and the corn-fed contingent has been out in force. A good many queer men with queer guns are prowling over the hills. Deer are plentiful all around within a radius of three or four miles of this city. The veteran marksman, Sam McFarlane, has already bagged two bucks wi h his trusty Martini, and the like luck has fallen to the lot of your correspondent. James Perkins, Harry Atherton, Harry McLary, James Anderson and Dr. Seery have each scored one. There are few better things in this life than stalking deer on the newly-fallen snow. The broad expanse of the St. John River, and the cleared land on each side, seem, by the way, to offer a considerable obstacle to the eastern migration of these animals. They can now be found in every section of the Province, but are far more numerous on the western side of the St. John.

That a buck deer will show fight when wounded has frequently been shown. William Stanhope, of Piskehagen, had a rumpus with a big one the other day. Had not another man been close at hand it would have gone hard with William. When a man sees his pants flying at half-mast on the end of a deer's horn, it is time that his friends should make themselves known.

Mr. J. B. Brainard, of East Orland, Me., and William Chestnut, of this city, have returned from a caribou trip to the famous Chicchock Mountains of Gaspe. William thinks that country has been greatly over-estimated. The two caribou which the party secured were sma'l, and the signs generally were s'im. The trip proved to be a very hard one, taxing the physical endurance of the party quite severely. The St. Anne de Monts River was found to be fairly alive with salmon. There is a record, I believe, that three anglers, M. J. Hogan, of Montreal, and the well-known actors, Sothern and Florence, took a ton of salmon in this river with the fly in three days. They didn't fish much either, so the Frenchmen said.

William Griffin, of Stanley, one of the most modest as well as capable of our local guides, had excellent luck with his last party, Linford Biddle and Charles T. Norris, of Philadelphia. Each of these gentlemen secured a moose, with antlers spreading 54 and 46in. respectively.

J. B. Scott, of Newburgh, N. Y., and Ross Burchard, of South Norfolk, Conn., left for home the other day, after a most enjoyable hunt in the headwaters of the Little Sou'west, with Thomas Pringle as their guide. They brought out a moose and a caribou.

Mr. J. H. Carnall, of St. John, is mounting about twenty moose heads at present, most of them the property of American sportsmen. The best head of the lot is owned by F. H. Hale, of Woodstock, and has a spread of 61in.

J. H. Owens and R. T. Evans, of Cleveland, O., have emerged from a trip of ten days on the head of Nappadoggan. They brought out a small bull moose, a deer and a bear. All these fell to the unerring aim of Mr. Owens. This did not disturb Mr. Evans, for he carries a scatter gun, and has no use for big game shooting. He feels that Mr. Owens was not really in it with him, for he bagged twenty-two black ducks and over fifty partridges.

I note that editorial mention is made of certain Provincial guides having threatened to desert their employers unless they receive $6 a day. If there is any foundation for this story, I think it probable that there are two sides to it. I have never heard of such a figure being asked by a guide for his personal services only. Our best guides charge from $3 to $4 a day where they supply camps, tents, canoes and all outfit except provisions and team. I know of only one man who charges $5. He enjoys a widespread repu'ation, is very much in demand, and has been to considerable expense in opening up a very remote game country. I have heard of two or three cases where the teamster's charges were excessive. Doubtless some cases of abuse on the part of our guides have arisen. As a rule, being very anxious to build up a business and make a record for themselves, they do their utmost to please their employers.

There are some other individuals to whom the genial editor might well devote his judicial mind; for instance the sportsman who engages a guide for a month, and having secured his game, or for any other reason, goes out at the end of ten days or a fortnight without paying the guide for the balance of the term; also the sportsman, if he can be called by that honored name, who engages a guide, fails to come at all, and makes no compensation for his default. Such cases, of course, are exceptional. The American sportsmen who have come to New Brunswick this fall have been almost invariably the most generous and reasonable of men, and have made themselves immensely popular with all classes.

FRANK H. RISTEEN.

New England.

BOSTON, Nov. 18.—Duck and coot shooting has been pretty good off the Massachusetts coast the past week or two. Cooler weather seems to have set the birds flying, and the bags have been fairly good. Some gunners at Brant Rock secured a big bag of black ducks the other day. At Chatham the Boston gunners have been having good sport. At Plum Island the shooting has been uncertain, with now and then a good day and a fair haul of birds. At Anisquam there have been a good many gunners, but the coot shooting has not yet been up to former seasons; later better success is reasonably looked for. The storm yesterday started another lot of gunners down there.

At Plum Island the other day Capt. Stevens, of the Knob Life Saving Station, saw a new kind of game for that island. He was out after some hay poles in the woods when looking at him, over a sand knoll, there was a live deer. The animal looked for some time till the Captain threw up his hands and shouted, when it made for the thicket in quick time. At the station he told of his discovery, and found that others had seen it. The doubting ones went to see the tracks, and sure enough there were the sharp footprints of a deer, and the holes dug in the sand where it took long bounds when frightened by Capt. Stevens. It was so near nightfall that he is not sure as to whether it was a buck or a doe, but doubtless it was the latter, or the antlers would have been noticed. The tracks were followed till it was found where it had doubtless swam the Ipswich River to some woods, where it has since been seen. The distance swam is nearly a mile. Tracks also suggest that it had swam from the mainland over the Merrimack nearly a half-mile to the island. Was it chased by dogs, or did it swim over to the island of its own accord?

Among the successful sportsmen at Chatham last week may be mentioned A. Harding, S. B. Mayo, S. Nickerson and H. W. Berry. They made good bags, and say that there are still lots of birds on the flats. Coot are reported coming into Chatham Bay in good numbers, with the gunners not quite as numerous as last week. At Orleans and Simpson's Meadows the storm has driven in a good many ducks, and a couple of Boston gunners who came up on the train to-day report good shooting. Charlie Paine, of Harvard, and Sumner Paine, of Boston, have been hunting quail at East Harwich. They are reported to have secured seventy quail and thirty partridges. Quail shooting near Boston has not been satisfactory of late. At Essex and Bayfield the gunners have been somewhat disappointed.

Nov. 21.—The heavy rain has again made the New England north woods hunting grounds bare of snow. Telegraphic reports say that the snow is all gone. The last fall of about 6in. made good hunting for one day only. Then it was followed by a noisy crust. Some good reports of moose and deer, taken that day, are coming in. Mr. D. J. Flanders, Dr. H. F. Libby, Eugene Nelson, W. E. Barker, E. W. Sprague and J. A. Flanders, of Boston, are out the woods from a very successful hunting trip. D. J. Flanders secured a moose, Mr. Nelson a moose and a bear, Mr. Libby a moose, Mr. Sprague a deer, Mr. Barker two bucks, and Mr. J. A. Flanders a deer. The party hunted in the vicinity of Pratt Lake and Moose Ridge, Aroostook county. G. D. Pike and J. R. Stewart, Jr., of Boston, have been hunting in the neighborhood of Greenlow Stream. Mr. Pike secured a moose wi h a spread of antlers of 54in. Mr. Stewart got a caribou and two deer. C. E. Duckering and his brother, of Boston, have been hunting big game in the vicinity of Camp West, Portage Lake. They have taken their two deer apiece. M. G. Titcomb, of Boston, is out with a couple of fine deer from the neighboorhood of Ripogenus. Other lucky hunters from this vicinity may be named, as follows: J. A. Ober, C. M. Knowlton and J. A. Woodward, two deer each from the region of Mattawamkeag; G. W. Bailey, H. S. Pike and S. M. Morrill, one moose, a caribou and six deer, from the Oxbow region; John Marno and John E. Lynch, four deer from the East Sebois region; J. B. West and E. A. Conant, four deer from the Katahdin Iron Works region; B. D. Metcalf, two deer from Shin Pond; A. N. Bridges, A. B. Stewart, F. D. Stevens and F. J. Dunlap, five deer from Webster Brook, Ashland region; C. C. Blood and C. Stinchfield, four deer from the Patten region; C. E. Corliss and H. S. Pond, four deer from the vicinity of Roach Pond; J. A. Little, two bucks from King and Bartlett; J. W. White and Mrs. J. W. White, three deer from East Branch, one deer killed by Mrs. White; A. J. Ghas, two buck deer from Stacyville; N. F. Stanley, a fine buck from Stratton.

The woods are also full of Maine hunters, and a great deal of game is being taken by them. It is estimated by those who have returned from Maine hunting trips that the number of moose and deer being taken by local and Maine hunters is more than double that reported at the railroads, the property of hunters outside the State. The interest in hunting has greatly increased in that State, even within a year, and if the deer supply can stand up under such excessive hunting it will be the wonder of the age. Following the FOREST AND STREAM, the Maine papers are taking up the complaint of so many deer finding their way into the Boston markets, declaring that something should be done to prevent it. The fact has been stated many times in these columns, but still the deer continue to come in. Quincy and Faneuil Hall markets are fully supplied, while not an outside market of any note is without its deer strung up at the door. On every street in the city and suburbs the same thing appears at the doors of the markets; a deer out for an attraction or an advertisement. I believe it a safe statement to make that 1,000 deer could be found in the markets of Boston at the present time; many of them in sight, and fully as many in cold storage. The Maine papers are complaining that these deer are killed by "cheap sportsmen, who pay nothing for guides, and as little as possible to hotels and camps." They return to Boston and other cities, and sell their game for nearly or quite enough to pay their expenses. Well, they have the same legal rights as the rich sportsmen, who pay liberally for guides, etc. The FOREST AND STREAM'S Platform Plank, stop all sale of game, is the only remedy. Maine people and newspapers will do well to give more attention to the illegal shipping of game out of the State, both in the open and close seasons; shipments that the FOREST AND STREAM has so often called attention to. Some astonishing statements are yet to follow from sources that none will care to dispute.

SPECIAL.

Sale of Pennsylvania Game.

EASTON, Pa., Nov. 17.—*Editor Forest and Stream:* Kindly oblige me by settling the following dispute in regard to game laws in the State of Pennsylvania. Here in this town all the stores are selling pheasants, quail, woodcock, wild turkeys, etc., and in fact all the game in season. Now we claim that they have no right to have any game in their possession for the purpose of selling the same. But they claim that they have the right to sell, because they have not shot the game themselves, as the law reads in Section 5 in your Game Laws in Brief (Pa.), as follows:

"Section 5. Taking for Sale.—That it shall be unlawful at any season of the year to kill any elk, deer, fawn, wild turkey, pheasant, grouse, quail, partridge or woodcock, for the purpose of selling the same."

Now you can see into their argument, as they claim that the only one that can be held is the one who kills the game; and so long as they can find some one to run the risk and sell to them, they will put the game out for sale. We are certain that somewhere in the game laws of Pennsylvania there is a clause that prohibits anybody from buying or selling any kind of game, or the shipment to or fro in the State.

Please answer this question if possible, and you will greatly oblige EASTON.

The law most explicitly forbids traffic in game. It is the same Section 5 which is given in the Brief in abridged form. The full text of Section 5, act of June 4, 1897, reads as follows:

Section 5. That it shall be unlawful at any period or season of the year to kill, entrap, or pursue with intent to kill or entrap, any elk, deer, fawn, wild turkey, pheasant, grouse, quail, partridge or woodcock in any part of this Commonwealth for the purpose of selling the same. And it shall be unlawful for the proprietor, manager, clerk or agent of any market or other person, firm or corporation, to purchase, sell or expose for sale any elk, deer, fawn, wild turkey, pheasant, grouse, quail, partridge or woodcock killed or entrapped within this Commonwealth. That it shall be unlawful for the proprietor, manager, clerk or agent of any market or any other person, grm or corporation to purchase for the purpose of again selling the same any elk, deer, fawn, wild turkey, pheasant, grouse, quail, partridge or woodcock killed or entrapped within this Commonwealth. Whoever shall offend against any of the provisions of this section shall be liable to a penalty of one hundred dollars for every elk, deer, fawn so taken, purchased or sold, and twenty-five dollars for every wild turkey, pheasant, grouse, quail, partridge or woodcock so taken, purchased or sold, or by imprisonment in the county jail for a period of one day for each dollar of penalty imposed.

A Colorado Lion Hunt.

DE BEQUE, Colo., Nov. 14.—*Editor Forest and Stream:* You are cordially invited to attend the Roan Creek lion hunt, given by the members of the Western Slope Hunting Association, Dec. 8, 9, and 10. The lions and wolves have become so numerous and have destroyed so much stock that we resort to this means for their extermination. The Association expects at least 500 sportsmen from all sections of the West.

H. A. STROUD, Sec'y.

Oregon Game and Indians.

PORTLAND, Ore., Nov. 10.—*Editor Forest and Stream:* The inclosed clipping from this morning's Oregonian is self-explanatory. Twenty years' experience and observation in the West incline me to the belief that the Indians have done and are doing more to bring about the complete extermination of all big game (except buffalo) than all other influences and agencies combined. S. H. GREENE.

"Willard H. Herren, who is in the sheep-raising business in the Heppner hills, and who runs his sheep in the Blue Mountains during the summer season, has just returned to the home range near Heppner, and writes to a friend in Portland as follows:

"'I have not hunted much for the last month, but in September I shot several deer, elk and bears. I got some particularly nice fat elk, and could get plenty now by going after them, as I know where they are, but a white man is not allowed to kill them now, as I see the last Legislature passed a law prohibiting the killing of elk during the next eleven years. I fear it will do but little good, as the Indians will slay them just the same.

"'I found a nice band of six elk last fall out in the Blue Mountains, and expected to keep track of them and shoot a large one as soon as his horns got ripe. But as soon as the snow got deep enough for the Indians to be able to catch up with them, they went in there and exterminated the whole bunch.

"'Last spring I was running a band of yearling sheep over on Skookum Creek, and the deer were very plentiful there, especially the old does, who were heavy with fawn. I used to take great pleasure in watching a band of them feed near our camp. But just about the time they commenced dropping their fawns a band of Umatilla Indians came in there and began slaughtering them. I soon fired the Indians out of that immediate vicinity, but of course they went elsewhere and killed all they could. They wasted most of the meat, simply skinning the deer and letting the carcass lay. I hope that there will be a game warden to stop the Indians from killing deer out of season. I think it can be done by going after the different Indian agents.

"'I expect to go out in the mountains soon and shoot a few good fat deer, and will start as soon as there is snow enough for good hunting. Will get enough for dried venison for the winter, and may also get a few bear skins for robes.'"

The New York Non-Transportation Law.

SEVERAL readers in this town have asked us to tell them why the game law in regard to transportation of certain game birds lawfully shot or taken in the season therefor is so framed as to practically prevent the sale or sending to market of such birds. As the law now reads it absolutely prohibits transportation of woodcock, partridge, any member of the grouse family, or quail, from or through any county of the State, except that they may be carried from the county where killed when accompanied by the owner; it also definitely prohibits common carriers from having these birds in their possession or in that of their employees, on penalty of guilt of a misdemeanor and a fine of $25 for each bird. The effect is to destroy any market (except local) value the birds might have for the local gunner. He can't afford to go to the city with a bunch of birds, and must forego all profit from their sale. But the city sportsman can come out anywhere on the island, kill all the birds he can find, and carry them back with him on his return, either to eat, to give away, or to sell. In such an obviously unfair discrimination what can be the underlying motive if it be not to discourage logal gunners and help "preserve" the birds for the better success, pleasure or profit, of the city sportsman? Can any one tell us, so that we can answer our querists?—Greenport (Long Island) Republican-Watchman.

[The Republican-Watchman will find an answer to its question on our editorial page.]

A Virginia Quail Country.

LUMBERTON, Sussex County, Va., Nov. 18.—*Editor Forest and Stream:* Since a recent publication in your columns of my report from "The Game Fields of Virginia," so many inquiries have come to me by letter that I have been unable to answer all. Will you therefore give me space in your columns to satisfy these "inquiring friends"? I will endeavor to be brief:

First.—The season for quail opens here Oct. 15 and closes Jan. 15.

Second.—Owing to protection by State laws for two years past, and unusually mild winters and favorable breeding seasons, quail were never more abundant. A good shot can bag fifty in a day's hunt with ease. The coveys are very large, and until late in December lie well to the dogs.

Third.—The lands in this section are not generally posted—with some exceptions—and the cover is of the best.

Fourth.—Delightful accommodations can be had at at least two or three country houses, where a few sportsmen are taken and guides, horses and dogs furnished at reasonable rates.

Fifth.—Besides quail, deer, fox, squirrel, hares and wild turkeys are hunted and killed in large numbers. Fox hunting is the favorite sport with our country gentlemen.

Don't write, please, unless you mean to come to Virginia. L. P. BLOW.

Hounds and the Still-Hunt.

MORGANTOWN, W. Va.—*Editor Forest and Stream:* Some of the ideas advanced by L. H. Hascall in his "Hounds and Still-Hunters" of Nov. 12 are misleading. By his statement "all the still-hunting outfit has to do now is to take a bull dog and a hatchet and wait for a deep snow and crust," we would infer that he is trying to class the dastardly and unmanly practice of slaughtering big game when the deep snow and crust place them entirely at the mercy of man or beast (which should be put together when it comes to anything so inhuman) with the manly sport of still-hunting. This classification every true sportsman will resent.

The still-hunt proper is to me the only true sportsmanlike way to hunt big game. It was the mode adopted by our forefathers in pioneer days, when the safety of our race and the development of our country depended largely on the qualities in a man, which are called out by the still-hunt, in which the patience, endurance, art of woodcraft, keen sight and steady nerve of the hunter were pitted against the instinct and cunning watchfulness of the game, each having an equal opportunity for victory. True, since the game has diminished in numbers, and with it the chance for a successful hunt, we must be lenient with those who take advantage of the game in such manner as the law allows, such as watching on crossings while some of the party drives the game, or calling a moose up within gunshot. Yet how much more gratifying it is to kill our game by fair still-hunting, where it has a fair and equal chance to defeat us.

Mr. Hascall speaks of men he would back to kill nine out of every ten deer he would start after on a light snow. We infer that he means by fair, still-hunting. That's a stunner to me. I supposed myself and several others I know were fairly good still-hunters, but we must take off our hats to such men as he speaks of.

Any observing person must agree with me that it is not the amount of game killed in hounding that causes game to decrease in a locality so hunted. Hounding deer tends to drive out that which is not killed.

One day's running of hounds in a deer country will alarm deer within a radius of several miles, and put them on the move for safe and quiet quarters, whereas the still-hunter only disturbs the game with which he comes in contact. Surely any one noting the effect of hounding deer as I have done, and instances of which I could give, could not uphold the practice as tending to the preservation of game. EMERSON CARNEY.

Ducks in Long Island Sound.

Editor Forest and Stream:

Have been shooting at Sachem's Head, Conn., since Nov. 9, and will not return until the 19th. Therefore I can't get out the concluding chapter of "The Louisiana Lowlands" for your next issue, as promised. Dr. Bashford Dean, of Columbia University, and Mr. W. H. Avis, of the Winchester Arms Company, are with me (Mr. Avis is our host), and we have a cottage where we do our own cooking, and are jolly. The ducks are scarce and wild; do not stool well, probably they have been deceived too many times this season. Old squaws and sea coots are about all that we get. A few "broad bills," the "ruddy duck" of books, are seen, and one day we got four of them. None since, and I am writing this as we pack up for home. If ducks are scarce, fun has been plenty, and we have enjoyed every hour. There was a little shooting on Sunday, but not by our party.

FRED MATHER.

GUILFORD, Conn., Nov. 19.

Gun Flints on the Way to Mr. Belknap.

Editor Forest and Stream:

To-day I opened FOREST AND STREAM, issue of Nov. 5, because it was a rainy day. The appeal of Mr. Orin Belknap for a flint, a regular simon-pure, for his old Hudson Bay gun, sent me to the garret in search of a box of flints, from which receptacle I had my supplies back in the thirties, and from which I fitted out the "bear gun" some thirty-two years ago. I was fortunate in finding a dozen or more, and mailed three, different sizes, to Brother Belknap, address, "Valley, Washington." JUNIATA.

Virginia Game.

JERSEY CITY, Nov. 17.—*Editor Forest and Stream:* My friend, Mr. Van Dyne, and I have just returned from a two weeks' shooting trip in Virginia. We found abundance of Bob Whites and other small game, but failed to bag the wily turkey. Shooters contemplating a Southern trip can do well by communicating with Mrs. C. L. Leak, Licking, Va. LE ROY JOHNS.

In North Carolina Mountains.

SAPPHIRE, Jackson County, N. C., Nov. 12.—Mr. J. P. Cunningham, of Newcastle, Pa., who is one of the shareholders of the Toxaway Company and Fairfield Gun at this place, is on here for the fall shooting, and a few days ago brought in a buck which weighed 186lbs., shot within an hour of the house. This is heavy for North Carolina. J. F. H.

Michigan Ducks in Spring.

NORVELL, Mich., Nov. 14.—I have seen more mallard ducks flying about this fall than I have seen in the past five years combined. This is the first season in which spring shooting has been prohibited in Michigan. H. H. R.

The annual meeting of the Vermont League was held at Montpelier on Tuesday, Nov. 22.

The New York League will meet in Syracuse, Dec. 8.

NOTICE TO SUBSCRIBERS.

The address label on the wrapper shows the date of the close of the term for which the subscription is paid. The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

Sea and River Fishing.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

Late in the Season.

I WANT to go a-fishing,
The wind is blowing hard;
I'll lay aside my tackle,
And take the role of bard.
For days I've lingered, waiting
For a man, for boat, for bait;
Now that I can command them,
The wind blows at great rate.
There is no use of wishing,
I must accept my fate;
I'm sadly disappointed,
The season's getting late.

I'll sing of seasons past and gone,
Of many a long, bright summer day;
Of casts I've made, of fish I've caught,
And of the fish that got away.

Who can portray, in verse or prose,
The fisher's joys, the fisher's woes?
Who, but by experience taught
Expresses sense of that word "caught"?
Who, but has counted to his cost,
Knows grief endured when fish is lost?
With faculties alert, alive,
Emotions, varying as you strive,
With springing rod and singing reel,
Excitement one can scarce conceal—
You've struggled manfully and deft,
Your skill's outwitted, and you're "left."

What fisherman cannot recall
Days when it seemed that fishes all,
In lake and pond and running brook,
Sought eagerly his baited hook?
How he has scorned small fish to show,
But put them back to let them grow.
No length prescribed by statute law
Has this day filled his soul with awe;
He on its limits won't encroach,
Nor ordinary things approach.
How he has wended homeward way,
Eager his prizes to display.
Success and confidence would seem
To stimulate his self-esteeem,
Till ere he seeks his downy bed,
All symptoms indicate "big head."
What shall we sing of other days,
When sweltering 'neath the sun's hot rays
He's striven with all skill and might,
For fishes small—even a bite.
How he has found at set of sun
No fishes caught—no trophies won,
Save such as other days he scorned,
'Gainst laws' infractions—even warned.
Such days as these, 'tis plain to see,
Develop great humility.
On the one day he "owns the earth,"
The next—"life's living's hardly worth."

The lesson taught don't fail to see,
When in great extremity
Things which in brighter days we'd scorn
Are welcomed as a hope forlorn.
Shall we not view with charity
Those mortals whom adversity
Has driven, unrelentingly,
To deeds they'd scorn as soon as we
Could they but with clear vision see.
When casts are made with bait or fly
We measure distance with the eye;
Imagination gen'rously
Fills up the space for you and me.
If fighting bass or wily trout
Leave in our minds a shadowy doubt
Of weight, or size, or length of run,
Or height of leap (isn't it fun?),
We've ample source from which to draw
When telling what we did, and saw.
Why should one doubt were I to state
That each lost fish was heaviest weight?
For this is true—I tell but facts,
I've seen the scales (upon their backs);
And furthermore, all fishers say
'Tis biggest fish that get away.
In speaking thus of fish we've caught,
The story's often overwrought;
And some maliciously have said,
"You slyly stuffed their throats with lead."
When showing fish in self-defense
(Of fine day's sport good evidence)
'Tis said with sneering, doubting look,
Those fish were caught with silver hook.
This is hard lot for fishermen,
No matter where—no matter when;
No matter how sincere they be,
They're met with incredulity.

Would that I might good reason find
For treatment so severe—unkind;
For habits, it is sad to say,
Our fishermen too oft display.
Perhaps the cause of the complaint
Lies with our wicked Patron Saint (?)
Old Ananias, cynics say,
Guards fishermen from day to day.
If so, the reason we reveal,
Why stories of the rod and reel
Are often met with doubts and jeers,
And truth is crushed when it appears.

Our fishing seasons, one by one,
Are passing by, soon they'll be gone;
If in our visions we must paint
The image of some "patron saint,"

Should we in fancy yet desire
Some potent spirit to inspire
Our lives, our hearts, our thoughts, our ways,
Throughout our few remaining days;
Discard the one whose record shows
Deceit and lies, e'en at its close.
There is no "sport" in trickery,
Nor fun in like iniquity;
Be honest with yourself, nor try
Deceit, though meant in levity;
If honest with ourselves, we then
Are honest with our fellow-men.

Saint Peter was a fisherman,
Install him as your saint, and then
We will no more exaggerate;
Pleasure in "sport" shall not abate,
Besides, he tends at Heaven's Gate.

H. F. TAINTOR.

AT BARNEGAT BAY, October, 1898.

"Goin' A-Fishing."

Wherein Lies the Pleasure?

MEN may be different in the ordinary attributes of life and habit, yet there is that in the composition of the entire human family which revels in a temporary return to the primitive conditions of mankind, as exemplified in one or more of the several features of the early environment of the race.

This does not necessarily imply that savagery or brutal first motives be the moving spirit. On the contrary, it is in communion with those things which marked the primeval man—the sea, the forest, the fields, the mountains—these and their accompanying and varying features are the essences which delight the heart of the average man, and in them for a time doth his nature revive, and his blood course rapid and ardent.

Where is the man, be he whom he may, whose soul does not expand when its possessor is for the time removed from the conventional trammels of society and of prosaic business and confronted with nature pure and simple.

Gazing into the sapphire skies; upon the surface of reflecting lake, murmuring stream, or never quietening sea; surrounded by the delicate greens of the summer covering or the ardent coloring of October foliage; heels pressed deep into the leaf-strewn sward and back contentedly resting upon the crusty bark of some forest giant—the breath comes freer, the limbs more pregnant with strength, and life takes on a fresher tinge, as he or she takes in the full significance of the vista and the conditions which govern it.

Man is more himself thus. Shorn of the echoes which ring of the pavement and of the mart, the full humanity of self becomes apparent, and the shams and mockeries of a nineteenth century civilization dwindle under the softening influences of good old Dame Nature, until the soul is nearer the surface and the dwarfed mind broadens with the expanding body. God is nearer to man when he lists to the breakers roll on brown sands; to the tremor and soft rustle of the wildwood or the early quaver of the winds when they sweep the marshes in the morn. And then, too, how much more so when one stands upon the bank of some fresh-running stream and sees the trout spring into active being in the clear depths; to watch the fish as it lithely breaks the surface and the water curls in ever widening circles, which reach the shore and die in the shadows.

"Ah, how good it is to live!" one sighs contentedly—and that brings me to the subject matter.

Sometimes a fellow runs along moralizing as he goes. A vast deal of time is thus wasted, but then, what's the odds? Life is a medley, and we are apt to remember those things which at one time or another afforded the greatest degree of pleasure. Why one should moralize about so simple a thing as "goin' a-fishing," I can't imagine, but you may understand it. The prospect for retrospect is infinite. Goin' a-fishing! Why, that expression has been ringing in my ears since the early days, when, with a "spool of thread for fishing line and bended pin for hook," I perched myself on a little knoll which jutted into a summer-lit old moat, and waited for a bite.

That old moat was a source of never-ending pleasure to me then. It was by the little, old, red schoolhouse, and when lessons were over I would tuck my old third reader into my shirt and make for the time-honored pool. I remember one day how I threw myself into the soft spring clover by the moat and watched a water snake try to swallow a red-bellied perch it had caught. Seems cruel now, but I never thought of trying to prevent the snake from getting its dinner. Guess I must have recognized the earthly rule which permits the strong to do up the weak, and thus tacitly, if unconsciously, agreed to the proposition.

I suspect that if the man of to-day were to analyze his make-up he would find a vast number of records of days when he was "goin' a-fishing," and too he would learn that in the majority of instances he never got any further than the "goin'" stage.

In the boy, I rather am inclined to the belief that the bare brown rafters and ink-stained, knife-chipped forms of the little schoolhouse have been responsible for a very large number of the goin' a-fishing periods. You know yourself, and from experience, that the sky seems bluer when viewed through the open window. The summer day—ah! so many summer days at school. There was the dull hum of the human bees in the hive of learning. A very distinct hum that dulled the senses, and you looked through the wide open window and there were the golden-barred bees themselves sporting amid the white crests of the clover blossoms, and then off into the cool looking shadows of the woods near by. There were a lot of gleaming clouds lazily floating across the sky, making huge deep-toned blots upon the fields when they came between the sun and the grass tops.

How could you study when the note of the mocker came crisply in through the window, and you heard the rustle of the leaves as they flirted against each other in the south wind? The barren, mundane, tiresome schoolroom, and the glorious sunlighted out-of-doors. What a comparison, and to make it harder, just as you caught sight of Tommy Green, with a reed cane on his shoulder and a mysterious looking old tin can in his hand, walking stealthily in the direction of the woods, there came a sharp summons: "Class in second geography, please come forward." And you walked to the instructor's desk, wondering what the lesson was, and between times wondering how many fish Tommy Green was going to catch. You knew as well as Tommy that the stream in the wood was "just filled with 'em."

When one comes in after years to think of it all, it seems that it wasn't so much the fish one caught that set the measure of enjoyment. Then if not the fish, what was it?

For my part, I am inclined to the belief that it was just the getting out of doors. A little lad I know quite intimately—he's only eight—not infrequently disobeys the maternal admonitions, slips off, is gone several hours, and comes home, mud from head to foot. More or less shame faced, he admits he's been fishing—fishing in the gutters for minnows and "crawfish," and then he proudly exhibits to his younger but admiring brother a tin can, which he produces from beneath his shirt bosom, and in which rests a tadpole as large as a collar button.

Shades of Izaak Walton—a tadpole! and yet the little scamp's face is wreathed in smiles as he views his treasure, and I suppose he feels as you or I might after the landing of a 6lb. bass. I doubt, however, if it is the tadpole itself which gives the young angler the greatest degree of pleasure; rather is it the brief freedom from restraint, the absence of the maternal apron strings, and the temporary revel in the grass tops, listening to the sharp chirp of the cricket, chasing the yellow butterflies—in other words, a delight in an unconscious return to primeval conditions, when clothes and conventionalities were scarcely so necessary as during the to-day.

And I really believe that in after years, if God lets him live, and I pray He will, this now immature and defiant rascal will view his childhood in retrospect, and swear by the moon those were his happiest days. The environment of his being then—the evidences of man's progress, the luxury and opportunities for enjoyment, will pale and fade, and in his mind's eye will come a picture of tall grass with damp roots, a muddy gutter in a city's suburb, and a diminutive tadpole flopping in the depths of a battered old condensed milk can.

H. M. MAYO.

Tuna vs. Bass.

Editor Forest and Stream:

In a communication to your valued paper some time ago, I mentioned, I believe, that a black sea bass of 400lbs. had been taken with a rod, thus beating Mr. Frank V. Rider, the honorary secretary of the Tuna Club. If you will permit me, I should like to make a correction. Mr. Rider holds the record for the largest black sea bass ever fairly taken with rod and reel, the fish weighing 327lbs.; and he is given credit for it on the Tuna Club book, a copy of which I enclose. This gives Mr. Rider, if I am not mistaken, the record for the heaviest game fish ever taken with rod and reel. The 400-pounder was not caught fairly, the angler receiving aid from several people, according to report, which has not been denied. This gives Mr. Rider the championship of the world, to quote the ethical expression used in other sport. The question now agitating the minds of anglers in the Tuna Club is, Does Mr. Rider's catch of a 327lb. black sea bass on light rod and 21-thread line entitle him to the real championship of the world? I have a strong suspicion that my friend proposes to claim it. In fact, he has claimed it, and I confess that he has me at a disadvantage at the outset, as, while I have caught on a hand line many black sea bass ranging from 200lbs to an estimated 500-pounder, I have so far failed to land one with rod and reel.

I believe it is the consensus of opinion in the Tuna Club that the leaping tuna stands alone and unequal in the world as the hardest fighting game fish known, not excepting the tarpon. The record fish which I had the honor to take (weighing 183lbs.) fought me four hours, and I do not believe Mr. Rider, who is a very powerful angler, could have killed the fish in less than two; yet he brought his record 327lb. bass to gaff in fifty-five minutes. This very fact, Mr. Editor, tells the story. The black sea bass, for half an hour or twenty minutes, is perhaps the equal of the tuna; but if he is fought vigorously for that time he is soon worn out; in a word, he has in no sense the staying or fighting qualities or the strength of the tuna, in which expression, I think Mr. Beard, who took the first 200lb. black sea bass, will bear me out.

On the other hand, I do not believe the man lives who will take a 327lb. tuna with rod and reel and 21-thread line. Such a large fish has been known to jerk a man overboard and drown him with a hand line. It is true that I have not taken a black sea bass with the rod, but I played a monster during the past season for twenty minutes who certainly must have weighed 200 or 300lbs. Yet I had him very badly demoralized in twenty minutes, and not being very well, I did not have the strength to push the fighting; so he towed our boat to a kelp bed half a mile off short, and I lost him by fouling the weeds. If I had had clear water and could have husbanded my strength, or taken my time, I am confident I could have brought my fish to gaff in at least three-quarters of an hour. When I hooked the 183lb. tuna, I was in fair condition physically, and fought the fish as hard as I could for four hours; and during the fourth hour the tuna, still full of life and vigor, towed the boat at least four miles. To my mind there is no comparison between the two fishes. I believe any strong man, who, like Mr. Rider, is a skillful rod fisherman, can kill a 400lb. black sea bass in an hour, or less, with 21-thread line. I do not believe it possible to take a 300lb. tuna, much less a 400lb. fish, at all on the same tackle. I believe the 200lb. tuna is very near the limit of possibilities, though I should not be surprised to see the gold medal of the Tuna Club go to the catcher of a larger fish, especially if Mr. Vom Hofe can provide a reel that will hold 1,500ft. of 21-thread line.

By the above I do not wish to detract from Mr. Rider's catch or belittle it. Many men have "gone to pieces" during the past season in trying to land a smaller black sea bass. But I wish to record my opinion that the king of the bass, though a magnificent fighter, is entirely outclassed by the leaping tuna, size for size, pound for pound.

CHAS. F. HOLDER.

SANTA CATALINA ISLAND, Cal., Nov. 9.

New Jersey Legislation.

[From the Report of the Fish and Game Commission.]

The Fish Law.

The present law does not permit the use of eel baskets anchored on the bottom of streams. Some years ago the law of New Jersey did recognize these wicker eel baskets as lawful contrievances, but for some inconceivable reason this law was repealed. There is no greater enemy to fish life than the eel, and its extermination would be of benefit to fish of all other kinds; wicker eel baskets anchored on the bottom of streams and ponds take no fish but eels, and there seems to be no reason why their use should be forbidden.

Under the present law the use of small perch by the angler is prevented, the statute having apparently been framed on the law of some State where baitfish are more plentiful than they are in New Jersey. As a matter of fact, small perch form the food to a great extent of the larger fish, and consequently there seems to be no reason why these small perch should not be used as lures by the angler. For this reason the word "perch" has been dropped from the list of fish which the law requires to be released from the minnow net.

The present law imposes a penalty of fifty dollars for violation; in the opinion of your commission twenty dollars would be sufficient.

17. Proposed open season for black bass, pike-perch, white perch, June 15 to Nov. 30. Pickerel, pike, May 1 to Feb. 20. Unlawful to take any of these fish between 9 o'clock at night and sunrise. Penalty $10.

The law at present opens the season for taking black bass on May 30. As a matter of fact, in no year are the bass through spawning by that date, and a great many fish taken in the early part of June are removed from their spawning beds. In most of the States the protection to black bass is extended to the middle of June or the 1st of July. The difference in dates has frequently given rise to annoyances, and this is especially the case in Greenwood Lake, one-half of which is situated in New York State, where the law does not open until June 15.

Your commission has during the past two years brought considerable numbers of white bass and pike-perch to the waters of this State, and perhaps the best method of propagating them would be to establish a close season for two or three years; the difficulty in the way of such an enactment arises in the fact that these fish are angled for in the same manner as black bass and pickerel; to prohibit taking white bass and pike-perch would practically prevent taking the other fish. To provide for the return to the water of all white bass and pike-perch taken would be impracticable, as the fish in most cases would be so injured that death would follow even their return to their native element. It might be argued that this same objection would apply to the present law, prohibiting the taking of small trout and bass, and it does so to some extent, but this law prevents the fishing for these small fish, and consequently indicates the use of appliances which the small fish will not take. With the adult white bass and pike-perch it would be impossible to use contrivances which would not be readily taken by them as well as by the black bass. The precautions which the lawful angler takes to prevent the capture of small bass and trout would inure to the benefit of the small white bass and pike-perch. In consideration of all these facts your commission is satisfied that ample protection would be extended to the white bass and pike-perch if they were placed in the same category as the black bass.

The provisions against the taking of fish at night will apply to very few persons, and will meet with no objections excepting on the part of those who have been in the habit of slaughtering fish at night for the purposes of sale. It will be observed that the provision extends only to the better class of game fish. Such a law has been enacted in a number of the States.

It will also be observed that the penalty for the violation of this section has been reduced from twenty dollars to ten dollars.

18. Proposed open season for brook trout, April 1 to July 15. Penalty $10.

This is the law as it now stands on the statute books, with the exception that the penalty has been reduced from twenty to ten dollars.

19. Lawful length of black bass, white bass, pike-perch, 9in. Trout, 6in. Penalty $10.

The reason is obvious why the recently introduced pike-perch and white bass should be accorded the same protection extended to the black bass and trout. The penalty attached to the section of the present law is twenty dollars, which your commission thinks might be reduced by one-half without prejudice to the interests of the fish.

23. It shall be unlawful to put, place, use or maintain in any of the waters of this State inhabited by pickerel, pike-perch, black bass, perch or trout, any setline or setlines, or to use upon a line for the taking of fish in such waters any contrivance having more than three hooks attached thereto, under a penalty of $10 for each offense.

Laws against the use of setlines have been on the statute books of this State for a long number of years, and this manner of fishing has been practically put a stop to. Little less destructive to fish than the setline is a contrivance which has recently been put on the market; it fairly bristles with hooks, and on this account its use has been prohibited in other States. A law against its use in New Jersey would not in the least interfere with the sportsmanlike manner of taking fish, and it would be welcomed by nearly every angler.

25. It shall be unlawful to remove from this State any quail, ruffed grouse, pinnated grouse, woodcock, hare, squirrel or ring-

necked pheasant; provided, however, that the provisions of this section shall not apply to such quail, ruffed grouse, pinnated grouse, woodcock, hare, squirrel or pheasant as may be in the possession of the person who may have lawfully captured the same during such periods as the provisions of this act make lawful for such capture, and that such removal shall not take place excepting within such periods. Penalty $10 for each bird.

A large number of the States have passed laws absolutely and under all circumstances prohibiting the removal from their borders of all fish and game, and sportsmen who go thither cannot bring home with them trophies of their vacation. Your commission does not approve of measures which prohibit lawfully secured fish and game from being taken wherever the owner may see fit, nor has your commission any intention of interfering with the sale of reed birds and with other similar commercial features pertaining to the capture of fish and game, and consequently does not suggest any such drastic measures as have been adopted by some States very close to New Jersey. But your commission would very much like to put a stop to the taking of the better class of game for the purposes of barter and sale. There is not the slightest doubt that the adoption of a section like the one above suggested would tend in a large measure to put a stop to trapping and other unlawful methods of taking game, for if the pot-hunter and poacher cannot market the product of his work he will soon cease it. Now it is a well-known fact that railroad and express companies are strict in their observance of the fish and game laws, and annually stringent instructions are sent out to the agents of these corporations requiring them to observe the laws of the State pertaining to the handling of contraband goods, especially fish and game. The number of ruffed grouse, quail, squirrel and other indigenous game animals in New Jersey is not large enough to supply the markets of Philadelphia and New York, nor can the most effective protection during closed seasons and the most expensive propagation keep pace with the demands of those who hunt or fish for gain. Your commission has no doubt that if the removal of game from the State under certain circumstances, such as are indicated in the above section, is prohibited, it will aid materially in the preservation of such game in this State.

26. The term "waters of this State" for the purposes of this act shall be construed to mean all the fresh waters of this State; provided, that all ponds, lakes and waters created by or under the exclusive control of individuals or associations, stocked and maintained at the expense of such individuals or associations, and not runways for migratory fish, shall be considered private waters and be exempt from the provisions of this act as far as such individuals and the members of such associations or persons receiving permits from them are concerned.

The above section is a considerable modification of the law at present on the statute books. There is at present on our statute books a law which provides that the wardens shall enforce the provisions pertaining to trespass, but only to such trespass as is committed by a person going on the lands of another for the purpose of taking fish. There are several laws relating to trespass by gunners, but the wardens are neither required nor authorized to enforce these. This anomalous condition of affairs has frequently given rise to unpleasant situations. The wardens are State officers, and consequently it should be, and it is, their duty to enforce the laws as far as the general public is concerned. They should not be required to look after private interests in which the public has no concern. There certainly seems to be no reason why they should enforce the laws against trespassing anglers and not against trespassing gunners. There are in the State of New Jersey a number of preserves, and these generally combine both woodland and water; they are owned either by rich individuals or by associations, and the benefits accruing to them are only for the owners. This principle seems to have been recognized by the Legislature in the passage of the laws pertaining to trespassing gunners, and for the purpose of carrying out this very principle your commission has omitted from its suggested law the provision requiring wardens to enforce the laws pertaining to trespassing anglers. If the interests of the State should be divorced from private ownership, there seems to be no reason why these private owners should not be permitted very wide latitude in the management of their property. The above section contemplates the giving of such rights by permitting owners of preserves to do as they deem best as regards ponds under their immediate control, and for the maintenance of which they pay. No harm can inure to the interests of the public by the passage of such a law. The fish planted in these ponds are purchased by the private owners; they are cared for without expense to the State, and as long as these ponds are not runways for migratory fish the supply of fish in which the public is interested cannot in any way be diminished or deteriorated. A different state prevails as to gunning. It would be impossible for any individual or association to so securely fence in property as to prevent the movements of birds and other animals, and for this reason it is but just that private owners and associations should be required to abide by the laws of the State pertaining to game. There is little danger that such private owners will ever abuse the privilege sought to be granted them by the above suggested section; if they do abuse it they themselves are the losers, and not the public. Placing the private owners in absolute control of ponds in no way interferes with proper protection, for every constable and every member of a regularly incorporated fish and game protective association—and nearly all sportsmen's club are such—have the same powers to prosecute possessed by the wardens, and applications for the appointment of deputy wardens by owners of large estates have always been cheerfully granted by your commission.

In concluding these suggestions and comments, your commission desires to express a hope that the former will be adopted. We have had many years' experience in the enforcing of the statutes protecting fish and game, and we have come into contact almost continually with persons interested in these laws. The above suggestions represent our best judgment in regard to the matter, and we feel confident that their adoption will give to the State a code of laws which will not be disturbed for many years.

The Cuvier Club banquet in Cincinnati was held on Tuesday of this week.

The Massachusetts Association.

BOSTON, Nov. 18.—*Editor Forest and Stream:* Members of the Massachusetts Fish and Game Protective Association got together at Copley Square Hotel last Wednesday afternoon, for the first time since the long vacation. There was a good attendance, although many of the members are still scattered at various points—some on the Cape, where they have been having excellent sport with the birds, while others are in the down East woods after bigger game. Representatives from other kindred organizations were present by invitation to consult upon the best means to be taken to further the objects of the Association—fish and game protection. These gentlemen were Prof. Niles, of the Appalachiam Mountain Club; George H. Mackay and C. C. Munn, of Springfield; W. B. Phinney and Thomas L. Bunney, of Lynn; I. M. Stevenson, of Pittsfield, a member of the last legislative committee on fish and game; George H. Palmer, of New Bedford; C. N. Raymond, of Rehoboth; C. C. Peck, of North Attleboro, and Dr. Spaulding, of Hingham. Col. Rockwell, the president, was in the chair, and the records were looked after by Secretary Kimball.

A very profitable and interesting discussion ensued, taking as usual a wide range, including, of course, protection as the main object. Mr. Stevenson enlarged upon the latter point, referring to the need of more stringent laws against poachers; that game was becoming more and more depleted no one would deny, and he was fast coming to the belief that the sale of game should be prohibited. There was room, he thought, for reform in the fish and game commission, which should be made up of men who were experts in all matters of fish and game. Dr. Spaulding touched upon the very important subject of the smelt fishery, which is a great source of recreation to many in the waters around Boston and the islands in the harbor. Much of the illegal seining of smelts had been stopped by energetic work. Mr. Peck advocated the appointment of paid deputies to enforce the laws. While it was agreed on all hands that there were opportunities for new laws or amend-

CATCHING BASS FOR RESTOCKING.

ments to old ones, it was the general opinion that better results were to be obtained, for the present at least, by a more rigid enforcement of the present laws than by attempting new legislation that would arouse antagonism now nearly overcome.

A subscription dinner followed the conference, at which speeches were made by several gentlemen, and President Rockwell appointed the usual committee to nominate a list of officers for the ensuing year.

WILLIAM B. SMART.

Transporting Fish Alive in Ice.

THE Norman Fish Company, an American concern operating at the Lake of the Woods, on the Minnesota boundary, has recently been shipping bullheads to St. Louis and Buffalo packed in ice; and the same not only arrive fresh, but all alive, at their respective destinations, provided they are put into cold water and thawed out. More than this, Manager Jos. Armstrong states that scale fish sent to Buffalo have been known to revive if treated in the same manner.

Now this solves the oft-mooted question, whether fish can be winter killed by freezing. It is not the congelation which kills them off en masse in some waters on occasion, but the lack of air simply, as has been satisfactorily demonstrated time and again.

Opening air holes in the frozen surfaces of ponds for breathing spaces for the fishes will save great mortality in cases where they become hermetically sealed by severe cold weather. Black bass are of a species which could probably be transported long distances in ice, and come out alive, and it seems only necessary to prove by experimental tests that this can be done to make the winter season an advantageous period for stocking depleted and barren waters from hatching houses. It would be incomparably less expensive than using special fish cars, with their attendants, for aeration and other care.

CHARLES HALLOCK.

Fishing in a Maine Harbor.

ABOUT twenty miles this side of Eastport there is the little fishing hamlet of Cutler, on the Maine shore, which was cool and pleasant all through the past heated season.

A land company has built a commodious inn, where good meals, restful beds and general comfort may be enjoyed for about one-half Bar Harbor rates. The harbor, about a mile long, is very safe, and fishing may be enjoyed there in weather when it is too stormy to venture upon the ocean for the larger cod, haddock, pollock and halibut. In the harbor the smaller cod and pollock afford good sport with light tackle, and 2lb. flounders may be easily secured for the frying pan. The red perch is perhaps the handsomest fish falling to the rod, and like all his family is a free fighter.

Within two miles of the hotel are trout brooks, so that small trout may be secured in sufficient quantity to vary the fishing.

Deer and other game are said to be abundant in their season; about 150 deer being recorded as having been shot in 1897. An all-water route from New York, via Boston or Portland, is not the least enjoyable of Cutler's attractions.

W. H. R.

New Jersey Coast Fishing.

ASBURY PARK, N. J., Nov. 19.—Will the movements of our coast fishes ever be understood, or the influences which impel the never-ending vagaries? Since August all varieties have been most erratic, and save for an occasional run have been phenomenally scarce. Never were prospects brighter than during the early and middle summer months. Kingfish, bass and weakfish came in early, and in abundance, took the hook freely, and were fine in size and condition; but conditions suddenly changed and remained unfavorable during the rest of the season. This applies to surf fishing. In the rivers and bays the supply was fairly abundant at all points; even the plaice, usually so very abundant during September and October, have been absent. This is accounted for in a measure by the absence of the sand eel or sand laut, which usually swarms in the open sea during the fall months.

Cod are coming in now, and a few specimens have been taken from the piers during the past week. Ling are abundant and are taken every night. The whiting, or as they are commonly called, frost fish, have not yet put in appearance, but are being sought every night. They are a sprightly fish on the rod, and when of good size put up a good stiff argument. While there is an abundance of bass in the surf, they will not take the hook, and surf fishing can fairly be said to be at an end.

LEONARD HULIT.

New Jersey Fish Stocking.

IN his report of recent operations, Fish and Game Protector Charles A. Shriner says of the restocking work: "An attempt during the first part of October to bring an adult live fish from Lake Erie resulted in failure, the first failure which has attended a number of similar attempts on the part of experienced wardens designated for that work. Arrangements had been made with fishermen on Lake Erie to save in ponds such varieties of fish as might be wanted here; although the fishermen succeeded in keeping the fish during an exceedingly warm period of weather, all the fish were killed in one night, when there was a severe thunderstorm. When the wardens reached the lake not a fish was to be had, and severe storms prevented netting for some days. When finally a lot of fish was secured a rise in the temperature prevented them from being removed to New Jersey. A delay was determined upon, and at the date of this report the wardens at Lake Erie report good promise of success. The trout purchased have been nearly all distributed, and that with a fair degree of success. Delays in making connections with trains caused a small percentage of loss, although on several days 10,000 each were distributed to all parts of the State without the loss of a single fish. Every application, with a few exceptions, has been filled, and I trust within a very few days to satisfy the few remaining applicants."

The Vermont Fish Commission Appropriation.

SHELDON, Vt., Nov. 18.—*Editor Forest and Stream:* "Penny wise and pound foolish" is the mildest term to be used when mentioning the stupid work of our legislators in cutting down the beggarly $5,500 fish hatchery appropriation to a worse than beggarly sum of $3,500. This is Dogberries in office with a vengeance.

Any intelligent person well knows that with the waters that Vermont possesses $25,000 should be the minimum amount appropriated to give good results in stocking, which, if done properly, would bring into the State a yearly return of twenty times that amount.

We have some notably well-informed men in our Legislature, but they are overruled by the great majority who are of a class dubbed cent pinchers. It would be a thousand times better for the progressive interests of our State if we had woman's suffrage, then these noodles would remain at home, and we would have better law makers in the persons of their wives, daughters, sisters, female cousins, or their aunts.

STANSTEAD.

The Ohio Centennial.

TOLEDO, O., Nov. 16.—*Editor Forest and Stream:* Doubtless you are aware that Ohio is to celebrate her one hundredth anniversary at Toledo in 1903, or possibly in 1902, but perhaps you do not know that in the recent organization of the local centennial commission, Mr. John E. Gunckel, of this city, the secretary of the American Fisheries Society, has been elected its president. Mr. Gunckel has expressed himself as desirous of making prominent features at the coming centennial of a parliament of religions, and an extensive exposition of fish and fishing. What a railroad passenger agent can know about either of these subjects is something of a puzzle to those who are best acquainted with him, but his Toledo friends stand ready to coach him in both, including

JAY BEEBE.

Mr. Plant's Tarpon.

WE have received from Mr. J. J. Farnsworth, Eastern Passenger Agent of the Plant System, a taking colored print of Mr. Henry B. Plant's tarpon. The fish was caught at Fort Myers, Fla., in April of 1897, and the artist has pictured the big fellow as he leaps clear of the water.

Catching Bass for Restocking.

MR. DAVID H. HOGG sends us the accompanying photograph, in illustration of catching bass in Lake Nipissing, Canada, under warrant from the Ontario Government to stock a lake at Huntsville, Ont.

Mr. A. N. Cheney asks us to say that illness and absence from home have prevented him from giving attention to a number of correspondents, whose letters he has been compelled to defer replying to.

The Changed Adirondacks.

Our Northern Lakes and Mountains.

THE Adirondack Mountains of northeastern New York afford a striking evidence of the changes which advancing civilization has wrought along our Eastern seaboard. There can be seen the development, almost within a decade, of a wilderness into a great summer and autumn resort, dotted with luxurious modern hotels, and traversed by stage routes and railways.

The sportsman, whether he be hunter or fisherman, familiar with even a portion of the Adirondack Mountains, more poetically termed the North Woods, fifteen or twenty years ago, and who now revisits the scenes of his youth, will find such visit a dream dispelled, for his is the memory of their former wildness and beauty, of trout rising on lakes and streams, of deer roaming the dense woods and drinking from quiet waters, and of a strange, wild life. With this memory he now finds a large part of the woods region peopled for three months of the year with the votaries of fashion, with steamboats puffing on the lakes and engines shrieking through the forests, with prosperous villages here and there, and the old wild life gone never to return.

I open as I write an old and well-worn book dear to all older American sportsmen, written by William C. Prime, and published in 1873, entitled "I Go a-Fishing," and I turn to two chapters respectively entitled "The Saint Regis Waters in Olden Times, 1860," and the "Saint Regis Waters Now, 1872." Would that the venerable author, now I believe a very old man, and long since unable to handle the rod and gun, could revisit the Saint Regis waters and paint us their scenes of to-day. The twelve years which elapsed between his first and second visits seemed to him to have brought many changes, the most marked of which was the expansion of Paul Smith's first little house, built in 1858, and holding not more than eight people, to a large hotel, capable of accommodating 150 guests. On both occasions Mr. Prime had to drive into Paul Smith's from Port Kent, on Lake Champlain, a distance of fifty-five miles. The rare old fisherman and lover of nature, floating in his canoe on the lower Saint Regis in 1860, wrote as follows: "The day had died most gloriously. The 'sword of the sun' that had lain across the forest was withdrawn and sheathed. There was a stillness on land and water and in the sky that seemed like the presence of an invisible majesty. Eastward the lofty pine trees rested their green tops in an atmosphere whose massive blue seemed to sustain and support them. Westward the rosy tints along the horizon deepened into crimson around the base of the Saint Regis hills and faded into black toward the north. No sign of life, human or inhuman, was anywhere visible or audible, except within the little boat where we two floated; and peace, that peace that reigns where no man is—that peace that never dwells in the abodes of men—here held silent and omnipotent sway. Then came the wind among the pine trees. The gloom increased and a ripple stole over the water. There was a flapping of one of the lilypads as the first wave struck them; and then as a breeze passed over us I threw two flies on the black ripple. There was a swift rush—a sharp dash and plunge in the water. Both were struck at the instant, and then I had work before me that forbade my listening to the voices of the pines. It took five minutes to kill my fish—two splendid specimens. Meantime the rip had increased and the breeze came fresh and steady. It was too dark now to see the opposite shore, and the fish rose at every cast. When I had half a dozen of the same sort, and one that lacked only an ounce of being full 4lbs., we pulled up the killeck and paddled homeward around the wooded point. The moon rose, and the scene on the lake now became magically beautiful. The mocking laugh of the loon was the only cause of complaint in that evening of splendor. Did you ever hear that laugh?" Again Mr. Prime well says: "One who has in former years lived in the woods forms a stronger attachment for that life than a man ever forms for any other. The affection which we have for the companions of our solitude is very strong. Hence, when I find myself in the woods the old sights and sounds come back with such force that I cannot tear myself away."

I have given Mr. Prime's charming picture of the Saint Regis waters forty and twenty-five years ago so that I might the better in my feebler way sketch them to-day, and by this contrast emphasize the difference between our Northern lakes and mountains of the middle and the end of the century. For the change that has transformed the Saint Regis country from a wilderness and the delight of sportsmen to a fashionable summer resort has also taken place throughout the North Woods, except in a few portions, and will not be long in taking place there. I reached Paul Smith's on a recent September evening by a walk of four and a half miles through a settled country and over a macadamized road from a brick station on the main line of the Adirondack division of the New York Central, which runs from Utica to Montreal. Darkness had fallen before I entered a strip of woods through which the road runs for a mile before it reaches Paul Smith's, and cherishing the memory of Mr. Prime's picture, as I neared the Saint Regis waters I listened for the laugh of the loon and the wind among the pines. So listening I suddenly stepped from the darkness of the woods into a blaze of light which flashed out from the countless windows of an enormous wooden hotel, and which were reflected far out on the waters of the lake. There was no laugh of the loon, but the sound of oars in the rowlocks of numerous boats, and of men and women's voices "with fashion, not with feeling, softly freighted." Gone in an instant was Mr. Prime's picture—vanished the dreams of the sportsman—and I turned with a sigh to the comforts of civilization and the atmosphere of New York or Newport in the season.

I had heard of the "camps" on the Saint Regis waters, and rising soon after daybreak the next morning, I engaged a guide and was rowed by him in an Adirondack boat across the lower Saint Regis through Spitfire Pond and around the beautiful wooded shores of the upper Saint Regis. The morning was very beautiful. Far to the west the Saint Regis mountains lifted their pine-crowned peaks into the hazy blue, while the sun, just risen, made the dancing ripples of the lake seem like ridges of burning gold. The wind blew soft and cool, and there was that vigor and life in the air which one only finds in the mountains at sunrise. A procession of boats laden with supplies for the "camps" plied between them and the hotel, and two naphtha launches puffed hither and thither. I saw the "camps" of Henry L. Hotchkiss, Whitelaw Reid, Charles A. Barney, H. McKay Twombly, Anson Phelps Stokes, P. H. McAlpin, a son-in-law of William Rockefeller, and others. They are, for the most part, really villas, with sea walls, summer houses and every appliance of comfort and luxury. The guide told me that in some of these "camps" there was hot and cold water, and in one electric lights, and it all seemed to me like playing at roughing it, and as if the title "camp" was the only link that connected these modern summer villas with the old free life of the woods. Why does not some modern essayist write of and on "the millionaire of the wilderness"? One finds strange things in the woods, but the sportsman and true lover of nature can find no stranger bird in the North Woods than the modern millionaire. I believe that the first of these "campers" on the upper Saint Regis went in about fifteen years ago, to the astonishment of the guides and natives, armed with a hair mattress, an air pillow and a nameless article of domestic utility. Now he brings electric lights and naphtha launches. It is unnecessary to say that there is little fishing in the Saint Regis waters to-day, and a report that a deer was seen near there this year is not generally accepted. So was my dream dispelled.

But if Paul Smith, with the Saint Regis region, is now solely a fashionable resort, what shall be said of Saranac Lake, and especially Lake Placid? I had heard much of both places, and I visited both. At the former I found a large village and a hotel—the Ampersand—the most modern, most luxurious and most pretentious house in the Adirondack Mountains, under whose electric lights and in whose dark wooden halls and rooms one feels as if in town in mid-winter, and at the latter I saw a continuous village surrounding its lower end, four or five barnlike wooden hotels, and golf, croquet and tennis in full force. They have golf links, by the way, at or near all the Adirondack hotels now. There is, however, a portion of the North Woods where the man or woman who, whether or not in search of fish and game, loves the sense of remoteness and the feeling of the wide woods around can still find sport and an idea at least of primeval wildness. I refer to the southwestern and far western sections, and to that central district which lies west of Port Kent and Port Henry. In the former lie the Fulton Chain of lakes, Long Lake and Lake Massawepie, on whose wooded shores, after a six-mile drive through the virgin forest, I found the best kept and most comfortable hotel in the woods, that of Childwold. In the latter region are Blue Mountain Lake and a series of lakes and mountains which are still sportsmen's resorts, and from which the railroad is still far distant.

There are two standpoints from which to view our Northern lakes and mountains to-day. I have treated them thus far from that of the sportsman and lover of the woods. The other standpoint from which to regard them is that of the student of the development of our summer resorts, and of the believer in the march of modern improvements. There are five men whom I hold chiefly responsible for the transformation of the Adirondacks from a sportsman's paradise to a fashionable summer resort, and these are in order of precedence Paul Smith, who entered the woods from Vermont as a guide in the early fifties; the late Thomas C. Durant, who projected the Adirondack railroad, built from Saratoga to North Creek in the early seventies; Le Grand Cannon, who projected the narrow gauge Chateauguay Railroad, which was first built from Plattsburg to Dannemora in 1879, and completed by successive stages to Saranac Lake and Lake Placid in 1889 and 1890; "Adirondack" Murray, whose ephemeral but flashing pen pictures of the "North Woods" first drew public attention to them and gave him his nom-de-plume twenty-five years ago, and lastly, Dr. Seward Webb, who finally carried out his long cherished plan of building a trunk line through the heart of the wilderness from Utica to Montreal in 1891. I should perhaps add to this list the names of Drs. Loomis, Trudeau, and others who first directed attention to the Adirondacks as a resort for consumptives and a natural sanitarium, but I find that the hotel proprietors and many others interested are not anxious to have this feature of the mountains emphasized. With the building of the railroads and the consequent bringing of the mountains within easy access of the cities, and especially New York, the old boarding houses and small hotels scattered here and there, and which are comparatively few in number, have been enlarged or have given place to fine and expensive structures. Paul Smith's has grown upon and around itself from a little frame house accommodating eight people to an immense building, with spacious piazzas and hallways, which can hold nearly a thousand guests, and is a city in itself. Then comes the Ampersand, a handsome house on Saranac Lake; and then in succession the fine and well situated Wawbeek Lodge, at the foot of the Upper Saranac; Saranac Inn, at the head of the same lake, and the cluster of large hotels at Lake Placid, beginning with the White Face Inn and including the Ruisseaumont, Lake Placid, Grand View and Stevens houses. Scattered here and there throughout the mountains there are also fine or comfortable houses, such as those in the Keene Valley, St. Hubert's Inn and the Chateauguay, Chazy Lake and Loon Lake houses on the lakes of those names.

I was most impressed, in my trip through the Adirondacks, with the beauty of the forest in and around Childwold, the solitude of Long Lake and the Fulton Chain, the view from Lake Placid and over Mirror Lake, with the peaks of Mount Marcy and its fellows in the south, with the vistas of woods, lakes and streams along the line of the Webb railroad, and particularly with the superb prospects from the Chateauguay road as it climbs Lyon Mountain, which recalls the scenery of the Blue Ridge. I found much of interest and information in the talk of the guides of the region. The older guides are as a rule pessimistic as to the future of the woods, and groan over the change from the old sporting days. They do not care for the tourist business and the hanging round the hotels, even if they make $3 and $4 a day, or double the wages of a decade ago. The younger guides who knew not the early days, and did not fish and hunt with W. C. Prime, Kit Clark and their fellows, find the present conditions advantageous, and welcome the increasing bands of tourists. But they spend less and less time in hunting and fishing with their patrons and more in rowing the latter tamely around the lakes, perhaps accompanying them on a day or two's journey through the lakes and over the "carries." In the more remote districts there is still fishing to be had, and the deer are still fairly abundant. I was told, however, of many instances of flagrant violations of the game laws, and it is evident that the woods are not adequately supplied with or patrolled by guardians. Hounding and "jacking" for deer, while forbidden, are still practiced, and the remark of a guide on Long Lake, when questioned as to some infraction of the game laws, that "there never was any law on Long Lake," emphasizes the situation.

But while the Adirondacks are changed and are changing they will remain for many years to come the great natural mountain and lake resort for the larger cities of the Eastern seaboard. They are to our generation what the Catskills were to our grandfathers and even to our fathers in youth, and if your true sportsman must now seek the far Canadian woods for big fish and big game, he cannot take with him or away the life-giving air and the exquisite scenery of the Adirondack hills and lakes. He loses, but his loss is the gain of thousands and thousands of less fortunate beings, to whom the woods and hills bring relief from the heat of summer, renewed life and strength, and a keen realization of the old saying that "man made cities, but God made the country."

Lakes George and Champlain, which are always associated with the Adirondacks in the public mind, have undergone comparatively few changes during the past twenty years, and so do not require more than a passing allusion in this sketch. Lake George is still the same beautiful sheet of water, set in a frame of forest-clothed mountains, as when the first French explorer gave to it from its azure depths the name of Saint Sacrament. There are more villas on its shores, more boats upon its waters, a new hotel here and there, or an old one restored, but summer after summer the lake calls to its lovers to return to its beauties in such a way that they must respond. Lake Champlain now has the fine Bluff Point Hotel just below Plattsburg on its western bank to add to its attractions, and the tourist, even if he or she is familiar with both lakes, should not fail to again traverse them. Their beauties never fade, and whether one sees Lake Champlain from the slower and comfortable steamboat, or the fine, rushing trains of the Delaware & Hudson, which traverse its entire western shore, or steams through Lake George, one cannot tire of the infinite variety of water and landscape which both lakes afford. September is the month of all months to rightly see and appreciate the air and scenery of our Northern lakes and mountains. Now come days filled with sunlight which does not oppress, cooled as it is by the home wind of the northwest, and now succeed nights whose frosty airs give to the woods and lakes a clearness of outline and to the skies a splendor that summer never brings.—Town Topics.

PRIZES FOR AMATEUR PHOTOGRAPHS.

THE FOREST AND STREAM offers prizes for meritorious work with the camera, under conditions which follow:

The prizes will be divided into three series: (1) for live wild game; (2) for game in parks; (3) for other subjects relating to shooting and fishing.

(1) For live game photographs three prizes are offered, the first of $50, the second of $25, and the third of $10.

(2) For live game in parks, for the best picture, a prize of $10.

(3) For the best pictures relating to FOREST AND STREAM'S field—shooting and fishing, the camp, campers and camp life, sportsman travel by land and water, incidents of field and stream—a first prize of $20, a second of $15, a third of $10, and for fourth place two prizes of $5 each.

There is no restriction as to the time nor as to where the pictures have been made or may be made.

Pictures will be received up to Dec. 31 this year.

All work must be original; that is to say, it must not have been submitted to any other competition or have been published.

There are no restrictions as to the make or style of camera, nor as to size of plate.

A competitor need not be a subscriber to the FOREST AND STREAM.

All work must be that of amateurs.

The photographs will be submitted to a committee, who, in making their award, will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities and other things being equal, the unique and difficult nature of the subject.

Photographs should be marked for identification with initials or a pseudonym only, and with each photograph should be given, answering to the initials, the name of sender, title of view, locality, date and names of camera, and plate or film.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

FIELD TRIALS.

Nov. 28.—Amoret, Mo.—Missouri Field Trials Association's second annual trials. L. S. Eddins, Sec'y.

Dec. 5.—Continental Field Trial Club's trials, Lexington, N. C. W. B. Meares, Sec'y.

1899.

Jan. 16.—West Point, Miss.—U. S. F. T. C. winter trials. W. B. Stafford, Sec'y.

Feb. 6.—Madison, Ala.—Alabama Field Trial Club's third annual trials. T. H. Spencer, Sec'y.

E. F. T. C. Trials.

THE trials began with the Members' Stake, which in the quality of the competition rated well with that of the All-Age Stake, and much better than that of the Derby.

The changed character of the grounds, brought about by large areas being sowed with wheat, contracted the useful hunting area greatly in places, so much so that consecutive ranging was out of the question. The dog with good judgment had an excellent opportunity to display it. The dog which ranged wide, regardless of whether the ground was bare or otherwise, was handicapped from the outset.

During the first few days birds were difficult to find, but after the rain storm of Wednesday the conditions for good work improved greatly.

The judges worked diligently, and handled the competition skillfully in all its details. It was done in a model way in many respects. The handlers kept well together as a rule, and there was no scrambling as in the old days.

Messrs. Hitchcock, Lorillard, Duryea and others, who were expected, did not appear, much to the regret of the gathering. It is to be hoped that another year will find them in attendance as of old.

Taken all in all, there was a falling off in quality of competition as compared with that of some of the previous years, though there were parts of the work that were commendably good.

The loss of time occasioned by rainy weather prolonged the trials. Had the weather permitted, the trials would have been finished by Saturday afternoon. The Subscription Stake was postponed till Monday of this week, owing to the loss of time above mentioned.

The Derby.

THE Derby had sixteen starters, a goodly number, as members go in that stake of late years.

The quality of the work was decidedly inferior; in fact, much of it was very weak. The competition, on that account, was spiritless at times. No doubt but what the character of the grounds accentuated the poorness of the competition, but be the grounds as they may be, there were certain unmistakable signs of inferior capabilities.

The winner of first, Count Danstone, was easily the best dog in the stake. He was wiser in beating out his ground, and his work on birds had greater accuracy and finish than had that of his competitors. His performance as a whole was commendably well sustained throughout his two heats. While his work was not brilliant, it was well done, and easily surpassed that of all the others.

Halbard, winner of second, made a commonplace competitor, and was in about the same class with Colonel R. and Bob, all of which, doing some good work on birds, with a lot of faulty work of different kinds mixed in with the good. Halbard's first heat was decidedly poor. His second heat was better, but of no special excellence either in the competition or as individual field work.

Bob ran a fairly good first heat. His second was weak in places. He showed good ability on birds, and was quite obedient. In speed, range and ability on birds, he classed much higher, in my opinion, than did Halbard.

Nightingale showed a great deal of natural ability. She is sharp and quick in her point work, but is lacking in experience and discipline. This is in a measure true of Matt of Cotton Grove.

The judges were Messrs. Theodore Sturgis, of New York.; S. C. Bradley, the club secretary, of Greenfield Hill, Conn., and Mr. A. Merriman, of Memphis, Tenn. They were painstaking, and handled the competition quietly, without fussiness, and with skill.

The handling was free from scrambling, and it was rarely that the handlers were separated from each other. Fairness and courtesy were observed throughout. After the winners were announced, Judge Bradley, who has had great experience in such matters, complimented the handlers on their excellent handling, and declared it the best of any professional stake he had ever seen.

Monday, Nov. 14.

The weather was most unpromising. A heavy rain storm set in Saturday night, and continued steadily till far into Sunday night. Monday morning was cloudy, foggy, damp and uncomfortable. Roads and fields were muddy, making bad footing for handlers, dogs and horses. In the forenoon a thin sprinkling of rain fell a few times. In the afternoon the weather cleared up. A cool, stiff wind set in. Birds were not easy to find. The work of the day averaged very mediocre in quality. There were a few patches of good work, though nothing particularly brilliant. It was good by contrast. The available grounds were hard to work, owing to their irregular shape and insufficient areas, which no doubt added somewhat to the poor showing.

The order of running was as follows:

Geo. E. Gray (agt.), b., w. and t. setter dog Count Danstone (Count Gladstone IV.—Dan's Lady), agent, handler, with Pierre Lorillard, Jr.'s, b., w. and t. setter dog Jean de Reszke (Gleam's Pink—Dell F.), C. Tucker, handler.

P. Lorillard, Jr.'s, b., w. and t. setter dog Pink's Boy (Gleam's Pink—Belle of Pawling), C. Tucker, handler, with J. B. Bisbee's liv. and w. pointer bitch Jubilee Blythe (Rectoné—Dinah), W. H. Hammond, handler.

Charlottesville Field Trial Kennels' liv. and w. pointer bitch Nana (Rip Rap—Toxic), C. E. Buckle, handler, with D. E. Rose (agt.), b., w. and t. setter dog Dewey (Tony Boy—Nellie C.), agent, handler.

Mrs. Royal Phelps Carroll's b., w. and t. setter dog Tobard (Count Gladstone IV.—Iza), John White, handler, with Charlottesville Field Trial Kennels' liv. and w. pointer bitch Ranée (Rip Rap—Toxic), C. E. Buckle, handler.

H. R. Edwards' b., w. and t. setter dog Colonel R. (Harwick—Trap, Jr.), Geo. E. Gray, handler, with Mrs. Royal Phelps Carroll's b., w. and t. setter dog Halbard (Count Gladstone IV.—Iza), John White, handler.

Miss C. Parson's b., w. and t. setter dog Berber (Antonio—Laske), John White, handler, with E. Hart Height's b., w. and t. setter dog Bob (—— — ——), owner, handler.

D. E. Rose (agt.), b., w. and t. setter dog Lena B. (Tony Boy—Nellie C.), agent, handler, with Fox & Blyth's b., w. and t. setter bitch Nightingale (Antonio—Reta H.), R. V. Fox, handler.

Victor Humphrey's b. and w. pointer bitch Matt of Cotton Grove (Rip Rap—Croxie Kent), owner, handler, with H. H. Sheperd's b. and w. setter dog Jersey King (Rod's Boy—Cincinnatus Girl), Dr. Walter L. Steele, handler.

This stake was for all setter and pointer puppies whelped on or after Jan. 1, 1897. The prizes were: First, $300; second, $200; third, $100. First forfeit, $10; second forfeit, $10; $10 additional to start.

A start was made some distance beyond Gibson's well, and during the day the ground was well worked out toward Conover, near which place the day's competition ended. The stormy weather had affected the birds so that they were rather wild and difficult to work upon.

First Round.

Count Danstone and Jean de Reszke were cast off at 9:15. Jean flushed a bevy near the edge of a cotton field. On the scattered birds in woods, each made two points, and drew to points on the footscent. Both were steady to shot and wing. Sent on. Count pointed a bevy which was on the other side of a fence from him and which flushed wild. The birds were followed, but aside from some roading nothing was done on them. Sent on. After searching awhile, Count pointed another bevy nicely. The heat ended at 10:25. Count had much the advantage in every respect. While his range was a bit more than medium, he hunted diligently, and showed good ability in his bird work.

Pink's Boy and Jubilee Blythe began at 10:48. Jubilee pointed hesitatingly at the edge of woods and moved on. The birds at the same time flushed in a run close by. Boy pointed a bevy in briers, and soon afterward secured two points on singles. Up at 11:52. Boy's performance on birds was creditably good. His range was moderately wide. Jubilee's ranging was poor, and she was lacking in her finding and pointing.

Nana and Dewey started at 12:15. Dewey flushed a single bird in open weeds. Next he made a point, to which nothing was found. His range was moderate. Nana was fast, but apparently was not seeking birds, as she ran with little plan as to beating out her ground, and was not using her nose. The heat ended at 1:12.

Tobard and Ranée began their heat at 2. In corn, in a bottom, Buckle called point and immediately afterward a bevy was seen to flush near by him. Some cover intervened, shutting off the view somewhat, but everything indicated that Ranée had the point. The birds were followed. Each secured a point and was steady to shot. Sent on. Each made a flush in open weeds. The birds were marked down again in weeds, close by a growth of willows. Tobard going across wind flushed a single, and stopped in the middle of the scattered birds without showing any sign of stiffening on point. The birds flushed wild in ones and twos around him, and he remained steady. Up at 2:30. Both were lacking in judgment in beating out their ground and in work on birds.

Colonel R. and Halbard were cast off at 2:34. Colonel devoted the first half of the heat to vigorously amusing himself by flushing and chasing sparrows. In the latter part he settled down to work, and performed quite creditably. Halbard made a poor competition. Both made game, roading and pointing. Halbard flushed a bevy. Sent on. Halbard roaded and pointed firmly in open and in woods, but nothing was found. Soon afterward, in other woods, Colonel flushed an outlying single of a bevy. He next made two good points on scattered birds, and was steady to shot. Up at 3:32. Colonel ranged vigorously and fairly wide, but he did not use good judgment in beating out his ground.

Berber and Bob began at 3:40. Berber stopped to a flush in open weeds. He next made three flushes on singles. Bob next pointed a bevy which was on the opposite side of a fence from him in woods. He moved on to locate better. Berber crossed the fence and pointed the bevy, and Bob backed well. Both were steady to shot and wing. On the scattered birds in woods Bob pointed a single. Both pointed and roaded on the footscent of birds which had flushed. A few yards outside the woods, in a bottom, Bob pointed on a single a moment before it flushed, and later in woods made a good point on a single. Up at 4:28. Bob was promptly obedient, was well in hand at all times, showing good training and good purpose. His point work also was commendably good.

Lena B. and Nightingale commenced at 4:31. Nightingale pointed a bevy and then broke in and flushed it. In woods on the scattered birds Nightingale pointed a single, but was stanch under compulsion. Lena made a point on a single, and afterward flushed one. Next she pointed, and nothing was found. Up at 5:01. Nightingale was a merry worker, and sharp in pointing and locating, but was not stanch. Lena was a narrow ranger.

Matt of Cotton Grove and Jersey King were started at 5:11. Matt going down wind flushed an outlying single, then stopped and the rest of the bevy flushed wild. They were marked down in the open a few yards away, and the dogs were worked to them. King flushed and then dropped to order, and the rest were flushed around him. Sent on, King pointed a bevy in open weeds, and Matt backed promptly and prettily. On the scattered birds in weeds, Matt pointed and King backed. The former moved on to locate better and the birds flushed wild. Up at 5:40. King was slow, ranged narrow, and his point work was ordinary. Matt was quick and sharp in her point work, but she needs more experience. She was speedy and had middling good range.

This ended the day's work.

Tuesday, Nov. 15.

The weather was delightfully pleasant. A cool, frosty morning softened into a warm, pleasant day. The sun shone clear and bright. Birds were found quite plentiful at times; at others they were apparently scarce and difficult to find. The start was made near Conover. The work as a whole was of a very commonplace kind, both in the finish of the Derby and the heats of the All-Age Stake.

Second Round.

Six dogs were retained in the competition, with two more, Lena B. and Nightingale, to be given further trial.

Lena B. and Nightingale were cast off at 9:18. The handlers flushed a bevy. On marked birds Lena flushed a single, held her point, and a remaining bird was flushed to it. Each flushed a bevy. Lena trailed a great deal. She followed Nightingale's lead, consequently her work was not independent. The heat was a poor one. Up at 9:50.

Colonel R. and Tobard were cast off at 10:00. Tobard made a point, to which nothing was found. Colonel made game in a cotton field. Gray was attempting to get him in hand when a bevy flushed wild close by. On the scattered birds in sedge Colonel flushed twice. The dogs missed several opportunities on birds which were afterward flushed by the handlers. The bird work at this juncture was poor. Colonel pointed some scattered birds, and was steady to shot. Colonel flushed a single and was a bit unsteady. On a side hill in sedge Tobard pointed; Colonel backed; nothing found. Tobard again made a similar point. Colonel was much the faster and better ranger, but he was hard to handle. Both made an inferior competition in respect to bird work. Up at 10:26.

Pink's Boy and Bob ran a long heat, commencing at 10:36 and ending at 11:50. Bob pointed in a cornfield and Pink backed; nothing was found to the point, though it was in a most promising nook for birds. Bob made game and pointed a bevy in sedge grass, after a good effort at roading and locating. Pink's Boy pointed; nothing was found. Bob's bevy was marked down and followed. Bob pointed a single bird nicely and Pink backed well. The dogs and handlers were working close on the bevy when it flushed in sedge close by a fence. Pink made two good points on singles and was steady to shot. Both worked diligently. Their work on birds was mixed in quality; good and poor. They ranged fairly well. Up at 11:50.

The running was suspended while the party took lunch.

Count Danstone and Halbard began at 12:53. Count pointed nicely a bevy in weeds and briers, and Halbard backed well. Both were steady to shot and wing. The birds were followed into pine woods. Halbard made three points and flushed twice on the scattered birds. He was lucky in having the opportunity alone, as, at the same time, Count pointed in the open, probably where the flock of crows had been feeding. Coming into the woods, where Halbard was working on the singles, Colonel made a good point on some scattered birds. This ended the work in these woods. Colonel next pointed a bevy beside a ditch and was backed. Halbard next pointed a bevy in the open beside a ditch, stopping a moment uncertainly before the bevy flushed. The find was not from good seeking, as Halbard was not going wide in his casts. Count was the better worker in every respect. Up at 1:27.

This ended the Derby. The judges then announced the winners as follows: First, Count Danstone; second, Halbard; third, Bob.

The All-Age Stake.

There were sixteen starters in the All-Age Stake, many of which were already known to fame. Immediately after the conclusion of the Derby this stake was begun. The work during the remainder of Tuesday afternoon was of a very low grade, excepting that of Young Jingo, which would rate as fairly good.

The dogs ran in the following order:

Robt. J. Emmett's b. and w. pointer bitch Ney (—— — ——), E. Hart Height, handler, with J. P. Green's liv. and w. pointer dog Young Jingo (Jingo—Pearl's Dot), agent, handler.

Geo. Crocker's b., w. and t. setter dog Sam T. (Luke Roy—Betty B.), Victor Humphrey, handler, with J. B. Bisbee's b. and w. pointer dog Ripstone (Rip Rap—Pearl's Dot), W. H. Hammond, handler.

D. E. Rose (agt.), liv. and w. pointer dog Chisholm (—— — ——), agent, handler, with Charles Sheldon's setter dog Turnavo (Antonio—Laska), V. Humphrey, handler.

Geo. Crocker's b. and w. pointer dog Tick Boy (King of Kent—Bloom), V. Humphrey, handler, with Del Monte Kennels' o. and w. setter bitch Minnie's Girl (Antonio—Minnie T.), Geo. E. Gray, handler.

Herbert Parson's setter bitch Larisso (Antonio—Laska), V. Humphrey, handler, with Deveraux & Edward's b., w. and t. setter dog Uncle B. (Harwick—Dan's Lady), George E. Gray, handler.

Charlottesville Field Trial Kennels' b., w. and t. setter bitch Pin Money (Count Gladstone IV.—Daisy Croft), C. E. Buckle, handler, with W. W. Titus' b., w. and t. setter dog Joe Cummings (Antonio—Piccaola), Victor Humphrey, handler.

D. E. Rose (agt.), b., w. and t. setter dog Sport McAllister (Tony Boy—Blue), agent, handler, with Victor Humphrey's setter dog Cotton Grove Dick (Dick—Donna), owner, handler.

D. E. Rose (agt.), b., w. and t. setter bitch Pearl R. (Sam Gross—Donnoshey), agent, handler, with P. Lorillard, Jr.'s, b., w. and t. setter dog Why Not (Eugene T.—Miss Ruby), C. Tucker, handler.

Joe Cummings, winner of first, made a good class competition. His work was sound in all the details of

ranging, finding, pointing and work to the gun. He displayed "bird sense" of a superior order. His speed was well sustained throughout. He is owned by the celebrated field trial and field handler Mr. W. W. Titus, of West Point, Miss.

Pin Money, winner of second, was at one time a promising candidate for first honors, but owing to some errors in her heat with Young Jingo her chances for first honors vanished. She, however, was a good second. She ranges fast and wide, is a good finder, points her birds accurately, and shows sterling merit as a field dog.

Uncle B. is a good worker, but his class would be about that of the average good shooting dog. His range is of the common kind. He is uniformly industrious.

Young Jingo ran a good race as a whole, and in my opinion was far superior in class to Uncle B.

The judges were Mr. R. V. Fox, Harrisburg, Pa., and Messrs. Merriman and Sturgis.

This stake as a whole was weak in competition in the greater part of it.

The conditions were as follows: Open to all setters and pointers that have never won a first prize in an all-age open stake at the Continental or U. S. Field Trials. First prize, $300; second, $200; third, $100. Forfeit, $10; $20 additional to start.

Edm. H. Osthaus, Toledo, O.; M. Buckley, Southport, Conn.; Geo. F. Nesbitt, Wilkes-Barre, Pa.; S. C. Bradley and his daughter, Miss Elizabeth B. Bradley, Greenfield Hill, Conn.; Dr. G. G. Davis, Philadelphia; G. G. Williamson, Muncie, Ind.; H. H. Shepard, New Berlin, N. Y.; L. E. Leay, Salisbury, N. C.; Julian Corbett and Miss E. Corbett, Charlottesville, Va., and Mr. Whitehead, of New York; the Messrs. Arend and others followed the running of the stake.

First Round.

Ney and Young Jingo were the first to begin the competition, which commenced at 1:48. Jingo pointed a bevy by a fence at the highway, a most unpromising place for a bevy; Ney backed. The birds were followed. Ney roaded to a flush on a single, and about 20yds. further pointed a single. Each pointed and roaded in the open near thick cover, in which a bevy was heard to flush. The birds were followed. Jingo roaded a long way in woods, and made a good point on scattered birds. At the same time, Ney roaded in the opposite direction, but failed to locate. Up at 2:30. Jingo was the better in every way.

Sam T. and Ripstone began at 2:40 and ran thirty-eight minutes. Sam pointed a bevy in open sedge; Ripstone coming in across the point pointed the same bevy. Sam next pointed foot scent, and Ripstone neglected to back. Ripstone pointed a single. At the same time Sam pointed; nothing was found. He afterward made a similar point in a narrow strip of sedge. He would draw on apparent expectations of scent. Sam was the faster and wider ranger. The heat was a poor one.

Chisholm and Turnavo began at 3:30. Down forty-three minutes. The work on birds was much alike, each flushing awkwardly on bevies and singles in open and cover. It was a very poor heat in every respect, marked with errors and lost opportunities.

Tick's Boy and Minnie's Girl began at 4:23 and ran till 5:27. A single was seen to flush where one of the dogs was ahead. As the horsemen rode up, the rest of the bevy flushed. Minnie was lost for some minutes. She pointed and Tick backed; nothing found. Minnie pointed later and again nothing was found. Tick was lost, and the dogs were thereafter separated till the heat ended. Minnie in the meantime pointed a bevy. The heat was a poor one.

Wednesday and Thursday, Nov. 16 and 17.

Heavy rain fell on Tuesday night, and steadily till late in the afternoon on Wednesday, therefore the competition was necessarily postponed.

Thursday morning was foggy, with signs of more rain. A late start was made in consequence. Fields and roads were very muddy. The sky was heavily overcast, but birds were found in good numbers, and the work was the best of any displayed in the open stakes, though there were only small parts of it that rated as really good. Miss E. Corbett, a relative of Mr. C. E. Buckle, was an interested spectator of the competition on this day. The first round was completed late in the afternoon. Thereafter two braces of the second round were run.

Larisso and Uncle B. were cast off at 11:34, near Gibson's well. Larisso pointed a bevy in weeds, and was well backed by Uncle. Both were steady to shot. On the scattered birds in pine woods each made a point on singles. The remaining scattered birds flushed wild, the ground being devoid of cover. After ranging over open ground seeking bevies, Uncle pointed in an open weed field; Larisso coming in, pointed about 40yds. behind Uncle on foot scent. Both roaded, Uncle on the true trail, Larisso casting about and not following the scent with precision. Uncle at length made a point on the bevy, and Larisso, crossing in ahead, pointed the same bevy about 30yds. ahead of Uncle. The credit of the work was Uncle's. Up at 12:09. Uncle made two points on singles. Both ranged middling well, though Uncle's range was rather narrow at times. Each was industrious.

Pin Money and Joe Cummings were cast off at 12:21. Soon after starting Pin Money was lost. When found she was on a point on a bevy in pine woods. Joe was casting wide. On a side hill quite a distance away he pointed a bevy and held it stanchly while his handler struggled across a creek, through bushes and up the hill to him. He behaved well to wing and shot. Sent on. Pin Money pointed a bevy in a narrow strip of cover in open ground and held her point well. Some of the birds passed close over her head, and she made a single spring at them, but steadied instantly to caution. The dogs were brought together, and were started again in search of bevies. On a side hill in weeds Joe pointed a bevy and was well backed. On the scattered birds in open weeds Pin made a good point, and she too was nicely backed. Joe flushed a single excusably near a ditch by the edge of a cornfield. Up at 1:04. Both ranged wide and fast, and their finding and pointing was done with good judgment and finish.

Sport McAllister and Cotton Grove Dick began at 1:12. The heat was very much disorganized by first one then the other dog becoming lost. Each dog in his way was hard to handle, and the courses of the dogs were much as they pleased, regardless of handlers. Sport was lost soon after starting. Dick flushed a bevy. Sport next pointed a single in woods in sedge. In the meantime Dick was lost. Up at 1:51. The heat was a very poor one in every way. Each dog had good speed and wide range, but was extremely deficient in working to the gun. The party went to lunch, after which the heat was resumed at 2:35. A bevy was flushed near Dick, and on the scattered birds each pointed. Next Sport pointed a single in open weeds; Dick backed, then moved and flushed the bird. There was an abundance of birds. Each roaded and pointed, Dick making a point on one. The work done was far short of the opportunities. Up at 2:53. The continuation of the heat was very weak, as was the fore part of it, in respect to finding, locating, pointing and pleasant work to the gun. Each dog was hard to handle.

Pearl R. and Why Not were started at 2:59. Why Not pointed a bevy in an open weed field, and Pearl to order backed for a moment, then broke her back. A single bird flushed near by. Pearl in the edge of a thicket pointed one of the scattered birds, flushed it and was unsteady. Why Not pointed a bevy at the edge of a wheat field. Pearl pointed a single, then flushed it. Next Pearl in weeds pointed a single and Why Not backed. Sent on. Both dogs were roaming about riotously on the foot scent, and were doing very inferior work, considering the abundance of opportunities. Pearl flushed a single, with Why Not close by. Why Not pointed in cane, moved on, and both roaded a long distance in corn on foot scent of birds, presumably. Pearl flushed a single. Up at 3:37. The heat was a very poor one.

Second Round.

Ten were kept in, a very liberal number considering the very inferior competition made by several of them.

Young Jingo and Tick's Boy were cast off at 4:10. Tick took a number of wide casts, but marred his range by returning to his handler and requiring much urging to start him out again. In weeds, on a side hill across the valley, some 300yds. away, he pointed. His handler failed to flush and Tick abandoned the point. His handler worked him on the scent again, and at length he pointed the bevy. It was a very inferior piece of locating. Sent on in search of another bevy, Tick pointed twice in different places; nothing found. Jingo wasted some time and points on larks in an open field. They ranged some minutes, when in an open weed field they were out of sight for a few moments. When next seen the position would indicate that Tick was pointing the bevy and Jingo was backing; circumstances by no means conclusive as to the manner in which the work was done. Both were steady to wing and shot. In woods on the scattered birds, Jingo pointed a single. Tick pointed twice and nothing was found. Up at 4:56. Both had speed, and went quite wide enough at times, and both showed poor judgment most of the time in ranging.

Uncle B. and Pin Money began at 5:05. They ran a very good heat. Pin pointed nicely a bevy in an open weed field, and Uncle backed stanchly some 50yds. behind her. On the scattered birds in woods Pin secured two good points on singles. Uncle flushed a single excusably. The dogs were separated. Pin pointed; nothing found. Next Uncle pointed a bevy. A few moments before the heat ended, each at the same time pointed singles. Both ranged well, and their pointing and finding were pleasingly good. Up at 5:25.

The weather was very thick in the last hour of the running, with signs of more rain. The scent was excellent, and the conditions were seemingly the best of any existing during the previous days of the trials. This heat ended the day's competition.

Friday and Saturday, Nov. 18 and 19.

Friday was a day of almost steady rain, therefore no attempt was made to start the competition.

Saturday was clear, bright and favorable for good work. The mud dried up rapidly. The fields were heavy, but still passably good for traveling over. The whole field trial contingent were out to see the work. Birds were found in sufficient numbers. The general class of work was fairly good, though the best of it was not at all brilliant. A start was made near Conover. Lunch was eaten at Yount's, and the trials ordered not far from Sherrill's Ford.

Minnie's Girl and Sport McAllister began at 9:37. On some scattered birds of a marked bevy Minnie made a flush. Sport dropped to a point, and some birds were flushed to it. Minnie was self-willed and ranged without much regard to her handler. Sent on. Sport dropped to a point in sedge; nothing found. Up at 10:28. Both dogs were very disobedient, and beat out the ground without much consideration of the gun. Minnie was the worse offender of the two. Each was out of bounds part of the time.

Joe Cummings and Why Not were started at 10:32. Joe pointed a bevy in sedge in pines, and was backed by Why Not. The birds were followed and Why Not first flushed a single excusably; next she pointed some running birds well. Returning to where the bevy was first flushed, Joe nicely pointed some remaining birds. Sent on. After ranging a while, Joe pointed some marked birds in pines, and was backed. The heat ended at 11:08. Joe was the better in every respect. He displayed sound judgment and practical skill in his work throughout.

Cotton Grove Dick and Pearl R. ran a very commonplace heat. They started at 11:17, and ran forty-five minutes. At the edge of pine woods Dick pointed a single and Pearl backed. Pearl pointed a bevy on a side hill in sedge. Sent on. Dick found and pointed a bevy on a side hill, and Pearl backed indifferently to order. On the scattered birds in pines, Pearl made five good single-bird points, by far the best work done by her in the trials. Up at 12:02. The range and general character of the work was lacking in finish, excepting Pearl's work on the scattered birds. In many respects they were inefficient.

Third Round.

Six dogs were selected to continue in the third round. They ran as follows:

Young Jingo and Pin Money were cast off at 1:28, after lunch at Yount's. Pin Money pointed in an orchard and was handsomely backed by Jingo. Nothing found. Sent on and Pin money soon was lost. When found she was within bounds on a point on a couple of birds in woods. Jingo, after the dogs were brought together, pointed a single bird in open weeds. Sent on. The horsemen flushed a bevy, and the dogs were worked around to the marked birds. Jingo pointed, apparently on the foot scent. Soon afterward Pin pointed a bevy in sedge in pine woods. Next she made a flush on scattered birds. Up at 2:45. Both dogs were fast rangers, but they were hard to handle, and the heat was not a good one in matters of finish. Pin made a few points which proved barren. Both dogs in a general way, however, showed that they had good capabilities.

Tick's Boy and Uncle B. were started at 2:57. Tick pointed a bevy in a cornfield, moved on and a single flushed; then he stopped on point and the rest of the bevy flushed wild. Working on the scattered birds, Tick pointed a single. Next Uncle pointed and Tick refused to back; nothing found. The dogs became separated. Uncle pointed a bevy. The birds were marked down in woods, and the dogs were brought together to work on them. Both at the same time made two points on the same birds, which flushed wild. Next, each made separate single-bird points. Next, ranging in search of bevies, Uncle pointed a bevy in corn; Tick backed, and broke his back as the handlers approached him. Uncle held his point on the bevy and it flushed as the handlers advanced near to the dogs. Sent on. Working on the scattered birds in sedge, Uncle pointed; his handler failed to flush; Tick moved on and flushed the bird. Uncle next made two excusable flushes across wind. Tick next was lost for a few moments. Uncle made a sloppy point on a single. Up at 3:56. Uncle was much the better worker. He showed more judgment in ranging and finding, was stancher and more finished in his steady work to the gun, though as to class he would rate as a fairly good shooting dog.

Joe Cummings and Pearl R. started a very one-sided heat at 4:01. Joe, standing on a bare wheatfield, pointed a bevy in bushes. Pearl passed close by him and refused to back, but at length stopped to order. Next, while the dogs were again ranging, the judges rode up a bevy. The birds were marked down in the open. Joe soon pointed them in sedge; Pearl made a poor back. She was a bit unsteady to shot. Sent on. Joe pointed a bevy in open weeds; Pearl backed very shakily for a few moments, when her handler made her lie down. Joe moved on to locate. Pearl cut across a few yards and made a point. Again moving on to locate, Joe pointed the bevy. Both were steady to shot. Joe was the better in every respect. The heat and stake ended at 4:25.

The judges soon announced the winners. First, Joe Cummings; second, Pin Money; third, Uncle B.

NEWTON, N. C., Nov. 21.—There are six starters in the Subscription Stake, namely, Joe Cummings, P. Lorillard, Jr.'s, Roland, Tick's Boy, Pin Money, Sam T. and Young Jingo. The morning is clear, frosty and favorable for good work. The start will be at Gibson's well. Each hunt of the first series is two hours in length.

Newton, N. C., Nov. 21.—(Special to FOREST AND STREAM.)—The class work in the Subscription Stake was commonplace. There were six starters. Winners, first, Pin Money; second, Young Jingo; third, Sam T. The competition, aside from that for first and second, was very weak. The weather is pleasant and birds are in ample numbers. Messrs. Merriman and Sturgis judged. Only one heat was run after the first series, that of Pin Money and Young Jingo. B. WATERS.

International Field Trials.

MITCHELL'S BAY, Ont., Nov. 16.—The eighth annual trials of the International Field Trials Club, of Chatham, began at this point yesterday morning, the party putting up, as before, at Mr. C. W. Raymond's comfortable sporting hostlery, which is much patronized by duck shooters, bass fishers, and quail shooters. Here all were well taken care of, and the party was conveniently located near the working grounds, the traveling being all on foot, as is always the case in these trials—a commendable way to work, albeit a trifle hard on the judges until they have seasoned up a bit, as the Canadians are all walkers from Walkerville, Ont. The weather was grand the first two days, the storm of last week having quite spent its resources. It left the eighteen miles of road from Chatham to Mitchell's Bay anything but a dream of delight. The party left Chatham early in the morning, but didn't reach the Bay until afternoon, so that only four braces went down yesterday. The walking was not bad, and the birds, while not so numerous as last year, were abundant enough to satisfy requirements.

The judging was done, and very acceptably done, by Messrs. Stoddard, of Thomasville, Ga., U. S. A.; and A. Herrington, of Leamington, Ont. They took plenty of pains with the work, the first two days showing heats nearly an hour in average. From what was seen to-day, I rather fancied Tickler over Ramona, but this judgment is formed without having seen the work of the first four braces, during which work Tickler came down for a flush and was criticised for not quartering well, having the fault of working the same ground twice. He showed to-day a very useful dog, with a great eye and nose to business, but the judges saw all his work, and no doubt placed him safely on the total.

Among others, a few of those present at the trials were Thos. Johnson, Winnipeg, Man.; T. G. Davey, London, Ont.; J. B. Dale, Petrolia, Ont.; H. Milliken, Leamington; W. B and A Wells, Chatham; Jas. McGregor, Chatham; Chas. Allen, Bothwell; J. W. G. Winnett, London; Marshall Graydon, London; E. E. Bliss and John Baird, Saginaw, Mich.; Geo. Dale, Wyoming; Dr. O. Totten, Forest; J. W. Du Long, Thamesville; J. Trudell, Thamesville; A. Herrington, Leamington; Chas. Mills, of Mitchell's Bay.

Mr. Johnson came all the way from Winnipeg to visit this old friendly meeting ground, and he brought along a pointer and a setter, but started neither, though both were entered. His dogs had had no training on quail, as they were broken in a chicken country. Tummas blinked the walking on the second day, and went over

to Big Point Club as guest of Mr. Wells, and put in his time shooting ducks.

Nothing startling came out in the Derby, though the average was good, and with but few exceptions all the puppies showed training and were obedient beyond an occasional puppyish break in after flying birds. Mr. Wells, or rather the Wells brothers, Wm. B. and Alphonse, had four entries in the Derby, all of the same litter (by Selkirk Dan—Selkirk Tessa). These were a very tiny lot, Selkirk Stella not much over the size of an old-fashioned beagle, and weighing, at a guess, less than 25lbs.—so light that her handler could tuck her under his arm and carry her as he liked. All the four were a nervous, active lot, all were good for an hour without tagging, and all showed bird work. Mr. A. Wells handled these all. He did this very nicely—indeed, all the handling was pleasant and free from jockeying. Certainly Mr. Wells might feel pleased, for he took first and second with Selkirk Bretta and Selkirk Ramona. Bretta is the handsomest of the four, and very clever. They are 13 months puppies. Tickler, third, I have mentioned above. He is a much larger type than the two above, with coarser head, not so much for bench as for field work. He created a very good impression and was a popular favorite. He will make a good bird dog, which is very good praise. London Boy, Mr. Stegman's entry, handled by Charlie Allen, shows a very good notion of the game. He can nail a single, and he is very much steadier to wing than the average Derby entry.

The Derby Draw.

The dogs were drawn for the Derby in the following order and description:

W. B. Wells' blue belton setter bitch Selkirk Bretta (Selkirk Dan—Selkirk Tessa) with H. Milliken's l. and w. pointer bitch Cousin Peggy (Uncle Sam—Beppo's Molly).

J. W. Humpridge's blue belton and w. setter dog London Boy (Roy of London—Fanny) with W. B. Wells' b., w. and t. setter bitch Selkirk Stella (Selkirk Dan—Selkirk Tessa).

T. C. Stegman's blue belton and w. setter dog Tickler (Duke—Press) with T. G. Davey's b. and w. pointer bitch Bessie (Brighton Joe—Girl of Kent).

J. W. G. Winnett's blue belton and w. setter bitch Jubilee Vic (Roy of London—Bessie) with W. B. Wells' b., w. and t. setter bitch Selkirk Freda (Selkirk Dan—Selkirk Tessa).

W. B. Wells' b., w. and t. setter bitch Selkirk Ramona (Selkirk Dan—Selkirk Tessa) with Jas. B. McKay's b. and w. setter bitch Blue Bonnet (Dash Antonio—Nelly Breeze).

J. W. G. Winnett's blue belton and w. setter dog Doctor Jim (Roy of London—Bessie) with J. R. McGregor's b., w. and t. setter bitch Rod's Clip (Rodfield—Latonia).

Dr. O. Totten's l. and w. ticked pointer dog Norwood (Bedouin—Lady Rip Rap), a bye.

Derby Runnings.

Selkirk Bretta (A. Wells) with Cousin Peggy (H. Milliken). Owners handled. In range good, but with no luck at birds for a time. At edge of woods Bretta drew ahead and made game, but did not locate the birds, which flushed out of a tree top as she cast about. Peggy meantime came up, and stopped just about as the birds flushed. Both steady to wing. Nothing was done on singles. The heat was but ordinary. Both worked well out, but Bretta showed the more eagerness and zeal. Down 52 minutes.

London Boy (C. Allen) with Selkirk Stella (A. Wells). Stella was faster with her nipping gait. Two bevies put up by handlers or dogs were not followed, and there was no work. On corn a third bevy went up, and Boy got a point on a single on leaves. Stella had a point claimed, not seen by judges. Both steady to wing. Down 57 minutes.

Tickler (Jas. McGregor) with Bessie (C. Allen). Quite the best, fastest and most stylish brace yet seen, with plenty of speed and independence. They worked out a good heat in the open. The judges thought Tickler might cut out his ground better. They thought also that Bessie was letting down distinctly in speed before the close of the heat. Mr. Davey, owner of Bessie, thinks this was due to the fact that McGregor, in punishing Tickler, cowed Bessie so that she would not go out again well, though she had then eight minutes left in the heat. Tickler pointed, but flushed (it was for this he was punished). No work had on singles. Down 45 minutes.

Jubilee Vic (Winnett) with Selkirk Freda (A. Wells). Owners handlers. Both ranged enough, but they ran an hour and got no birds. On a field Freda roaded nicely, and Vic made a good point on a house cat, Freda backing. Freda very properly chased the cat up a tree. It is thought that no doubt this cat had at some time eaten a quail, and the dogs pointed because they were cognizant of that fact. This ended the day's work. The first thing on the following morning, Wednesday, Nov. 16, this same brace were the first ordered down again, being cast off at 8:40 A. M. They both showed good range for twenty-five minutes, Freda more intelligently going at her work. On open corn, part of a bevy had run, and a couple of birds went up near Vic, who was none too guiltless. Meantime Freda pointed the bevy at a ditch near by, and needed caution, as she was edging in. She chased as they rose, stopping to loud commands. Freda also broke in after a single. Vic did not get any point. Down 35 minutes.

Ramona (A. Wells) with Blue Bonnet (Jas. McGregor). Both were fast enough. Blue Bonnet very fast and wide ranging, but not intelligently so. On a stubble and ditch a few birds went out ahead, the dogs then drawing in, Ramona ahead, she pointing, Bonnet steady. Ramona needed severe caution as the bevy went up. On a slashing, two singles went up ahead, Ramona pointing a small bevy at a brush heap, Bonnet at one side, cautioned. On, and two singles flushed; Bonnet near by. On, at a thicket, two more singles got out, not pointed. At a fence Ramona pointed and a bird was put up, Bonnet now far out in the field. Ramona showed much better notion of hunting. Down 45 minutes.

Doctor Jim (Winnett, owner, handler) with Rod's Clip (McGregor). Clip is a little whippety black and tan, but went out and outranged Jim, though the latter hardly was up to the game fully, and at times showed plenty of range. A bevy went up ahead of the dogs in weeds, no glory to either. On slashing, Rod pointed a single, broke in, steady only to caution. On over slash, but they quite missed a nice bevy, which was put up by the crowd. Rod pointed at a log heap; McGregor put up two birds, Rod chasing a bit. Down 50 minutes.

Norwood (McGregor). The only pointer to run today. He ran alone. He had a long go without making game. The crowd put up a single near a ditch. Brought around, he made a nice bevy point. These birds were not followed. Just ahead, a large bevy was seen to rise and was marked down on nice ground among high weeds. Here fully twenty birds went out, but Norwood seemed always just too late to nail his points, though he was steady and roaded well along on footscent after the birds were gone. He should have picked up three or four points here, but got no square point at all. On ahead, at slash, the birds kept on going up ahead, but he was again just too late. At the path a bird was flushed, and he at once dropped handsomely to wing. Down 50 minutes.

Lunch followed. The judges then announced that they would run the second series as follows:

Second Series.

Selkirk Bretta with London Boy. Selkirk Stella with Tickler. Selkirk Ramona with Jubilee Vic. Selkirk Freda with Norwood.

Selkirk Bretta (A. Wells) with London Boy (C. Allen). Both went a clinking gait and hunted indifferently. On open cornfield, Boy pointed but moved on. They had a good walk in the middle of the day, but both held a slashing gait. Boy pointed a pig for luck, having nothing better. On a weedy slashing Bretta pointed a bevy nicely. Ahead, on singles, Boy pointed handsomely, steady to wing. Boy again made game and was moving on, but Allen called him off, a bird later being walked up here. On, at grass and weeds, Boy pointed again, nothing seen, but he was not allowed to work it out, the brace being ordered up at that moment. Down 43 minutes.

Selkirk Stella (A. Wells) with Tickler (Jas. McGregor). They ranged quite widely enough, Tickler making a very good impression with his evident bird sense and the idea of what to do and where to go. He made one point, steadied, but moving on, no bird going up. They had a long round without birds. On a slashing, Stella chased a rabbit, bustling it for quite a way. The dogs separated, and Tickler was now at open grass near the edge of the slash, when he made game and roaded on nicely 50yds., finally stopping at a fence, and the small bevy going out on stubble beyond, he steady to wing. He now made a long cast up this same fence, and located a large bevy, McGregor following, and the bevy going up, Tickler perhaps going too close. Stella was now brought over, and on the stubble both made game, Tickler pointing handsomely. Stella chased for a few steps, as Tickler's two birds started by. They went to thicket, Tickler taking the edge well ahead and very knowingly. He again pointed in the thicket, and his bird was put up. He pointed again and a bird was seen to come out. They now left the thicket and tried the open again, making a stiff run on corn and stubble, both still going. The little one had no business with Tickler, who ran the best heat of the day. Down 1 hour.

Selkirk Ramona (A. Wells) with Jubilee Vic (Winnett). Ramona showed the more intelligent ranger, Vic apparently lacking experience. Ramona pointed uncertainly at ditch, but nothing was found. A long walk followed. On open corn Ramona pointed a bevy nicely, Vic backing handsomely, and Vic steady to wing. On these singles, on slashing, three birds went up ahead, Ramona stopping just about as they rose, and Mr. Winnett cautioning Vic, who was making game. Another bird flushed to noise, and Ramona chased, but stopped to repeated orders. Again Ramona nosed at a woodpile, and a bird rose on the other side of it, no point. Down 1 hour 4 minutes.

Selkirk Freda (A. Wells) with Norwood (Jas. McGregor). On corn Freda made a bevy point, none too steady to wing, but dropping to repeated commands. Both kept out well. No other work. Down 24 minutes.

This ended the series. Dusk was approaching. The judges now asked for Selkirk Ramona and Selkirk Bretta, and W. B. and A. Wells took these and went back with the judges for a twenty-five minutes heat over thicket and corn. They got a rattling good heat and put up three bevies. Bretta pointed the first bevy in weeds, Ramona soon after nailing a second bevy at an orchard. A third bevy flew wild. Bretta pointed a single, and backed Ramona's bevy point nicely. Both dogs showed training, and worked a merry heat together. It was near dark when they were taken up at the road, and the judges then announced their decision: Selkirk Bretta, first; Selkirk Ramona, second; Tickler, third; London Boy, fourth.

The All-Age Stakes.

Nov. 17.—The All-Age Stakes were run off to-day, being barely concluded before darkness put an end to the work. The weather was clear and not cold, all that could be asked. Birds were by no means so abundant as might be wished, but each brace down got bird work, except in the final heat of ten minutes just before dark.

There were ten starters in the All-Age, and these ran a workmanlike average, for, though nothing of exceptional brilliancy turned out, all the dogs showed handling and were well broken on birds, the entry being of higher class than the Derby. There was but one pointer, Maud W., and one Irish setter, Goldie. Mr. W. B. Wells ran his old standby, Cleopatra, but the old lady is now past eight years of age, and was hardly up to her own standards. Mars, her heat mate, ran a stylish heat early in the day, showing nice range and head carriage, but later he did not do so well with his birds. Essie D., Mr. Marshall Graydon's smart little bitch, that won second in last year's Derby, was in great form in these trials, and was guilty of little, if any, fault. She ran a great contest, merry as a cricket, faultless in range and gait, and was quite free of all that timidity of her birds that marked her last year. I could see no other for first, though the judges placed her second. Mr. Graydon shared the general admiration which he heard expressed for this fine little one, but he was most gentlemanly sportsmanlike in the acceptance of the decision. Noble Chieftain, placed first, is to my fancy a better type of dog than Essie, bigger and more powerful and useful looking. He showed much bird sense, and is a very practical dog. He let down a little in range, not enough to hurt, and his worst fault to-day seemed that his nose needed sharpening up a bit, though he got quite a lot of work on birds. Brighton Bob, third, was a favorite at the start. He is a handsome and commendable sort of dog, not whippety, but like a setter and a shooting dog, one of the sort to go a heat or a day, or even a week. He did nicely at first, but to the surprise of everyone ran a very sloppy heat in the second series, and let himself down very much. Both Bob and his heat mate, Chieftain, seemed totally demoralized in that well-nigh fatal heat. Della Bondhu, Selkirk Tana and Selkirk Dan did not do much but range. Goldie, the Irish, was the fastest dog put down in the trials, but he closed up a bit later and lacked nose and positiveness. Maud W. was merry and eager, but was not much to the fore in bird work, lacking confidence and positiveness. There was no dog down that was not plenty fast enough, and they were all good enough at the end of an hour. Of the three winning dogs it may be said that without doubt they are the best three that ran, judged on the work they did here and not what they may have done at some other time, or may be able to do at some future time. It was also obvious that Noble Chieftain had far the best of Brighton Bob to-day. Many thought that Essie D. was quite as far ahead of Noble Chieftain, yet the latter will be seen to have perhaps more bird work to his credit than any other, and the judges valued this positive credit even with some faults over the faultlessness of Essie.

The dogs were drawn in the following order:

W. B. Wells' b. and w. setter bith Cleopatra (Mingo II.—Lady Thunder) with J. B. Dale's b. w. and t. setter dog Mars (champion Cincinnatus—Daphne).

Marshall Graydon's b. and w. setter bitch Essie D. (Brighton Dick—Nancy H.) with Leamington Pointer Kennels' b. and w. pointer bitch Maud W. (Plain Sam—Beppo's Mollie).

Geo. Kime's b. and w. setter dog Noble Chieftain (Dash Antonio—Rose Rapid II.) with Jos. Trudell's b., w. and t. setter bitch Della Bondhu (Rod's Whim—Mary T.).

C. W. Watson's red Irish setter bitch Goldie (Shaun Rhue—Nellie D.) with W. B. Wells' b., w. and t. setter bitch Selkirk Tana (Thiers—Cambriana).

T. G. Davey's blue belton setter dog Brighton Bob (Brighton Dick—Misfortune) with W. B. Wells' b., w. and t. setter dog Selkirk Dan (Whyte Be—Luna).

Cleopatra (W. B. Wells) with Mars (J. B. Dale). Owners handled. Down at 9:12 A. M. on stubble. Both went out fast and wide, the old bitch with her customary hard-working eagerness, Mars with a very good and stylish gait, but less independent. They got nothing in the open, and crossed a slash blank. At a weedy ditch at the edge of a field Mars made a fine bevy point, steady to wing. Cleo came in to him, and put up a pair of birds just ahead of Mars. They did little at singles. Cleo pointed, a bird having gone out of a brush heap before her point. Mars backed handsomely. Again Cleo pointed at a log, and Mars backed nicely, but all that could be found was a rabbit, which Mr. Wells shot; both steady, Cleo the more so. On stubble, at a fence, Cleo flushed a single, down wind, and dropping to wing. Down 45 minutes.

Essie D. (G. Kime) with Maud W. (Milliken). A merry brace, quartering well and staying out, both quite fast enough. They got a long trying out over slash and corn, until at last at the edge of a stubble Essie pointed a bevy, Maud to one side, and not at first seeing her. On further on the same field both dogs were seen pointing, Maud moving up as Kime passed on and put up the bevy, neither at fault. An odd thing had happened here. Messrs. Wells and Davey were sitting on the fence as Essie came up. She stopped and looked at them, and they called to her to go, but she at that instant turned her head and located the bevy handsomely. On same field the weedy corner was full of birds. Both made game, Maud disappearing in weeds, no one present to see whether or not she pointed, several birds going up and no point being claimed. Essie also went into the weed thicket, and Kime called a point, and she was seen pointing, three birds going up. On over this same wide field, they got nothing at singles, and were taken up. It was warmer now, and the dogs showed it, but were going well. Down 46 minutes.

Noble Chieftain (G. Kime) with Della Bondhu (Trudell). Owners handled. Down at 11 o'clock. Both ranged, but did not seem brilliant, Chief not quartering as systematically as he might on stubble. Della pointed uncertainly, but not moving on, and scored a false point. They worked blank for fifteen minutes, but at length, just over a fence on stubble, Chieftain made a grand stanch bevy point, dropping to wing. Della was away. On the marked birds Chieftain made game and squatted in a stanch point. Della did not honor, but ran in ahead of him, he still steady. Many birds went up (a new bevy probably), both steady to wing. On woods, Chieftain pointed running birds on leaves, Della running ahead again and putting up the birds. Chieftain worked for singles intelligently. Down 48 minutes.

Goldie (C. Watson) with Selkirk Tana (W. B. Wells). Owners handled. Both were fast enough, Tana with much less speed than Goldie, which cut out a hot pace, going wide and independently. It was warm, and they both let down at close of the heat. They showed no special quality, leaving a lot of country blank. At last on open ground near a pasture fence a bevy rose about Tana, she not having scented them, Goldie apart. Tana pointed tarrying single at this same place, Goldie refusing to back, going ahead and nosing about, Tana steady to wing. On the marked birds in a thicket these did very low-grade work, losing nine chances for points on birds that went up singly or in pairs, and not even catching the footscent where birds had flown. Goldie was now not very cheerful in work. Goldie flushed on grass, Tana close by; both steady. An indifferent heat. Down 55 minutes.

The party now ate lunch, which the landlord, Mr. Raymond, had brought out in good shape.

Brighton Bob (T. G. Davy) with Selkirk Dan (W. B. Wells). A handsome pair, and good rangers, Bob making a very good impression. They knew their business, Bob's greatest fault in range, not a serious one, being that of coming to the gun very often for instructions. Bob was well under control, dropped at distance to hand, and seemed a sweet one. They ran half an hour blank, the handlers often separated and quite out of sight of each other and of the judges. A half-dozen birds flushed ahead of Dan on corn, and were marked at a ditch, neither dog noting them as they came by. On over this field Dan made a glaring false point, Bob when swung around backing finely at 60yds. Over on stubble and at fence Dan three times more pointed to no results, and though moving on each time got no credit at this, surely. They went over, and at the edge of a stubble field Bob made a bevy point. Dan ran by, refusing to back, and ran up the birds. No work was got on the singles. Down 1 hour 13 minutes.

Second Series.

The judges now asked for the second series, naming Cleopatra with Essie D., Mars with Maud W., Noble Chieftain with Brighton Bob.

Cleopatra (W. B. Wells) with Essie D. (G. Kime). Down at 3:12 on a wide stubble, both going a slashing merry gait. They crossed to a weedy fence, and here Essie pointed a single, Cleo backing, both steady to Kime's shot. They crossed a road to another wide field, which was well cut out, both going far and free, Essie at times 300yds. or more ahead of the judges. They drew blank and went on to wood, where Essie pointed a partridge nicely, Cleo backing. No more work had. Essie left a good opinion of herself again. Down 35 minutes.

Mars (J. B. Dale) with Maud W. (Milliken). They went out well, Maud still eager and busy as ever. Luck was with Mars, who made a nice bevy point on stubble, Maud at one side. Trying for singles on a weedy flat, Mars made game and stopped, but couldn't locate. Later he ran over a bird near here, steady to wing. They drew corn blank, Mars' stock was lower, as he had let down in quality. Down 23 minutes.

Noble Chieftain (G. Kime) with Brighton Bob (T. G. Davey). Owners handled. This heat was looked forward to with great interest, but was cruelly disappointing, since it saw Bob, a very popular and very worthy one, quite ruin his former record in one of those inexplicable off-streaks which come to the best of dogs at times, and since in it Chieftain was guilty of some work not worthy of him and verging on the middle class. They went down at 4:27, a good time for birds to be moving. In range they were both good enough, Bob still coming in to his handler now and then, though he was cheerful and merry as one could ask, and quite under control. At length on open corn Chieftain made game and made three roading points. Bob did not honor, but cut in ahead, his handler following, both ahead of Chieftain. Bob had the bevy, and he dropped flat, edged in and dropped. The birds were close as they rose. Bod had no glory here. They went on after the singles on a slashing, and made bad work of it, as not less than seven birds went out, and it is doubtful if a genuine point was had by Chieftain, while Bob had not even one claimed for him. At a brush heap Chieftain rose up, planting his forefeet upon the brush, but not noticing three birds, which went on the other side of the heap. Again Chieftain put up a bird, but Kime claimed a point, and he perhaps stopped before the bird rose. Again he put up a single, not noticing it till it rose, but steady to wing. Bob had not even a flush on his finding record here. The birds were lying close, not having had time to run, but the work was ordinary. On, at a fence, and on stubble, Davey twice called a point for Bob, but Bob knew better and moved on.

They now moved on up over a fine open stubble, at the most favorable time of day, and when the birds were feeding, and with the advantage of what little wind [illegible] as. Going thus into the wind, Bob ran bang into a big bevy, dropping to call. This was too bad for him. They went on up the field, and Chieftain pointed. Bob was at his right and slightly ahead, and now began to edge in ahead of Chieftain, cautioned. Kime, with his eyes on Bob instead of on his own dog, now went on ahead of Chieftain, apparently not noticing what he was doing. Chieftain roaded up, and stood looking down under his nose eagerly, then making two or three short runs after something which ran in the stubble just under his nose, and which was thought to be a rabbit, but which was really a quail. Two birds went up at his face, and the bevy followed, between the dog and his handler, who was to blame here nearly as much as the dog.

They went up the same field, and Bob pointed, roaded up, flushed his bird and chased it a few steps—a most singular thing for a dog that has had several hundred quail shot over him. They were now taken up, after a disappointing exhibition. Down 31 minutes.

Final.

The judges now called up Essie D. and Noble Chieftain for the final heat, to decide place for first and second. They went down on this same stubble at 5:11, nearly dark, and ran a perfunctory ten minutes. Chieftain was naturally not so fresh as Essie, who was merry and businesslike as ever. They got no birds, and were taken up at dusk. The decision was: Noble Chieftain, first; Essie D., second; Brighton Bob, third.

Noble Chieftain is a well-put-up setter of medium size, weight about 50lbs., oddly marked, with a heavy black spot on either shoulder. He has bird sense and showed himself a bird finder. Essie D. is a lighter type, under 40lbs., compact, able to go and apparently to repeat, she has a very pleasant, amiable way of work, and while no wonder is a very good one. Brighton Bob is a sturdy one, about 53lbs. weight, white, with belton marks, a powerful and well-built dog, to whose type more attention might well be paid. He is not tall and lathy, and is no wind-splitter, yet can go and keep it up, though his condition hardly shows that he has seen recent hard service. Noble Chieftain and Essie D., first and second this year in the All-Age, were first and second last year in the Derby.

The winnings in the stakes were as follows: Derby, first, $61; second, $30.50; third, $22.87; fourth, $15.25. All-Age, first, $44; second, $33; third, $16.50.

At the annual meeting of the International Field Trials Club, held at Chatham, Nov. 15, the following officers were elected for the ensuing year: President, H. Marshall Graydon, London, Ont.; First Vice-President, T. G. Davey, London, Ont.; Second Vice-President, Dr. O. Totten, Forest, Ont.; Secretary-Treasurer, W. B. Wells, Chatham, Ont.; Executive Committee, Geo. Kime, L. H. Smith, A. Wells, Thos. Gutridge, I. L. Nicholls, A. C. McKay, W. D. Tristram, J. B. Dale, A. G. Smith, T. C. Stegman.

The following new members were elected: A. J. Smith, of Detroit, Mich; A. C. McKay, Chatham, Ont.; J. B. Dale, Petrolia, Ont.; T. C. Stegman, Toronto; J. W. Humpidge, London, Ont.

The club shows a balance of $120 in treasury.

E. Hough.

1200 Boyce Building, Chicago, Ill.

Western Massachusetts Fox Hunters

Westfield Correspondence Springfield Republican.

An ideal day marked the opening of the eleventh annual hunt of the Western Massachusetts Fox Club at Westfield, Wednesday, Nov. 16. The morning was cool and frosty, and many foxes were started during the day, although the number of brushes secured is considerably less than in past years on the first day of the hunt. There seemed to be about the usual number of hunters and hounds, but for some reason most of the foxes managed to evade the watchful nimrods. Three are known positively to have been killed, and these were shown at the Park Square Hotel last evening. The owners of these are W. Stiles Bush, William Tice and Frank Williams. The start yesterday morning was from the Park Square Hotel, and the guests were taken to the hunting grounds at Pochassic in barges. The house of William Moore was made the headquarters as usual, and there were groups of sportsmen about the house all day. Many of the hunters drove to Pitcher street in Montgomery, which is high above Pochassic, and where the best hunting seemed to be. About thirty hounds were used, but the "driving" lacked some of the exciting features of previous hunts. Foxes were frequently started by the dogs, but the latter seemed unable to hold to the scent as well as ordinarily, and this was very aggravating to the hunters. At frequent intervals, however, the heart of the true fox hunter was made glad by the music of a half-dozen hounds in full cry closely following a fresh scent. Every hound has a different voice, and to hear a fair sized pack hot after a fox is anything but music to the unaccustomed ear, but to the experienced fox hunter there is none quite so inspiring, especially if the "bedlam" issues from the throats of his own favorite hounds.

One of the first brushes of the day was secured by W. Stiles Bush, near Ball Mountain. Mr. Bush took A. B. F. Kinney, of Worcester, to the top of the mountain in his team, and Mr. Kinney had with him four hounds. When just above the Kelso place both men saw a fine fox standing on a rock only a few rods from the road. The animal did not seem to notice the men and started to take a nap on the rock, but this was disturbed when the hounds were released. The dogs were nearly crazy when they found the tracks, and it required several minutes for them to settle down to business and follow the scent. Mr. Bush and Mr. Kinney at once started for their favorite "stands," and not long after Mr. Bush got a fine shot at Mr. Fox and bowled him over. There was considerable firing done during the day, and at least two foxes were fired at seven and eight times each, and yet escaped. One of them was toppled over once or twice, and still kept on his way. Probably during the day no less than seventy-five hunters joined in the sport, and many of them had the pleasure of seeing a fox running, even if they did not have an opportunity to secure a brush.

There were a number of fine hounds in the hunt, but Logan, of the Kinney-White pack, was missed this year. He was unable to take part in the meet, as he has been used a great deal this fall at Worcester, and was not in first-class condition. Mr. Kinney brought along Sam, Carl, Belle and Tom, and they were much in evidence. John R. Thayer had Rose, Dick and Speed, and among other dogs were: John T. Way's Jake and Jerry; Walling brothers' Hunter, Rock and Rye; A. A. Sibley's Bailey, A. G. Dodge's Josie, L. M. Pomeroy's Sancho, F. C. Pomeroy's Mascot, Dick, Flirt, Sport and John; C. S. Davis' Ranger, H. H. Carrier's Spot, George W. Roraback's Walker, W. A. Cooney's Sam and Ponto, Frank Wililam's Spot, and B. R. Holcomb's Prince, McKinley, Bryan and Tug. George W. Roraback's splendid hound Tip was not in the hunt this year, and it is thought he has gone to the happy hunting grounds, for he has been missing for two weeks, and it is now believed he met his death while chasing a fox on the railroad near Shaker Crossing, toward Southwick. This is the second dog Mr. Roraback has lost at the same place, and both were his special pride. The hunt to-day will be in the same section. Judge Clark, of Derby, Conn., is again present at the hunt. Judge Clark has but one arm, and that is his left, but this does not deter him from being an enthusiastic hunter and an excellent shot.

The annual banquet at the town hall last evening, for which over 150 covers were laid, was served at 6:30 o'clock, with William Kimball, of the Hotel Worthy, in this city, as caterer. The spread was one of the best ever served to the club. Excellent music was furnished by the Cleveland Wheel Orchestra. The club had as honored guests Congressman Lawrence and Congressman-Elect John R. Thayer, and both were given a royal reception. The presence of Congressman Lawrence was a very enjoyable surprise to the members and guests of the club, for very few knew that he was to be present. He spoke of the good feeling that was always engendered by such gatherings, and referred eloquently to the era of good feeling that had now come between the North and South, and of the loyalty of American people without regard to section to the Stars and Stripes. Mr. Thayer was given a hearty reception, such as can be given by fox hunters, and in his remarks he, of course, avoided politics. He said he had had a glorious time, and stated that although the orchestra music of the evening had been unusually fine, there was no music so sweet, so inspiring, so exhilarating as that furnished by a pack of eight hounds that he had heard early in the morning. He spoke strongly of the joys of fox hunting and of the good that comes of it. He alluded very pleasantly to the friendship that he had formed with Congressman Lawrence, and said that he hoped it would continue, "as it does with some Republicans and all Democrats."

F. M. Dean, of Boston, told some very good stories, and among the other speakers were James H. Bryan, who welcomed the guests; A. B. F. Kinney, of Worcester; C. F. Holmes, president of the Waterbury (Conn.) Fox Club; Dr. Holbrook, of East Douglas.; Charles S. Chapin and Henry W. Ely, of Westfield. Mr. Ely hit the fox hunters pretty hard in his remarks, and made lots of fun by his clever thrusts. He also gave the congressmen some advice concerning "imperialism," to which he is strongly opposed. Lawyer Harold P. Mosely acted as toastmaster in a most acceptable manner. Congressman Lawrence was elected an honorary member of the club. The officers elected were: President, John T. Way; Vice-Presidents, James B. Hazelton, N. A. Harwood; Secretary, C. M. Goodnow; Treasurer, C. N. Lewis; Executive Committee, J. D. Cadle, William H. Foote, F. F. Shepard; Reception Committee, R. B. Crane, Dr. J. W. Holland, F. S. Dewey, Jr.; Dinner Committee, Fred E. Lay, T. J. Cooley, G. E. Austin; Master of Hounds, B. R. Holcomb, James Jeffers.

Among the guests present were A. B. F. Kinney, A. G. Dodge and wife, J. E. Fuller, J. E. Fuller, Jr., O. M. Ball, Charles F. Mann, C. W. Walls, A. W. Hunt and H. L. Jilson and wife, of Worcester; E. L. Walling, Walter Walling, of Auburndale; A. A. Sibley, of Leicester; O. F. Joslin, of Oxford; Dr. J. H. Pomeroy, of Gloucester; L. M. Pomeroy, of Poquonock, Conn.; F. C. Pomeroy, of Windsor, Conn.; S. E. Horton, of Windsor Locks, Conn.; Dr. George E. Pomeroy, of Hartford; M. F. Slattery, of Lenox; Henry F. Rice, of Sutton; Charles S. Davis, of Philadelphia; W. A. Coomey, of Chicopee; Dr. Holbrook, of East Douglas; Ben Babb, of Southwick; E. A. Nelson and Fred Morse, of this city; Walter and Charles Holmes, of Waterbury, Conn.; Judge Clark, of Derby, Conn.; E. S. Baxter, of Colebrook River, Conn., and B. S. Beecher, of Winchester, Conn.

Raw and rainy weather interfered, to a considerable degree, but did not wholly spoil the second day's hunt. Between twenty and thirty enthusiasts, including, of course, Congressman-elect Thayer, and all but two or three others of the Worcester contingent, and visitors from Connecticut and Maine, started as soon as darkness lifted in the morning, and when the hunting ground in Pochassic district was reached the hounds were loosed on the side of the mountain and within a few minutes were hot on the fresh scent of a fox.

It was not long before Walter Walling, of Medford, got a fair shot at reynard and bowled him over. Several other foxes were started during the day, but the wet condition of the ground and the steadily-falling rain prevented the dogs holding the scent, and the hunters, late in the afternoon, gave up the hunt with but a single pelt.

Only five were taken during the two days' hunt, a smaller number than for some years. Last night the visitors and their hounds returned to their homes, the former expressing satisfaction with the sport enjoyed and the fine banquet of Wednesday night.

F. F. T. Club Meeting.

The annual meeting of the Eastern Field Trial Club was held in St. Hubert Inn, Newton, N. C., Nov. 22. Mr. Edmund H. Osthaus presided. Following is the list of officers elected: President, P. Lorillard, Jr.; Vice-President, C. H. Phelps; Secretary-Treasurer, S. C. Bradley, Greenfield Hill, Conn. Board of Governors, Dr. J. Spencer Brown, James L. Baker, S. C. Bradley, W. A. Coster, Edward Dexter, H. B. Duryea, F. R. Hitchcock, F. A. Hodgman, P. Lorillard, Jr., W. B. Meares, Edm. H. Osthaus, James E. Orr, C. H. Phelps, Jr., R. V. Fox and George Crocker. The rules governing the Members' Stake were amended to read that a dog or dogs owned by a member of the club may be handled by any other member whenever the member owning the dog or dogs is absent. The date fixed for the Members' Stake was Friday, Nov. 19, 1899. The open stakes will begin on Monday of the week following. The conditions of the stakes will be same as those of this year. A vote of thanks were extended to Messrs. Crocker, Baker and Hodgman for their generous gifts as prizes for the Members' Stake.

Central Beagle Trials.

In the trials of the Central Beagle Club, at Latrobe, Pa., last week, the Derby Class A (13in. to 15in.) had six entries, with winners: 1st Thomas Spry, 2d Pilot II., 3d divided by Guyasuta and Dandy H., res. Nell S. In Class B (13in. or under), with five entries, the winners were: 1st Staley, 2d Betty Zane, 3d divided by Bolivar and Harker's Rose, res. Fanny S.

Open Class C (13 to 15in.) with seven entries, the winners were: 1st Wiona, 2d Maywood, 3d divided by Birdie S. and Nell S., res. Dorsey Woodman. In Class D (13in. and under), with eight entries, the winners were: 1st Staley, 2d Madgett, 3d divided by Little Prince and Lady Rose, res. Smith Perry.

Details of the running will be given in our next issue.

Points and Flushes.

The show of the American Pet Dog Club, held in New York on Thursday and Friday of this week, had the following entries: 12 field spaniels, 47 cocker spaniels, 43 collies, 41 poodles, 52 bull dogs, 46 French bull dogs, 50 bull terriers, 62 Boston terriers, 40 dachshunde, 32 beagles, 35 fox terriers (smooth), 41 fox terriers (wire), 24 Irish terriers, 7 Scottish terriers, 16 Airedale terriers, 17 Black and Tan terriers, 10 Yorkshire terriers, 6 toy terriers, 46 toy spaniels, 4 pugs, 4 Maltese terriers, 5 Skye

terriers, 8 Italian greyhounds, 12 miscellaneous. Total 660.

In order to comply with A. K. C. rules there will be only two winners' classes for pointers at the Joliet, Ill., show, instead of four, as printed in their premium list. The premium list is now ready, and may be had of Secretary W. F. McMasters, Joliet.

The Continental Field Trial Club will hold a meeting in their club rooms at Lexington, N. C., on Dec. 8, 1898, at 8:30 P. M., for the election of officers for the ensuing year. W. B. Meares, Sec'y.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

Nov. 24.—Buffalo, N. Y.—Thanksgiving Day shoot of the Bison Gun Club; targets. John E. Wilson, Sec'y.
Nov. 24.—Rutherford, N. J.—Thanksgiving Day Turkey shoot of the Boiling Springs Gun Club. W. H. Huck, Sec'y.
Nov. 24.—Pawling, N. Y.—Thanksgiving Day shoot of the Pawling Rod and Gun Club. Geo. S. Williams, Sec'y.
Nov. 24.—Holmesburg Junction, Pa.—Thanksgiving Day shoot of the Keystone Shooting League; live birds.
Nov. 24.—Newark, N. J.—Thanksgiving Day shoot of the East Side Gun Club; live birds. L. H. Schortemeier, Captain.
Nov. 24.—Pottstown, Pa.—All-day open tournament, under the auspices of the Shuler Shooting Club. W. I. Grubb, Captain.
Nov. 24.—Dansville, N. Y.—All-day shoot of the Dansville Gun Club.
Nov. 30-Dec. 1.—Sterling, N. Y.—Tournament of the Sterling Rod and Gun Club. C. F. Wayte, Sec'y.
Dec. 1.—New Brunswick, N. J.—New Jersey Tray-Shooters' League; live birds; open to all comers.
Dec. 3-4.—Milwaukee, Wis.—Tournament of Milwaukee Gun Club; live birds and targets.
Dec. 7-8.—Kewanee, Ill.—Tournament; live birds and targets. E. E. Baker, Manager.
Dec. 13.—Burnside Crossing, Ill.—John Watson's tournament; live birds only.
Dec. 19-23.—Indianapolis, Ind.—Grand Central Handicap; targets first day; sparrows two days; pigeons two days. H. T. Hearsey, Sec'y.
Dec. 27-30.—St. Thomas, Can.—Tournament of St. Thomas Gun Club. Jack Parker, Manager.

1899.

Jan. 17-19.—Hamilton, Ont.—Annual tournament and grand Canadian handicap of the Hamilton Gun Club; $1,000 guaranteed. H. Graham, Sec'y.
April 4-7.—Baltimore, Md.—Tournament of Baltimore shooting Association; targets and live birds; money added. Geo. L. Harrison, Sec'y.
April 6-8.—Utica, N. Y.—Fulford's handicap at live birds. E. D. Fulford, Manager.
April 11-13.—Elkwood Park, Long Branch, N. J.—The Interstate Association's seventh annual Grand American Handicap tournament.
April 18-20.—Lincoln, Neb.—The Lincoln Gun Club's second annual interstate tournament; targets and live birds; $500 added. Geo. L. Carter, Sec'y.
April 18-21.—Baltimore, Md.—Prospect Park Shooting Association's tournament; added money. H. A. Brehm, Pres.
May 16-20.—St. Louis, Mo.—Tournament of the Missouri State Fish and Game Protective Association. H. B. Collins, Sec'y.
May 24-25.—Greenwood, S. C.—Annual live-bird tournament of the Greenwood Gun Club; 25-bird Southern Handicap. R. G. McCants, Sec'y.
June 7-9.—Columbus, O.—Tournament of the Ohio Trap-Shooters' League, under the auspices of the Sherman Rod and Gun Club. J. C. Porterfield, Sec'y, O. T. S. L.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The Bergen County Gun Club, of Hackensack, N. J., has definitely decided to hold its all-day tournament (previously fixed for Wednesday of this week) on Wednesday, Dec. 7, on which date it promises to entertain its friends at Hackensack to a hot turkey dinner and a programme of interesting events. The main feature in that programme will be a contest for the Inanimate Target championship of New Jersey, and the E. C. cup that goes with that title, which have just been resigned by Mr. Ferd. Van Dyke, the holder, by reason of ill health. Mr. Van Dyke has been ill for some time, and now feels that he would be unable physically to accept any challenges for the trophy and title. He therefore, in a most sportsmanlike manner, hands them over to "the boys" to fight for, and wishes that "the best man may win." The conditions will be 50 targets, unknown angles, entrance $1, price of targets. An optional sweep on each 25 will be shot in connection with this event. The cup and title are open only to members of clubs that are members of the New Jersey State Association.

The Massachusetts weather is too cold, and her stock of game birds too depleted, for O. R. Dickey. He likes to be where birds are plentiful, and where the sun shines occasionally during the month of December with the warmth that comforts. For the above reasons Wellington, Mass., will shortly suffer a temporary loss, as Mr. Dickey has completed arrangements for a trip into North Carolina in search of quail and sunshine warm. Incidentally he will put in some licks on live birds, with a view to training for the Grand American Handicap next April, as the New England States frown upon live-bird shooting, and forbid the trapping of pigeons for the purposes of trap-shooters.

Harold Money, the youngest son of Capt. A. W. Money, of The American E. C. & Schultze Gunpowder Company, has been known for some months in the target shooting world as a 90 per cent. shooter. He has now blossomed out anew, and has showed both at the East Side Gun Club, of Newark, on Nov. 8, and at Arthur Bunn's shoot at Singac, N. J., on Nov. 16, that live birds are also a specialty of his. At Bunn's he had the satisfaction of being the only 25 straight, with Capt. Money and John L. Brewer among those who finished behind him.

The Crescent Athletic Club, of Brooklyn, N. Y., seems to have discovered a new shooting star in the person of D. G. Geddes, of that city, who has lately been doing some excellent work at the traps. Some of Mr. Geddes' work would be classed much more highly, were it generally known how poor a background there is on the club's grounds for target shooting. In Messrs. J. S. S. Remsen and Geddes the Crescents have a pair of crackerjacks who could set the pace for most any pair of amateurs in the country.

Lieut. Peter Gibson, of Cincinnati, has just arrived in New York. He came here for various reasons, business and pleasure, the chief ones being to view the horse show in Madison Square Garden and to try and get a date fixed for his proposed rifle match with Ed Taylor, of Laflin & Rand. He saw the horse show all right, but expresses grave doubts as to being able to agree with Mr. Taylor as to date, place, etc., for the match, which has now been hanging fire for over fifteen years!

E. C. Meyer, of Rochester, N. Y., president of the Rochester Gun Club, and ex-president of the N. Y. State Association, was a visitor to the Empire City last week. Shooting in and around Rochester still holds its own, and it is doubtful if there is a gun club in the United States that is more comfortably fixed, both financially and as to club house, grounds, etc., than the club of which Mr. Meyer is not only president, but also one of its very best shots.

Notwithstanding the extremely bad weather that prevailed in this section last Saturday, John J. U. M. C. Hallowell was not to be deterred from journeying to Wissinoming station, P. R. R., to take part in the Philadelphia Trap-Shooters' League contest, held on the grounds of the Florists' Gun Club. Mr. Hallowell did not make his journey in vain, for he came back to New York thoroughly satisfied with his day's work, having landed U. M. C. shells at the top of the high average column. On Thanksgiving Day he will make one of the party that will be present at Rutherford, N. J., being on that occasion the guest of the Boiling Springs Gun Club at its holiday shoot.

For a wind-up of the season of the Central New Jersey Trap-Shooters' League the Reservoir Gun Club, of New Brunswick, will hold a live-bird shoot on Dec. 1, open to all comers. Part of the programme will be a 15 bird handicap event, $10 entrance, birds extra at 20 cents apiece. Shooting commences at 10 A. M. Pennsylvania Railroad to New Brunswick, Commercial avenue trolley to the grounds. Committee: John Belloff, Henry B. Smith.

Irby Bennett, of the Winchester Repeating Arms Company, is expected to be in this city within the next week or two. His friends are hoping that he will give them a chance to make things pleasant for him; in other words, there is a wish expressed that he will not be in too much of a hurry to get back to Memphis. Our weather is bad up here, we know, but still there are compensations.

Colin R. Wise, of Passaic, N. J., was in New York on Monday of this week just long enough for him to call in at Schoverling, Daly & Gales, and choose a Daly gun that Bob Snyder picked out for him. This gun will be christened at Passaic on Thanksgiving Day, when Mr. Wise forms one of a quartette that shoots a match at live birds with another quartette, all members of the Passaic City Gun Club.

Mr. J. H. Amberg, of the Audubon, Garfield and other gun clubs, of Chicago, was in New York for several days last week, and visited the FOREST AND STREAM office. He spoke encouragingly of shooting matters in Chicago, and said that John Watson's coming tournament is going to be a big thing. After leaving our office he went down to Sportsman's Row, to look up some of the shooters of this town.

The Boiling Springs Gun Club, of Rutherford, N. J., hopes to bring off a series of five team races with the Passaic, N. J., City Gun Club. Paul Jeanneret, captain of the Boiling Springs Club, has been in communication with the Passaic City Club, and all details will be arranged shortly.

John Watson's tournament, Dec. 13-16, ought to be a good one. Mr. Watson's grounds at Burnside Park are run well and capably, and shooters always get what is coming to them when Mr. Watson himself has the chief say in the matter. He promises a good programme; and what he promises he fulfills.

Mr. Henry Hawkins, of The American E. C. & Schultze Gunpowder Company, has returned to this country after a brief trip to England. Mr. Hawkins, accompanied by Mrs. Hawkins, arrived in New York last Saturday, having made the trip from Europe on the Cunader Campania.

The fall tournament of the Sterling Rod and Gun Club will be held at Sterling, N. Y., on Wednesday and Thursday, Nov. 30 and Dec. 1. There will be seven target events on the first day, and eight target events and one live-bird event on the second day. Chas. F. Wayte is secretary.

Mr. Everett Smith, of the Schenectady, N. Y., Gun Club, was in the city last week, and found time to pay a call on FOREST AND STREAM. Mr. Smith said that Schnectady had a live gun club, and that there was a likelihood of some tournaments up that way next year.

The first annual amateur shoot of the Mt. Pleasant Gun Club will be held on the club's grounds at Mt. Pleasant, Mich., on Nov. 24. Prizes are offered for the best average, the next best average, and the poorest and next poorest averages.

We have this week from Mr. Waters, in place of a Cadi chapter, a report of the North Carolina field trials. If somewhat wanting in the wise and kindly humor of the chronicler of the homestead of Hopie Jane, it is nevertheless excellent reading in its way.

The Bison Gun Club, of Buffalo, N. Y., have on their programme for Thanksgiving Day ten 20-target events, 75 cents entry, $50 added. There will also be a match at 100 live birds per man for $200 between Chas. S. Burkhardt and Otto Besser.

Last week was a dull one in the trap-shooting world, the Thanksgiving Day shoots of the current week and the wet weather on Saturday, the 19th inst., being jointly responsible for the lack of news matter.

Chas. Reichert and F. L. Goodrich were scheduled to shoot a match at 25 live birds for $25 a side on Nov. 24 at Belvidere, Ill. Four other live-bird events were on the programme.

ON LONG ISLAND.

Rockaway Point Rod and Gun Club.

Rockaway Park, L. I., Nov. 14.—The semi-monthly shoot of the Rockaway Point Rod and Gun Club was held here to-day. Several sweeps followed the club event. Scores:

Club shoot:

Emerald Gun Club.

Dexter Park, L. I., Nov. 15.—The monthly shoot of the Emerald Gun Club, which was held here to-day, was as usual well attended, twenty-six members taking part in the shooting. Three men—Sands, Short and Harrison—tied for first place with clean scores. The shoot was one of the series to count for the yearly prizes, which will be awarded after the February shoot. The scores:

Sands, 28	2222222222—10	Hilbers, 28	10121122*2— 8

Four pairs: J. Hopkins 7, Camden 2.
Five pairs: W. Hopkins 7, Van Siclen 3.
Three pairs: Dayton 6, Camden 4.
Three pairs: Camden 3, Dayton 2.

Mr. Fulford to Brother Shooters.

UTICA, N. Y., Nov. 19.—I am out with a petition to the officers of the Grand American Handicap, requesting them to divide the purses into six moneys, class shooting, or its equivalent, 25, 20, 20, 15, 10 and 10. I would like to hear from brother shooters, with permission to use their signatures.

The man who can kill 25 will be handsomely rewarded, and nearly all the rest will more than get their entrance back.

I have shot in the Grand American Handicap for five years, and last year was the first time I got a penny back. Many men I know have shot in this event from year to year and never saw the color of a cent in return, and shot pretty good too.

E. D. FULFORD.

IN NEW JERSEY.

Harold Money wins at Singac.

Singac, N. J., Nov. 16.—In the 25-bird handicap shot on Arthur Bunn's grounds here to-day, Harold Money captured first money alone with a clean score against a strong field of shooters. Capt. Money, Doty and Brewer each missed one bird and tied for second place, while Jack Hallowell and Miss Annie Oakley were tied for third with 23. Wright finished with 22, and Harrison and Morfey withdrew. Annie Oakley shot finely, missing only one bird out of the 25, the other lost bird dropping dead out of bounds. In the miss-and-out sweeps Jack Hallowell carried off first honors, killing all his birds in both events. Event No. 1 was at 25 birds, distance handicap, $15 entry, three moneys. No. 2 was a miss-and-out, 5 birds, $2 entry, and No. 3 a miss-and out, 8 birds, $2 entry. The scores:

No. 1:

H Money, 28	1221211112221211222222222—25
J L Brewer, 32	2012221112212122221112221—24

Hudson Gun Club.

Jersey City, N. J., Nov. 20.—The members of the Hudson Gun Club held their second November shoot to day. The weather was fine, but the high wind made good scores impossible. Schorty was the greatest sufferer from this cause, and was subjected to some good-natured chaffing, the outcome of which was a match at 100 targets per man, for $10 a side, to take place at the first shoot in December. From now on a boom is expected in the club, as most of the members have returned from their shooting trips. At the annual election of officers, held this month, the following were chosen: President, E. G. Heritage; Vice-President, Henry Van Dyne; Secretary, Thomas Kelly; and Shooting Captain, George Brewer. Scores:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6

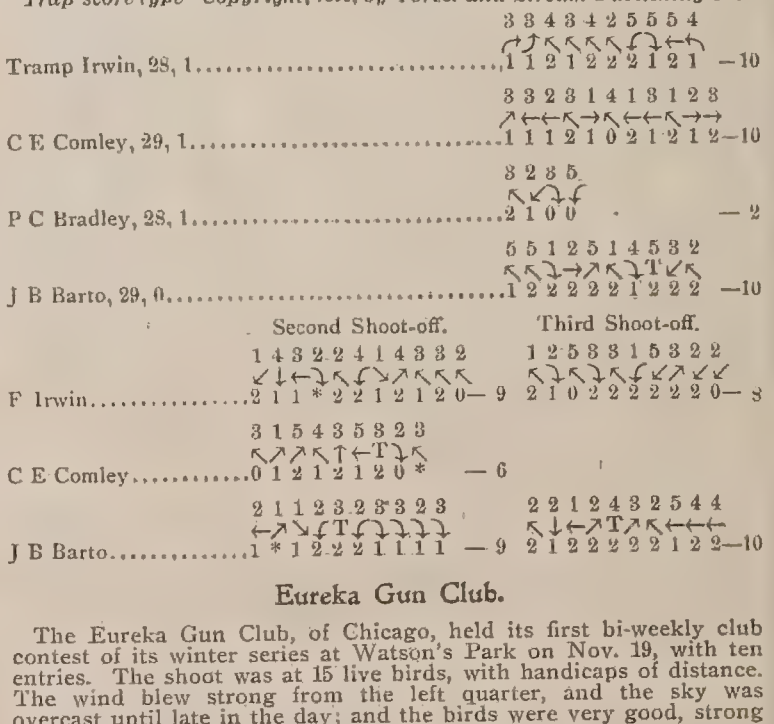
WESTERN TRAPS.

Montgomery Ward & Co. Trophy.



The seventh semi-monthly contest for the Montgomery Ward & Co. trophy took place on the afternoon of Nov. 18. While the attendance was fair, it was not up to that of previous shoots. The interest nevertheless was not lacking, and ties for the trophy necessitated shooting off three times before the winner could be decided upon. The shoot-off in the last tie continued well into darkness, so that blue or black birds were difficult to see over a gun unless they towered. The shoot-off resulted in J. B. Barto winning for a second time, after killing 49 out of 50, and thereby tied C. E. Comley for first place to date, as the trophy has not been won more than once by any other contestant.

The contest was at 20 live birds, with a handicap of distance and birds. The wind changed during the contest from left-quartering to right-quartering, and finally to left-quartering driving. The sky was clouded the greater part of the day, with an occasional sunburst. The birds were good, strong flyers, and got away without hesitation. Following are the detailed scores:

E C Rice, 26, 6	022002222212200*1121222202—	19
Geo Roll, 29, 1	2221121212111*2122210 —	19
H Levi, 27, 5	2102101100020*1220 w —	10

First shoot-off:

Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

Eureka Gun Club.

The Eureka Gun Club, of Chicago, held its first bi-weekly club contest of its winter series at Watson's Park on Nov. 19, with ten entries. The shoot was at 15 live birds, with handicaps of distance. The wind blew strong from the left quarter, and the sky was overcast until late in the day; and the birds were very good, strong flyers; many were killed, but fell over bounds.

The club offers three handsome prizes, for the three highest averages in five contests out of the nine scheduled, and it is necessary to participate in at least six events to qualify for the trophies. C. C. Hyde and Lem Willard made the high scores of the day, each missing but one, and, unfortunately for Hyde, his 15th bird, after doing good execution on those previously shot at. Following are the detailed scores:

E Steck, 31	122022110221012—12	E Rice, 29	010121122020*00— 8
C Hyde, 28	112211222221210—14	E Bingham, 32	210*222*2222212—12
R Carson, 27	101102221111202—12	G Roll, 32	*2101*21*201222—10
L Willard, 31	121111221222201—14	A Adams, 30	02*10*121*01*21— 8
Lord, 31	120211122122201—13	J Houston, 29	22*121012120222—12

The officers anticipate a larger attendance hereafter at the contests, which are to be held the first and third Saturdays of each month up to and including March.

Calumet Heights Club.

The Calumet Heights Club announce a programme for Thanksgiving Day, which consists of the regular live turkey, shooting, rifle and target shooting, foot races, throwing the hammer, putting the shot, as well as the evening entertainment in the club house, as usual, by way of singing, dancing, etc. A large attendance is looked for, and anticipations may be fully realized.

Chicago Challenge Trophy.

The trustees for the Chicago challenge trophy, notwithstanding A. C. Paterson's challenge to the holder, was mailed first in Chicago, have decided that E. S. Rice is to shoot for the trophy

at the next contest, which will take place on Watson's Park grounds, Burnside Crossing, Ill., on the afternoon of Tuesday, Nov. 29, at 2 o'clock. The handicaps will be given out at least three days prior to the day of contest.

J. J. Smith's Park.

J. J. Smith announces that he will give a Thanksgiving Day tournament at his West Emerson street park, in Evanston, Ill., consisting of live-bird and turkey shooting. For bus accommodations call at 1624 Maple avenue, Evanston.

A. C. PATERSON.

Shooting at Watson's Park.

CHICAGO, Ill., Nov. 18.—Some lively shooting has taken place at Watson's Park, Burnside Crossing, this week. The fun began on the 15th, when four men came together and shot a 25 bird match. Hollister won with 22 kills, and E. S. Rice, with 19, was second. The scores:

Hollister .....1211212222011220121211220—22
E S Rice.....2021022210120121101122202—19

Lloyd .....1012001020200100212011110—14

Nov. 16.—The Audubon Gun Club's regular monthly medal shoot was held to-day. This was at 20 birds, distance handicaps and bird allowances. Palmer, at 29yds. with an allowance of 2 birds, was first with 18. Mussey and Hollister, who shot from the 30yds. mark and had no allowances, finished with 16 kills each. Mussey shot at 100 birds in practice after the club shoot, and scored 90. Palmer killed 16 out of 20 in practice. Scores:

Club shoot:

Trap around Reading.

READING, Pa., Nov. 19.—Several members of the South End Gun Club's regular team and several substitutes held a practice shoot this afternoon on the South End grounds. The call for the shoot was issued by Capt. Yost, so as to pick the team which is to represent the South End Club at Pottstown on Nov. 24 in the shoot of the Shuler Gun Club, of that place, for a handsome silver trophy, representing the championship of Montgomery and adjoining counties. The shooters who were present shot the three events in a drizzling rain, but this did not dampen the ardor of the shooters. Shaaber and Capt. Yost, of the regulars, seemed to have their eyes on the targets, and both made good scores. Farr, one of the substitutes, shot an awful streak, and bids fair to replace some of of the regulars. The South End Gun Club's team for the Shuler shoot will be Shaaber, Essick, Eshelman, F. Yost, captain, and Harrison, with H. Yost, Farr, Ball and Yeager substitutes. The scores to day:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	25	25	25	25	10	Targets:	25	25	25	25	10
Capt Yost	19	17	20	20	..	Shaaber	17	19	22	20	5
Ball	11	15	16	12	6	Essick	13	18	15	17	7
Farr	12	23	21	8	..	Texter	12	..	..	..	..
Gicker	..	..	..	..	6	Eshelman	..	..	..	10	6

Farr in event No. 4 shot at 10 targets only, his shells being exhausted.

Fernwood, Pa., Nov. 19.—The monthly shoot of the University of Pennsylvania Gun Club was held here to-day. Owing to the weather conditions the entries were few. The loving cup, presented by Mrs. Wm. J. Swain, of West Philadelphia, to be competed for at each monthly shoot, was won by Steel, '99 M., with a score of 18 out of 20; Parish, '99 C., was a close second, with 17 killed. Besides several open events, two team matches were shot off. The scores:

Swain cup match, 20 singles, unknown angles:
Steel .....11111110111111110111—18
Parish .....10011111011111111111—17
Paul .....11110101110111110111—16
Swain .....11001111010111110111—15
Weaver .....10001111011110101011—13
Neilson .....10101110011100101011—12
Jacques .....00000110101110110101—10

Event No. 2, three-men team shoot, 10 targets per man:
Steel's team—Steel, captain, 8, Swain 8, Weaver 7—23.
Parish's team—Parish, captain, 7, Paul 8, Neilson 7—22.
Event No. 3, three-men teams, 10 targets per man:
Steel's team—Steel, captain, 7, Swain 10, Weaver 4—21.
Parish's team—Parish, captain, 8, Paul 10, Neilson 7—25.
Event No. 4, 5 targets: Parish 5, Weaver 4, Swain 3, Neilson 3.
Event No. 5, 15 targets: Parish 13, Weaver 12, Swain 10, Jacques 10.

DUSTER.

Audubon Gun Club.

BUFFALO, N. Y., Nov. 19.—The fourth event, for the Hebard trophy, was the drawing card at the Audubon Gun Club's shoot to-day. Geo. P. McArthur and Crooks tied in this event, Crooks winning the shoot-off. No. 3 was the club badge shoot. E. C. Burkhardt won Class A badge, Geo. P. McArthur won Class B and Crooks won Class C. No. 5 was at 5 pairs. The regular monthly cup shoot of the club takes place next Saturday. The scores:

Events:	1	2	3	4	5	Events:	1	2	3	4	5

C. J. M.

A Shoot at Utica.

UTICA, N. Y., Nov. 21.—*Editor Forest and Stream:* I wish to claim Thursday, Friday and Saturday of the week before the Grand American Handicap for three days' shoot at pigeons only. I will hold up the manufacturers and dealers, and sandbag the local dealers, as the Cadi says. This will amount to over $200, as they should be more liberal when held up by their own party. This I will add to the ten highest guns that shoot the programme through.

The shoot will be known as Fulford's shoot. I will give the boys fast birds from fast traps, and show them that 300 pigeons can be shot and gathered in one hour.

Utica is on the New York Central, West Shore, D., L. & W., and Ontario & Western railroads, and my Western friends can get stop-over tickets without any extra cost while getting their rate to the Grand American Handicap.

E. D. FULFORD.

Rifle Range and Gallery.

Rifle Shooting in Frisco.

SAN FRANCISCO, Cal., Nov. 14.—Yesterday was monthly medal day at Shell Mound range. Also the North German Schuetzen Club held a public shoot on the man target. Capt. Siebe, proprietor of the park, held a turkey shoot, which was well patronized.

Winning scores in the North German contest:

Regular tickets: Louis Haake 77, A. H. Pape 76, F. E. Mason 74, George Alpers 74, John Utschig 73, A. Jungblut, 72. Among the other prize winners were A. Strecker, C. Thierbach, F. P. Schuster, D. B. Faktor, D. W. McLaughlin, H. Hellberg, J. Gefken, N. Ahrens and H. Burfeind.

Premium tickets: A. H. Pape, A. Strecker, George Albers, John Utschig, F. P. Schuster. Other prize winners were E. H. Goetze, H. Burfeind, A. Jungblut, D. W. McLaughlin and L. Haake.

San Francisco Schuetzen Club, monthy medal shoot:

Champion class, John Utschig 440; first class, Nick Ahrens, 427; second class, Frank Koch, final, 391; third class, R. Stettin, final, 416; fourth class, J. W. Goetze, 364; best first shot, August Jungblut, 25; best last shot, R. Stettin, 25.

German Schuetzen Club, monthly medal shoot:

First champion class, F. Schuster, 447; second champion class, L. Haake, 369; first class, H. Stelling, 385; second class, E. Goetze, 402; third class, William Goetze, 343; best first shot, H. Stelling, 25; best last shot F. Schuster, 24.

Columbia Pistol and Rifle Club, rifle shooting:

Champion Class: A. H. Pape 50, D. W. McLaughlin 52, F. O. Young 90.

First class: J. E. Gorman 70.

Second class: G. M. Bailey 101, M. J. White 102.

Third class: E. N. Moor 115, B. Jonas 142.

All-comers' rifle medal: A. H. Pape, 42, 51; D. W. McLaughlin, 51; F. E. Mason, 55; Dr. Rodgers, 59.

Bushnell military rifle medal: F. O. Young, 47, 44.

Members' rifle medal: J. E. Gorman, 56, 60.

ROEEL.

PUBLISHERS' DEPARTMENT.

Hunting and Fishing on the C. & O.

No necessity exists for a journey across the continent for the sportsman who is looking for an outing. Five hours from Washington, through the most beautiful mountain scenery this side of the Rockies, deer are almost as plentiful this year as they were in the days when the Old Dominion was first settled by white men.

Since the open season began, on Oct. 1, several parties have gone from Washington into Bath county, Virginia, and the reports which they bring back are such as to make the heart of the sportsman jump with expectancy. There is plenty of sport to be had with the rifle, the shotgun, the fly-rod, and none of the game bags or fish creels are brought back empty.

Within a radius of ten miles from Millboro, Va., there are literally hundreds of deer. Then too the Cowpasture River is teeming with bass, and a 2lb. small-mouth will make the disciple of old Izaak, who has played the big-mouth on 40yds. of line, think that he has a salmon at least on his hook.

Virginia at this season is the paradise of the sportsman, and the Chesapeake & Ohio trains leaving Washington at 2:20 P. M. and 11:10 P. M. carry him right into the heart of that paradise.

For information address H. W. Fuller, General Passenger Agent, Washington, D. C.—*Adv.*

THE large auxiliary bark White Heather, of 635 tons, one of the finest of her class, is now offered for sale at auction, as advertised on another page. She was designed and built by J. Reid & Co., in 1890, the hull being of steel, and she is 179ft. b.p., 28ft. 2in. beam. She is fitted for long cruises, being a real auxiliary, with seagoing rig.

Yachting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter-century.

As the yachting journal of America, the FOREST AND STREAM is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.

The Canada's Cup Races, 1899.

The final arrangements for the international match of 1899 on fresh water were made in Toronto last week, the conditions, as given below, being agreed to and signed by the committees of the Chicago Y. C. and the Royal Canadian Y. C. The former club, at a meeting early in the month, appointed Messrs. W. R. Crawford, George Warrington, J. B. Berryman and Secretary Chas. H. Thorne a special committee to convey the challenge to Toronto, and to arrange a match with the Royal Canadian Y. C. The latter club, at a meeting on Nov. 10, appointed a special committee of four, Com. Jarvis, C. A. B. Brown, Frank M. Gray and E. H. Ambrose, the latter of the Royal Hamilton Y. C., to confer with the Chicago yachtsmen. At the same meeting the following sailing committee was elected for 1899: Messrs. C. E. Archbald, F. M. Gray, J. Wilton Morse, J. S. McMurray, W. H. Parsons, J. Carl Reed and F. A. Turner.

The Chicago party arrived at Toronto on the afternoon of Nov. 15, being met at the station by a number of Toronto yachtsmen. After luncheon the two committees met at the town house of the R. C. Y. C., where the formal challenge was presented, as follows:

"Chicago, Nov. 14, 1898.—F. J. Ricarde Seaver, Hon. Sec. R. C. Y. C.: Sir—We have the honor, on behalf of the Chicago Y. C., to challenge your club to sail a series of races for Canada's cup, subject to the deed of gift and other conditions to be agreed upon.

"As required by the deed of gift we name the 35ft. class as the class in which races shall be sailed, and Aug. 22 as the first of the days upon which races shall be sailed.

"W. R. CRAWFORD,
"GEO. WORRINGTON,
"J. B. BERRYMAN,
"C. H. THORNE, Sec'y."

The only points on which a difference of opinion existed were the date, the location of course, and the length of time limit. The Chicago representatives favored Aug. 22 for the date of the first race, with the course directly south of the island, and a time limit of five hours for a 21-mile course. The Toronto yachtsmen wished to sail the races a couple of weeks later, at the date of the Industrial Exhibition at Toronto, with the course a little to the west, and in front of the exhibition grounds; the time limit to be six hours. The latter point was finally settled at five and three-quarter hours, the date and course being left open for the present. The regular crew limit of the class has been reduced from seven to six, as each yacht will carry a seventh man as scrutineer.

On Tuesday evening the visitors dined at the Toronto Club as the guests of Com. Jarvis, leaving for home the following night.

CONDITIONS governing the match for the Canada's cup to be sailed between the yachts representing the Chicago Y. C. and the Royal Canadian Y. C.:

Rules.—The racing rules shall be those of the Yacht Racing Union of the Great Lakes as existing at this date, subject to such additions and variations as are herein provided, and in accordance with the deed of gift dated 16th of January, 1897.

Construction.—The yachts shall be of wooden construction, in accordance with the scantling tables in the rules above mentioned.

Size of Yacht.—The competing yachts shall be in the 35ft. class.

Number of Races.—The winner of three out of five races shall be declared the winner of the match.

Date of Races.—The first race shall be sailed on——— ——— and the other races on consecutive days thereafter until completed, Sundays excepted.

Courses.—The races shall be sailed on Lake Ontario, off Toronto Harbor, on courses to be hereafter agreed upon.

The first course shall be triangular.

The second course shall be windward or leeward and return. The tug bearing the buoy shall start at the time the preparatory gun is fired.

The third and fifth shall be similar to the first.

The fourth shall be similar to the second.

The triangular races shall be once around an equilateral triangle of twenty-one nautical miles.

The windward or leeward races shall be nine nautical miles to windward or leeward and return.

The triangular courses shall be so sailed that one side of the triangle shall be to windward, if possible.

In windward and leeward races all buoys shall be left to starboard, and in triangular races all buoys shall be left to starboard or port, as directed by the judges.

Time.—All races shall be started at 11 o'clock A. M.

Any race not sailed in five and three-quarter hours by the winning yacht shall be resailed.

The start may be postponed by the judges:

First—In case of fog.

Second—If, in their opinion, the space around the starting line is not sufficiently clear at the time appointed for starting.

Third—In case both yachts consent to a postponement.

Fourth—In case of serious accidents to either yacht, as hereafter provided.

Fifth—Should such a course appear to them desirable.

And in case of postponement the judges shall determine the time for starting, but in no case shall a race be started later than 1 P. M.

A yacht crossing the line before the starting signal is given shall be recalled by five short blasts of the whistle and the hoisting of her national flag.

Unfinished Races.—An unfinished race shall be resailed until completed.

Accidents.—In case of accident to either yacht prior to the preparatory signal, notice thereof shall immediately be signaled to the judges, who shall have power to postpone the race if the accident, in their opinion, is sufficiently serious to warrant such a course, or if an accident occurs during a race the yacht to which the accident has happened shall have sufficient time to make repairs before being required to start in the next race.

Scrutineers.—Each yacht shall have on board during the races a representative named by her competitor, whose weight shall not exceed 150lbs.

The names of the scrutineers shall be given to the judges not less than twenty-four hours before the first race, and the scrutineers shall report to the judges within six hours after the termination of each race.

Management.—The races shall be sailed under the management of three judges, none of whom shall be interested in either yacht. One shall be appointed by each club, and the two so appointed shall select a third on or before the 1st day of July, 1899, and they shall act as judges and time-keepers and settle all disputes. The decision of the majority shall be final in all matters.

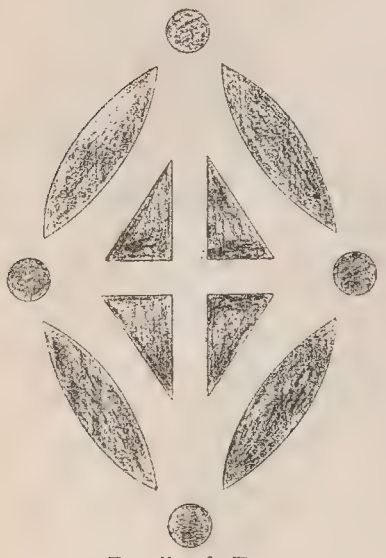
The judges shall be the regatta committee referred to in the rules of the Yacht Racing Union of the Great Lakes.

Measurements.—The yachts shall be measured by the judges or by a disinterested person appointed by them, and each yacht shall be entitled to have a representative present when measurements are taken.

The yachts shall be measured not less than two days before the first race.

Crews.—The crews shall be limited to six men, whose total weight shall not exceed 1,050lbs.

Instructions.—Charts of the course and instructions shall be furnished to the competing yachts not later than 7 o'clock of the morning of the race.



Alterations.—These conditions may be altered or amended by mutual agreement at any time.

A Fast Cruiser.

WHATEVER the winter may bring forth in the line of racing yachts, there is at present every indication of a material increase of the cruising fleet. The new yachts, as a rule, promise to be literally "fast cruisers," following closely in form the modern racing craft, but with greater freeboard and such increase of other dimensions as will give good room in cabins and forecastle. Mr. B. B. Crowninshield, of Boston, whose work is already known to our readers, has now in hand a number of yachts designed specially for cruising and general sailing, and not for class racing, but at the same time expected to show good speed under the conditions of summer cruising. The accompanying plans show the construction, arrangement and details of one of these, the lines and sail plan being published last week. This yacht was designed for G. S. Silsby, of Boston, and she will be built in one of the Maine yards. Her dimensions are:

Length—		
Over all	45ft.	8 in.
L.W.L.	30ft.	
Overhang—		
Bow	6ft.	6 in.
Stern	9ft.	2 in.
Beam—		
Extreme	11ft.	6 in.
L.W.L.	10ft.	8 in.
Freeboard—		
Bow	3ft.	8 in.
Least	2ft.	6 in.
Stern	2ft.	9½in.
Draft—		
Extreme	7ft.	½in.
To rabbet	2ft.	9½in.
Displacement, 19,770lbs	8.882	long tons.
Ballast (in keel), 8,362lbs	3.73	long tons.
Ratio of ballast to displacement	.42	
Sail Area—		
Mainsail	967sq.ft.	
Jib	248sq.ft.	
Total	1,215sq.ft.	

As the design shows, both displacement and deadwood have been freely cut away, and in general type the yacht comes very close to the fin-keel; but the beam, the freeboard and the round full form of section give a large amount of internal space, and in a form that may be utilized to good advantage. The main cabin is particularly wide and roomy, with 6ft. headroom under the skylight. There is plenty of room between the faces of the transoms, a good permanent berth in each wing, and the sofas draw out, making two extra berths, four in all, at night. The cabin is very well arranged, with plenty of locker space, there is a good-sized toilet room, and the galley is under the fore end of the trunk, giving headroom and ventilation. The forecastle is necessarily low, but there is plenty of room for a couple of hammock cots, clothes, lockers, etc. As a matter of course the floors and lockers are worked clear out to the skin, and there is no room for stowage under the cabin floor, but there is space for a watertank under the cockpit, the ice chest being in the galley. The cockpit is roomy, well above the water, and there is stowage room abaft it and on each side.

The construction is thoroughly strong, nothing being sacrificed in this essential; the keel is practically in two pieces, well butted amidships, and backed by the deadwoods and metal keel, and extending for the full length of the yacht. The clamps and double bilge stringers run the full length, and a shelf is worked inside the clamp. The details of the construction and fittings are very clearly shown by the plans.

The rig is of the "fast cruiser" type, only mainsail and jib, like the knockabouts, very well proportioned for general summer sailing.

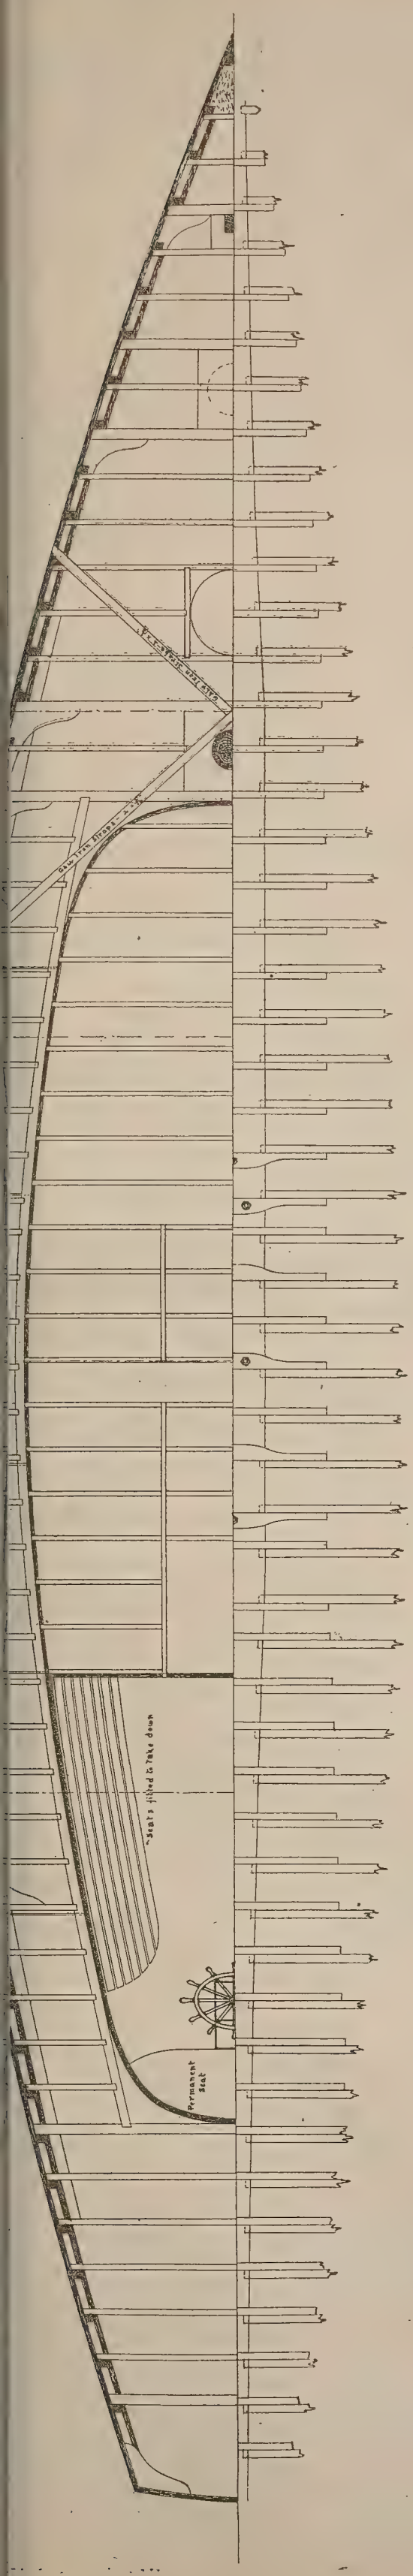
It is probable that Mr. Crowninshield will build a second yacht similar to this, with auxiliary power, and he has already under construction two larger ones, both yawls. One of these, to be named Regina, is for W. E. Barrett, of Melrose, Mass.; she will be 78ft. 8in. over all, 50ft. l.w.l., 17ft. 5in. beam, 7ft. draft without board, and 13ft. with board, iron keel 15 tons, sail area 3,000sq.ft. She will carry mainsail, jib, staysail, mizen and topsail. Her main cabin will be 12ft. 6in. long, with three fixed berths, three transoms and space for a piano. The owner's room is 8ft. long, with bath and toilet room adjoining; on the port side is an extra stateroom, with passage; forward is the galley, 7ft. by 7ft. 6in., with a room for the captain on starboard side. The forecastle will be quite roomy, with four hammock cots. The construction will be strong and durable. Rice Bros., of East Boothbay, Me., are the builders. The dimensions of the spars are: Mainmast, deck to hounds, 46ft.; masthead, 9ft.; topmast, 29ft. 6in.; mizenmast, 34ft.; bowsprit outboard, 12ft. 6in.; main boom, 46ft.; gaff, 29ft.; mizen boom, 24ft.

The other yawl is for Francis H. Bacon, of Boston, 65ft. over all, 43ft. l.w.l., 16ft. beam and 3ft. 9in. draft, with iron keel and polemasted rig. The main cabin will be 13ft. long, with three berths and piano, the headroom being 7ft., under a high house. The owner's room will be 10ft. long.

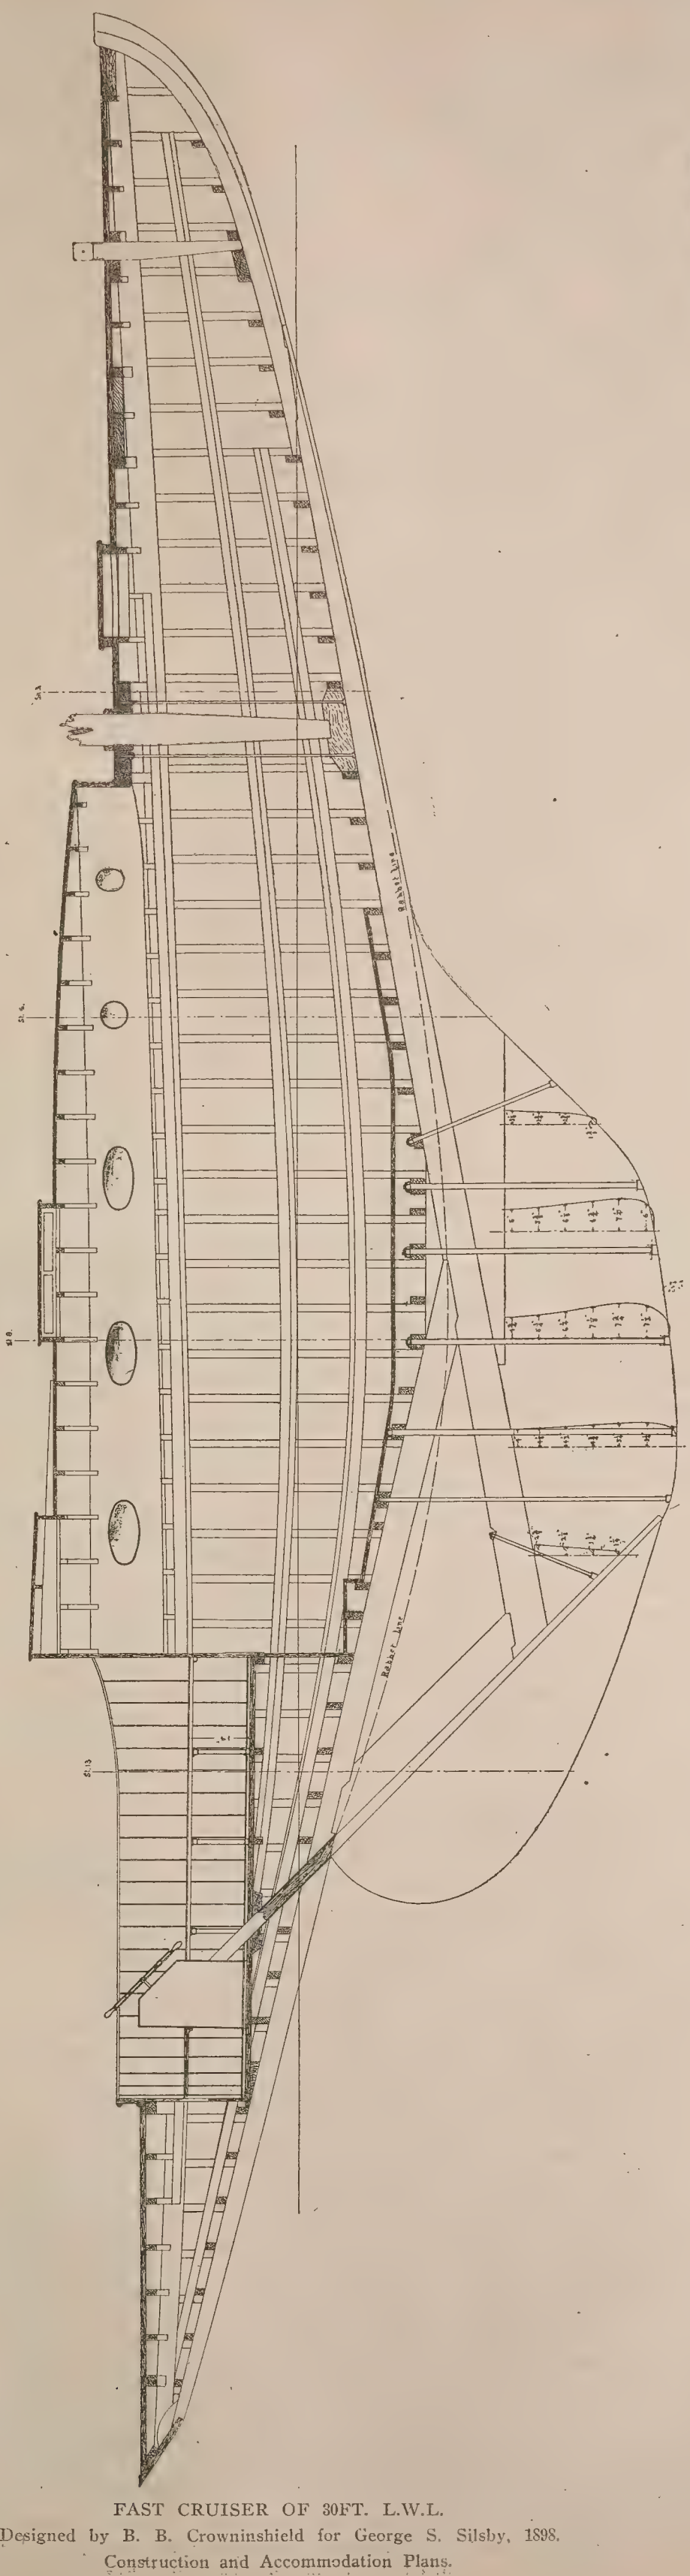
In addition to these, Mr. Crowninshield has a 55ft. l.w.l. cabin launch for Dr. Wm. R. Powell, of Erie, Pa.; a 25ft. keel cruiser for F. J. Bradlee, a 25ft. deep centerboard cruiser for Emor H. Harding; a 28ft. 6in. cruiser, deep centerboard, for W. B. Rogers; a 21ft. keel raceabout for John D. Minton, and a 21ft. keel knockabout for James Lawrence.

The Royal Victoria International Challenge Cup.

THE following editorial from the Field reads very much like the obituary notice of the Royal Victoria Gold 600 Guinea International Challenge Cup, established by the Royal Victoria Y. C. in 1890. This cup was won by Britannia in a race across Channel against Navahoe in 1893, the only occasion on which it has been raced for; and it was afterward withdrawn from further competition for an indefinite time.

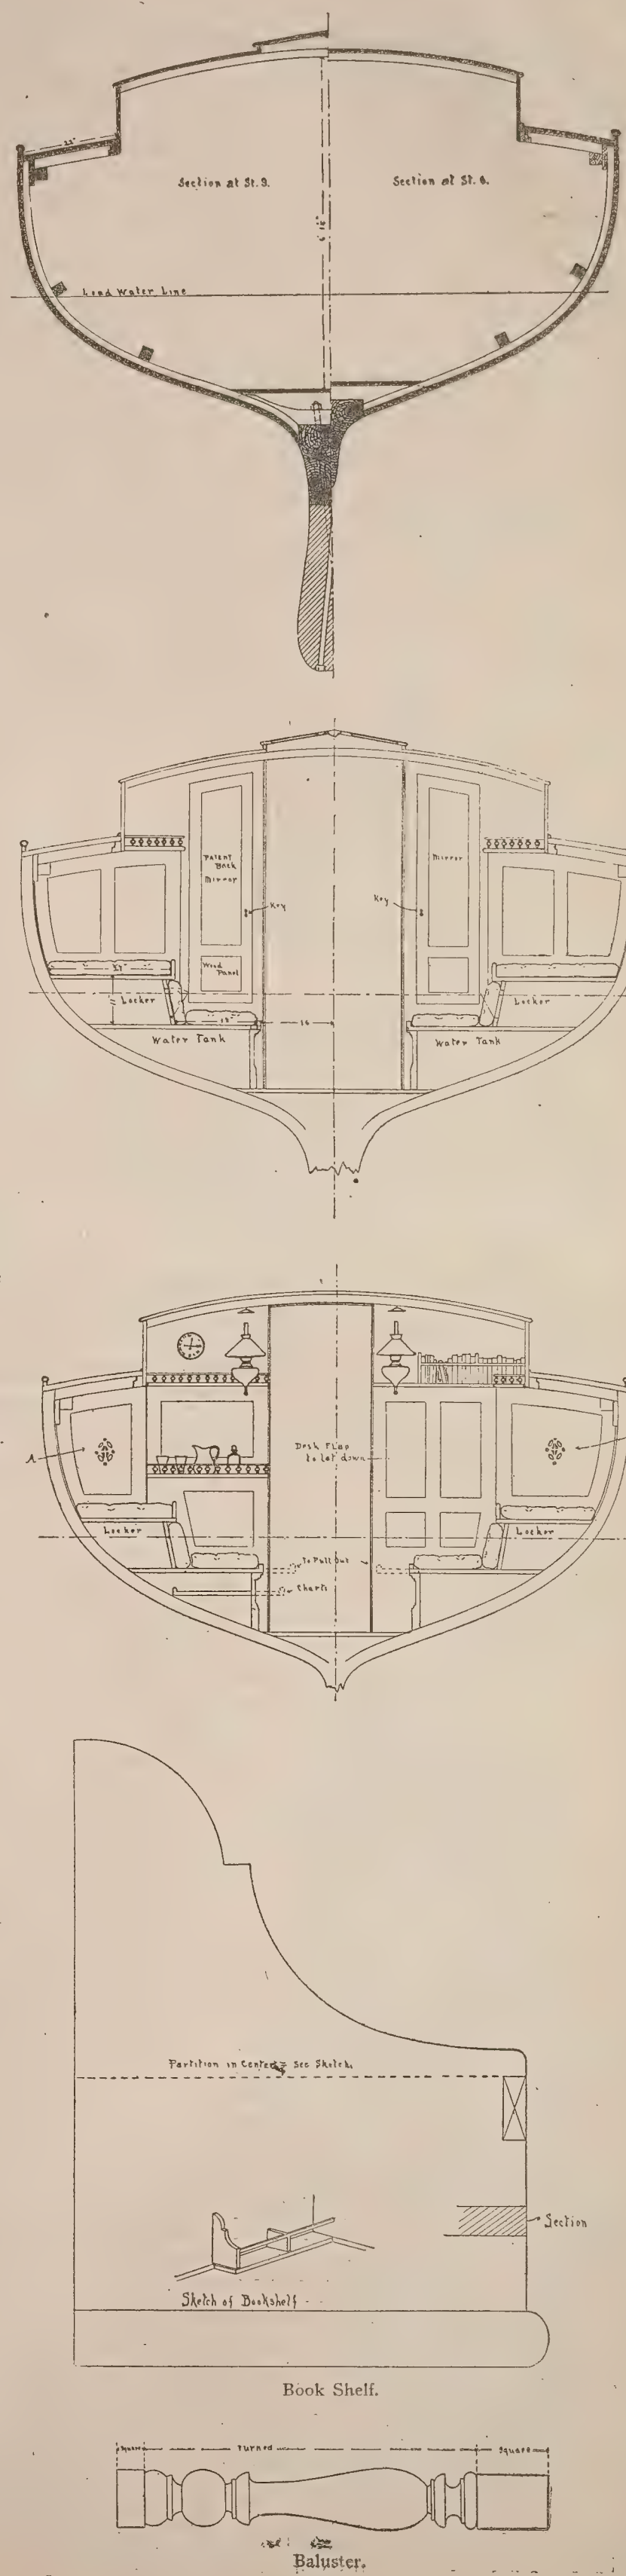


We have drawn attention to the fact that the gold cup of the Royal Victoria Y. C. has been withdrawn by the club from competition, and that it therefore is absolutely the property of the Prince of Wales, who won it with his yacht Britannia from the American yacht Navahoe. Two or three correspondents have written privately to us, stating that the withdrawal of the cup from competition was an illegal act, but, unless the whole of the subscribers to the fund interfere in the matter, we do not see what can be done. The cup was in possession of the club, and the committee of the club, on their own authority, withdrew it from competition, thereby practically, as far as we can judge, leaving the trophy in the possession of the Prince of Wales as the right owner. This abrogation of rights over the cup we understand was entirely the act of the flag officers of the club and the committee. Of course, the Prince of Wales could alter the awkward predicament by informing the club that he would represent the cup for competition; but why should he do so? We said that the fact of the withdrawal of the cup from competition was an illegal act, and we consider this a correct statement of the case, as in the original deed it was enjoined that it should always be subject to challenge subject to nine months' notice.



The cup has thus far proved entirely useless in promoting international competition, and it is a pity that it was ever established. Considering the widespread feeling of disgust which prevailed in 1890 on both sides of the Atlantic over the action of the New York Y. C., in arrogating to itself the sole ownership of the America Cup, there was every opportunity for the Royal Victoria Y. C. to have successfully established its new cup as the premier yachting trophy. This, however, it has failed to do. The original terms on which the cup was offered were fair enough, but the management of the trophy has been very poor indeed, the effort apparently being to discourage instead of encouraging competition.

Had the R. V. Y. C. in the first place offered the cup on such fair terms as to have induced American competition, but stringent enough to prevent all tampering with them in the interests of a temporary holder, and then judiciously lost the cup to the first American challenger, it could in the following year have had a race in American waters that, with the America Cup locked up in a safe and under the ban of public opinion, would have altered the whole course of international racing.



As matters now are, however, while the New York Y. C. has striven for some years to rectify the mistake of 1887, and to cut away the numerous strings that have long been tied to the America Cup, the R. V. Y. C. has tied up its cup in such a way that it is now discredited and worthless. The moral is a perfectly plain one, and well worth the attention of all clubs interested in international racing; cups with strings tied to them in the interest of any parties can never be successful as international trophies, however useful they may be in promoting local racing.

Mr. F. Bovie was fishing for eels in Wimbledon Park Lake, in 4ft. of water, using as a bait a small dead roach on a double gorge hook. During the whole morning Mr. Bovie did not get a single run, and went away at 1 o'clock. On returning he saw an unusual commotion 30yds. from the bank, and looking more closely noticed that the disturbance was caused by a young crested grebe floundering about in the water near where he estimated his bait would be. Mr. Bovie picked up his rod, and discovered that the bird was hooked, and on reeling in found that the grebe had literally gorged the roach, so much so indeed that it had to be killed.—London Fishing Gazette.

The America Cup, 1899.

THE work of constructing the new challenger and defender for the America Cup races of 1899 is now well under way on each side, but as a matter of course very little is known as to the plans and progress of either party, and nine-tenths of the special reports are mere guesses and unverified rumors.

The final plans of Shamrock have been completed and submitted to Sir Thomas Lipton and his associates, and the work of actual construction will begin very soon. It is reported that the hull will be built by Yarrow & Company, on the Thames, the famous torpedo boat builders. The firm is thoroughly equipped for handling aluminum and very light plating, and will no doubt turn out a fine job if the work is entrusted to it. Another report in connection with the races is that the Duke of York will visit New York to witness them.

On Nov. 1 Valkyrie III. was towed to Greenock from her moorings in Gourock Bay, where she has laid since her return from New York, and she was hauled out at Scott & Company's yard for cleaning and painting. She has been cleaned, a heavy growth of barnacles being removed, and after the bottom was tarred she returned to her moorings. Nothing is known of the purpose of her owners, but she may be fitted out for trial races with Shamrock next season.

At Bristol the new defender is laid down and work is under way on the first patterns, etc. The lead for her keel has arrived, and the frames are being bent. She will not be set up, however, until Defender has been repaired and launched from the south shop, where she now lies. She was hauled out on the new railway on Nov. 15. This railway has been specially constructed within the past two months for the handling of the old and the new boat, it runs out 300ft. to a depth of over 20ft. on the cradle. The ways have been laid by a diver, the work being interrupted at times by bad weather. The cradle is but 28ft. long, but very strongly built, of wood, steel and cast iron. It is fitted with a number of steel struts, extending up to the body of the hull, instead of the ordinary sliding blocks or poppets. The hauling is done by a powerful steam winch at the head of the shop. The work of hauling out Defender is described as follows by Mr. Robinson, of the Boston Globe, who was present:

Just how extensive will be the work of repair on the Defender cannot be stated with exactness until after careful examination of her hull, but Mr. Herreshoff considers her in good condition for a boat that has lain idle at her moorings for three years, and has not been hauled out since before the Cup races in September, '95. The aluminum plating of the topsides and the aluminum deck beams are undoubtedly in bad shape and practically will have to be replaced, but it is believed that the steel frames of the boat and the manganese bronze plating below the water line are sound and that they will need comparatively little attention.

A good look at the boat to-day, as she was being hauled out, confirms these impressions. The corrosion of the aluminum topsides is mostly hidden under a coat of white paint applied before the boat left New Rochelle for Bristol, but in places the plates were deeply pitted, and there are other evidences that the lightweight metal has not stood a long seawater test. Still it stood long enough to successfully defend the Cup, and that was really all that was expected of it. The new syndicate has money enough to replace it for next year's work, as well as to build the new boat, so that outsiders seem to have no quarrel with the use of aluminum in either new or old.

In many places on the manganese under-water body of the boat, notably on the rivet heads and the edges of the plates where they are butted together along both bilges, there are quantities of iron rust.

The difficult task of hauling out Defender was accomplished with neatness, if not with dispatch. Plenty of time was taken, for the work begun soon after 8 o'clock in the morning was not finished until late in the afternoon, but since the safety of the boat was the first consideration, time did not count, and nothing that could insure that safety was left undone. The Herreshoff ingenuity was shown everywhere in the work, and Mr. N. G. Herreshoff gave the job his personal supervision.

The cradle is fairylike compared with the cradle of the ordinary marine railway, and yet it serves its purpose much as do the light launching cradles used by the Herreshoffs. It is noticeable for its absence of heavy bilge blocks. In place of them on either side is a series of inclined shores reaching from the sides of the cradle to the body of the boat just as it rounds into the keel, or just where the garboard strake would come in boats of ordinary construction, and extending about 30ft. fore and aft.

The keel rests on the usual heavy blocks, but of other support there is none, except a shore on the forward end of the cradle, which finds its top bearing on the bobstay plate, where it is riveted to the stem. The construction is of course solid, but its lightness and simplicity are marked.

The work of hauling out was begun just before 9 o'clock, when Defender was warped from her berth at the north pier by means of properly placed cables, and was moored stem and stern at the outer end of the ways, ready to be run into the cradle when it should be let down the ways from the shop. But the cradle wasn't ready as soon as Defender. Men were still at work in the shop on its wooden blocking. Mr. N. G. Herreshoff, who had been on Defender, went ashore in a small boat to hurry things along, but it was 9:45 before the cradle ran slowly and smoothly down the ways and stopped at their end just under Defender's bow.

Defender was hauled slowly and carefully ahead and was apparently almost in place on the cradle when she refused to move further. Diver G. O. Phillips, of Quincy, who has been at work for eight weeks on the ways for the Fall River firm having the job in hand, was sent down from its diving scow to see what was the trouble, and reported that Defender was binding hard against the cradle on the starboard side. The boat was then hauled somewhat to port and soon slid ahead until her keel had full bearing on the blocks. Then the cradle was hauled up until Defender's waterline was about 2ft. above the surface, when the diver again went down and drove home the wedges between shores and hull, making everything solid.

The work of getting Defender on to the cradle had been done none too soon, for there was barely a foot of water under her keel when she was finally settled in place, where there had been nearer 3 at high water.

The cradle and with it Defender was now slowly hauled up on the ways, with one or two stops for the firm placing and wedging of the forward shore, and as the noon whistles were blowing the boat's bow was within a dozen or 15ft. of the end of the shop.

Here work was suspended until after the men had had their dinner. Defender was now left to herself for a while, with the water just lapping the bottom of her lead keel.

And very handsome she looked, too, when left alone and with only the lightest of cradle support. Rust stains on her underwater body could not hide, much less detract from her fine model, the easy and graceful sweep of her fore and aft lines and her general racerlike look all around. No irregularity in form was to be seen, and she looked outwardly as though a little scraping, polishing and painting was all that was needed to put her in shape. She is certainly a beautifully modeled boat, as all who saw her in the dry dock in New York in '95 will testify, and it is not easy to see where Mr. Herreshoff can improve on her. Whether or not he can improve on her will be shown later in the new boat.

Soon after 2 o'clock the work of hauling the boat into the shed was taken up, and with a stop now and then to make sure of dredging and shoring, was completed before dark. There had been no serious hitch in the work and everyone interested breathed more freely when the 150 tons and 20ft. draft of Defender was safely housed, shored and blocked for the work of repair. This work will now be pushed so that Defender may be launched and the new boat set up in her place.

Assisting Mr. Herreshoff to-day, aboard the Defender, was Capt. Charlie Barr, who sailed her around from New Rochelle, and who will sail her in next season's races. Pres. John B. Herreshoff of the firm was a frequent visitor to the north pier during the forenoon, and was kept well posted as to the progress of the work. After the boat was in the shop both the Herreshoffs expressed satisfaction that a job which would have taxed any of the regular marine railways had been satisfactorily done, but neither would give an opinion as to the extent of the repairs needed or the probable time required.

Defender's mast, boom and other spars are on the south pier, where later they will be safely covered from the winter storms. Sails and rigging have been stowed away in the lofts.

Capt. Barr has returned to his home at City Island for the winter.

The Capabilities of Small Yachts.

WE continue below the republication of the very interesting discussion of this important subject, from the Field. As a matter of vital interest to all cruising yachtsmen and single-handers, we hope that our readers will feel inclined to discuss it still further. The designing of a thoroughly stanch and seaworthy cruiser, capable of keeping the sea and of giving good living room to her crew, and at the same time a smart lively boat, and not a mere leewardly box, is one of the most interesting problems of yacht designing, especially when the fitting up to the best advantage of every inch of space is included.

The discussion thus far has developed various views of the value of overhangs versus square ends, all types finding their warm advocates, but the happy mean for real sea-going will probably be found very far from the square stem or stern in the form of moderate overhangs of the whaleboat type, giving long diagonals, an easy form, and ample buoyancy above water. There is little doubt that this type of boat is superior both to the square-ended craft with straight stem and bluff bows, and the racing type with excessive overhangs on each end.

The question raised in your issues of Sept. 24 and Oct. 1, on the capabilities of small boats, is, in my humble opinion, of paramount importance to all yachtsmen. My experience of sailing began with a small deck boat about 17ft. long, with a cutter rig. In this craft I knocked about the lower reaches of the Thames for a season. The following year I had a 3-tonner, but still I was ambitious for a boat which could stand almost any weather that one is likely to encounter on our east and southeast coasts. As this boat did not answer my requirement, I sold her some time before the close of the season, and then spent my leisure in going from one yacht yard to another. I visited the whole of the yards inside the Solent, and then up as far as Brightlingsea, for the ideal cruiser. I came across many that would answer my purpose, but there was invariably some drawback, and I had almost made up my mind that, to get the boat I wanted, I should be compelled to go to the expense of building; but when I asked a friendly builder the probable cost, I was winded on the spot at his reply. Luckily, however, an agent, just at the right time, sent me particulars of a boat which he thought would suit.

I went down to the fort where the boat was lying, and at once saw she was the craft I wanted; Thames measurement, she worked out at 8 tons. Her length over all was 30ft., 26ft. l.w.l., and 9ft. 3in. beam, and cutter rigged.

A few days later she became mine, and I shall not easily forget the satisfaction I had when we brought her round to the Thames.

Her draft was 5ft. 3in., which gave comfortable head room. The cabin was about 9ft. long and 9ft. wide, giving plenty of room to move about in.

The gunwales were only 4in. high, provided freely with scuppers, so that when under way the water simply washed over her.

Of course the proof of the pudding is in the eating. To look at from the shore she looked an ideal cruiser, but the primary consideration was what would she be like under canvas well down Channel.

To find out from one's own personal experience is, I think, decidedly the best; therefore I resolved to bring her up to the Thames myself instead of engaging any extra hands. On board with me was a skipper and a boy.

At the end of April we got under way and stood up Channel. The day had been fine, but toward evening I noticed the wind was shifting from S. to S.W., and the glass falling. The clouds were chasing one another up from the windward like mountains of black wool, and I made up my mind for a wicked night. I was at the tiller, which we moved in a somewhat large cockpit, made completely watertight by a wooden covering. The tide was favorable, and the course easterly. I had all my work cut out in watching the end of the main boom (the sheet being free) and the waves, which were chasing us astern. The wind increased in violence every minute, and as we ran up the breast of one wave, and halted on the crest for a dive down into the gulf of another, I took a hasty glance to windward and saw the waves following each other, regiment after regiment. I thought it was utterly impossible to avoid getting pooped, but we did not get so much as a bucketful over the counter. To the buoyancy of the boat I could only attribute this fact. Hour after hour we slashed her through, and having gained confidence in the boat's seaworthiness, I had not a particle of fear that we should weather the gale safely.

On the following day we got round the North Foreland in a brutal sea, caused by the tide rips, and the wind being abeam we were scudding along with double-reefed mainsail, reefed foresail and storm jib. The water occasionally came over the bows simply in tons, but owing to the low bulwarks simply rushed over the sides, back from whence it came. Instead of a fair wind, it was a dead peg the whole of the day to Queensborough. Tack after tack we made, and the wind and tide contested every foot of the way. After a spell at the tiller I dived below for a rest, and lay for some time listening to the wind howling through the shrouds, and then dozed off into a sound sleep. I must have slept for about three hours, when I awoke and found by the motion of the boat that the going was much easier and not accompanied by a vicious kicking at her heels. Going on deck, I found that there was less force in the wind and our port of destination was in sight. When at anchor that evening I took up the floorboards of the cockpit to see what water was in her, and was delighted to find that there was scarcely a bucketful of sea water. A water breaker which had broken loose accounted for the rest. I have had a good many dustings off the Forelands this year, but none so severe as the one just related.

Looking back over the cruises of this year, I cannot but feel satisfied, as well as confident, that a boat well built and well handled can hold her own in almost any weather.

The recent contest on the Medway, between the Maid of Kent and the Irex, contains food for ample reflection for yachtsmen generally. In conclusion, I am decidedly of opinion that there is a large field open for builders if they can turn out cruisers of the above type, or, say, a shade larger, giving a length over all of 36ft., 30ft. on the water length, beam 9ft. 3in., draft 5ft. 3in. These dimensions would give a large forecastle and two cabins, with a cockpit amply sufficient for working her. With a schooner bow and an elliptical counter such a boat would, I venture to assert, be one that any yachtsman would be proud of.

ERNEST A. ORR.

The letters which have appeared in the Field under this heading, and the interesting editorial remarks on the subject, open up a wide area of discussion, in which I hope I may be permitted to join.

Mr. Chatwin admirably sums up the three most urgently necessary points in the design of a yacht intended solely for cruising purposes; but I am not quite in agreement with him in making it an absolute rule that a small yacht when caught must necessarily "run for it." It all depends upon circumstances, and under some conditions good seamanship would dictate heaving to in preference; but, at any rate, it is desirable to be able to run successfully whenever necessary, and as small craft are not often caught very far from shelter, it is most usually resorted to. I do not anticipate that any of your readers who have had much experience at sea in small craft will deny that running a small yacht in a heavy sea, even under the snuggest sail, is an anxious and trying job, and if the correspondence should clear up any doubtful point in the design of cruising yachts, very much good will have been accomplished.

With regard to counters—if the words quoted from "Yacht and Boat Sailing" be taken in their absolute and literal sense, i. e., "a short, neat counter"—I think there can be no question that such an adjunct is most valuable in running. The kind of counter usually found on a racing yacht can hardly be accurately described as short; but even that is better than an absolutely square stern, although one would hardly put such a long tail on a small cruising yacht, and I doubt very much whether any form of counter and after body would run longer or more safely than the "unconventional" sharp stern form alluded to by Mr. Chatwin, if this were accompanied by a fairly long heel, and a nicely rounded off forefoot of not much more than half the depth of the sternpost, and a sufficiently large rudder.

"Broaching to," that ever-present terror when running in a high sea, would not perhaps be entirely banished; but at any rate it would be removed to a safer distance.

This particular form of stern, which, I think, was first introduced by myself for cruising purposes (the Jullanar possessed one years before, for measurement cheating purposes), very much approximates to what was known as the elliptical or round stern, which that veteran cruiser, Mr. McMullen, speaks so favorably of. His words are: "Having experienced the great discomfort of riding at anchor in rough weather in a boat with a long counter, I had the Sirius built with a round stern, which, although it was at the time considered an ugly innovation in yacht building, has since become common * * * the long overhang stern * * * is an excrescence and a nuisance in seagoing vessels, where comfort and safety are of more importance than elegance."

On turning to the plates in his book "Down Channel," which give outline views of the different cruisers he built, it will be found that the overhang aft of Sirius, 11 tons, was only 3ft.; and that of the Orion, 16½ tons, but 4ft., while the Leo, his first yacht, although only 20ft. over all, had 2ft. of overhang aft. It is probable that these yachts would nowadays be voted intolerably slow; but there is no denying their abilities as cruisers when handled by their owners. Yet, remarkable fact, the Procyon, a later boat still, and a single-hander, has a perfectly flat stern, and only 6in. more draft aft than forward! Evidently a "master" can cruise safely in a square-sterned boat; but that a "short, neat counter," carrying out the body of the boat, would have been a vast improvement, it is hardly possible to deny, with out present knowledge of form.

The limits of overhang, both forward and aft, are practically decided by the form of midship section. It is only the flat-floored, high-bilged bulb-keeler that can take unlimited overhang. With the full, deep body necessary in a cruising model, it is not very easy to overshoot the mark if the design is kept fair, even with a large amount of cutaway forward, though this feature, carried to excess, is one of the causes of unsatisfactory behavior, when hove to, which a designer of experience would know how to avoid, without actually indulging in a "square toe," and given, say, 36ft. as extreme over all length, a more satisfactory and actually larger cruiser could be designed with 3ft. overhang forward, and 4ft. or 5ft. aft, than one with a straight stem and an 8ft. counter, the greater part of the after end of which would be useless, and therefore, as Mr. McMullen dubbs it, an "excrescence."

Although "converted" lifeboats are often made into fairly successful and safe cruisers, they can be at best but makeshifts, costing nearly as much in the end as would a properly designed and built cruiser, in which one could obtain far more comfort and an exact disposition of the centers necessary to successful performance in all weathers, in addition to the very valuable amount of surplus buoyancy gained by judicious overhang fore and aft.

Mr. Chatwin may be glad to hear that the unconventional sharp stern, which he evidently approves of, is rapidly coming into favor in the small class of cruisers now known as canoe-yachts. Several are being built in England and America, and I am at present engaged upon the designs of two others which will be afloat next summer.

ALBERT STRANGE.

Scarborough, Oct. 15.

In the discussion about designs for seaworthy yachts, and even in editorial paragraphs on that subject, certain misleading definitions have crept in, which may prove to be hurtful.

The controversy centers on the value in strong weather of overhang, either forward or aft, or at both ends. The Field, in an earlier stage of the discussion, took the view that "overhang at either end was of great value in a sea, and any one who had ever been caught in a blow in a square-sterned craft would recognize the use of the counter, either for running or jamming the wind in a heave-to."

It has been my lot to have watched both experiments in both types, and unreservedly I dissent from the implied conclusion. The question really is, in effect, what is the length of a vessel? Compactness of hull in all directions facilitates construction, docking, storing and swinging, and is therefore desirable. For purposes apart from convenience, yachts are rated in most countries by their waterline length; without doubt additional length in the ends, which comes into play at high rates of speed, or in broken water, may add power to a boat, but the overhang ends are in fact length, added, but not counted.

Any naval architect would, I imagine, design his waterline the full length of the hull if no penalty of measurement were thereby incurred, and if the vagaries of fashion were neglected. If noses and tails are of greater value for seagoing purposes than waterline length, logically it would improve the model of a successful square-sterned boat to carve away at either end till the ideal shape were attained. A cutter without overhang, scientifically designed and constructed, whose waterline length was equal to the over all length of the Britannia, would lose that successful vessel in any weather.

Lifeboats and crabbers, Penzance luggers and torpedo boat destroyers, are all practically the length on the waterline that their respective sizes admit, and even in the newest Atlantic liners the trifling overhang at one end is barely sufficient to keep hawsers clear of propellers. It seems to me that the dispute arises from misapprehension.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

RMS, $4 A YEAR. 10 CTS. A COPY: SIX MONTHS, $2.

NEW YORK, SATURDAY, DECEMBER 3, 1898.

VOL. LI.—No. 23. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

"*The sale of game should be forbidden at all seasons.*"
—FOREST AND STREAM, Feb. 3, 1894.

AMATEUR PHOTOGRAPHY.

THE FOREST AND STREAM'S announcement of prizes for amateur photographs is given elsewhere.

It is when the snow is on the ground that we take the census of the woods.

E. E. Thompson.

GAME AND THE FOOD SUPPLY.

Commenting upon the current high prices of English game occasioned by the unfavorable weather prevailing during the breeding season, the London Standard points out that under ordinary conditions game birds from the great preserves are cheaper than domestic poultry. "Thirty years since," the Standard says, "it would have been thought a piece of extravagance to buy game for ordinary consumption in any middle-class household. Latterly, however, ladies have found pheasants cheaper in the end than fowls. Without costing more money, they go a good deal further. A prime young pheasant, well fed on buckwheat and other nutritious delicacies, has more meat on him than the much-vaunted Surrey fowl. We must all be glad that both pheasants and partridges have been brought within the reach of the middle classes; and it would be an evil day, for more reasons than one, if ever they were placed beyond it again. We anticipate no such misfortune as that." Partridge and pheasant are cheap commodities, of course, only because they are bred in enormous supply; and bred with as much system as are the ducks in any Long Island duckery that sends to market its twenty thousand ducks in a season. In this supply of cheap food for the large class in England who habitually buy game for their tables is found an answer to much of the criticism upon game preserves. Only for the sake of shooting will landed proprietors go to the expense and trouble of maintaining game-keepers, pheasantries and costly establishment of a game preserve. In Great Britain then sport has a direct and wholesome effect upon the market price of cheap food.

We have at the present time in this country no game conditions answering to these. A well-known sportsman of Ohio once made an eloquent plea for the protection of quail in that State, and clinched his argument with the declaration that if duly protected the birds would become so abundant as to furnish an unending supply of cheap food for the people. Except in certain circumscribed localities, where birds are many and people few, this consummation can never be realized. Wherever and whenever the condition has existed it has been with the primitive stock of game, before it has been given protection, before there was apparent necessity of protection for it. Protection never has and never can so restore a wild game supply as to make it a source of cheap food for the people. The game in our markets to-day is a luxury. Canvasback ducks are quoted at $6 a pair, redheads at $4.50 a pair, quail $3.50 a dozen, woodcock $2.25 a pair, snipe $4.50 a dozen, partridges $2.25 a pair, loin of venison from 50 cents a pound for fresh killed to 30 cents for refrigerated stock. No feathered species which is dependent upon natural supply alone can ever compete with the domestic hen, or with the imported pheasant, if that bird shall be bred in the English way. Given thirty years of extension and development of the game preserve system which is so rapidly taking hold in this country, and the experience of the United States, with the pheasant as a factor in the food supply, may answer to that of Great Britain; we may then be where England is now.

RING-NECKED PHEASANTS IN NEW JERSEY.

The most important and significant story of game stocking enterprise ever told of the Atlantic States is contained in the chapter in the New Jersey Commissioners' report for 1898, which records the introduction of the ring-necked pheasant into the covers of that State. In 1897 some four hundred and seventy-four birds were distributed through the several counties, where they were entrusted to the care of persons who undertook to assure security for them by posting the land and other means. The letters published by the commission, some of which are quoted in our game columns to-day, establish the fact that when put out and left to shift for itself, the pheasant is abundantly able to find food, to stand the climate and to maintain itself with our native birds. In New Jersey the pheasant has increased and multiplied. By giving us such a demonstration the Commissioners have rendered a service to game interests extending far beyond the limits of their own State. Pheasant breeding has been successful in numerous instances when undertaken as a private enterprise; here it was entered upon as a public charge, and the success attending it is such as must insure the adoption of similar work by the game commissions of other States.

A service like this rendered to the people by a fish and game commission must go far toward strengthening the commission in public esteem, and toward enlisting an improved public appreciation of its game protective functions. The persons of the community most difficult to deal with in these matters are those who look upon the commission and its executive force as having only the one purpose of restricting their sport and denying them the right to hunt when they choose to. The commission stands to them in the relation of a spoil sport. They cannot or will not look beyond this to the ultimate purpose of close seasons, and other restrictions, as measures adopted to insure the perpetuity of the game supply But here surely in this pheasant introduction is something which the most obstinate and wilfully obtuse opponent of game protection must see and acknowledge as of direct value to himself and his fellow shooters. The enterprise declares upon the face of it that instead of seeking to restrict shooting, a commission which introduces a new game bird must be intent upon promoting sport with the gun. By and by, when the required close season on the game shall have expired, and fortunate gunners shall return from the field with the magnificent trophies, they will see this more clearly yet. The establishment of the pheasant then will have a two-fold result, it will supply a new game bird, and it will foster and make converts to the game protection idea.

THE SNIPE BAG.

The trick of posting a greenhorn to hold a bag for snipe at night has remarkable persistence; hardly a season goes by without its reporting from some quarter; and not infrequently the results are fatal to the victim. Usually the bag holder is a guileless stranger, at whose expense "the boys" determine to have some fun; to that end they take him out into the swamp, where the mosquitoes are thick if it is summer, or to the bleakest spot they can find if it be winter, and standing him there with a bag to hold open for the game, they caution him to silence, and go away ostensibly to beat up the game, but actually to return to the tavern to await the advent of the bag holder, when he shall come to a realization of the sell. There was a blizzard in Iowa last week, and among the newspaper dispatches about it was one from Sioux City, recording that a young stranger who had been induced by practical jokers to hold a bag for quail on the bank of the Little Sioux during the storm was supposed to have wandered away and frozen to death, or to have fallen into the stream. At last accounts the searching parties had not discovered the body. The unfortunate individual appears to have fallen prey to that canine instinct in man which prompts him to do for the stranger after the manner of a band of dogs which will invariably set upon a strange dog.

The snipe bag jokers we shall have always with us, but it may be noted that the stranger who is likewise a greenhorn is not nowadays so often as formerly the butt of village tricks. This is in particular true of those communities which derive a revenue from providing for the sportsman tourist, for it has come to be understood that no matter how green the person may be, his money is quite as good as that of any other man when paid for hotel, boat, camp outfit, guide and cook. The first thing the dweller in an isolated place must learn, in order to put him on good terms with a stranger, is that in dress, deportment, speech and equipment as to information or skill or ability, one may be at wide divergence with local standards, and yet be "a very decent sort of a fellow" after all. In teaching this lesson, the sportsman has always had a large influence, because it is the sportsman who so frequently first invades remote communities and puts them in touch with the world. The man with the gun and his brother with the fishing rod have thus in numberless instances been the bringers of many social amenities.

SNAP SHOTS.

They do things differently in New Zealand. In that land of extinct and extinguishing forms of animal life they have a bird remnant, the *Notornis mantelli*, a giant flightless purple coot, first described from bones found with those of the moas, and like the moas supposed to be extinct. After a while a living one was discovered, and was, of course, promptly killed and made into soup. Years afterward a second one was captured, and the skin was sent to the South Kensington Museum; and then, some twenty years ago, a rabbit catcher one day found in his snare the third known specimen. A fourth has just been captured, also by a rabbit snarer, and promptly killed. It is, of course, a great pity that rare forms of bird life should be destroyed in this way, but what more could be expected of New Zealand rabbit trappers? In this enlightened country it would have been different. The same foresight and provident self-control which have preserved to us the wild pigeon and the buffalo, the Pennsylvania elk and the Florida plume birds, would have taken good care of a bird which could not fly. The genius of American sportsmanship is such that this continent would be a secure paradise for wingless wildfowl.

Mr. Titcomb sends us the list of deer killed in Vermont this year, as reported by postmasters. It runs by counties: Addison six, Bennington four, Caledonia two, Chittenden one, Essex ten, Franklin one, Lamoille two, Orange one, Orleans four, Rutland thirty-five, Washington two, Windham four, Windsor fifty-eight—a total of one hundred and thirty. This is against a total of one hundred and seven reported by postmasters in 1897; the whole number for that year was estimated at one hundred and forty; and it is probable that the number this year is much larger. The open season in 1897 and in 1898 comprised the month of October, and the use of hounds was permitted. The experience of these two years has demonstrated that this drain upon the supply was too great, and acting at the instance of the game commission, the Legislature has changed the law; the game is protected except for the last ten days of October, and the use of dogs to pursue deer is prohibited.

"It is the almost universal custom with the local shooters here to shoot the bucks and let the does go free," writes Mr. Risteen from New Brunswick. "I never shoot does nor fawns, but always wait for something with a head on it," said a Florida sportsman the other day, describing deer hunting in that State. And so from Canada to the Gulf sentiment is growing in favor of sparing the does. The rules which sportsmen impose upon themselves for conduct in the woods are not constant from generation to generation, but are made more and more stringent as time goes by. The tendency is all in the direction of a more provident and careful use which shall not diminish the parent stock.

Guide Joe Francis of Maine woods trail and camp is Gov. Joseph Francis, of the Penobscot Tribe, having been elected to that office on Tuesday of last week. If the Governor is as capable as the guide, the Penobscots have made a capital choice.

The organization of the Alabama Field Trial Club has had a distinct influence to quicken public interest in shooting and the game supply, and it is probable that one good result will be the securing of a game law to cover the State.

The Sportsman Tourist.

Yukon Indians.

(*Continued from page 224.*)

Pink Tea on the Yukon.

The first night we were in the cabin about half the village organized a surprise party. Everybody came except those who had to stay home to keep the dogs from stealing the meat, and they brought their appetites with them. In this respect it differed from other surprise parties, for the hosts were expected to furnish the dainties, as the Indians weren't slow to explain. They sat around on our provision sacks and the bed, and some of them squatted, Indian fashion, with crossed legs on the floor.

Mac and I elected that, as we had to furnish the grub, we would change it into a 5 o'clock tea, or a pink tea, or any old thing where solids were not called for.

We set a pail of water on the stove and dropped in a handful of tea (we had more tea than anything else in our outfit), and then we gobbled our own supper and were prepared to be sociable.

I filled half a dozen tin cups with tea, and Mac passed them around to the ladies first. Somehow when we looked around the men all had the teacups, and they were the biggest and ugliest looking men at that.

In our own selfish interests we had forgotten the sugar, but the first man to taste his tea remedied the defect. He got up from his seat on one of the three chairs that the cabin boasted of, and stationing a boy on guard over it, walked over to the table and put his hand into the tin pail containing sugar and helped himself. His hand would hold a lot of sugar, and it looked as if he had been skinning caribou that day. We were quick to appreciate the delicate hint, and passed no tea after that night without a modicum of sugar.

The party was laughing and chatting among themselves, and firing questions at us when they could invent some way of framing them to suit our comprehension.

Bum, a fierce looking little man, as black as most pure-blooded negroes, asked our names. We told him Jack and Mac. On hearing the name Mac, all the Indians with a common impulse laughed as if greatly amused.

Mac looked a little mad, for he couldn't see anything humorous in his name, and asked Bum what there was to laugh about.

"Mac," said the Indian, and he laughed again at the mention till the tears came into his eyes. "Mac, him no matches. Him cold; bu'r'r. Him stop, all the samey Yukon. Him no muck muck." From which we gathered that the Indians had been acquainted with a man by this name who had frozen to death. When the Yukon freezes they say it stops. Why the incident and the coincidence in names seemed funny to them is more than I can explain, unless they were putting it all on to tease Mac and scare him.

They couldn't scare the plucky Scotchman, who was nothing if not cool grit, but he showed very plainly his annoyance, and I resolved to try to rid him of the attentions of the crowd.

Burning Water.

Our light was furnished by a bacon grease lamp (called "bitch" for short on the Yukon), and as it happened the Indians had never seen anything like it. We had taken an empty butter can, melted in that our grease, with a little lard and salt mixed in, improvised a wick from a raveled cotton rope, and a burner from the top of a condensed milk can, and finally supported wick and holder on a wooden float, so that the flame would always remain a suitable distance above the grease. When it was completed the grease at our disposal would not fill the can, and the rim cut off a portion of the light. To remedy the trouble we poured water into the can till we had raised the grease and flame to the desired level.

The Indians it seems are unacquainted with the fact that grease has a lower specific gravity than water, and will float on top without commingling.

"Johnson," I said, addressing the most troublesome Indian of the lot, "you asked us a while ago what we burned in that lamp."

Johnson went over and examined the lamp, and the Indians forgot all about their joke and became interested.

"It's water," I said, telling only about two-thirds a lie. "If you don't believe me, get some water and see it burn."

The Indian was incredulous, but he took a cup and went to the pail from which they all had been drinking since the tea gave out, and dipped up some water and poured it in the lamp. None happened to fall upon the wick, and it continued to burn as brightly as ever.

The Indians were convinced, and I had furnished them a subject which gave them plenty to talk about the rest of the evening. They have been trying to burn water there ever since, but they haven't succeeded.

Good Indians.

Along the Yukon they bury dead Indians in boxes that look like chicken coops or dog kennels with pickets around them, and instead of spending their money on a lot of carriages and flowers they buy red, white and blue paint and try to make the place look cheerful. To scare off bad spirits they hang up various articles on poles. Sometimes it is a tin can, but more commonly some kind of a gaudy streamer of silk or cotton.

It is getting to be the fashion among them to cremate their dead and carry them around with them wherever they go in little decorated trunks. These trunks come in handy for seats in their houses, and they don't seem to think it is bad medicine for a white man to sit on one of them. For themselves they prefer to squat on the floor when at home.

Mr. Curtis, at Marsh Lake, told me the following incident. The Tagish Indians had a settlement there till they got into trouble with the whites, and set up a war-whoop and left in a body. The most intelligent Indian is named John. He had a store, and was a trader in a very primitive way. Some one had made him a sign, which is still there, and reads: "John's House, Merchant." This is the way Curtis tells it: "An Indian by the name of Slim Jim—he's the fellow that goes up to all strangers and says, 'Me good Christian. Got chew tobacco?'—was off hunting near the Salmon cache on the McClintock, and his wife, 'Couchman' the Indians call them, died. Jim brought her down to John's store, and the Indians had a big feast, stove going red hot and the woman propped up as if she was looking on.

"Next day John came to me and said, 'Come to my store; I want to show you something.' Jim was there sitting in one corner, with his face blackened up like the ace of spades—suppose that is some Indian custom.

"John pointed to him and said, 'Him poor Indian. Lost his wife.' Jim didn't look particularly sad—was grimacing over it. John said, 'Want to see? Want to see?' He began pulling off coats and a whole lot of truck piled upon the bed, and there was the corpse. Wanted me to give some money to Jim for the show. John will keep her there all winter and burn the body next spring. He has a whole lot of burial trunks on storage there. Sort of safe deposit for the other Indians, you know."

Not Related.

The Indian's idea of relationship is queer. They inherit property through their mothers, and their fathers are not considered relations by blood. When the father dies his children inherit none of his property, which all goes to the relatives on his mother's side. A man's father or children may be starving and get none of his property at his death. In Dawson's report a case is mentioned where a rich Indian would not go out or contribute to send others out to search for his aged and blind father, who was lost and starving in the mountains. Not counting his father a relative, he said: "Let his people go and search for him." Yet this man was an over-average good Indian.

The Indians steal from each other, it is said, though as far as our experience goes they do not steal from white men. They entered and left our cabin constantly, and yet we never missed anything of value. The white men are the thieves of the Yukon. J. B. Burnham.

Monsieur Marmie.

For the last hundred years western Pennsylvania has taken a leading part in the iron industry. I find from my friend James M. Swank's valuable work on "Iron in All Ages," that the first iron furnace west of the Alleghany Mountains was the Alliance Furnace, on Jacob's Creek, in Fayette county, which was first put into operation on Nov. 1, 1790. This was almost in the shadow of the Chestnut Ridge. A chief partner of this enterprise was Peter Marmie. The 6lb. shot for General Wayne's expedition against the Western Indians was made at this furnace in 1792. This enterprise was carried on at intervals until the year 1802, when it finally went out of blast. Mr. Swank, writing in 1891, says that the stack of this primitive furnace was then still standing, but in ruins.

Peter Marmie, mentioned above, if he had been only a manufacturer of iron, would be no more entitled to notice in these columns than are his partners in the Alliance Furnace business. But he is otherwise worthy of distinction. He was a Frenchman—a dashing, high-living, enthusiastic fellow, and notably addicted to field sports. The region in which he lived afforded abundant scope for these pursuits. It was then an almost unbroken wilderness, and alive with wild turkeys, squirrels, foxes, bears, and deer. We imagine Monsieur Marmie's taste for sylvan diversions might easily grow by what it fed upon. There was no let or hindrance to its free exercise; no game laws, no trespass notices, no private right even in a large part of that vast wilderness. A man with a livelier imagination than mine could easily depict an old-time hunting party under the auspices of the mercurial and wealthy Frenchman; could in fancy pursue the wily fox or the bounding elk through his devious way, make us hear the baying of the hounds down in the woodland hollows or along the rough hillsides, and the clear ring of the view-halloo as the unfortunate victim of the chase came into sight.

"Yell'd on the view the opening pack;
Rock, glen and cavern paid them back;
To many a mingled sound at once
The awakened mountains gave response.
A hundred dogs bay'd deep and strong,
Clattered a hundred steeds along;
Their peal the merry horns rang out,
A hundred voices joined the shout;
With hark and whoop and wild halloo,
No rest Benvoirlich's echoes knew."

Only a sportsman with the genius of Sir Walter could so glowingly portray the glories of the chase in the merry days of old. But, however merry the dogs of Monsieur Marmie may have been at their best, they ended in a frightful tragedy. For any knowledge of the fate of this old sportsman and iron master I am indebted to Frank Cowan's poem, in his volume entitled "Southwestern Pennsylvania in Song and Story." It seems that the Alliance Furnace was not a successful enterprise. After a few years the firm was dissolved, and the works were left on the hands of Marmie alone. His affairs went on from bad to worse, till finally, with that recklessness and penchant for the dramatic which characterize his people, he resolved upon an exit from this mundane sphere in a style at once tragic and memorable.

One day, when the furnace was glowing like a volcano and the molten metal bubbled and hissed in the vast cauldron, Marmie was seen to ascend to its brim accompanied by his faithful dogs. For a moment he stood, then casting the dogs two by two into the seething mass, he paused for an instant to wind a blast upon his huntsman's horn, and then leaped into the furnace to die with the constant companions of his woodland sports.

"Tirr-ill irr-ill, larry o-hee!—
Why that glowing, curling wreath
Of the smoke above the crater?
It is Marmie at the death."

Such was the fate of Marmie, according to the poet. It is further related that his perturbed spirit still frequents the melancholy spot, and "the hunter on the hillside" sometimes catches the sound of the horn as it echoes up from the infernal regions.

It is a gruesome story. The exigencies of the poem may have required some amplification of the circumstances; but that Marmie committed suicide in somewhat the manner described seems to be a well settled belief in that region. Mr. Cowan writes me: "As far as I know there is no historical basis for the suicide of Marmie, only tradition. I got it from an intelligent man who belongs to one of the oldest families in the neighborhood, and was the treasurer of all their traditionary lore.

"I cannot say how the truth may be,
I tell the tale as told to me."

A boon companion of Marmie's was a brother Frenchman named De Harperd, who, after a meteoric career, in which he married the most beautiful woman in southwestern Pennsylvania, suddenly disappeared from view. His wife got a divorce, married her lawyer, who committed suicide by cutting his throat when he thought his wife was dying, and she was carried to her grave on the following day. They left a daughter, who became the wife of a well-known citizen of an adjoining county.

T. J. Chapman.

Ingram, Pa.

The Copper River Country.

Tyonic, Alaska, Oct. 8.—*Editor Forest and Stream:* You will be pleased to learn that I have been to the Tanana Valley this summer, having traversed the unexplored region between the Suchitna and Copper Rivers. I returned to the Knik Station on Sept. 24, and on the 28th I found a praeticable route across from Portage Bay to the Knik Arm. Late in July I packed up the Matanuska alone, seventy-five miles, to Lt. Castner's party. In August Capt. Glenn came out with his party and we proceeded north with fifteen pack animals (horses and mules); at Bubb River (a branch of the Teslina) we fell in with Mr. Castner's guide, an old-timer in the country, who led us to the Tanana country. Pack animals can go anywhere through this country, and they do not apparently suffer from the mosquito pest.

The route we pursued was not the best one, and can be much improved. After we passed the head of the Matanuska (120 miles), in looking south one could see a vast ice-bound region of snowy peaks and glaciers extending to the coast on Prince William's Sound. As we advanced north through the forest lake region beyond Bubb River, the Wrangel Range loomed up at intervals through the mists. Mount McKinley can be seen from the Knik Arm only, but once, when about 200 miles north (magnetic), I saw a tremendous high peak true north from my position. Soon we saw a barrier of snow-clad mountains ahead, extending east and west beyond a range of isolated foothills. The Gerstle River, down which we proceeded, flows south out of these foothills into a chain of lakes, thence north about 100 miles through this barrier to the Tanana.

As we approached the Tanana, the country appeared rounded and very dry. On the side hills I found cottonwood, willows and alder 3in. high, and flattened out like vines. From the head of the Matanuska to the Tanana we found caribou and moose, also black bears. On the lakes we found few ducks (mallard and teal), once we saw geese and a few swans. We wasted a good deal of ammunition on loons. Some prairies on the Gerstle reminded me of Montana. Not a single rabbit was seen. This must be one of the years during which they disappear. On the glaciers enormous brown bears are found, and the largest wolf tracks I ever saw. We passed several river beds scooped out by glacial action, and some of these places I wanted to prospect, but could not stop. Fair indications of gold are found on Gerstle River, and on streams between Portage Bay and the Knik Arm. Except in mosquito time we did not use tents much from May to October, but slept in the open or under spruce trees.

Luther S. Kelly.

John Gomez and a Coincidence.

Coming down in the elevated train the other day we read in the morning Times a dispatch from Knoxville, Tenn., reporting the death in that city of Mrs. Susan Sanders, aged 107 years. Mrs. Sanders was a relation of John Sevier, first Governor of Tennessee, and owned many souvenirs of the battle of King's Mountain. This record of the advanced age of 107 years called to mind old John Gomez, of Panther Key, down on the West Coast of Florida; and when we reached the office we found in the morning's mail this note from Tarpon, dated Tarpon Springs, Fla., Nov. 21:

Editor Forest and Stream:

Your inquiry about old man Gomez should have been announced before, but I have been waiting to send you something definite. I have heard a rumor that he was dead, but I do not believe it. The yacht Maud, of this place, is now on a cruise to Miami. She will call at Panther Key one way, and I shall know all about old John when the Maud returns, which will be soon. I will write as soon as I learn the facts. I mean to take one cruise myself this winter, and I want to see old John once more. We are having glorious weather, and I never saw so many quail. Tarpon.

Nessmuk.

Medina, N. Y.—*Editor Forest and Stream:* Who is Nessmuk, the author of "Woodcraft"? Is he alive; if so, where does he reside, and how old is he? Kindly give such biography of him as you can without too much trouble, as I am certain it will interest many of your readers. D. D. W.

[Nessmuk was the pen name of Geo. W. Sears, who was for years one of the best known and best liked contributors to Forest and Stream. He died May 1, 1890, at the age of sixty-nine. An autobiographical sketch is contained in his book of poems, "Forest Rimes," which has also an artotype portrait.]

THE PRONG-HORN ANTELOPE.

In the Louisiana Lowlands.—X.

BY FRED MATHER.

(*Concluded.*)

Two sharp reports of a gun rebounded from the forest opposite, and seemed half a dozen as the echoes died away. I crawled out from under the boat and found Doctor Gordon running toward it. "Launch it quick, I've got some ducks!" he called, and we shoved out into the fog on the river. The ducks had fallen up stream, and the current was weak on our side, so that we were in time to harvest them as they floated past, but our range of vision was limited to about 20ft. in all directions. We picked up six green-winged teal and heard a couple of cripples flop out into the dense mist to hide in the sedge all day and be eaten by the keen-nosed mink at night. It is a mistaken idea that a crippled duck pines away and dies from blood poisoning or starvation. One of two things happens to a wounded wildfowl. If only just wing-tipped so that it can't fly, it may skulk by day and have a chance for life by feeding at night and sleeping on open water, for all wildfowl are on the constant watch for danger. But if badly crippled in body or brain, the gulls watch for it by day and the mink searches the shores and marshes for it by night. The duck then fills the mission for which nature intended it, food for man or other animals, and in nature's scheme the beasts and birds of prey are to be provided for. The moral of this is to show that if a sportsman wounds a duck it has a chance to live, mate with some other "pensioner" and so round out its life for another season, but if badly hurt there is no prolonged suffering.

An Early Breakfast.

"Now," said Dr. Gordon, "these six green-wings are more than equivalent to three blue-wings, and we may use three blues for breakfast and take the fresher birds to New Orleans, for the blues were killed long enough to be eatable now; you prefer the greens, and I want to take them to New Orleans and have them served there under your orders."

"You said that you were going to get fish for breakfast, Doctor, and while my last waking thoughts were on fish, they found no place in dream. I think I slept solidly all night, for this Gulf breeze, with its freedom from mosquitoes, is a relief which I fail to find words to express. An aching molar deftly removed is an instant relief, but our immunity from the insect has been gradual. I can only compare it this way: Our first night on the Atchafalaya, near Red River Landing, may be likened to 'Fiddler's Green,' which the Irish locate as being nine miles below Gehenna. Then we reached a spot which was an ordinary Hades, as figured in Dante's 'Inferno'; a place of punishment for those who had committed only the minor sins. Another day brought us where the terror of the night is only an annoyance, and here we are in the Elysian Fields!"

The fog was lifting before the rising sun, and we had a journey of some thirty miles before us to Plaquemine, with no idea when a steamer would pick us up. The Doctor took off a lot of catfish from the set-line, and I knocked down a lot of pintails before the fog lifted, and we exchanged them for the darky's teal. If a darky thinks sprigtails as good as teal, why not? but the fact is that bacon is the grandest thing that his palate knows, and all other foods are classed below that great staple.

The sun was hardly an hour high when we finished our breakfast, and the Doctor remarked: "It will be two or three hours before our smoked American will be here with his team, and we might as well put in our time in accumulating a wealth of frogs for use on our journey; how does that strike you?"

"Just the thing; no man can say when we will reach the father of waters, and if we have a well-filled commissary we don't care. Get your fish line rigged and I'll cut a pole."

We had by after count sixty-seven giant batrachians, taken in three hours, before we heard our wagon coming to the landing. It was the middle of November, and the sun rose about 6:30, we began frogging an hour later, and here was our friend, who promised an early start, about to reach us at 11 A. M. If "time was made for slaves" it must have been abolished in George's household when emancipation was proclaimed. While we were in no pressing hurry, we had an inclination to start when ready, and now we began to think of dinner.

After the creaking lumber wagon had moved off the flat boat George remarked: "We's done a heap o' wuk dis mawnin', an' me an' Mose is gettin' hungry, an' as dis is de las' place whah dey's no skeetahs, I 'spec's we bes' get ouh dinnah; ha, ha! W'at yo' say, Doctah?"

"Yes, get dinner first." Then to me: "That 'skeeter argument was a good one; when we leave this Gulf breeze we hit the enemy again, and they hit us."

"Doctor," I asked, "is there no way of hurrying these people; have we got to spend the night in a dense forest where uncounted millions of poisonous insects are waiting to feed on us?"

"You might as well try to hurry the sun as to try to instil push into one of these Southern plantation darkies. They suffer with pains and aches, largely due to careless living; but they live long. See all the old ones in almost every house. I sometimes think that Dryden had one of these uncles in a prophetic mind when he wrote:

> 'Fate seemed to wind him up for four-score years;
> Yet freshly ran he on ten winters more;
> Till like a clock, worn out with eating time,
> The wheels of weary life at last stood still.'

Many of these old darkies approach the mummy line before they die, and just live on in a sort of vegetable life until there is no sap left, and they simply wither."

While dinner was preparing I was busy with my self-imposed task of discovering Dr. Gordon's ——. Here our language lacks a word that "nativity" does not fill. Old Sam, at Alexandria, had revealed the fact that the Doctor was born in Georgia; the Doctor's idioms were from all over America and England. He had just spoken of a Louisiana negro as a "smoked American," a term that was common to the Western troops in Sherman's army, but one that I never heard from any Eastern regiments. Where was he educated?

We used our fish and some of our frogs for dinner, and George and his boy Mose, who had lain on his back on some hay in the wagon until the landing was made, looked on the frogs with such disgust as they could not conceal. They watched to see if we really did eat frogs, and after dinner looked over the bones in order to be certain that they were "sho' 'nuff" frogs, but our offers of this delicacy were politely declined with the assurance: "We's got plenty 'nuff, thankee, an' we's got to eat all dis bacon an' fried bread an' not was'e it."

We Start for the Mississippi.

It was high 12 before the mules were hitched and moved their hoofs and the wagon toward the Mississippi. We left the old tub of a boat as payment for our transportation, and we walked. I insisted on taking the canvas, and that was all. George might have it when we left him at Plaquemine, but in case of rain it would be of service. The mules were in fair condition, but we now saw that there was no chance of getting through before sundown, and that we must pass a night in the woods within whose still recesses lurked millions of mosquitoes ready to take our last drop of blood and leave poison in its place. Somehow we conveyed this thought to each other without speaking, as we glanced at the midday sun at starting.

The old wagon had seen long service. The tires had been tightened up with wooden wedges, which the swamp water swelled so that the wheels were kept from dissolution. The axles groaned and cried piteously for grease until after a consultation the Doctor and I called a halt, stuck a limb under the end of an axle, lifted the wheel, propped up the limb, and took the wheel off and slipped it on again over a bit of pork rind, and after treating each wheel to the same sort of plaster we went our way without further protest from the wheels. When I expressed surprise that George had not greased the axles before starting, the Doctor replied:

"These plantation negroes like to hear a wagon squeal, possibly they think it keeps off savage beasts, or perhaps evil spirits, but I have no idea that George knows that grease on an axle serves any other purpose than silencing the noise. I'll ask him. George! why didn't you grease your wagon this morning before starting, and not have it go groaning and complaining of your neglect through the forest?"

"Hit come dis-a-way, Doctah; I tole my boy Mose, a-layin' in de wagon now, to 'range de wagon fo' a long trip to Plaquemine, an' he dun fo'got 'bout de grease fo' de w'eels. He's de laziest boy, dat Mose, wot I got, an' I'se a min' to make him walk, same as we's doin, 'stead o' ridin' awn de straw. Hey! You Mose, wake up an' 'splain wheffo' yo' no grease dat wagon dis mawnin' 'cordin' as I tole yo'!"

This was accompanied by a very light stroke of the black-snake whip as a sign of authority, but which would not have hurt a fly, and Mose emerged from the straw and said:

"Yo' done tole me to 'range de wagon fo' dis trip, but I knowed yo' like to heah him squeal fo' to wawn off de bahs an' de ghosts, so I 'glect fo' to grease de w'eels. Ef yo' done tole me fo' to put grease awn de w'eels, I done put it awn; dat's so, Doctah, fo' a fac'."

We had gone a mile or two after lubricating the wheels, the Doctor and I were walking behind the wagon when there was no water in the road, and piling in when we came to a wet spot. We were discussing some question of science or of natural history, when suddenly the wagon stopped and the mules went on, while George lurched out ahead. The animals kicked at the whiffletrees dangling against their heels, and then turned aside to browse. The old wagon-tongue had broken when the wheels dropped into a rut and the mules gave it a side strain.

A Breakdown.

"I 'clar' to goodness ef dat ah tongue ain' clean busted," George remarked, as he pulled himself out of the mud. "Ho! Mose, yo' pull yo'se'f out dat straw an' min' dem mules w'ile I see how we gwine get awn."

The Doctor and I looked at each other. His face expressed abject misery, and mine must have impressed him in the same way, for we both burst out laughing. The prospect of spending several nights in the mosquito-laden woods, after our anxiety to get through them in one day, was regarded as a joke on us. The insects had found us; we could fight them feebly by day, but what of the night?

The two darkies, father and son, stood gazing at the wreck. The father dreamily said: "Ef I had some slabs an' nails and some strong cawd, we's done fix dattah tongue so he go awn good."

"Very true," the Doctor replied, "but you have no slabs, nails nor cord, and there's no use to wish for them. We must make a new tongue."

"I kin fin' a small 'cawn tree fo' to make a tongue, but we ain' got no kin' o' tool fo' to make de holes fo' de bolts."

"Doctor," I asked, "what does he mean by a corn tree?"

"It's a species of hickory that bears the pecan nut of commerce, but the Southern pronunciation is pecawn, which our teamster, and other darkies, shorten into 'cawn."

"I see. George, you go get your 'cawn tree and make a tongue and I'll bore the holes in it."

"W'at is yo' gwine make 'em wid?"

"My fingers! You go get the tree and trim it in shape, never mind how I make the holes, and don't be all day about it; here it is 3 o'clock, and only two more hours of daylight, and we have not made ten miles. Hurry up or we will leave you and walk to the landing, for we might as well walk all night as to sleep among the 'skeeters for two or three nights. Strike out now, get your small tree, square it where it goes between the braces, or whatever their names may be, on the axle, and get back soon."

The Doctor smiled as the man walked off with his axe, and remarked: "If you were talking to some Northern woodsman or farmer, your words might have a stimulating effect, but as for hurrying George, you might as well try to hurry a clam. It will be dark before he comes in with the tree; yet I don't know but your threat of walking may bear fruit."

"Let us hope that it will. In the darkness of this forest, with its miry places in the road, we could not make a mile an hour, but we can't move until morning. The squirrels are chattering and the frogs are croaking in a swamp off to the right. You go for squirrels and I'll see if I can't get some frogs and so help out our commissary."

As I cut a long sapling to hypnotize the frogs with and started off, I heard the Doctor singing:

> "As I was a-comin' to Lynchburg town
> My ole ox-cart it done broke down;
> My oxen run, an' never did stop
> Till dey got 'fore de do' ob de blacksmith shop.
> Oh, Johnny Booker, help dis niggah,
> Oh, Johnny Booker, do, oh, do.
>
> "Says I, 'Mis'r Smith, do you charge anything
> Fo' to men' my oaken ring'?
> 'Oh, no,' says he, 'we nebber charge
> Unless de job am berry large;
> A job like dat it am so small,
> We nebber charge anything at all.'
> Oh, Johnny Booker, help dis niggah;
> Oh, Johnny Booker, do."

This old-time song evidently was suggested to the Doctor by the breaking of the wagon-tongue, but that he knew it brought up the old question of his early and late environment, for it was one of the old and early minstrel songs, and therefore did not originate in the South.

A Night in the Woods.

The frogs were difficult to get, because the swampy bottom of the marsh was hospitable, and only on the extreme edges could I persuade a frog to be mine by stroking its back with the sapling or by dangling a fish hook before its nose. The diminishing light of the sun hinted that an immediate return to camp would be preferable to spending the night in the swamp, and I took the hint.

At the show-down George displayed a crude wagon tongue of pecan, all complete except the holes for bolts. The Doctor brought out fourteen squirrels, and I laid out thirty big frogs; not bad work for two hours in a swampy land, where locomotion was sorely impeded.

Supper over, our darkies proposed to turn in, but I objected. The wagon tongue must be completed for a start in the morning. The Doctor and I agreed that an early start was desirable, and he turned over the command of the camp to me. I had felt the necessity of this move, but was diffident about suggesting it. The way was clear now. There was no more consultation with our darkies. Mose was ordered to look after the mules and George burned the old wagon tongue, or "pole," in order to get out the bolts. Then I took the smallest bolt and at a red heat made a hole where needed, for a burned hole is always larger than the iron that burns it, and so we had a serviceable tongue fitted before we lay down to sleep in the wagon, with the canvas propped over us as a ridge pole to protect from rain or mosquitoes.

The ground was too wet to sleep on, and a wagon box or "bed," as it is sometimes called in the West and South, is only 8ft. long, hence the problem of four men sleeping in it when it would only accommodate two abreast. There was but one way to do it. The Doctor and I took the front end, under the seat, which kept the canvas from our faces, and the Afro-Americans slept with their heads to the tail board, which protected them from the weight of canvas, but there was a lapping of legs, which was a necessary condition in an 8ft. box. We slept in our clothing, of course, but after a side talk with the Doctor I ordered that no shoes be removed. It was better to have bruised shins than to risk evils whose extent we did not know.

Just how much sleep came to each one of the party was an unknown quantity. Some slumber may have ventured my way, but was not remembered in the morning. There was a sound of revelry in the frog pond, a croaking of night herons, which were combining the sports of fishing and frogging without partiality to either as long as the diet was sufficiently "fillin'," the hooting of one owl and the so-called "screeching" of another, with the occasional whicker of a coon, and the omnipresent song of the myriads of mosquitoes outside our canvas, and the jubilant tone of the few which had got under it through the low ventilating folds, seemed a continuous performance.

Now the Frosty Stars are Gone.

The night was long, close and stifling. The necessity of a change of position naturally awoke others whose shins were creased by boot soles, and when morning came we were glad to lift the canvas, get on land and stretch our legs. After breakfast our teamster showed no sign of preparation for the start, and as the Doctor had turned all authority over to me I said: "Come, George, get a move on you; send Mose out for the mules and get ready to go on."

George was seated on the new wagon tongue in the attitude of prayer, and looked up, saying: "Dis yah's Sunday, an' de good book says we muss'n' do no wuk awn dat day, an' I 'spects we has to camp heah till to-maw."

The fact was that since leaving the mansion of Col. B. and the Red River we had taken no note of time, but the proposition to lie in the mosquito-laden woods and cook because it might, or might not, be Sunday was a little too much for me, and there was the Doctor enjoying the situation, probably wondering what form my indignation would take. After meeting his eye I cooled down and said to George:

"If your conscience forbids you to travel on Sunday you may remain and cut wood and cook your dinner and supper, but I will take the team and wagon and go on to the river, where you will find your property when you get there. Mose! you get the mules up and harness them now, hurry up!"

"Dad he say we ain' gwine move to-day—"

"Doctor, hand me that shotgun! Mose, if you don't bring up the mules I'll put so many shot into your trousers that they'll be too heavy to walk in. Your young brother, Gawge, must have tole yo' I was a

Yankee, an' was hard to keep from eating colored boys, but if you don't have the mules here in ten minutes I'll have you for dinner."

Old George, the Doctor thought, had no religious scruples about travel on Sunday, but he hoped for a pecuniary reward for doing it, and after the mules were hitched and the start was made he said: "The bluff didn't work, but it was fun to see it tried. These darkies are not consistent and are not truthful. George has not half as much respect for Sunday as we have, but on this occasion he paraded his respect for the day in an attempt to get money; it did not work, and here we go."

The old darky took his place on the driver's seat as usual. If he was at all disgruntled by my action it was not apparent, for he soon began to sing:

"Roll, Jordan, roll; roll, Jordan, roll;
I want to go to heaven w'en I die,
To hear old Jordan roll."

He gave us snatches of other religious songs, for the plantation darky is fond of sonorous hymns, especially if there is a good chorus to them. When we stopped for dinner he asked: "Is yo' gwine trabbel all day?"

The deference with which he asked this question was evidence that he acknowledged my assumption of authority over him and his team, therefore I answered: "Yes, all day or all night, until we reach the river. We've fooled along this road too much, and the sooner you push your mules into Plaquemine the sooner they'll get a rest, and if you can't get them there to-night, I will."

"I dunno, I 'spect de rain's make de road sof', an' de wagon done pull hahd, but if yo' mus' get dah to-night we's gwine try."

As we started and the Doctor and I dropped into our places behind the wagon, he remarked: "I've enjoyed the way that you have issued orders where you really have no authority, and also the way in which they have been obeyed. The boy is afraid of you, and perhaps his father is also, but there is no excuse for more delay. We had only about thirty miles to go when we started yesterday noon, and can't have much more than half that distance before us now; but if you let George have his way it will take two days to get to the river."

Then I adopted new tactics: at every stretch of good solid road we would pile in over the tail board and one of us would work up alongside of George and "feed" the mules with the blacksnake until they were wide awake; and we had over an hour of daylight when we pulled up at a hotel in Plaquemine, then a village of some 2,000 inhabitants. We gave George enough to buy several new blacksnakes, and when I told him that I knew the mules could make the trip before night he grinned and replied: "Yassah, but dey done got some help wid de blacksnake, o' I 'spect we be back in de woods now."

We got a steamer for New Orleans about midnight, and next day Dr. Gordon voluntarily solved the riddle that I had propounded to myself. In the course of conversation he told me that his father was a rich Georgia planter, but he had run away from home with a circus when fourteen years old, and had gone North; interspersing his narrative with reminiscences of Dan Rice, Jo. Pentland, Dan Costello and Tony Pastor; names known to every boy half a century ago, when a circus billed its clown as the star feature, and had only one, who was better known to the small boy than any of our statesmen. Two years of this life satisfied him, and the boy went home. Then he studied medicine in New York and graduated; drifted to California and back to Chicago until the Civil War broke out, when he returned to Georgia and was appointed surgeon of a Confederate regiment. Afterward he had traveled abroad. Hence my failure to fix his locality by provincial terms and expressions, he was too thoroughly cosmopolitan to be so fixed.

The Doctor knew of a quiet restaurant where for three days we had green-winged teal served in different ways, and he declared that they were all so good that he couldn't tell which were best, and that never, until then, did he know how much excellence lay under the feathers of a duck that was usually spoiled in the cooking. He said: "I will treasure your rule and never allow any sort of dressing in a wild duck unless the bird is fishy or sedgy, and the flavor is to be destroyed."

As a man of leisure the Doctor could hardly understand my anxiety to get back to Washington with my specimens, and make my report; but some years later he dropped into the aquarium at Broadway and Thirty-fifth street, and in the evening we ate teal in my favorite café, and in memory floated down the Atchafalaya River, hunted frogs and squirrels in the intervals of blacksnaking the ribs of mules over the roads through the woods in Iberville Parish, after time had obliterated all the discomforts of the trip, while memory retained only the pleasures which were magnified in the fog of distance and loomed up as our pleasures of the past are wont to do.

The past is all that we are sure of, and the "good old days" are always behind us, but when they were with us we still looked back or forward, according as we were old or young. It was with young men in mind that Pope wrote: "Man never is, but always to be blest."

NOTICE TO SUBSCRIBERS.

The address label on the wrapper shows the date of the close of the term for which the subscription is paid. The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Natural History.

The Antelope's Horns.

To men who have hunted much in the West the antelope is familiar and needs no description. Strong, swift and graceful, he gives life and movement on the bare yellow prairie, where often no other living thing is to be seen. Being so common and so familiar, few people realize how singular an animal the American antelope is. They may imagine—if they think about it at all—that other creatures like him inhabit other portions of the globe, and perhaps suppose that the antelopes of Asia and of Africa are similar in general characteristics to the one of our Western prairies. This is far from being the case. Nowhere in the wide world does there exist another animal at all like the prong-horned antelope. He stands alone—the only representative of his family, the *Antilocapridæ*, just as the giraffe is the only representative of his family, the *Camelopardidæ;* and as the giraffe is found only in Africa, so the prong-horned antelope exists only on the plains and among the mountains of western America.

Besides his structural peculiarities, which separate the prong-horned from all other antelopes, he is remarkable for shedding his horns. He belongs to the horned section of the great group of ruminating animals called *Pecora*, which includes the giraffe, the deer, all antelopes, sheep, goats and oxen. This group is further divided into two; one is the deer whose solid bony antlers are shed and reproduced each year; and the other is of the hollow-horned ruminants, in which the horns are permanent and covered with a sheath of horn or skin. These bony outgrowths are usually permeated by large air cavities, and it is on account of these that these animals are called hollow-horned.

Of all the hollow-horned ruminants the prong-horn antelope alone sheds his horns, yet he does not shed them as the deer does. The bony growth never drops off from the frontal bone, but each year the sheath which covers this process of bone becomes loose and falls off. Many a hunter, ignorant of this peculiarity of the antelope, has been astonished after killing a specimen in the early winter to have one or both of the horns come off in his hands, as he straightened out the animal preparatory to butchering. If one looked carefully at the support on the antelope's head, from which the black sheath has just slipped away, he would see that it was covered with soft skin, from which grew fine, whitish hairs, looking a good deal like those on the antelope's leg and that only at the tip was it black, hard horn. It is the growth of this hair, and of the new horn, which pushes up and loosens the sheath of the old horn.

In the spring and summer the process of bone supporting the sheath is covered with living tissue as thin as paper, just as are all living bones. This is the periosteum, which keeps the bone alive, and which in case of injury secretes new bone.

Toward autumn, however, the periosteum becomes thicker, and takes on the character of skin, and from this skin grows the fine hair, which, as stated, finally pushes the sheath of the old horn away from its supporting bone, and at the extremity of the skin becomes new hard horn. After the sheath has been shed, the hair continues to grow, and as it grows it becomes matted together below the tip, dark and hard, and gradually working down toward the head, changes from a covering of single hairs, which are white in color, to a mass of black agglutinated fibers, precisely like the sheath which the animal carried the year before. This process gradually extends further and further down the horn, until at the base it is sometimes difficult to be certain just where the sheath ends and the skin of the head begins.

During the rutting season, which takes place late in September and during the first half of October, antelope use their horns to some extent in fighting, and often come together with considerable force and energy, and push head to head for a long time. It is not probable, however, that such battles are ever severe enough to loosen the horns, or that they have anything to do with the annual loss of the sheath, which has been described.

As already intimated, the fact that the antelope sheds the sheath of its horns is a very remarkable one. For years scientific people denied that they did so, although the fact had long been known to many old hunters. A description of the process was written out and sent to the Smithsonian Institution in 1828, a long time before the fact was finally published, but the statement was so contrary to all that was known about hollow-horned ruminants that it was thought that there must have been some mistake, and the statement was never put into type. The first published observations on this subject were in 1855, on an antelope that was for years on exhibition in the Zoological Gardens in London, England.

Our issue of Nov. 19 contained a note explaining the annual shedding of the horns of the deer. If there is so much uncertainty as seems to exist in the minds even of the readers of FOREST AND STREAM about the shedding and growth of the horns of deer, we need not be surprised that the belief about the shedding of the antelope's horns is still more vague and hazy. It is hoped that this description will clarify the ideas of some of our readers as to the matter.

Wyoming Wolves, Coyotes and Game.

JACKSON, Wyo., Nov. 15.—*Editor Forest and Stream:* At the last meeting of the Jackson Hall Gun Club, a $1 bounty on coyotes and a $3 bounty on wolves was offered, payable in scrip—due in cash three months from date. The killing of game by coyotes especially has reached enormous proportions, and the Gun Club knew of no better way to get rid of its surplus cash than in this manner.

Louis Lonigan, a constable, was also hired by the Gun Club to patrol the wagon roads leading into Idaho, and to arrest all persons who were unlawfully killing game—the game wardens hired by the county at $3 per day being absolutely no good and incompetent.

WM. L. SIMPSON.

Not the Passenger Pigeon in Mexico.

MACOMB, Ill., Nov. 22.—*Editor Forest and Stream:* We will have to acknowledge at last that you are better posted in regard to the wild pigeons of Mexico than all of us. The FOREST AND STREAM has claimed all the time that the wild pigeon of Mexico was not the passenger pigeon of America, but was probably the band-tail pigeon or some other species that resembles the passenger pigeon. I wrote to the Agricultural Department at Washington, and through it obtained the address of E. A. Goldman, who is employed by the Government traveling through Mexico in the interest of agriculture, and wrote him, asking if he would go to the trouble to find out if the American passenger pigeon could be found in Mexico. The following letter will explain itself:

"GUAYMAS, Mexico, Nov. 14.—Dr. W. O. Blaisdell: Dear Sir—The passenger pigeon, so far as we know, does not occur in any part of Mexico. Another bird, the red-billed pigeon, is very common in the tropics on both coasts, and has sometimes been mistaken by Americans for the passenger pigeon. The band-tail pigeon, which occurs in the mountains of Western United States, is quite common through the Sierra Madre, Mexico, nearly as far south as the Isthmus of Tehuantepec. Yours very truly, "E. A. GOLDMAN."

I shall have to fall back on my old theory that the passenger pigeon of America must have perished of some disease. They disappeared almost at once. The millions and millions of these birds could not have fell a prey to the shotgun and net in so short a time.

W. O. BLAISDELL.

Forest Preservation in Bohemia.

CONSUL MAHIN writes from Reichenberg, Sept. 28, 1898: Bohemia is one of the most populous countries on the globe. Its climate is relatively cool, with rather severe winters. Therefore much fuel is used, and it is largely taken from the forests which cover the mountain sides. Yet, after the many centuries during which these forests have furnished fuel and building material for a dense population, they retain nearly their primeval area. This is due to the forethought of the Government in ordaining that as trees were cut down others should be planted to fill the vacancies. Vast stretches of dense forests cover the mountain slopes of this district. The wood is mostly pine. Trees are constantly being cut: but wherever a clearing is made small trees are planted the next spring. What at a distance may appear to be a bare spot in the forest, on near view is seen to be covered with little trees, set out in symmetrical rows and varying in height according to the length of time since they were planted. These new trees are raised from the seed in small inclosures, scattered in the mountains, and are thence transplanted. A similar custom in the United States might yet avert the serious danger threatening at least the Western part of our country.

"The Ways of Roots in the Ground."

BOSTON, Nov. 20.—*Editor Forest and Stream:* The account given in your issue of Nov. 19 by Mr. Shelton under the heading "The Ways of Roots in the Ground," can be matched by the behavior of a tree root which is—or was a few years ago—preserved in the Natural History Museum of Brown University at Providence, R. I. The legend concerning this root is piously believed by all good Rhode Islanders, as it has to do with their patron saint, Roger Williams, and is, as I remember it, in substance as follows:

On some occasion of exhumation of the remains of Williams, or at least examination of them, it was found that a root—I think of an apple tree—had behaved exactly as in the case reported by Mr. Shelton, and had sent out branches to follow the arms—the main root following down the spine and dividing at the base, a thick branch following down each of the legs. It is supposed that all that is left of the bodily substance of the doughty old pioneer and disturber of the peace of the Massachusetts colony is preserved in the tissues of this root.

C. H. AMES.

Insects on Mountain Tops.

THE claim of Capt. Langford that, at the time when he reached the summit of "The Grand Teton," he found mosquitoes there, reminds me that one time, as I stood at noon of a sunny July day on the summit of the Little Matterhorn—one of the minor peaks of the Pennine Alps—at an altitude of almost 13,000ft., there floated directly over the summit and within reach of my hands a beautiful black butterfly. I also have a distinct recollection of reading in Tyndall or Whymper observations of bees seen on the snow on some mountain top—I think it was the Matterhorn itself.

As a member of the Appalachian Club, and just a bit of a mountain climber myself, I have been interested in Capt. Langford's, to my mind, rather impressive defense of his claim to have reached the summit of the Grand Teton, and possibly what I have said may lend verisimilitude to his statement on one of the points challenged.

C. H. AMES.

As a Life Preserver.

I CALL FOREST AND STREAM my "life preserver." It is the only reading matter I can pick up for a few minutes, when worried with business, and my mind all in a muddle, and find instant relief by becoming oblivious to all cares and business perplexities; and I verily believe such a blessing as that will add years to the life of any business man. Then why do I not rightly call it a life preserver?

After spending years in the wilds of the Rocky Mountains with the full enjoyment and freedom of such a life, with its attendant pursuits of game and close touch with undisturbed nature, a change into a business life would be almost greater than I could bear were it not for the weekly visits of the FOREST AND STREAM.

EMERSON CARNEY.

Game Bag and Gun.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in Forest and Stream.

The "Brief's" Pictures.

The illustrations in the current edition of Game Laws in Brief, Mr. Charles Hallock says, well represent America's wilderness sports. The Brief gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

The Grouse of School-house Run.

This is the way we bagged him:

Jack and the Colonel, Doctor and I were beating the hills and vales of Essex county, New York, what time the October flight of cock was due, having been lured there by word from our old guide that grouse were in fair numbers, waiting to be shot "on the wing, on the head, on the tail, any way to get 'em." For several days we drove from cover to cover, shooting over the likely places with indifferent success, and finally landed under the hospitable roof of the widow Wall, in Olmsteadville, where a week was spent hunting the surrounding hills. For some unknown reason the expected flight did not materialize, and so far as ascertained philohela has whistled a swift au revoir to his usual haunts in the Eastern States on his journey to the south land this year.

One crisp morning we started out to beat a long, narrow patch of alders, through which ran a little rivulet—an ideal place for woodcock—and where a day or two before, when hunting without a gun, a few birds had been started, among them a grouse "as big as an owl."

On the way over the hill Fred pointed out a precipitous mountain side rising sheer 500ft., over which, once upon a time, three deer were driven, one of them in his downward flight striking a treetop and was torn literally in two, and a part left hanging in the tree. We gave him a long, stony stare and trudged on. Five years ago it was one deer dashed to a shapeless mass. For modern embellishments to ancient history, commend me to an Adirondack guide.

As morning mists wreathe about his native hills, transforming them to shapes that loom up imposing and fantastic, so his imagination playing about the simple event of yesterday produces it to-day impressive, to-morrow grotesque and startling. He is a romancer accomplished and cheerful, furnishing with elaborate detail the event that never happened as a sauce piquante for the noonday lunch by the brookside. At such times we couldn't keep house without him, and we love to linger in his shadow while the tide of years or the advance of civilization makes it beautifully less.

The drumming of a grouse from a bunch of spruce led to a council of war, which resulted in our stalking him to his death. Then through a clump of alders, where Jack picked off another over a staunch point, on to a dense cover, where three grouse flushed all around the Doctor, causing such uncertainty in his trigger finger that both barrels of that priceless Greener discharged at once; and when he tried to shoot one of them that treed, the nitro powder just dribbled the shot on the leaves before him. When birds are scarce, such trifling incidents are trying even to one of the Doctor's selfpoise; and especially so when the reputation of a much-lauded sportsman's equipment is at stake. We consoled him in the manner common to sportsmen, but there are times when human sympathy availeth not.

Beating along a hillside of scrub pines, a grouse flushed wild, and going fleet as a shadow for the cover below was cut down at long range by the Colonel's little Parker. Then the dogs scrapped a little for the honor of retrieving after such a rattling shot, and between them delivered the bird sans tail.

Passing around a swamp, we found some fresh bear tracks, and when Fred suggested looking around a little the Colonel declared he hadn't lost any bear, and the rest glanced furtively about for a roost in a stout sapling. There appearing no appetite for fur, the hunt for feathers was continued.

Reaching "schoolhouse run" we arranged to hunt it four abreast, about 20yds. apart, Jack with peerless Tick on the left, then Colonel with Shooting Star, Doctor with old Jaroff, and the Scribe with Pepper on the right. Advancing, a cock was sprung at the left of the line and swung ahead into the alders. Again Tick pointed, and again Jack and the Colonel paid their leaden respects to those whistling wings, which would have gone away unharmed had not the Doctor made a long, clean kill, thereby turning the tables on the left of the line, which, en passant, had been a trifle hilarious over his double-trigger and nitro powder act. Going on, the Colonel drifted about 100yds. behind the scribe, and from a thicket too dense to afford a shot flushed the big grouse. With a startling whirr away he went, rushing up through the brush, heedless of leaves and twigs, and making more noise than seemed possible for one pair of wings. I heard him coming and turned around just in time to see him break cover, about 70yds. away at the other end of a narrow opening, and come toward me like a rocket, mounting higher every instant. Quick as thought the gun was thrown on him, and as he loomed over the sights he looked indeed "as big as an owl." I felt rather than saw Pepper expectant a few yards away. At the crack of the nitro the grouse came swiftly on, but describing an arc toward the earth, went by me like a flash, struck the ground with resounding thump, and such force as to burst his crop and lay there fluttering and beating the air in his "last strong agony."

Pepper broke the spell by picking him up—after two or three attempts—and brought him in as proudly as though he were entirely responsible for the whole affair. A bouncing bird indeed, and as I shook into place the ruffled plumage it dawned on me that in my hand was the coveted prize—the big grouse of schoolhouse run. With breast beautifully barred, tail a royal fan, wings strong from long flights and the love-beats of many springtimes, ruff to rival the boa of any belle, he was easily lord of the glade. Then quoth the Colonel, as he balanced him on his palm:

"I never saw but one larger, and that was in a museum; this is a 30oz. bird."

"Nay, nay, Colonel, 30oz. would break the record for these hills; let us call it 26!"

"Thirty ounces at least; not one less. I'll bank on my judgment."

Evening coming on, we took a turn along a hillside, hoping to start a white grouse the guide had seen (?); failing in that, we set our faces toward the glimmering light above the river, where awaited us a game dinner, followed by the usual siesta and story telling, and then sweet sleep and pleasant dreams.

The Colonel was right. Two different scales told the same tale—31oz. plump. If you think that not remarkable, please weigh the next big one you shoot, and drop a line to

Alma.

Alma, Mich., Nov. 18.

A Day with the Birds in Prince Edward Island.

Three youths sat planning a shooting trip in a country "place" in Prince Edward Island. One of these youths was a visitor. His voice was seldom lifted in the council of war, for lately arrived, the places discussed and their relative merits were unknown to him. So he listened while the others reviewed the pros and cons of this pond and that, and became excited, as was natural, as he heard the others tell of the ducks that had been seen upon these ponds, and the snipe that had been put up in the marshes surrounding them.

After due deliberation, and a careful comparison with the others, one pond was selected as presenting most attractions to the three in the smoking room, and it was moved, seconded and carried unanimously—the mover and seconder not voting—that preparations be made, and the three depart for two days' shooting on the morrow.

Now, the carrying out of this resolution was so very enjoyable that he who was the visitor begs leave to recount the experience.

A problem presented itself at the outset. The three were after black ducks. The pond was large, therefore decoys were an essential to the success of the expedition, and the party possessed none presentable. True it was that a flock of wooden ducks were produced—stiff and angular affairs—resembling nothing so much as a small boy's wooden horse with legs and tail amputated, but the three knew the wary, sharp-eyed black duck too well to believe that for one moment he would be deluded by such poor imitations of his kind.

Frank said: "Why not press some barnyard ducks into our service." He imagined, he added, that a search among the surrounding farms would produce enough tame ducks resembling sufficiently closely the wild ones to make a presentable flock of decoys.

So the three knocked together, in anticipation, a rough duck coop, and started in the search. They found many farms containing, among the other poultry, the birds they sought. In each case, after an explanation, the farmer himself, or his wife, or his boy, would collect the stock of ducks, and cause them to waddle past—I cannot say march past—for inspection. Very much like judges in a dog show, the three would single out the best one or two and examine them, allowing the others to paddle back demurely to the puddle from whence they came. The three rented the selected ducks at so much per head.

It was curious, and not in the least flattering, that each farmer, after looking the youths up and down, asked them what price they would agree to pay if his birds were shot. From six flocks fourteen ducks were chosen that resembled more or less their wild brethren. Certainly some had white rings around their necks, all had yellow bills and legs, but it was argued that when a duck came near enough to remark these discrepancies it would be from the duck's good luck and gunners' bad shooting if he ever went away again.

The pond—their destination—was long and narrow, running parallel to the sea, and separated from it by a low sand strip. So narrow was the strip and so flat that the breakers from the ocean nearly found their way into the pond, as they chased each other across this bar of sand. This little lake was the source of a stream that ran a mile through flat and marshy land before it found the sea.

Curlew, snipe and plover of all kinds found the food they liked best up and down the length of this stream—but more of this later.

Across a bay of the ocean, and through the creek up to the pond, the three brought their low, green, flat-bottomed boat, and the ducks poked their heads through the slats of their coop, and quacked lustily to see around them so much water and such good feeding. The only watch said it was 4 o'clock when camp was made and a meal eaten. They always ate—those three—after a hard piece of work, quite independently of the hour of the day, and without the least reference to the time elapsed since last "grub."

The day seemed rather too bright for duck shooting; so Frank, taking the tin plover decoys, started off down the edge of the stream in search of a suitable place to await the evening flight of shore birds.

The "Doctor" (a brand new title, as was proved by a crisp sheet of parchment, with a great deal of Latin thereon, bearing the date—in Roman numerals, of course—of 1898) and his friend, the visitor, commenced very leisurely to get ready the decoy lines and anchors. While thus engaged, their eyes swept from time to time the horizon, as one will when duck shooting, and they both perceived at the same instant a long black line, like the waving tail of a kite, off in the direction of the stream and high in air. Frank had seen this too, and the two at camp watched him a quarter of a mile away settle slowly into the long, rank grass.

As it approached the water, the flock of ducks—for, of course, it was ducks—descended until 40yds. over the stream, then followed it up until it had passed directly over the concealed hunter's head. It looked well to see two ducks—like tiny black specks—fall from the line at the white puff of smoke from Frank's gun. This little incident stimulated, naturally, the energy of the other two shooters. It was not long before they had the punt completely hidden in a point of bullrushes that extended out into the pond, and the decoys pluming themselves and swimming as far as their lines would permit in the still water.

Everything was quite ready for it, when a single duck came hurling along, low over the water, like some huge bumblebee. It curved its wings almost into a semi-circle as it neared the decoys, then fell among them, to the Doctor's gun, on its back.

The two friends waited long after picking up the single bird ere the first flock came in from the sea. Well hidden in their bullrush blind, the two could watch it coming. The flock was passing to the left when their leader heard the decoys—and just here let me say, in justice to them, that whatever the decoys may have lacked in personal appearance, however much their protruding crops may have differed from the rounded grace of the black duck's breast, or their yellows bills from his dark green one, they certainly made up for these deficiencies and differences in the strength and persistence of their calling. Did sand lark or crane pass within vision the flock ceased not to quack and call out a lusty invitation, until the bird had quite disappeared. They wheeled—this flock of wild ducks—and a moment after the two in the green punt heard the water hiss as the ducks skimmed into its surface. They jumped up, the Doctor and his friend and the ducks. The two former fired four barrels—bang-bang, bang-bang—but alas, that it must be recorded, not one duck wavered in its flight. They looked at each other—the Doctor and the visitor. There are times when words are hopelessly inadequate—and yet, perhaps, unnecessary to express one's feelings—this was one of those times. The Doctor simply looked the disgust he felt for his friend, and his friend, I hope, did not altogether betray the scorn he felt toward the Doctor at that moment. Here had been thirty big black ducks—the air was full of them—and two men had exploded four cartridges into their very midst—so to speak—and yet there they were off in the distance, not one of them the worse, and it was but poor consolation to know that they had been very badly frightened.

The visitor had not recovered from his disgust when a single duck passed close to his end of the punt. It was one of those ducks that seem suddenly to spring into an existence. Have you never, brother sportsman, stood up very cautiously in your blind, and swept with eye the whole expanse of sky and water, convinced, after a careful and thorough search, that no duck is flying within the mile, and then, just as you settle down again into your blind, have you never heard, brother sportsman, the whistle of wings as a duck shoots past you—30yds. away? This was one of those phantom birds. The visitor fired at its retreating form. The duck mounted in air. The visitor fired again—the duck mounted higher as he scuttled along under forced draught. Some moments had passed before the visitor dared turn his eyes to meet those of his friend, and he smiled very sheepishly indeed as he made the weak apology, "I hardly liked to shoot that bird; he seemed to have something on his mind." The Doctor muttered something to the effect that the duck certainly had nothing more now on his mind—or anywhere else—than he had before the two shots.

Another duck passed the same end of the punt. After a long time had been expended in finding its dead body—for it fell behind them, among the rushes—it was becoming too dark to shoot, and the two took up the decoys and returned to camp.

Frank was already there. He showed about ten birds—yellowlegs, curlew, a black-breasted plover, and the two ducks that had been shot in the beginning.

Old Sol had just got out of bed and was opening slowly, one by one, the shutters of his room away off in the east, when the two who had been together in the green punt left Frank asleep, and paddled down to the far end of the pond. There was little clear water here—all wild rice and reeds and bog.

They placed the decoys in a little piece of open water, but the ducks were not flying well, and what few did pass regarded not the decoys, nor their calling.

A green-winged teal planted himself suddenly among the decoys. He looked inquiringly as a man's head and shoulders issued from the reeds, then pelted away as fast as his little wings would carry him. He fell into a very thick bit of marsh, and the two shooters had a long search. Later they watched a single duck circle round and round the foot of the marsh, and finally, after so many circles that one became quite giddy following it with the eye, settled in the very thickest place. The two in the punt waited a few moments longer, and then, because no more birds were moving, poled the punt into the thick rushes in search of the single duck. A snipe rose from somewhere, and crossed in front of the punt's nose. The visitor shot it, and at report of gun the black duck got up almost, it seemed, from under the punt. It dropped dead when the Doctor fired. While retrieving this bird, another rose from one side, and fled away, quacking with fear. It fell at 40yds. to the Doctor's other barrel. They retrieved the game, pushed, paddled, poled and pulled the punt through the liquid mud, that pouted and swelled in front of the boat as it reluctantly yielded a way.

The ducks seemed all to have settled in the little pond in the midst of the marsh, so the two paddled slowly around its edge. They had not gone many yards before four ducks got up—and now the two shooters wiped out the disgrace of the night before—for after four reports not a duck was left in air.

And so they went on all that morning, every few moments a single duck or a "double" would be frightened into flight. Sometimes they were killed, sometimes they escaped.

At lunch time the two friends placed the dead on their backs upon the seats of the punt, smoothed down the ruffled feathers of their glossy breasts, and counted them—fourteen black ducks and a teal.

Is there anything that makes one more absolutely and more sublimely contented than to gaze upon a good bag of one's own shooting? You find yourself, do you not,

making very good resolutions? You remember at such times how much your guide admired the knife with the long business-like blade, and you resolve on the spot that it shall be his; and you even think of the friends who would not come when you asked them, and assign to them mentally a fat brace of birds.

To this benign influence the Doctor and his guest succumbed. The visitor said: "I'll paddle home, old man; you just stretch yourself out in the bottom of the punt and have a snooze." And he asked the Doctor thoughtfully if his heel still pained where the rubber boot had blistered it, and complimented him upon his shooting.

While the Doctor said: "No, old man, I'll paddle you. You worked hardest coming down, and it is only right and fair and proper that I should do my share now." And he spoke so nicely about the other's shooting, who replied, "Not at all." And in fact they were both just as polite and genial as it was possible for two men to be—not at all like the two who started out in the morning, cold and hungry, when the other told the Doctor that he really didn't know the first thing about paddling a punt quietly, and that he had chosen the very worst place in the whole pond to set out decoys; and when the Doctor had reminded the other of his shooting of the night before, and had put it to him whether any one who could not hit a duck in two tries was likely to be an authority on placing decoys.

On their way back the two in the green punt found a little creek fringed on both sides with rushes. They explored this. The visitor, having the place of courtesy, sat in the bow with his repeater (12-gauge) ready for action. A sharp turn revealed two ducks; one was killed and the other swam off with a broken wing. A shot from the third barrel of the repeater stopped proceedings. It is in cases of this kind that, it seems to me, the repeater has an advantage over the double-barrel arm.

Nothing more was seen, and the punt's nose was turning to descend the creek, when the almost tangible stillness of that lonely swamp was broken rudely by the hoarse honks and croaks of a flock of geese. They passed perhaps 20yds. high over the creek and about 100yds. ahead of the punt. How they wished, those two youths, that they had turned that boat a moment or two before.

Still in the bow, a little later, as they rounded one of the sharp turns in the stream, the visitor caught sight of the geese coming back, following the creek and low over it. A motion to the Doctor, and the whispered word "geese," and the punt backed quietly until hidden to the coming flock by the bend. The rushes were low. By peering through their tops, the two could see the grand, big birds, with their long necks straightened, flapping nearer and nearer. It was an exciting moment. Would they come as far as the bend, where the concealed hunters lay, or would they strike across country before they were within range? As a matter of fact, they did neither, for when within 70 or 80yds. of the bend they curved their wings and slid quietly into the water.

The Doctor called himself something under his breath for forgetting to bring with him that morning the few cartridges that he had filled very full of black powder and AA shot. As it was, their shot was small, the birds were very large, and the two did not think that at such a distance they could do them much harm. So they waited, and watched the geese drink their fill of the fresh water, then turn, alas! and swim slowly away. The two in the punt said things quietly to themselves as they saw the distance increase. The geese were going away. They had gone 100yds. when the disappointed two of the punt heard off in the distance the boom of Frank's gun. The geese heard it too, for they rose, turned once more, and honking and howling like a pack of beagles approached rapidly the ambush. The main body struck across country before they were within range; they seemed to fear that turn of the creek, but four more venturesome followed the water and passed the shooters 60yds. away.

The Doctor jumped to his feet with the pent-up energy and excitement of ten long minutes, singled out one goose and "let him have" both barrels. The visitor—the Doctor laughs yet at the recollection—jumping to his feet too in the glorious excitement of the moment, pumped the whole six shots of his "squirt gun" at another goose. Perhaps it was the distance, perhaps the shot was too small, perhaps the birds were too large, perhaps the shooting was poor. I know not which, but the geese, their necks a little longer, their speed a trifle faster, flew on, apparently unharmed. How envious the others would have been had they brought home the first two geese of the season! for it was the second day of the open season. How splendidly the two big geese would have set off the others. How—just here the Doctor and his friend ceased abruptly their vain regrets. The wings of one goose 200yds. away closed, his neck drooped, and he fell to the ground with a thud which the two vowed afterward to their friends that they had heard. A moment later, and another left the flock and scaled down rapidly into the woods. The first one was stone dead; the second one, though the two thrashed the woods for an hour or more, was never found. I fear some fox is still licking his narrow mask in fond recollection of that juicy bird. They were merry, those two in the green punt, as they paddled toward camp, their boat heavier for the presence of sixteen black ducks, two snipe and a Canada goose.

They saw in a marshy meadow, as they returned, several small flocks of grass plover. The day only half-grown, so they landed and had half an hour with those gamy birds. Once disturbed, the flocks scattered out over the marsh, rising in singles and pairs as the shooters walked them up.

Now, "Enough is as good as a feast," to quote a very old proverb, and one which the good sportsman bears always in mind. So it came across the two friends, after shooting for some time, that they already had all the birds they and their friends at home could advisedly consume, and they left the grass plover alone again with their meadow.

That evening the three counted their slain. Frank had returned with more black-breasted plover, yellowlegs, turnstone plover and grass birds.

Laid out upon the floor of the smoking room for the express purpose of causing envy and jealousy in the hearts of those who would not come, and who two days before had scoffed at the rented barnyard fowl, was the following display—I take it from a list I made at the time: 1 goose, 20 black ducks, 1 green-wing teal, 31 grass birds, 2 Wilson snipe, 11 yellowlegs, 3 gray plover, 1 turkey curlew, 6 turnstone plover, a marsh harrier and a grebe duck.

J. K. Kennedy.

Montreal.

Lake Superior Deer Hunting.

This was to be my first camp on Witch Lake. The M. & N. Ry., now a part of the C., M. & St. P. system, was being completed between Iron Mountain and Republic, and opened up a new field for sportsmen, that heretofore could be reached only by canoeing on the Michegamme River, or by long trips through the forest. There were nine in our party—Messrs. White and Gilmer, Winters, Bender, Proper, Lewis, Hearn, Baur and the writer. We went via Fort Wayne, Chicago and Milwaukee, our destination being 244 miles north of the last city. We came to our journey's end about 2 P. M., and jumped off and into about 4in. of snow. A company from Convoy, Ohio, got off also, and a few moments later we were all searching for a desirable place to camp. We finally chose a spot on the south side of a ridge, through which the road was graded, and something like twenty steps from the railroad and fifty from the Lake. We did not have time to make permanent camp, as night was near; so set up our two tents, put the trunks in one, placed our sheet iron stove in the other, just as we meant it should remain, opened up our grub boxes and Baur got supper, while others of our party brought in wood, water and branches for bedding.

Baur saw more game than anybody, and could hit a spot on a tree, but he never touched a living thing. Bender, a quiet fellow, and as sly as an Indian, seldom missed.

We made a bad night of it, for it was quite cold. The boys gave me the place of honor next the stove, and when I was not burning I was shivering. Four of the party slept in the other tent, and had to huddle like pigs. Our tents were neither large nor of good quality.

The next day Gilmer, Hearn, Winters and I built a permanent camp by leveling a side of the hill and boarding it up with lumber off a stable built by the railroad graders, then lining one end of the shack with one of the tents. Lewis, who was our photographer and an experienced hunter as well, covered the sleeping apartment with a large section of oil cloth he had brought with him for the purpose of covering a pit in the ground when he should need a dark room. This effectually headed off any possible annoyance from a leaky roof.

Those who hunted came back from different directions, some with rabbits or grouse, or both, except Bender, who brought in a deer that would weigh probably 65lbs. From that to the end of our three weeks' stay we had venison. That evening, as we who had stayed in overhauled our shooting irons, the boys took occasion to poke fun at me. There was one heavy double-barreled shotgun, one .45-90 Winchester, and one other large caliber, probably a .40-65. Five were .38-40, while my gun was a .32-20 Winchester, model '73.

Baur gave us flapjacks and venison steak for breakfast, and just as the sun painted the tree tops with gold we started out. Bender went west, in the direction he had been the day before, and I crossed the railroad also and pulled off to the north of him. The morning was an ideal one, clear and quiet, the snow lying lightly on the leaves in the timber, while adhering to the ice on the marshes. A quarter of a mile from camp rabbit and grouse signs were abundant, while deer tracks led in every direction. A rifle shot off to my left caused me to look sharp, and a moment later a gray and white streak passed across in front of me, broken by intervening timber, and quite out of range. It emphasized the fact, however, that I was again in a deer country, and made me more watchful and cautious. It was trying to walk past where a big northern rabbit had patted the snow down on a mossy knoll, and I frequently stopped and stood enjoying the scenery. The surroundings were not grand, but had the charm of being wild. No timber had been cut; there were no roads, paths nor other landmarks; while the air was laden with perfume from the fragrant evergreen trees, and I almost envied the wild creatures that inhabited that silent woods.

About a mile from camp I saw blood in the fresh trail of a deer, and as it was circling to the left in the direction I was going I followed the trail. It used a deal of cunning in its efforts to conceal its trail. One place it came to a large birch tree top that had succumbed to old time and consequent decay, and covered probably 50ft. square of earth. It walked the logs, jumping from one section of a broken limb to another like a goat.

I left the trail after a time, and went south, but had gone but a short distance when I ran into a brood of grouse. I was sorely tempted to pot some of them, but pushed on, keeping a sharp lookout for a deer. I didn't know how far I was from camp, nor certainly in what direction, but that did not matter. I saw an opening in the timber ahead, and approaching found it was an extensive burned area, running south fully three miles. I stepped on to a log and swept my eye over the barren waste, instinctively raising and cocking the rifle as the trim outlines of a deer came to view off to the left. The thought flashed through me that the distance was too great for the little gun, and I would better elevate the sights; but the same instant I was locating the shot I meant to hit; and bringing gun to eye I drew a bead on the center of the shoulder, and as the gun cracked the deer whirled a half circle, took a couple of steps and stopped just as I fired again, this time at the other shoulder. As the gun cracked the second time the deer dropped, and was dead without a struggle. I found the distance to be quite 150yds., and also found that both balls had gone entirely through both shoulders near the center, the second one possibly 4in. further forward than the first. What I would have done with a large caliber gun is left to conjecture.

I hung the deer to a bent bush out of reach of wolves, looked at my watch, saw that it was 3 o'clock, also noticed that the clouds hung low and threatening, and flakes of snow were filling the air, looked at my compass, took my tomahawk in one hand and began blazing in a due easterly direction, while opening a way through a willow thicket with my left hand. I knew that by going east I would come to the railroad, and could follow that to camp, but I had a miserable climb over logs and through burned and seasoned thickets and tamarack swamps for a mile, where I struck heavy forest.

It was getting gloomy now, and I pushed on, and was within half a mile of the railroad, when I heard men talking, and discovered Winters and Baur crossing my trail in a northwesterly direction. When I hailed them Winters swore by his compass in true hunter fashion, contending they were going to camp, and I was all wrong. I laughed at him. At the same time it would have been no laughing matter to make camp in the woods in a snowstorm, and without an evening meal. But Winters finally declared his compass was wrong, and dropping into line, blazed the remainder of the way to the railroad, which we struck about half a mile south of camp.

The following day Gilmer and Hearn went with me to get the deer. A large lynx or some animal of the cat tribe had back-tracked my trail during the night, stepping into my rubber shoe tracks, and leaving a footprint nearly 3in. in diameter. We said nothing about following its trail, and I don't know why, unless the others thought as I did, that we would run across it again, but we didn't.

My trail led over a high ridge between two lakes. This hill had been almost stripped of timber at some time years ago, by storm, or fire, or both, only a few large old pine trunks standing, while a heavy growth of black birch and other shrubs had sprung up, the largest reaching a diameter of probably 3in. This growth had been visited during the summer by a scorching fire, and each individual shrub was seasoned and blackened. There was no way around it, so we clambered through as I had done the evening previous. We had come through one of those dense swamp thickets where a person gets a shower of little yellow spines or needles every time he touches a bush, and we yet had to coon logs over the marshy outlet to a lake, and crawl through the willow thicket before we found the deer. When we reached the place Gilmer and Hearn sat down and emphatically declared that they would not shoot at a deer in such a place. I reasoned that if either of them had been in my shoes he would have made an effort to get that deer, for it was in line with human nature. But to lighten their burden I skinned out the forequarters, and we left them, since they were badly shot up. Some time after noon we got back to camp.

The next day I went west again, but kept within the circle I had made two days previous. I must have gone close to two miles, and was skirting the border of a small lake, when a rabbit skipped away from my feet and did not stop until quite ninety paces distant. I was tempted to try my little gun on it, and when I stepped the distance to where the rabbit lay the game looked a good deal as if it had passed through a pulp mill. I then half circled the lake, which was only a pool, and stopped on the west bank to get a drink. The lake was very deep; the logs that lay in the water were at an angle of about 45 degrees, and the water was so clear I could see them for quite a distance. The lake was surrounded by a heavy growth of large hemlocks, with scarcely any undergrowth, and this would be an ideal place to lose one's self for a time. I have tramped that territory over several times since, but never happened on to that pool a second time.

Just west of it I was sitting on a sapling that had been uprooted and facing the west, when I saw a buck coming directly toward me from the north. He was some 200yds. when I first saw him, and there were many small trees and saplings intervening. He would come a few steps and stop to listen and look, then move on again. He came to within some 40yds. of me and stopped behind a clump of trees. I could see a part of his right horn, and sat there fully a quarter of an hour waiting for him to move. He evidently had scented me, and was afraid to come further, so I slowly rose to my feet, turning as I did so, pushed my gun out in front of me and leaned over to the left as far as I could, but could only see his right eye and a streak of his head. I worked my feet over a couple of inches, leaned nearly off my balance, and tried to hold a bead on his head, but my position was so unnatural that I could not hold my gun steady, and missed. He bounded off, and I took a snap shot through the timber and missed again. I did not care much, for we had plenty of venison in camp, and I knew we would get more if we needed it. When I returned to camp I passed near where Proper had killed a large doe, and had her hanging on the pole at camp. There were about twenty-five hunters camped at this place, and yet I seldom met any of them in the woods.

If these random notes are readable, those who follow me will see that my aim, in part, is to relate personal experience and personal observation, touching some points that have been under discussion in these columns, and which I observe seem never fully settled. There are many by-plays, however, in hunting camps, and I both enjoy engaging in them and reading of them.

The boys laughed a good deal at my hunting rabbits with a lantern. Before we had been in camp many days, a big grizzly rabbit, nearly white with age and the cold season, came at dawn to nibble the apple and potato parings on our garbage pile, so one night I got a lantern and my single-barreled scatter gun, which I had taken along for no purpose in particular, and went down into the swamp in front of camp to look for him. I soon had him up and going, and the way he did kick the earth. It sounded like a horse trotting. Thump, thump, thump went his hind feet, as he vanished into the gloom. I could walk him up, but when I tried to hold the lantern and shoot him on the jump I found I had bargained for too much. It was a new experience for me, and probably was for the rabbit. If I had put the lantern on my head, or let the rabbit carry it, I might have gotten him.

G. W. Cunningham.

[To be continued.]

The Song of the Grouse.

I'm an old cock grouse, and I'm lusty and strong;
My ruffs are glossy and black and long;
I'm nimble-footed and keen of sight,
And swift of wing as an arrow's flight.
I'm the bird of the mountains and brush-grown hills,
And the darksome glens with their tinkling rills;
And I wake the woods with my whirring hum,
When the snow drifts deep and the streams are dumb.

I love the time of the shining haze,
That dims the hills in the autumn days,
When the wildfowl pass on tireless wing,
When the air is sharp with a bracing sting,
When the frosted leaves whirl gaily past,
And the ground is thick with the fallen mast.
I love the time when the old year fades,
For it's then I'm king of the woodland glades.

If men must hunt, let them have their fun.
'Tis little I reck of the crack of the gun;
For the pattering shot it's little I care,
Or the crouching setter that sniffs the air.
Though the gun be sure and sight be keen,
There's naught I fear with a tree between.
I slyly run and I swiftly fly,
Or I spring with a whir when they've passed me by.

There's danger in it? Oh, yes, that's true—
I've lost a toe and a feather or two;
And once and again have I felt the sting
Of the scattering shot, with their spiteful "ping."
But it's all in life that is worth the name;
And if at the last you must die—die game.
Or else be an owl, and mope and whine,
And doze in the dark of a gloomy pine.

Then here's to the grouse—the mountain king,
So keen and lusty and swift of wing—
The Northland's spirit strong and free—
The flitting ghost of the hemlock tree,
As long as the seasons shall come and go,
As long as the brooks of the mountains flow,
May the heart of the sportsman be thrilled and stirred
By the whirring burst of the brave old bird.

J. R. B.

Notes from New Brunswick.

It grieves me to note in the secular press that John Perry, of Megantic, who officiated as my guide in that region two years ago, was recently shot and severely wounded in the Maine woods by a gentleman of an imaginative turn of thought who took him for a deer. John is one of the most careful, cool-headed men in the woods I ever had the pleasure of meeting, but this did not avail to save him from being shot down. The bullet passed through his right hand and into his side.

The papers also report that the body of Richard Robinson, a young man who formerly lived in St. John, was found dead at Dennysville, Maine, with a bullet hole in the back. He was undoubtedly shot by some reckless deer hunter. Whoever did the shooting examined the body and then walked away and gave no information. There is only one way to stop this murdering, and that is to make the killing or wounding of people in the hunting woods a criminal offense, punishable with a liberal term of imprisonment.

It is a pleasure to turn from the contemplation of such things to the luminous countenance of our friend Charles Phair, of Presque Isle, who has just returned from a goose and brant expedition at Tabusintac on the North Shore. Mr. Phair was accompanied by his newly wedded wife on this trip, and claims that he never had so good a time before. He says big game hunting is not to be placed in the same class with the fun of persuading a big goose to come down and smite the water. It was his first experience. There were, he thinks, some millions of geese and brant tarrying at Tabusintac on their way southward, and the shooting was superb. Charles brought down sixty-five geese and brant, and is positive that he missed a few. Harry Chestnut, of this city, also gathered in a large nest of feathers at Tabusintac recently. His haul consisted of fifty-five geese and brant, and about the same number of partridges and woodcock.

Deer have been coming in rapidly this week. Charlie Gallop shot two on Friday near the Gornish Brook, and on the same day Charlie Grier, of Maryland, brought in two fine bucks. On the following day two deer were shot by Joel D. Scott, one by Percy Camber and one by T. W. Elliott. A fine caribou was brought in from the Keswick to-day by Charles Hoyt. The head, which has twenty-eight points, will pass through the skillful hands of S. L. Crosby, of Bangor.

The newspapers mention that a deer, which had escaped the dogs by running and then swimming the St. Croix River at St. Stephen last Wednesday, and also escaped the school boys on the other side, was finally killed on Lincoln street, in Calais. This has a tendency to make the man who sits on the fence feel sorry for the deer and sorry for Calais. Deer are frequently seen within the city limits of Fredericton; but no one would think of molesting them. I might add that it is the almost universal custom with local shooters here to shoot the bucks and let the does go free.

At Centreville, Carleton county, a deer was caught on the ice of the main river last winter. While deprived of her liberty she dropped two kids, a buck and a doe. Both of these have been kept ever since by R. W. Balloch, and are now in the best of condition.

What is claimed to be a record caribou for this Province has just been shot by Mr. Charles F. Reardon, of Boston, who hunted with Arthur Pringle as his guide for about ten days on the Nor'west Miramichi. Mr. Reardon's trophy is remarkably massive, contains thirty-nine points, and the brow prongs have a depth of 13in. This gives me a mild attack of grief, for I am the possessor of a caribou with thirty-eight points, which I had come to regard as a record head. There is no doubt that woodland caribou occasionally have over forty points, though these, being shed as a rule before good snow tracking, are seldom taken. Billy Chestnut has a "combination" caribou in his camp at Pine Bluff with forty-two points, the antlers having been picked up separately on the snow in the Nor'west district.

Mr. W. M. Kidder, of New York, who went into the Deadwater country with Henry Braithwaite the first of this month, came out to-day. He brought a nice bull caribou and had several chances for moose, but did not shoot, as the heads were small. Henry's next party is James Turnbull, of Halifax. His assistant, Tom Pringle, will take in next week Gen. Hutton, commander of the Canadian militia, and several of his staff. Braithwaite utterly condemns the small caliber rifles, and says they are responsible for a great many animals being wounded and lost in the Miramichi country this year.

C. B. Dykeman and G. A. Pollock, of Acton Settlement, had a lively scrimmage with a huge bear one night last week. The bear came one evening and lugged off a bee-hive. The next night these gentlmen laid for him with rifles. The bear appeared again and was shot, but traveled 200yds. before he succumbed. The chase with a lantern was exciting. Upon being examined it was found that one bullet had passed fair through his heart. The bear was brought in town to-day, and measured exactly 7ft. from tip to tip.

At McAdam Junction on Saturday D. Stuart and S. Tracey brought in an unusually fine buck deer. Mr. Tracey was recently fortunate enough to shoot a bear weighing 400lbs.

Frank H. Risteen.

Fredericton, Nov. 24.

On Maine Snow.

Bemis, Me., Nov. 25.—Well, I am in the deer country. We hunted yesterday on the ridges between this point and Rangeley. Four inches of crashing, crusted snow prevented us from seeing more of the big game than an aggravating glimpse, and to hear them crashing through the trees. But this morning we are in luck. Four inches of light snow fell last night. The crust is buried and the tracking will be all that can be asked for. It is now 5:30 A. M., and breakfast is ready. We shall be off as soon as it is daylight. A deer's track means that we are near him.

Tracks we found not a mile from the camp. The track I undertook led me up the mountain a short distance. The deer saw me first through the snow-covered thickets, and jumped. Making long leaps he went a quarter of a mile, then turned square about and watched for me. Of course he saw me first, and leaped again. Three times he went through the same tactics. I was disgusted and turned about. A mile and a half up the mountain I had the fun of tramping back by compass to the tote road with no deer.

Prof. J. F. Moody got his deer within half an hour, and but a short distance from the tote road. Mr. Lambert did not get a shot, though tramping all day in 3 or 4in. of light snow, over 4in. of crusted snow that breaks at about every step.

To-morrow will be just as good deer hunting as to-day; since it has snowed about all day, followed by a northwest wind that has shaken all the snow off the scrub firs and underbrush. The tracks will be fresh again.

Nov. 26.—The mercury registers only six above zero this morning, and Lake Mooselucmaguntic is frozen over, or will be as soon as the wind goes down, not to be opened till the trouting season is on again, some time in May, 1899. The Government fish transportation car has been up here, and the fish commissioners have put large numbers of nine-months-old salmon into this lake. Capt. Barker's natural fish hatching spring has been full of parent trout. Captain has kept a man there all the fall to prevent poaching. The spring is up a little brook a mile and a half from Bemis camps; is 10 or 12ft. in circumferance. It is not an uncommon sight to see hundreds of noble brook trout there late in October and early in November. The gravelly bottom is thoroughly mixed with trout eggs now, spawned naturally, to hatch naturally in February. Capt. Barker's idea is that this natural hatchery is of much importance to the trout supply, and one who sees it at this time of the year will be much inclined to agree with him.

Special.

Conditions in Florida.

Your St. Augustine correspondent has been harsh and unfair, I think, in some of his remarks aimed at Southerners, especially in the ones concerning Floridians, for he must remember how little we did in the Middle and the New England States to protect game till it was nearly exterminated, and see that the people here, profiting by our experience, are taking earlier measures. The laws here are not ideal ones yet, but they are better enforced than would seem possible under existing conditions. Florida has an area larger than New York and Massachusetts combined, less population than Boston, a lower tax basis than some of our cities; and being unable to police her territory thoroughly, depends upon the character of her people to a great extent for a proper observance of game laws in outlying districts. If these facts were generally realized this State would be more justly treated.

One who is in his fifth year of hunting and fishing in Florida ought to know how well laws for the preservation of game are enforced here, especially in an experience covering many parts of the State from gulf to sea, and it is with some degree of pleasure, being a sportsman, that I can say quail were well looked after everywhere I have been, and shipments of game strictly prohibited. A few deer may have been shot out of season the year after the big freeze, when the orange growers in the woods lost everything they had, and probably found hunger unpleasant, but no venison was sold in town. It is difficult for any of us to say what we would have done under such conditions if we had been either the authorities or the unfortunate people.

Others may have had a different experience, but in my intimate acquaintance with the people of Florida I have never seen a gunner who had been raised here shoot a harmless bird unfit for food. The destruction of plume-bearing birds still goes on in remote parts of the State; as the more the authorities try to suppress that kind of traffic, the more tempting are the prices offered by foreign buyers; but with this exception the killing of birds not game is done by non-residents. The man who has grown up in the midst of good hunting cannot see the reason for useless extermination.

Local protection is given distinctive birds and small animals about some of the resorts. The pelicans roost about the pier at St. Petersburg with the other fishermen and the ducks there are equally tame. The gray squirrels at Clearwater were amusing as they chased and chatted in the limbs of a hickory a few feet from our porch, at times rowing with the blue jays, with whom they seemed to be at constant war, and at other times marching over the grass—a sedate procession, in which the leading squirrel buried a nut that was dug up in turn by each of his followers; the line reforming itself and reburying the nut till none of us could calculate either how many squirrels would be disappointed or how many times when the season came for harvesting cached food. At Seabreeze, on the Atlantic coast, the Florida blue jays will eat from the hand when food is scarce. Local birds are said to be protected at many of the resorts on the Indian River and further south; but this may be a mistake, as I thought till I read the remarks of your correspondent that these varieties were cared for on Anastasia Island, near St. Augustine.

All of this is a beginning, and shows that public opinion is being educated. All of us should hesitate before shooting a bird of any kind unfit for food, simply because it happens to be in Florida; killing harmless creatures for scientific purposes is bad enough, but destroying them to satisfy a whim is thoughtless cruelty degrading to human nature. If being a hunter prevents one from cultivating humaneness toward all live things, we ought to give up amusement of that kind and change to some such sport as hunting bouquets. I hunt and fish for pleasure, and have nothing to say to women that wear pieces of dead birds in their hats. They know by this time that the plume hunting is done in the breeding season, and each set probably means a starved nest of young birds. If any human being desires to wear that kind of grave-causing ornaments, let those of us who value our own lives have a care and say nothing. The tails of dead fish might be substituted for her uses; but this is only a suggestion. If I wore egret plumes I would be haunted by voices of nestlings starving by myriads calling on lost mas and daddies for food, and by visions of their dead parents' decayed corpses, and no longer white-winged purveyors to broods with open mouths. But this is between ourselves. And the hotel men push the erection of their large caravansaries further into the woods here every year for natural evirons, plant royal palms and cocoanuts for additional attractions, then twiggle their thumbs while guests and others destroy all the beautiful birds in the neighborhood. Individual goodness might save many of the harmless creatures in districts too far away to be policed by our refusing to shoot except for legitimate purposes. We might forego turtle eggs, too, without testing their edible qualities.

An Alien.

Ducks at Harvey Cedars.

Harvey Cedars, N. J., Nov. 24.—Harvey Cedars, New Jersey, is situated on a narrow strip of sand beach near the famous Barnegat lighthouse. It has been for years a well-known resort for sportsmen in quest of ducks, geese and brant.

The shooting is done in comfortable pumpkin seed shaped boats, that are hauled up on points with decoys anchored near by. The shooting is mostly on the wing, the wildfowl trading back and forth between two big bays.

The sportsman only needs to bring gun, ammunition and rubber boots; there are plenty of boatmen here to supply all the rest. One minute's walk from the hotel and you are in your gunning boat. Twenty minutes' brisk row and you are on one of the points for the best shooting.

Most of the sportsmen come in from the bay in the middle of the day for a hot dinner, as few wildfowl fly at that time.

I have been here several weeks, and have shot geese, brant, canvasbacks, redheads, broad bills, black ducks, pintails, golden eyes, dippers and other varieties of wildfowl.

The shooting has been good and bad, according to the flight of birds. But I know of no place within 500 miles of New York or Philadelphia where you can get better. I find the shooting here more comfortable than battery shooting—for you can get out and run around the meadow when tired of lying on your back. Trains arrive every day and leave every other day. That this is a genuine sportsman's house is shown by the fact that every one is called at 4 o'clock for early breakfast, and in time to be snugly stowed away on one of the points with decoys a-bobbing on the bay before the first peep of daylight, or a goose or duck has even thought of flying.

The Forest and Stream has guided me to many a place for sport with rod and gun, and other readers may wish to learn where good sport can be had among wildfowl within a few hours' ride of Philadelphia or New York.

Willard Spenser.

One Way it may Happen.

Bridgeport, N. J., correspondence of the Philadelphia Ledger tells of a shooting accident at a club house on Raccoon Creek. This morning they went out with their guns, and visited the farm. Young Schwerle was standing on the porch, when his companion, Shirley, had his attention attracted to a hawk, which was circling over the house. He slipped a shell in his gun, and was standing with the weapon resting on his arm, with his finger on the trigger. Just at this moment a big dog, belonging on the farm, jumped playfully on Shirley, pulling his arm, elevating the gun and discharging the weapon, the charge taking effect in the side and back of his friend. The young man was taken to the German Hospital, Philadelphia, where the leaden pellets were extracted, and at a late hour the physicians stated that while the wound was a serious one, he had a chance of recovery.

CHICAGO AND THE WEST.

Nov. 14.—Under date of Nov. 7 Mr. Wm. Wells writes me from the far-away Wind River country, of Wyoming, about game and Indians, of both of which I understand they have plenty in his neck of woods, and indeed too much of the latter commodity. Mr. Wells' Gros Ventre Lodge, in Uinta county, is one of the places I didn't get to visit this year, but have on my slate for some other year after I have become so wealthy I don't have to work or do anything but just run bear and things. Regarding the game, Mr. Wells has some good big news, especially about bear. I hope they haven't killed my long lost grizzly. He says:

"My hunting parties are all gone, and we are having any amount of sport by ourselves. Nice weather and just enough snow for tracking. We killed a lion just back of the lodge last Friday, and will keep the dogs pretty busy from now on.

"The bag for our hunting parties this fall has been ten bears, five lions, two lynx, seven sheep, twenty-seven elk, eleven deer, and about thirty antelope, divided up among a dozen sportsmen. The snow came late, and kept down the catch of lions and lynx.

"We are going to Jackson's Hole about Dec. 15 for a six weeks' hunt after lions, which are killing lots of elk over there.

"We are having lots of trouble with the Indians killing game. They are coming in in strong parties, and say that they will fight. Eighteen of us were out on a scout the other day, and found a camp where a splendid trap had been laid for us, if we had come along while the Indians were there. There were three tepees out in a park and nine more hidden back in the timber, where they could command the park. That meant about thirty bucks, and they would have mopped the ground with us beautifully. There were about six wagon loads of elk hair at the camp. I should say that showed several hundred hides grained.

"This thing of having a lot of redskins thinking that they can kill our game and defy us is getting tiresome.

"There are only about seventy-five of them making trouble. WM. WELLS."

About the Deer Supply.

In regard to the actual status of deer demand and deer supply, obviously that estimate should be most accurate which comes from points near to the grounds where the deer are found, and therefore I take pleasure in offering the opinion of the Superior, Wis., Telegram regarding the relative supply of venison and venison seekers this year and last:

"The deer season is now fully opened, and the woods of Wisconsin and Minnesota are full of hunters. Although hunting is so largely done this fall, the number of deer coming into the city is small compared with the number which came in last fall. In fact the number is just about half of that for last year at this time, although the meat shops about the city are getting all that they need, and are well stocked with good deer meat. The condition of the meat is very fine this season. One prominent meat man in the city says that deer are becoming very scarce in the woods in this part of the country, and this, of course, has an upward tendency on prices for deer meat. It is generally believed that one thing, that has considerable bearing on the growing scarcity of deer, is that every year for the past five or six years there have been too many amateur and would-be hunters thronging the sections where deer are found to be the most plentiful, and that the deer are chased in all parts in season and out of season, thus having no chance to multiply. In Duluth deer are coming in in much larger numbers than on this side, and while the number is considerable that comes from Wisconsin forests, the deer sections of Minnesota are furnishing by far the larger number of deer. Venison is selling higher this fall than last season, and meat men are getting good prices.

"It is toward the end of the season that the number of deer on the market is the largest, in many cases the game being held off until the end of the deer hunting season. But it is a noticeable fact that this species of game is becoming very scarce, and each year the number of hunters going out is larger than during the preceding fall."

A Trunk Mystery.

A party of Indiana licenseless deer hunters, who operated in Wisconsin and Minnesota, concluded last week to ship out some of the fruits of their labor. They packed up 400lbs. of venison and thirteen deer hides in three trunks, and checked the lot on out of the State. Warden Stone, of the Barron district, wired on ahead to the husky warden, A. J. Klofauda, at Eau Claire, and the latter visited the depot of the Omaha road with an eagle eye and a sledge hammer. He broke open the trunks and confiscated the game, which was sold at auction. The owners of the trunks did not materialize and remain a mystery. They can have three damaged trunks and a few fines by calling on Klofauda, warden. The venison was not tagged.

Quail.

The quail season fulfills prophecies, and is really a great one in the average Western district. Lower Indiana is full of quail, and lower Illinois also shows plenty of birds. Knox county, Sullivan county and others of that region are tipped to me by a friend as being good enough for the most fastidious. Upper Indiana and lower Michigan are also good. Ohio has an average crop, much shot as that State is, and lower Minnesota, pretty much all Iowa, Nebraska and Kansas show that this truly lovable game bird is not passing away, but actually increasing.

Mongolian Pheasants.

Mr. Howard Bosworth, of Milwaukee, Wis., in course of a visit at Chicago this week told me that his stock of Mongolians never promised better. He has over 1,000 now on hand in good health, and has put down many pairs at different parts of Wisconsin, notably Wauzeka, where there is a supplementary pheasant laboratory. Of the birds liberated near his summer place, at Pine Lake, Mr. Bosworth hears often, and now and then they come into farm yards near by. One cock for a time lived with the domestic fowls of a farmer and became quite tame. One day a little girl of the family started off to get some milk, carrying a bright, new tin pail. This bird followed her for a long time along the path, jumping up and fighting the tin pail, which he seemed to look upon as something of a gorgeous rival. These pheasants are a game bird without question, and it is to be hoped that they will finally fill our pine woods and hardwood forests. They should do well in central and lower Wisconsin. Mr. Bosworth I have always regarded rather as a pioneer in this acclimatization work in Wisconsin, and he has spent a great deal of money in getting his present practical knowledge of the bird.

The Law of Trespass and Shooting Preserves.

An interesting decision comes to hand this week which bears on the law of trespass as regards the property of shooting clubs. Mr. E. W. Bangs, president of the Swan Lake Club, of Chicago, sends this to me, with the remark that it is apt to prove of interest to members of shooting clubs all over the country, as well as to "parties who consider private grounds public property." The copy of the decision is given below:

In a trespass case recently tried before a jury in Hennepin county, Illinois, in which the Swan Lake Club was plaintiff, the following instructions were given by Judge Shaw, one of the foremost Circuit Court judges of the State, resulting in a verdict in favor of the Swan Lake Club.

Instructions of the Court.

1. The court instructs as a matter of law, that possession is sufficient in the law to sustain a suit for trespass, and the plaintiff is not bound to prove ownership or title; possession is sufficient in the law.

2. The court instructs the jury, that if they find from the evidence that at the time of the alleged trespass the plaintiff was in the possession of the premises on which it is alleged the trespass was committed, using it for such purpose as it was adapted for, then the plaintiff is entitled to recover of the defendant for any trespass shown by the evidence to have been committed to said possession, and this is the law, whether the premises were fenced or unfenced.

3. If the jury believe from the evidence that the defendant went upon lands then and there in the possession of the plaintiff, and then and there remained, hunting and shooting, after having been warned to leave by an employee of the plaintiff, then, in such case, the defendant is guilty of a trespass, and this is the law, regardless of the right of property in the game.

4. If the jury find the defendant guilty under the evidence and these instructions, and shall further find from the evidence that the defendant committed the trespass wantonly and wilfully, and in defiance of the rights of the plaintiff; then in such case the jury may find in addition to the nominal damages implied in the law, or to the damages proved (if any such damages have been proved by the evidence), such further sum as punitive damages as the jury may find reasonable under the facts in evidence, not only to compensate the plaintiff for the injury inflicted, but to teach the defendant and all others not to repeat, or be guilty of like offenses.

5. Though the jury may believe from the evidence that at the time of the alleged trespass the possession of the plaintiff (if such trespass was proved) was covered in part or in whole by water, yet, such covering of the land by water would give to the defendant no right to go on to the land so covered with water against the will of the one in possession thereof, or without his permission, nor to remain, nor to hunt thereon.

6. If the jury believe from the evidence that the defendant went on to lands in the possession of the plaintiff in a boat and stopped thereon, and shot a gun thereon, without the permission of the plaintiff, then in such case the jury should find the defendant guilty, and assess the plaintiff's damages.

7. The fact that the premises in question were covered with water at the time and place of the alleged trespass, in the law, gave the defendant no right to be there, nor to hunt and shoot on or over the same, without the permission of the plaintiff.

8. The jury are instructed that this is not a criminal prosecution under the game laws of the State of Illinois, but a civil suit, in which the plaintiff demands damages from the defendant for an alleged trespass, and before you can find the defendant guilty you must believe from the greater weight of the evidence that the defendant committed the trespass, and that the plaintiff was damaged thereby. But, if the trespass is proven, the law implies at least nominal damages.

9. A party suing for an injury or trespass can recover only such damages as naturally flow from or are the immediate result of the act complained of, and the jury should be governed solely by the evidence introduced before them, and they have no right to indulge in conjectures or speculations not supported by the evidence. This is the law, unless the evidence shows the trespass, if any proven, was wanton or wilful, in which case punitive damages may be allowed, as defined in these instructions.

10. In this case the Swan Lake Club can recover no damages for the value of any wild ducks shot or killed by the defendant on the premises of the Swan Lake Club.

Closing of the Deer Season.

The deer season in the Western States draws to its close. It ended on the 15th in Minnesota, and on the 20th in Wisconsin, in which State the five days of grace ended yesterday. Michigan allows the season to run to Nov. 30, so that there will be a chance to get a buck north of the line of Wisconsin—or south of it; such being the virtue of different dates for adjoining States.

In Wisconsin the hunting was fair and the results various. More deer would have been killed had there been more snow, but as it was it would seem that the total number killed is less this year than last. This fact I take to be rather proof that the non-residents are becoming afraid of the enforcement of the law on licenses, than that the deer are actually growing less abundant, though naturally the latter alternative may have much to do with the success of the average hunter.

At Marquette, Mich., report comes that there were more deer hunters this fall than were ever known in all the history of that country. The results are not commensurate with the extent of the invasion. At Superior, Wis., in the same region, there were 370 licenses issued, "no non-resident licenses reported." Last year the total amounted to 488, showing a slight falling off. This is in Douglas county, and the report runs that deer were not killed in such numbers as has in the past usually been the case.

At Bessemer, Michigan north peninsula, the situation was more encouraging. The clerk reports twice as many licenses issued this year as last, and most of the hunters have had luck. It is thought that over 300 deer were shipped out of that county, Gogebic county, in the first two weeks of the season. The Godding party of deer hunters, from Grand Rapids, Mich., last year killed thirty-seven deer at this place, which is thought to be a good deer country; better than it was four years ago. The deer seem to be moving up further north each year, as the farmers begin to get into the pine country. This settling up of the denuded pine lands by small farmers is one of the corollaries of the pine operations. In many parts of Michigan south peninsula the little ragged, hopeless farms have crowded far up into a region where once it was thought the wilderness would forever hold sway after the spiked heel of the lumberman had left it. Indeed, the quail are now coming into country which was once deer range. This will be the history of Wisconsin from now on, and I presume that it means the eventual crowding out and killing out of the deer, which already show signs of that great and fatal cause of game diminution, failure to breed when too much disturbed, and harried by hunters or the advancing lines of civilization.

From Merrill, Wis., up in the trout country, the report shows that the deer are by no means scarce in that neighborhood. The clerk had issued 335 licenses at last account, as against 427 issued last year. It is said that more deer have been shipped from this point this fall than at any previous season; about forty carcasses going out the first week. It is thought that at least 125 deer will be shipped from that point during the season. No arrests are reported, though hounding is considered extremely probable, in many cases not proven. Four hunters killed eight good, big deer in a week's hunt near that section, and pretty well on to half the number of hunters going in are estimated to be successful.

At Rhinelander, Wis., about 200 licenses were taken out, and conditions were favorable for deer hunting, though there was no tracking snow. "No violations of the law reported."

At Eagle River, Wis., about fifteen to twenty deer daily are reported as "shipped to Chicago." I have no doubt that this is literally true in all particulars.

At Heafford Junction, Wis., there were 180 carcasses of deer lying on the station platform tagged for shipment; this at one time on the same day.

At Ashland, Wis., in the upper part of the deer country, reports say that the lack of snow made the results less than might otherwise have been. In the first twenty days of the season one express company handled 200 carcasses, and it is thought that at least 500 carcasses will be shipped from or through Ashland during the season.

At Flint, Michigan south peninsula, there were 101 licenses issued at last account. At Saginaw, Mich., a great many hunters took out licenses, and when I passed through there this week I heard of many hunters who had gone out after a little deer hunt. Some of these had sent home venison. Among others who went in near Baldwin were Wm. Held, well known in deer hunting ranks of Saginaw, and Mr. Held was reported to have been very lucky. He varies his deer hunting with a little grouse shooting, and will be in camp some time.

At Standish, Mich., thirty-eight licenses were taken out, "all by residents." It would be very interesting to have a notion about the numbers of resident and non-resident licenses issued in the States of Michigan and Wisconsin. Without any earthly question there are hundreds of non-residents who evade the law in each of these States. Indeed, they sometimes boast of their shrewdness in doing this unlawful act. Two such boasters are C. K. Woolman and Henry Johnson, of South Bend, Ind., who shot in Michigan under resident licenses. These were both apprehended, and the former, who is over sixty years of age, and who has shot in Michigan for many years, took a nice long ride to jail because of his offense. Attorney General Maynard is taking charge of these cases. Johnson will fight the law on the ground that it is "unconstitutional." Of course it is. Yet another case of this kind is that of W. O. Jackson, of the same Indiana town. State Deputy Brewster is getting after a few of these folk, and establishing some very good precedents for other deputies in other States.

Chippewa county, Wis., appears to be about the center of the deer industry this fall, and I take it that its license record is the largest in Wisconsin this year. At last account there had been issued 1,534 licenses in Chippewa county. Eau Claire county issued 257, this not being a deer hunting county, but near to the better ranges. Barron county shows 600 licenses issued. It is thought that 250 or 300 of Eau Claire county product of hunters shot within Chippewa county limits, as well as 300 of the Barron county shooters; 300 more from Buffalo, Dunn, Jackson, Juneau and other counties south of Chippewa; about 200 non-residents who took out licenses at Madison, the State capital, as well as about 100 lawless and licenseless hunters, and who all did their hunting within Chippewa county, Wis. This would mean, according to the best obtainable advices, that about 2,600 men shot in that one county of Wisconsin. It is said to have meant a reign of terror. Some men who were obliged to go into the woods made a practice of wearing bright clothing—not always an effective device, as some hunters seem to think a deer is a bright crimson in color. Others took up the habit of vocal melody while passing through the forests, a well-shouted hymn being regarded better protection than a red shirt. In five years in Chippewa county there have been three men killed by careless shooting at the hands of others, six men seriously shot

and scores of others shot at, but missed by a greater or less margin. One farmer lost a black horse and a white heifer, both on the same day, both victims to the skill and judgment of "deer" hunters. Another farmer lost five head of cattle by the same causes. One man, who was out along a woods road with a red wagon and a team of large horses, was shot at by a party of hunters, and it is said that seventeen shots were fired at him before he could make it understood that he was not a deer. These shooters are reported to have been "Eastern men," but this I hope is a libel, though it makes no difference what State they hailed from. I adduce these facts as showing that deer hunting nowadays, under our liberal Western system, is a sport which has certain excitements.

In this same Chippewa county forty-five deer were marketed by butchers; sixty went out by one express company, seventeen went out at one depot, 196 at another depot (the Wisconsin Central), forty were taken home by local hunters, one express company shipped twenty each day for many days, 100 were shipped from one town (Cadotte) in one day, 300 were shipped by the Soo Railway from towns along its line, and several hundred others went out to the markets from Cadotte, Boyd and Stanley, all within this county. This is one county, and though perhaps the greatest of which we can get definite news on these points, it shows pretty well what a development there has been in deer hunting. The main wonder is that so many deer still exist.

Deputy Warden Henry, of Michigan lower peninsula, made a visit to the upper peninsula early in the season. He reported that there were 4,000 hunters in the upper peninsula alone. On one day before the season opened 1,400 hunters crossed the Straits of Mackinaw. Mr. Henry reports ten arrests for violations of the deer law. He thinks the average of success is one deer to five hunters. This may be true of the visiting hunters, but I do not think it at all covers the case of local shooters who kill for their own use, or of the many covert market-hunters who sneak out deer steadily to the big city markets. I should think that, taking these local and more skillful hunters into account, we may allow one deer at least, perhaps more, as the average of every hunter of whom we can get word as having gone out after deer. My earlier estimate of 25,000 deer for Michigan and Wisconsin, perhaps including Minnesota, I believe is not very far out of the way, all things considered. I have never before been able to get at this thing so closely as this fall, and some of the above facts have interest, since they begin to give an inkling of the magnitude of this Western deer traffic and deer travel. I do not have the figures of the Maine deer records at hand, for this season or last, and of course have no wish to make any comparison between our Western deer product and that of the big and good old State of Maine. Yet it seems likely that the history of our deer country and that of Maine will, year by year, take on the greater resemblance, and that our newer Western woods will be obliged to come to the check and tab system. I want to quit hunting then myself, and indeed I did quit deer hunting in this country a good while ago. It is too blamed civilized, and likewise too populous to suit a timid man.

And yet, speaking of accidents, the record obtainable for this section of the West for the present deer season is not so formidable as we might be entitled to suspect. I hear of less than a half-dozen shootings. At Ashland, Wis., Willie Moore shot himself. Not far from that place a farmer was out cutting evergreens, when he was seen and shot by a man who "saw something move." In another case two tenderfeet went out together to "shine" deer (an illegal method). They became separated. One saw a gleam of light, which he took to come from a deer's eye. It was from the lantern, and he killed his friend. These things sound absolutely incredible, but they go to prove what incredible idiots sometimes buy and use deadly weapons. One writer in a Wisconsin paper says that more men have been killed in that State by reckless deer hunters, since the shooters began to come in there, than have been killed by bullets in the Spanish war. I have heard used with contempt the expression "hunting with a brass band," this applied with scorn to the tenderfoot who broke twigs and made other noise in his hunting, but I am disposed to think that, on the whole, since neither hymns nor red shirts will always do, a brass band and a drum major would be about the best outfit a man could have along on a deer hunt in our north woods. But I shouldn't like to carry any risk on the drum major, if I were in the life insurance business.

White Deer.

I have heard of not less than three white deer being killed in Wisconsin alone this fall. One was taken into Ashland by F. C. Klady, H. Palmquist and Eric Scheideen, who shot it Nov. 19. Another was killed by Ole Catfish, a Flambeau Indian, on Nov. 10, on the Lac du Flambeau reservation. It weighed 254lbs. and had good antlers. It was bought by the Indian agent and sent to Chicago for mounting. A third albino deer was killed by A. Vine, son of the school superintendent on this same Flambeau reservation. It weighed 225lbs. and also had a good set of antlers. This specimen had a few small dark spots on the legs, but was otherwise white. In the case of Col. Catfish, the Indian, it would appear that he is forgetting a good many of the sacred traditions of his people, one of which says that the Indian who shoots a white deer is forever accursed and followed by ill fortune. Perhaps Col. Catfish is willing to take a few chances in that line for sake of the additional price that a white deer brings in valid coin of the realm. Superstition and commerce sometimes blend rather strangely. Thus I have heard that the common belief that opals are a most unlucky stone arose originally from the act of a hook-nosed citizen of Russia, who had a lot of other jewels to sell, whereas a fellow merchant was doing a good business in some newly imported opals. He industriously circulated the story that the new stones were unlucky, and adduced hook-nosed facts to prove it. Result, a posterity saddled with superstitious disbelief in the most beautiful stone there is on earth. I honor Col. Catfish, who saw the white deer and soaked him, even as, I am told, other men have betimes soaked opals, regardless of the superstition thereunto pertaining.

Half-rate Lion Hunt.

On Dec. 8, 9 and 10 there will be held, at De Beque, Colorado, a grand hunt of the round-up sort, which all are invited to attend, on condition that they bring their own blankets and have the price of 25 cents per meal. It is made a further condition that all participants in this hunt shall become members of the Western Slope Hunting Association, which costs only $3. It is the intention to make a regular thing of this hunt, and to bring to it as many hunters from as wide a scope of country as possible; in fact, the wider the scope the better, as I am persuaded to believe. The object of this hunt is to suppress, slay, exterminate and otherwise make uncomfortable all and several the mountain lions, bobcats, lynxes, wolves, coyotes and other cow-eating animals, which are alleged to be swallowing De Beque up, body and boots. Mr. M. R. Morse, of Parachute, has been elected captain, and has behind him fifty enthusiastic citizens, the county commissioners, and the passenger department of the Colorado Midland Railway. Mr. Bert Stroud, of De Beque, is secretary, and the citizens of that town have made arrangements for shooting matches, barbecues and other things appropriate to successful lion hunting and wolf extermination. Camera clubs are expected to attend to photograph the slain animals of prey. Everything will be done on a magnificent scale—provided that the lions, wolves, bobcats, etc., catch the true spirit of the occasion, and do their part, or any part of their part. It ought to pan out quite a good-sized affair, especially as I understand that the railway will advertise the hunt, and do everything possible to boom it. I presume that the people of De Beque know whether or not they are content with the present status of their lions, wolves, bobcats and other animals above enumerated, though it might seem that if they want to get rid of them, this is a very bad way to do so, as hath been many times proven in the history of similar enterprises. The word "enterprise" perhaps covers this project neatly. Passenger agents are proverbially enterprising, and the Colorado Midland is a hustling road. I trust I violate no confidence and disturb no one's equanimity by suggesting that while perhaps the lions, wolves, etc., above specified will perhaps not be exterminated, there will perhaps be no more than the usual damage done when large bodies of men go out to disturb the game of a region, but upon the contrary there will have been a certain benefit accruing to the eisenbahn, the carro ferril, and likewise the chemin de fer of the Colorado Midland. We are nowhere more American than in Colorado, yet I could wish there were held to be sufficient in the other boundless resources of that great State without calling upon the big game to make this truly American holiday.

Half-rate Rabbit Hunt.

The dates of Dec. 15 and 16 have been claimed for the annual jack rabbit hunt at Lamar, Colorado, and it is reported that the rabbits are as abundant as ever, in spite of the inroads of earlier years. Rev. Thos. Uzzell, of Denver, is credited with the inception of this jack rabbit round-up for the benefit of the poor, and though I have doubts about the priority of this claim, there is no doubt that he was first to put the idea into practical and extensive practice. This year the parson—"Parson Tom," he is called—intends to branch out a little. A New York fur house offers 7 cents apiece for the jack rabbit pelts, intending to make sealskins out of them, and Mr. Uzzell thinks there will be something in this for the poor. From a Chicago furrier I learn that the use of jack rabbit skins in the manufacture of "electric seal" (commonly made of coney fur) is a thing of some years' practice, though the hide of the jack rabbit is so tender as to be practically worthless. The big Lamar hunt, which is annually boomed to the good of the town and the railways, will no doubt this year, as for several years last past, net about 5,000 jack rabbits.

Dakota Licenses.

The county clerk at Steele, N. D., this fall issued shooting licenses to the total value of $1,035.25. If all the other counties in the duck belt did as well as that State Warden Bowers must have money enough to carry in a shawl strap.

Minnesota Justice.

In January, 1897, State Agent Fullerton seized over 1,000 illegal partridges shipped by a notorious alleged offender against the game law, E. W. Davis, a commission man of Detroit, Minn. Four indictments were brought and Davis was tried in June, 1897, being acquitted on the ground that the game was killed by Indians on their reservation. Then came the ruling of the Interior Department, as exclusively reported in the FOREST AND STREAM at the time, by which Indians were held amenable to the game laws the same as white men. Davis was tried under this new status of the law. The judge, Baxter, of Moorhead, fined Davis $10 and costs on three counts, and dismissed the rest, thus allowing him to go practically unwhipped of justice. This is a defeat to the Minnesota commission, and one which comes with a tinge of bitterness, as it seems neither law nor justice, Davis' record entitled him to a severer handling.

The Law.

"Game killed on an Indian reservation by a tribal Indian and transported by wagon to the nearest railway station off the reservation, and there delivered to a carrier to be shipped out of the State, is held, in Selkirk vs. Stevens (Minn.), 40 L. R. A. 759, to be subject to the game laws of the State."

"Live Quail."

Mr. H. G. McCartney, of this city, told me a curious thing the other day. He said that his groceryman, who lives and trades somewhere in the vicinity of Thirty-first street and Cottage Grove avenue, came to his door not long ago and offered to sell him some quail. "These are not any cold storage quail," said the honest grocer, "but real, live quail. I have just got a lot from South Water street, and if you don't believe it I'll bring them right here to your door and kill them, so that you can see for yourself that they are all I claimed." Mr. McCartney verified this man's assertion. He was really, in the year of grace 1898, in the city of Chicago, and in full sight of our game law, keeping live quail for sale, to be butchered on demand. He said he could get them right along.

Tacoma Duck Record.

Messrs. H. T. Denham and E. A. Kimball, of Tacoma, Wash., last week brought into town 113 ducks, the result of one day's shooting. This is said to beat the earlier record of W. A. Eberly and W. R. Dodge, who killed 104 in one day. Mr. Eberly and another man once killed 134 in one day. These are top notches for the duck men of that city, it seems.

Grouse.

Mr. C. A. Duke writes me from Duke Center, Pa., that he has this season killed in all sixty-six ruffed grouse. Certainly a very good run, even in a country where, as he says, the birds are quite abundant.

Thanksgiving.

Deputy Willis, of Bay City, Mich., early this week seized 1,600lbs. of under-sized fish at the markets, and caused them to be distributed among the poor.

Personal.

Mr. Chas. Lungren, the noted painter of Western subjects, paid the FOREST AND STREAM office a little visit to-day, and spoke as usual with enthusiasm of the sweet and sleepy Southwest.

Oscar Guessaz, once of San Antonio, Texas, and well known to all American sportsmen, is now at Savannah, Ga., still with the army, and so much with it, as he writes me to-day, that he can't get away from it. He is on the staff of not one but two generals, Wheaton and Lee, and neither will accept his resignation. He has been regimental adjutant, commissary quartermaster, ordnance officer, and division inspector of rifle practice, all at the same time, and has also been doing the work of lieutenant-colonel. This is a good deal like Guessaz, and I am satisfied there is enough of him to go round. It is no wonder he can't get resigned.

Mr. Louis Duryea, of New York city, called at this office to-day, and speaks very pleasantly of Dick Cox, the former beloved Chicago shooter, who went out to Seattle to grow up with the country, and who has grown. Mr. Duryea spent some time on the Sound, and reports that country flourishing and full of fine sportsmen.

Hon. Nat. H. Cohen, the much-alive president of our State fish commission, is among those who have recently reposed their feet on the FOREST AND STREAM furniture here. Mr. Cohen has caused several bass to grow where but one grew before, and sportsmen may remember this to his honor.

Mr. Jos. A. Baker, of Benton, Mont., seems to be on about the right lines to have a good time while he is alive. He lives in one of the best sporting countries on earth, and has made several trips down the Missouri, which he describes to be one of the best voyages one ever made, and full of interest. To-day he came in to get advice about Texas coast country, and I have sent him and his friend, Mr. F. S. Eaton, of Boston, down to Aransas Pass, Texas, where they will remain probably until next May, just thinking and shooting and eating. They will see Johnny and Jimmy Bludworth and all the rest of the Rockport friends known to the FOREST AND STREAM, and I hope will have a very pleasant time. They intend to charter a boat and cruise by themselves, as they are both good sailormen.

Speaking of sailors, it was this week that Nat. Cook, of Chicago, and Fred Dickens, of Milwaukee, both prominent members of the Western Canoe Association, dropped in to pass the time of day. They were about to attend a meeting at the Great Northern Hotel, with a view to rehabilitating the old W. C. A., whose winter meeting will be held at Milwaukee in January. It is many a tale of wild adventure by stream and lake that these two spirits can tell.

Mr. J. M. Morley, of Saginaw, Mich. (who is "Brooks" of the "Saginaw Crowd" hunting party), called this week as it happened right while I was over in his State, so we passed each other. Mr. Morley leaves word that he will see me some day and convince me of the overdrawn character of some of the hunting stories told by his friend, the ex-Mayor of Saginaw, in regard to the performances of "Brooks." It was on the cards that we three were to meet this week at the city of salt and shavings, but it fell out otherwise. Mr. Mershon himself, the said ex-mayor, was in Chicago yesterday, and left for home late last night.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

Connecticut Game Interests.

BRIDGEPORT, Conn., Nov. 24.—*Editor Forest and Stream:* All true sportsmen and those interested in the preservation of our fast-disappearing game birds in Connecticut will be pleased to learn that the subject will be taken up at Hartford during the coming session of our Legislature, when a strong effort will be made to pass such laws as will prohibit the sale of game in the State, also the export. Old Connecticut, with its ideal territory for the propagation of the partridge, the quail and the woodcock, with its acres of delightful covers, is fast and surely being depleted of its game birds by the incessant market-hunter, who from sunrise till dark pursues to kill, and incidentally to sell. In many cases whole coveys of partridges are easily bagged by the practiced killers before the open season, and when the opening day arrives the law-abiding sportsman finds but very few scattered birds as a rule. Add to this class the imported pot-hunter, with his single-barrel gun, who pots the robins and all other protected birds that come his way, and one can see plainly the "handwriting on the wall." The whir of the partridge and quail, and the whistle of the woodcock will soon be music of the past, unless our lawmakers act wisely and quick.

ORONOQUE.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

The Ring-necked Pheasant in New Jersey.

THE report of the New Jersey Fish and Game Commission for this year contains an exhaustive and highly interesting review of the work undertaken to stock the State with the ring-necked pheasant. We quote the following paragraphs:

In many of the States of the Union the ring-necked pheasant has been introduced with success, although in nearly every case its introduction was due primarily at least to private enterprise. There is perhaps no State better adapted to this bird than New Jersey, especially the southern part, where the sparsely settled yet cultivated country seems to offer them a home where they may propagate their species without assistance from human kind. For it must be remembered that in most places where the ring-necked pheasant has been introduced it was propagated by the eggs being placed under the common hen, the parent bird declining to sit long enough to hatch out the young or to take care of them after they had left the shell. Experiments tried in this country show that the female bird makes a better mother in this country than it does in England, and many instances are recorded of the bird rearing its own young. Scientists attribute this to the more prolific insect life in this country; they argue that in Europe, and in England especially, insects are less numerous than they are here, and that consequently there the pheasant has enough to do to provide for its own subsistence without troubling itself with a numerous progeny. Be the facts what they may, it is well established that the ring-necked pheasants in this country take care of their own young.

All these facts having been taken into consideration your commission concluded to try the experiment of introducing the ring-necked pheasant into New Jersey. For this purpose a number of birds were sent out two years ago, care being taken to provide homes for them where there was a probability of their being looked after for some time. Everywhere they were received with pleasure, especially so in farming communities. The inhabitants had observed with regret the diminution in the numbers of the indigenous ruffed grouse and they welcomed the beautiful stranger. No argument could be adduced against the bird, for it destroys no growing crops, pilfers little of the fallen grain and far more than compensates for the loss of the grain by the destruction of insects. The result of the experiment was closely watched, and it was so encouraging that your commission was induced to continue its efforts toward the better introduction of the bird. Last year the number put out was increased over that of the preceding year, and although failures are reported in a few instances, a perusal of the subjoined letters will probably bring the careful reader to the conclusion arrived at by your commission, that the bird may be introduced into New Jersey, and that with a close season for a few years, and proper care, it will soon become more numerous here than the ruffed grouse. Your commission has no desire whatever to persist in the experiment of introducing the bird unless there is at least a probable chance of its ultimate success, and in order that yourselves and the public generally may know just what degree of success or failure has attended the experiment, letters were written to those who had received birds, inquiring as to what had been the outcome. All the answers to these letters are herewith reproduced, both for information as to the experiment itself and for the purpose of guiding such persons as may in the future feel inclined to assist in the introduction of the bird.

Ring-necked pheasants have been distributed to counties as follows: Atlantic county 6, Bergen county 37, Burlington county 63, Camden county 6, Cape May county 12, Cumberland county 98, Essex county 0, Gloucester county 24, Hudson county 0, Hunterdon county 12, Mercer county 18, Middlesex county 18, Monmouth county 24, Morris county 42, Ocean county 24, Passaic county 18, Salem county 54, Somerset county 0, Sussex county 6, Union county 6, Warren county 6; total 474.

From Fish and Game Warden George W. Phifer, Manumuskin, Aug. 24, 1898: They have done grandly in our county. I know myself of several flocks of them, and I also know of a nest of twenty-nine eggs hatched last week. Colonel Willets told me he had two nests in his meadow this spring, and there are numbers of them down along the Maurice River. It seems that they all do well, as none of them are found dead. I have heard from several other counties with similar reports. They seem to have wintered very well.

From Mr. William W. Woodward, Newton, Aug. 24, 1898: I have been able to find three broods of young ones. These birds are all where they will have plenty of protection. We have more birds in our county to-day than I have seen for years, and if the commission can keep up its work of stocking I can see no reason why we cannot have better shooting than ever before.

From Fish and Game Warden Harry R. Dare, Bridgeton, Aug. 24, 1898: The ring-necked pheasants thrive and do excellently here, and make good sport. I have located broods of ring-necked pheasants this season both in this and Salem county.

From Mr. John P. Hutchinson, Bordentown, Aug. 24, 1898: Four pair of pheasants were released on and near my farm at Georgetown, where I resided last year. Two cocks I believe to be alive; the others were destroyed. Two hens are reported alive without any young. One nest has been reported; the eggs failing to hatch.

From George W. Dunham, fish and game warden, Flemington, Aug. 25, 1898: In April, 1897, you sent me twelve pheasants—three cocks and nine hens. They were turned out in different localities, between Flemington and the Delaware River, a distance of about ten miles. Wherever they were placed the farmers promised to protect them and prohibit gunning that year. This was done, and so far as I can learn but four birds were shot. Three of the hens, however, were killed by mowing machines, leaving but six to hatch. Last December, after careful investigation, I found that there were at least sixty birds in the vicinity where they were released.

I have visited these farms recently and find the result most satisfactory, the farmers having taken pride in protecting the birds and feeding them during the winter. Many of them fed with their fowls all winter. Several have been killed by mowing machines this summer, as they nest in the tall grass near the underbrush, and cannot be seen. I attach hereto the names of some of the farmers upon whose lands they have hatched, and do not hesitate to say there are at least 300 birds in the immediate vicinity where they were first released.

There is exceptionally fine cover for them in that locality. This, together with the protection afforded them, accounts for the increase. A few of the young birds scattered, but I do not learn of any nesting far away, and the old ones are still on the ground where they were turned out. Other broods are reported, but I am unable at this writing to say positively that the information is true; these farms are situated in three adjoining townships. The old pheasants on them number at least 100, and quail are abundant throughout that section. The report is made upon personal examination, and the numbers are not exaggerated.

From Assemblyman E. C. Hutchinson, Trenton, Aug. 26, 1898: I do not think that under the present game law there is much use in putting out ring-necked pheasants. We had quite a large number hatched, but I do not believe that there is one living to-day, all having been killed off. If we could protect them for two or three years I feel confident that we could get quite a stock of birds around here. The farmers would protect them if the law gave them an opportunity.

From Gus Hilton, fish and game warden, Anglesea, Aug. 26, 1898: The ring-necked pheasants you sent me were all put out, and all lived and are doing well. They laid and hatched out their young. There were plenty of nests to be seen in the places where I put these birds out, and now there are plenty of young birds. I think the birds all right. They seem to be very healthy and strong, and no doubt can stand a hard winter.

From Mr. George Van Buskirk, secretary of the Farmers' Game Protective Association of Bergen county, Hackensack, Aug. 26, 1898: I cannot report as good success with the pheasants as I did in regard to the quail. I have requested all the farmers to look after them and report to me if they had seen any young broods. They have reported from time to time having seen the old birds, but no young ones, with the exception of one report I have just received from Paramus, where they have seen one brood of twelve young birds. These were all doing well. There is no doubt that others have hatched out some, but we have not seen them.

From Mr. Joseph B. Righter, secretary of the Denville Game Protective Association, Denville, Aug. 26, 1898: After a varied experience in trying to raise the young ring-necked pheasants under setting hens, and not having succeeded to any appreciable extent, we turned them all loose, and since that time they have done finely, most of them remaining in the neighborhood of their former captivity.

From Senator Robert B. Engle, Beach Haven, Aug. 27, 1898: For the birds sent me last year I cannot give a very good report. I heard of only two nests of them, which were both destroyed by reaping machines, as they seem to prefer the fields to nest in. I have not heard from them this year. From the twelve sent me this year I hope to report more favorably. I have heard of two broods that were successfully hatched.

From Mr. M. L. Hoagland, secretary of the White Meadow Club, Rockaway, Aug. 27, 1898: In addition to the three cocks and six hens received from you, we purchased six hens, making twelve hens and three cocks in all; these were put in coops separately, with one cock and four hens to a coop; they began laying on April 16, and averaged nine eggs per day till they had laid in all 308 eggs up to about the latter part of July, and then they stopped. The eggs we hatched under hens and found that Bantam hens are far superior to any other kind; in fact nearly all we lost were with large hens, so there is no question but that Bantam hens are the best to mother the chicks. We also found the first eggs were by far the best, producing stronger chicks and a larger percentage than those laid later in the summer. Out of the 300 and odd eggs received we hatched about 230 chicks; these we kept in runs made of 1in. mesh wire, 4ft. wide and 8ft. long, with a tight coop in one end for the mother hen. All the birds we hatched out at first died from different causes, but I think the most fatal of all was the lice, which seem sure death to little pheasants; it was not till we had lost by far the greater number of those hatched that we found out how to care for them, so we could raise them with any degree of success, and by that time our old hens had stopped laying. Of the 230 chicks hatched out we have only succeeded in raising to maturity thirty-six, which we have recently liberated. This seems a very poor return for all our trouble and expense, but I am certain that next year we can raise seventy-five per cent. of those hatched; when we began last spring no one knew anything about raising them, and we went by such instructions as we could gather, with the result that we lost nearly all our birds, and it was not till we began to follow the dictates of common sense that we succeeded in raising any. I would advise any one trying to raise pheasants to burn up all printed matter he may have on the subject and go at it to reproduce, as near as possible, the natural conditions as the birds would find them in the woods, giving them all kinds of insects and plenty of fresh water. There is no reason why they cannot be raised if they are properly cared for; the last hen we had came off hatched eleven birds from thirteen eggs, and we raised nine of the birds, and let them go, so you see if we had been able to do anything like that at first we would have had a fine lot, but experience is absolutely necessary, and when we began we had none; however, we propose to keep our old birds over till next year, and fully expect to raise a good lot of birds. I hope that those who, like us, have tried to raise them and failed, because of inexperience, will not get discouraged and quit, but will keep at it till our State is well stocked with them. We hope for some good results from the thirty-six young birds we turned out this summer, as if they breed at all and we raise some more next year we will soon get the country stocked with them.

From Assemblyman David O. Watkins, Woodbury, Aug. 27, 1898: The pheasants have become extinct, and nothing is seen of any of them; a number were killed the season after they were put out.

From Fish and Game Warden James Huston, Jr., Trenton, Aug. 29, 1898: Of the six pair of ring-necked pheasants which were sent here to Mercer county three pair I can give a definite account of. The other three pair were taken down the country into the pines by Assemblyman E. C. Hutchinson, and of these I have not been able to secure any information. Of the three pair turned out within eight miles of Trenton I can give an account. One pair hatched out nine young and another pair hatched out three; they were all healthy and strong. The third pair was unfortunate, their eggs being destroyed by a field mower unintentionally. They seem to be a very tame bird, which makes them an easy mark for the gunner, but I do not believe that they were all destroyed, for I was informed by a farmer that two of them were seen last Friday a week ago about four miles from Trenton.

From Fish and Game Warden B. W. Brown, Roselle, Aug. 29, 1898: I have not heard much about the ring-necked pheasants excepting in this county, where I know there is a flock of eighteen from the six which were put out here. I feel confident that they will do well here if they are given a chance.

From Assemblyman Joseph B. Crispen, Salem, Aug. 29, 1898: The ring-necked pheasants put out this year have done exceedingly well. The three I let out on my farm have eighteen young birds with them.

From Colonel J. Howard Willets, Fort Elizabeth, Aug. 29, 1898: The pheasants sent last year did splendidly, and if they had not been killed by law in the fall we should have had hundreds of them for breeding this spring. The last consignment this spring also did well. I placed two hens and a cock from last year's birds in a pen; one hen laid twenty-seven eggs and the other thirty-two, but neither hen would set. I took the eggs and placed them under a bantam chicken, and they hatched out two broods. These lived and did well, and this spring I turned them loose, so we had them to begin with. This spring's consignment of one dozen I turned out at once. I located four nests, and they all hatched out well, one of thirty-one, one of twenty-six and one of twenty-two. The last nest had only nine eggs; as they were very late I judged that something destroyed the first nest, and that the hen laid only nine on second laying. A farmer mowed over her nest, and as they were all "pipped" and the workmen kept the hen from returning to the nest, he notified me, and at noon I went over and got the eggs, placed them under a hen, and the next morning they were all hatched. I took them back, found the old bird (with my dog) and I let the young go. Their "peep" soon brought the mother, and she has the whole nine, save one, now. I saw them yesterday; they are the size of quail. A farmer told me last week that he had found a nest of thirty-one eggs a few weeks ago, and watched them until they hatched every egg. The only reason I can see that will prevent the plan of introducing them here is that they will go to the open fields of grass and especially meadows to breed, and as the law permits shooting and they in the open they will all be killed as fast as they breed, and before they become numerous enough to be compelled to take to the woods. The three farms upon which we have seven broods that we know of we shall be compelled to "post" this year, and keep everybody off in order to save the birds. Our local sportsmen we can control, and they will not kill them, but the reed and rail bird shooting here brings so many strangers that they follow it up when the quail season comes in, and we can protect the pheasants in no other way. The "out" birds in the woods will no doubt, many of them, be killed. I know of at least a dozen broods in the woods within two or three miles, which shows that they will soon spread over a large area of territory, and I think enough of them will escape this fall to insure the success of their introduction. They breed such large broods, take good care of their young, stand the winters well and will no doubt multiply. If we had only had last year and this year, while they were gaining a foothold, a close season, we would have made a complete success of their introduction, and would probably after that never had need of anything.

From Senator Robert C. Miller, Alloway, Aug. 30, 1898: I hear most favorable reports from the ring-necked pheasants. They passed the winter very nicely and have been noticed during the summer by several who say they have increased in number. I believe the result will prove very satisfactory.

From Mr. W. E. Cox, Cream Ridge, Aug. 31, 1898: In regards to the ring-necked pheasants we went according to instructions, and built two pens, 20 by 10, with house at one end. They did finely, laying nearly 100 eggs, of which about fifty hatched out. Unfortunately we could not raise the young; we tried all kinds of feed, but it was of no use. The old birds are doing finely; we shall try again, and if we do not succeed turn the birds out.

From Assemblyman Charles Wright, Columbus, Sept. 1, 1898: Of the six ring-necked pheasants received last spring I can report that one hen died the day of arrival. One cock and one hen we cannot account for at present. The other cock is about, and the two hens each have broods, one of eleven and one of thirteen; so we think they have done very well, and appreciate receiving them.

From Mr. James G. West, Vincentown, Sept. 1, 1898: The birds are doing well. They have been seen several times lately, and one has twelve or fifteen young ones.

From Fish and Game Warden Newell, Salem, Sept. 1, 1898: I regret to say that most of the ring-necked pheasants were shot off last year before the law came in. Lawless characters shot them because they wanted them for mounting and mantelpiece ornaments. They covered up their violations of the law under the pretense of woodcock shooting. Subsequently the people here did all they could to protect the birds, and I think they will now have a chance to multiply.

From Mr. H. S. Kinmonth, Asbury Park, Sept. 2, 1898: I have seen some of the old ones several times, but cannot say whether they have raised any young or not.

From Mr. T. C. Shreve, Pemberton, Sept. 2, 1898: Two of the three pheasants have raised broods of young; I have lost trace of the other female. You would be surprised at the enthusiasm manifested by those who are not sportsmen over the liberation of these birds.

From Mr. W. E. Young, Chester, Sept. 5, 1898: The ring-necked pheasants sent me last spring I turned out the first of April, and from what I can learn three of the hens have hatched and possibly the fourth. The broods were of about a dozen each. One brood had the misfortune to be run into by a mowing machine and about half of the young ones were killed. The mother bird, however, escaped with the balance of the brood. With that exception they are doing well. The people—both sportsmen and others—are taking a great interest in the work of the Fish and Game Commission in trying to introduce these beautiful birds, and almost daily some one tells me of having seen some of the birds. All agree that it was unfortunate that the Legislature by an act did not protect the birds for at least three years. Nevertheless the sportsmen have agreed not to kill any this fall, trusting that the next Legislature will afford the desired protection. Owing to the extreme heat, I have not looked around personally lately, but I am satisfied with what others tell me that the birds have done very well. If the birds do not leave their present location we intend to build booths of brush, etc., and feed them regularly through the winter. I fed the birds last spring after I had turned them out, and I find by so doing they will not scatter much. They all remained within a circle of one mile.

From Assemblyman John J. Quaid, Sayreville, Sept. 5, 1898: The ring-necked pheasants have done very well, but not as well in proportion as the quail.

From Mr. William J. Husted, Mays Landing, Sept. 6, 1898: The pheasants sent to me are doing nicely. The country down here is just to their liking. I have planted twenty-five acres of grain for the use of the quail and pheasants. I often see the old birds and their young out feeding in the afternoon. I am very proud of the birds, and will protect and do the best I can for them.

From Mr. M. Warner Hargrove, Browns Mills, Sept. 9, 1898: I have delayed an answer to your letter inquiring my experience with the ring-necked pheasants sent me in April, 1897, that I might give the matter more attention toward a satisfactory and truthful reply. At this date I am not able to report that the birds have been a success. I believe every hen or nearly so hatched out young, which appeared to thrive well during the summer and fall of 1897. During the gunning season I made strenuous efforts to protect them, and with such success that I learned of only three birds being killed. A number were seen during the winter and early spring which had wintered over, but I have not heard of any being seen around for some time, while I hear of a number being seen further out in the country. Browns Mills is directly on the edge of the mammoth pine district of southern New Jersey, and from this I am led to believe that the ring-necked pheasants are not suited to forests, but that they will thrive better and spread in semi-open and farmed land. The effort on the part of the commissioners to introduce such a game bird is commendable. I might add that a gentleman who killed and ate one tells me the flesh was excellent eating.

From Mr. Julius Munch, Preakness, Sept. 15, 1898: The half-dozen ring-necked pheasants sent me gave me a desire to attempt the raising of these birds on a more extensive scale, and I accordingly secured two dozen more, and I am glad to say that I am more than gratified with the result. I was wholly inexperienced, and to this I attribute the loss of many young birds. I first attempted to induce the hen pheasant to sit, but did not succeed. I watched the bird very closely and thought she showed a determination to sit, as she was most of the time crouched on the ground in a nest she had made in the sand. I permitted her to keep her own eggs, and added others to it, but the bird never sat more than five or ten minutes at a time, when she would get up and run away for several minutes, after which she returned to her eggs. I saw that she would not hatch, and so I took all but two of the eggs away from her, and she spoiled these two.

I found that I had the best success with game and bantam hens, the only objection to the latter being that they cannot cover more than eight eggs. I hatched out nearly every egg in this way.

At first I started near my house in small boxes, with a little runway for the chicks, keeping the hen shut up in the box. Rainstorms killed from thirty to fifty chicks a day, and so I abandoned this method and placed the hens and chicks in the woods, where I gave the little ones more runway. I think this obviated the difficulty, for after that I did not lose more than one or two chicks a day, and some days none at all. It is my opinion that most of the losses were due to the fact that the chicks did not have enough exercise to keep the body heat while I had them near the house.

I think the birds have locality very well developed, and do not believe that they will wander far from any place where there is food and shelter. Even the chicks showed this to a remarkable extent, and it was amusing to watch them at feeding time. At one time I had as many as two dozen broods in the woods, each brood with its own enclosure and feeding box. The chicks wandered at will in the woods, but when feeding time came they each repaired to its own box and never have I seen a chick from one brood eat out of a box placed for another brood. It was very amusing to see them scurrying about looking for their own particular feed box and paying no attention to the boxes used by the others. I had the woods fenced in with wire netting, but occasionally some little fellow developed sufficient strength of wing to get over the fence without having sagacity sufficient to find its way back. When we opened the fence sufficiently to permit it to come back, it made a direct line for its own feeding box, passing others by on the way.

Of course a number escaped, and others I liberated purposely. I should suppose that over 100 thus got away from my enclosures, and these are in the woods or fields adjoining, excepting, of course, such as were destroyed by hawks. I have over 200 of the birds, either old or half-grown, now in my enclosures.

The Vermont Deer Protected.

Editor Forest and Stream:

The Vermont Legislature, although it did a bad thing in cutting down the amount of the fish commission appropriation, passed two measures of great value to the cause of game protection. One was a measure to prohibit the sale at any time of the ruffed grouse, commonly called partridge. The other prohibits the killing of deer and their kind for the next four years. The deer law comes just in time, as this year many more deer were killed than last, and the measure will at least preserve the survivors for purposes of propagation. It seems very strange that a Legislature that had in years past so carefully fostered the few deer we had in Vermont should allow an open season as was voted four years since. That enabled hunters to kill the semi-domesticated animals, and to place the numbers of deer back to where they were a quarter of a century ago, when the deer protection legislation was first inaugurated, but as the sagacity of Green Mountain Solons has become proverbial, especially in game law matters, the fact is not to be wondered at. KENEWAH.

Diagnosed the Dog's Trouble Wrongly.

CAMDEN, N. J., Nov. 19.—*Editor Forest and Stream:* The abundance of quail seemingly everywhere is gratifying to any lover of this sport. Yesterday with all the unfavorable conditions I was tempted to take my gun and dog through the misty rain and drove to Haddan Heights, only six miles from here, thinking it would be amusement to me, if only to give my dog a run. In making my way to the woods where they naturally abound for shelter in wet weather, I was compelled to hurry to relieve my dog of being fastened in what I thought a barbed wire fence. He looked to me as if he were in great agony. I had not quite reached him, when to my surprise a covey of a dozen or more birds arose, and he quickly fell, seemingly exhausted. You can imagine the rest. G. E. RIEDEMEYER.

South-Bound Geese.

ESSEX, N. Y., Nov. 23.—*Editor Forest and Stream:* A great flight of wild geese, estimated to number 4,000, passed over this place to-day going south. They were flying low, and the noise made by their wings was sufficient to attract people living near the line of flight to doors and windows, and even in some instances to scare horses into running away.

The symmetrical, harrow-shaped formation was preserved, though the flock was separated into some twenty divisions. This is the largest flight of geese seen in this neighborhood for years. B.

The Kentucky "Swamp Hen."

SOMERSET, Ky., Nov. 23.—A pot-hunter came in today with a dozen quail and one woodcock. On a purchaser buying the quail, he said, "I will throw in the swamp hen," so you can see in what high regard this fine bird is held by our country people. J. M. R.

PRIZES FOR AMATEUR PHOTOGRAPHS.

THE FOREST AND STREAM offers prizes for meritorious work with the camera, under conditions which follow:

The prizes will be divided into three series: (1) for live wild game; (2) for game in parks; (3) for other subjects relating to shooting and fishing.

(1) For live game photographs three prizes are offered, the first of $50, the second of $25, and the third of $10.

(2) For live game in parks, for the best picture, a prize of $10.

(3) For the best pictures relating to FOREST AND STREAM'S field—shooting and fishing, the camp, campers and camp life, sportsman travel by land and water, incidents of field and stream—a first prize of $20, a second of $15, a third of $10, and for fourth place two prizes of $5 each.

There is no restriction as to the time nor as to where the pictures have been made or may be made.

Pictures will be received up to Dec. 31 this year.

All work must be original; that is to say, it must not have been submitted to any other competition or have been published.

There are no restrictions as to the make or style of camera, nor as to size of plate.

A competitor need not be a subscriber to the FOREST AND STREAM.

All work must be that of amateurs.

The photographs will be submitted to a committee, who, in making their award, will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities and other things being equal, the unique and difficult nature of the subject.

Photographs should be marked for identification with initials or a pseudonym only, and with each photograph should be given, answering to the initials, the name of sender, title of view, locality, date and names of camera, and plate or film.

Marked Zero.—Teacher: "What does the word marsupial mean?" Tommy: "Carrying a pouch." Teacher: "Give an example of a marsupial." Tommy: "A tobacco smoker."—Chicago Tribune.

Sea and River Fishing.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

A Summer at Clearwater.

CLEARWATER, Fla., twenty-five miles north of Tampa Bay, though set down as inland on some of the maps, lies on a sheet of water that is separated from the Gulf only by small islands and narrow sand keys. My visit there was from May to October, a season when many kinds of fish were away in deeper water, but my experience even at that time may be of use to readers of your paper who come South in winter.

We arrived at the above town about midday, after making a trip that lay through pine barrens nearly all the way from St. Petersburg, and saw both the "harbor" and the Gulf of Mexico for the first time through an opening beneath live oaks at the end of the street leading from the station. The view was a pleasing one. The outer limits of the "harbor," or bay, were marked several miles from shore by palmetto islands and two narrow sand keys, the latter separated nearly off the street by a "pass." The water thus enclosed was composed largely of grassy shoals, submerged at the time by a half-tide that colored the surface with as many tints as there are in a shell. Innumerable channels like blue ribbon dropped at random wound through the flats. Far out the Gulf lay, a dark contrast between the white surf at the keys and the distant horizon. To us the sparkling scene beyond the shady street was a glimpse of a strange world.

Our first afternoon was spent on a pavilion at the end of a pier that extended 600ft. out from shore. The air was delightful after sandhill blasts of the interior. We reveled in the extent of our new horizon, after six months inland, where pine trees cut the vision to short range. The bay was a lively scene. The change indeed was in every way agreeable to us.

Schools of fish leaped as if they entered into our exhilaration. Porpoises that rolled by with heart-racking heaves had evidently labored a great distance. Pelicans, cormorants, and other strange birds, on stakes and flying about, croaked incessantly, pleased with their serenade. Sailboats, large and small, surely in numbers unusual, nested in foam, tacked about in hopeless confusion till eyes ached with watching. Soon the sun dropped from sight, with no preliminary change except a slight reddening of its face, with no afterglow, but as if a fire ball that extinguished in the Gulf. Stars appeared instantly overhead, and brighter ones back of town where night shot up. The bay glowed with phosphorescence where disturbed. The posts under the pier were circled with light. Leaping mullet made streaks and flashes. Every school of minnows was a milky way. Large fish shone according to size. It was all much as if we stood on our heads, and saw past our feet a sky luminous with shining fish. I retired that night haunted with what I had seen, to dream afterward of things besides ordinary sport.

The next morning I went down town to buy tackle and learn about the fishing. Storekeepers are not always the most reliable informants when what they say affects the sale of goods, but often they drop useful remarks.

"Yes, sir, I have plenty of tackle, the best in town too, and the cheapest. There is fine fishing about here; nothing like it any other place in Florida. Only the other day a boy caught a 300lb. jewfish off the public dock. I sold the line. And as for trout—I am tired of them. The old man that takes care of your pier does more fishing, and catches more too, than any other person in town. He buys his stuff from me. Won't have anything but Limerick hooks, because they are Irish too. See him?"

Dennis, the old caretaker, was willing to tell me more than he knew about the fishing. I remember distinctly part of his instructions: "Cut up some mate as fine as ivver you kin," he said, "thin ketched a minny and bait wid the same, and if the fish is feeding it won't be tin minutes maybe before the biggest trout thot ivver you seen grobs the minny, and if the fish ain't biting you might be sitting wid your line up a tree for all of thim whicht you will ivver ketched. Fish from the south ind of the pavilion."

And I tried right where he told me a week for trout and did not get even a nibble.

It became my turn to coach when another victim settled next door, by showing him how scarce the fish were about the piers. I even went out in his boat with him a number of times without changing the luck. We knew every house along shore after awhile, and every craft on the bay, but caught few fish. Scorching sun blistered patterns on our faces and about our shirt collars. At times we were driven to shelter. While cooling off under a pier on one occasion, we discovered good sheepshead fishing among the piles. These fish are worthy of notice, for they know how to utilize their surroundings, and a 5-pounder can make half an hour of saving tackle from piles and sharp barnacles very interesting. As they seemed to be nearly the only fish around the piers, we spent much of our time during the very hot weather in catching them. And we enjoyed it. The landing of a troublesome large one meant a smoke, and sometimes a song, for John could sing, and at such moments of exhilaration gave his favorite, "You shan't play in my back yard," to an accompaniment of bumping boat and flopping fish; music indeed, I thought, only equaled by running hounds.

The sheepshead were caught with sand-fiddlers. When we walked along shore these small one-clawed crabs formed wheat-colored waves that swung to and fro between holes above the highest tide and water to points far ahead, till our near approach caused them to hunt their dens. When we stopped, however, the ones that had vanished down holes near by appeared again and signaled with large claws to friends up the line. To do this, they scuttled to one side and waved, then to the other side and waved, rising to the tip of their hindlegs at each swing of a claw, till the same performance was going on as far up the beach as crabs were visible. They were like cadets at flag practice, or engineers at work,

It seemed almost homicide to take these intelligent wig-waggers for bait. They were courageous too, and fought viciously with claws when a part of the wave was cornered against the sea wall. It makes me tremble even now to think what might have happened if they had been as large as horses. But they were not.

There was sport in sitting under piers, perhaps for hours, with a can of fiddlers, dropping hooks with mechanical toss near piles, and striking an occasional fish that aroused one from lethargy. If minnows bit we tried not to lose our tempers; if large fish, we tried not to lose our heads. When we found a good place, we chained the boat there with an extra hitch. A number of large sheepshead flopping about the boat, their plump bodies clothed in convict colors, perhaps for the hooks they had stolen, made a handsome display. Their meat, too, when cooked, was white and delicious. But this was only a fortunate fact, as we were there for the sport, and often wished that more of them were needed for a meal.

White drum were almost the only other variety of large fish we saw around the piers. Great schools of them, generally on afternoons, often swam by, feeding with heads down and tails whirling the surface, a sight to behold. Some of them must have weighed over 40lbs. We tried often to catch these from the pavilion overhead, and lost hooks and line for our trouble. They were shy about biting. The best way to get a bite was to throw in a handful of fiddlers with our cast. Even then they frequently ejected bait after taking it. If one was hooked the reel screeched, became silent, screeched again, confusing eye and ear with its action, till finally a plunge against slack broke the line. The large ones were not for us; they were for boys with spears out in boats, which caught a number of 30-pounders. The drum owe me for hundreds of feet of line, to which they are welcome. I hope the acquaintance whose outfit I used feels the same way about the matter.

We began after awhile to look on these large fish with superstition. The ease with which they broke our lines was uncanny. Women say that they are not afraid of mice, but of the idea, whatever that means. John and I were victims of an idea. John nearly overcame this weakness about drum before leaving. A larger fish frightened him. He was alone, trying for sheepshead under a pier, when a tarpon, by his first account a 6-footer, by later ones much larger, dove at a pile near, and whirling the surface of the water with its tail, munched the barnacles on bottom. My chum spoke scarcely above a whisper in describing the way the line was then reeled in. While in a chained boat among piles he did not care to hook a large tarpon.

We went out on the flats at low tide to catch stone crabs when we tired of fish diet. These hard shells, with rending claws, live down holes from which they are hooked with long pokers. After being robbed of their claws they are usually released to grow new ones, a fact we were ignorant of at the time. But we learned how to catch them. We raked each hole carefully at first. Then we found if one of us probed with a rapid piston-like motion, and the other swept the entrance of the hole with his poker, going at innumerable strokes to the instant, we shot a crab some yards across mud and grass to a spot suitable for capture. Our half-bushel baskets were quickly filled, and were then fields of carnage, such as one rarely sees, in which cast-iron shells shattered as if dried leaves, and amputated claws flew in every direction. The crabs, spuming foam from their mouths, insane in their unrighteous rage, were devils incarnate. And some hunters search the holes with hands!

I went out to Little Pass when the weather moderated in August. The point of the key south of the pass deflects the current rushing through and causes a still, deep pool, in which large fish of various kinds feed on small fry thrown there by the running tide. Groupers, pompano, blackbill, trout, sheepshead and many other varieties are caught from this eddy. I took from it several rovalion or large salt-water pike and skip jacks, that were in the air half the time while I played them. Sand-diggers, a variety of minnows marked with rings, made the best bait. They were easy to catch, either with meat on a fine hook, or with a seine, in the shoals about the pass. These minnows come about in schools when the mud is stirred.

A canvas canoe, built after the Field plan, published by FOREST AND STREAM, was just the craft for these trips to the point. It would make the trip with a fair wind in twenty minutes. Three boys I met out there caught all the bait we needed, and I carried the bucket. Sometimes we went down the beach half a mile before we caught enough, and ran back with the boys yelling, sand and shells flying, hats blowing off—races in which I always lost.

We met out there one morning when the chickens in town were crowing the sleep out of their eyes. The water was cold, the sand was ice, and the breeze a chilly bath. The boys had been unusually lucky a few days previous, and had left all except their redfish at the point for the hot sun, so the air was fragrant for awhile. Cleaning house purified it, but brought the sharks. Our surroundings, with the exception of the bad atmosphere at first, were pleasing. Immense skaits 4 and 5ft. across leaped from the water at times and hit again with cannon reports that startled with their suddenness. Masses of screaming gulls and pelicans covered the exposed sand flats just inside the pass, and rose into the air every few minutes, for no apparent cause, with noisy fluttering. Tarpon shining like silver leaped from the bay, many of them close in, and played around half-submerged. Herds of porpoises came through the pass with the tide. Monster sharks 10 and 12ft. long went by in the clear water near shore. One of the boys plunged in to untangle a line from a snag a few minutes after a school of these large fellows passed, and another boy had his line snapped later as if web. About 9 o'clock the redfish began to bite.

The boys caught fish then for two hours. Their hooks fell exactly where large redfish waited with mouths open. Each of my companions danced on the tips of his ten small toes while hauling in these beauties, and met them in water knee deep. The first fish hooked each time was used to toll others near shore, sometimes where the school was seen, and two more fish were caught by trolling the other lines behind the first one. The three lines plunked out then in quick cadence, to be hauled in almost immediately as before. The red beauties, as they came in, swayed and shone a sight to behold. For some reason my line caught nothing—a source of amusement to the others only. The shoals were soon alive with their tethered fish, each of the half a dozen bunches too heavy for a boy to carry. My companions left when they had caught more than 200lbs. They would leave me a few to practice with. I might catch one in time if I stayed by my work. They would take the "hoodoo" off.

I set to work then with the bait they left. Luck changed at once. Fish at last found my bait. One after another they came ashore, such fine ones, to be met in shallow water and carried out with hands that trembled. They looked so much handsomer as they layed and fought on a line that was mine. There were 64lbs. of them before the boys reached town, the largest a highly-colored 9-pounder that was received by me with extra ceremony. When I arrived home about midday this large one was selected for baking, and serving afterward with drawn butter, and slice egg and parsley over it. We had a cook whose art was witchcraft, and she did much for that beauty. And I did much for him afterward when I seasoned delicious morsels of him here and there with Worcester sauce, and lingered loath to leave such food while a scrap remained. There were many such days during the summer, and many such dinners.

H. R. STEIGER.

The Tuna's Supreme Place.

NEW YORK, Nov. 27.—*Editor Forest and Stream:* In your issue of Nov. 26, page 429, I find in an article, "Tuna vs. Bass," that my friend Prof. C. F. Holder has been good enough to defer to my opinion as to the merits of these two extraordinary fish in the following words:

"The black sea bass (*Stereolepis gigas*) for half an hour or twenty minutes is perhaps the equal of the tuna, but if he is fought vigorously for that time he is soon worn out; in a word, he has in no sense the staying or fighting qualities or the strength of the tuna, in which expression I think Mr. Beard, who took the first 200lb. black sea bass, will bear me out."

Now, feeling duly honored by being thus specifically designated by so able an angler, naturalist and author as Prof. Holder, I beg to make the following remark or two:

In the first place I thank Prof. Holder for the compliment he pays me. Then to be brief, I agree with him. I consider that he is entirely right in his dictum. I may be pardoned too, I hope, if I say in support of my opinion that I know thoroughly what constitutes a game fish. Aside from quite extensive journeying in the delightful province of angling literature. I may lay claim to considerable actual practical experience with rod and reel. Not to mention years of angling elsewhere, I have paid two visits to that Mecca of all good anglers, Santa Catalina Island, where the superb game fish and the unequaled fishing cause the unaccustomed Eastern angler astonishment, wonder and admiration. I know the fishing there as thoroughly probably as any man in the East to-day, and here at the risk of being accused of vaunting my own exploits I might say that I have killed with rod and reel at Catalina almost 7,000lbs. of fish; that my best catch of yellow-tail (*Sereola dorsalis*), twenty fish, 368lbs., one day, one rod, is still the Island record; and that the 200lb. jewfish Prof. Holder refers to was the Pacific Coast record for something like two years.

All this to prove that I know something about game fish, and what good fishing really is. And yet in the face of all that, I count it as nothing alongside of Prof. Holder's single fish, the 183lb. tuna. As I said once before in FOREST AND STREAM, that was an angling feat to be proud of. When I learned that such a fish had fallen to my friend's rod I was not only pleased, but I considered that, although my very game 200lb. jewfish had probably outweighed his tuna by more than 20lbs., my fish was not to be mentioned in the same mouth with his on the score of gameness. In other words, I was ready to acknowledge from that hour that my record was hardly worth speaking of further, so vastly greater as a fighter do I consider the tuna when compared with his sable rival. I used a rather light rod at Catalina. It was built for killing striped bass, and would pull, dead weight, not over 4¼lbs. At that tension it was bent as much as I dared to bend it, and yet with this rod, by constantly keeping a good arc on him and compelling him to "fight or come in," I have frequently taken a 25lb. yellow-tail in not over nine minutes. Harry Elms, my boatman, has often timed me in fighting these game fellows, whose average is about 18lbs., and I think I am right in saying that I averaged about seven minutes of them day in and day out. This may mean nothing to one who does not know the fish, and yet I may say that frequently I have seen a 20-pounder give battle royal to and well nigh exhaust his would-be captor during a struggle of twenty to thirty minutes, simply because the angler did not know how to "force the fighting." I used this same rod on my jewfish, of which I took a number. I would have caught more, only I hated to do so, for I could make no use of the brave fellows after they had been brought in and admired. This almost destroyed the sport of catching them for me. I found the jewfish with this light tackle a dogged, stubborn and extremely strong fighter. Had I used a rod such as most men used at Catalina, a now tuna rod, which was capable of pulling at least 12 to 15lbs. of dead weight, I could have killed all my fish within an hour readily. As it was, two of them went over three hours of steady give and take before they were utterly fought to a finish as I wanted them to be. My largest fish, the 200-pounder, was taken by lantern light, in the midst of a hard gale of wind, on a 15-thread line, after having towed the boat with three of us in it for nearly four miles, and during three hours and thirty-five minutes of very hard fighting.

To sum the whole matter up in a few words, I consider the black sea bass or jewfish as capable of putting up a very interesting and prolonged fight when taken with light tackle, such as I used. He will give an angler, and a good angler too, all the work he wants under such circumstances. Nevertheless he is as nothing when compared with the magnificent tuna. That fish is a wonder. He has unequaled speed and strength, unrivaled pluck and cunning, but above all else and beyond all other fish that the angler knows of to-day he is remarkable for his tireless energy, which renders him as well the terrible Nemesis of the swallow-swift flying fish as what I have long maintained him to be, the "greatest game fish in the world."

Consequently, with all due deference to Mr. F. V. Rider, honorable secretary of the well-known California Tuna Club, whose very remarkable performance in catching a 327lb. jewfish on a 21-thread line is well worthy of the praise and attention of anglers, I must confess that I do not value his achievement as I do that of the honorable president of the club. Mr. Rider is outclassed just as certainly as I myself was outclassed under like circumstances. To my mind the case does not admit of a moment's hesitation. Prof. Holder is still unquestionably high hook of the club, if not of the world as well.

STUART-MENTETH BEARD.

"Red Water" in Narragansett Bay.

THE sudden and often unexplained epidemics which occasionally destroy fishes by wholesale are of great interest to the angler, and the following description of such an occurrence on the New England coast last summer and autumn, contributed by Mr. A. D. Mead to Science, is worth bringing to the notice of all who devote any attention to fishes. Mr. Mead says:

"During the last two months the inhabitants of Rhode Island witnessed the following remarkable phenomenon. The water of a considerable portion of the bay became thick and red, emitting an odor almost intolerable to those living near by. The situation became alarming when, on Sept. 9 and 10, thousands of dead fish, crabs and shrimp were found strewn along the shores or even piled up in windrows.

"At the request of the Rhode Island Commission of Island Fisheries, an investigation was made to determine the cause and extent of the unusual color of the water and of the great mortality of the fish. The results of this investigation are briefly as follows:

"During the last of August, throughout September and a part of October streaks of red or 'chocolate' water were observed from near Quonset Point and Prudence Island, north to Providence, and on the flood tide up the Seekonk River, nearly to Pawtucket, a range of about fifteen miles. In other parts of the bay, as far as could be learned, the phenomenon had not been observed.

On Sept. 8 and 9 the water became extremely red and thick in various localities from East Greenwich to Providence, and the peculiar behavior of the marine animals attracted much attention. Myriads of shrimp and blue crabs, and vast numbers of eels, menhaden, tautog and flatfish came up to the surface and to the edge of the shore, as though struggling to get out of the noxious water. Indeed, the shrimp and crabs were observed actually to climb out of the water upon stakes and buoys and even upon the iron cylinders which support one of the bridges and which must have been very hot in the bright sun. In several instances, on these two days, hundreds of blue crabs were caught by a single individual in a few minutes' time, at the mouth of the Seekonk.

"On the following day, Sept. 10, and for several days afterward, hardly a live crab or shrimp could be found. Along the shores, however, in the same vicinity, cart-loads of dead shrimp were piled up in windrows, and among them were strewn great numbers of crabs and fish of various kinds, especially menhaden and eels. This singular behavior and alarming mortality of marine animals was reported from nearly every station at which the red water occurred, and from no other station, which indicates that the two phenomena are related as cause and effect.

"It was commonly believed that dye-stuffs or other refuse emptied into the rivers at the upper part of the bay gave to the water its color and unpleasant odor, but microscopic examination showed that the water was swarming with minute organisms, a species of *Peridinium*. The *Peridinium* is reddish brown in color, and occurred in such excessive abundance that it gave to the water its peculiar color and odor, besides making it so opaque that one could hardly see a white shell 6in. below the surface.

"With regard to the systematic position of this organism there is a difference of opinion. It is, in fact, ranked with the animals by some authors, and with the plants by others. I have not yet been able to determine the species of our *Peridinium*. * * *

"After Sept. 9 and 10, when the great mortality of fish occurred, the *Peridinium* became, for a few days, less abundant, and then increased again until the 23d. There was a heavy rain on the 23d, and on the following day the water was comparatively clear. Since this date it has been more or less in evidence up to the day of writing (Oct. 7). On Sept. 21 the number of *Peridinium* per cubic centimeter in the Seekonk River was estimated at 5,880. This was enough to give the water a very noticeable red color. Nevertheless the marine animals appear not to have been seriously affected since Sept. 10 or 11, though the approach of a streak of red water has, in some instances, interrupted good fishing.

"In the Seekonk River the shrimp and crabs gradually returned, and in about three weeks after the sudden mortality were nearly as numerous as before, though the water was at times distinctly colored. On the 23d some shrimp, oysters and small fish (*Fundulus*) were kept in the water where the *Peridinium* were the thickest, and suffered no apparent injury. In consideration of these facts, it has been doubted whether the *Peridinium* was the immediate cause of the peculiar behavior and death of the fish which occurred on Sept. 9 and 10, especially as the weather had been phenomenally hot for several weeks previous to that date. I believe, however, that the *Peridinium* was the cause of the trouble, and not the hot weather, nor manufacturers' waste, for the following reasons:

"On the two or three days in which the mortality took place the water was extremely red.

"The hot weather was followed by a cold wave a day or two before the mortality commenced.

"The phenomena occurred in Greenwich Bay and off Nayatt, many miles from any considerable source of contamination.

"Finally, the phenomena in question were noticed by very many persons throughout the whole range of the red water, while in neighboring portions of the bay, for example in the Warren River and in Bristol Harbor, where the temperature of the water is quite as high as in the red water districts, no *Peridinium* and no mortality or unusual behavior of the marine animals was reported, though the regions were carefully canvassed.

"There are many recorded instances of salt and of fresh water colored red probably by *Peridinium* of this or a similar species. H. J. Carter, in his account of 'The Red Coloring Matter of the Sea round the Shores of the Island of Bombay,' described the new species *P. sanguineum*, which produces this effect. He points out, also, that Darwin's description of the animalcule which he found to color the sea red, a degree south of Valparaiso, accords exactly with that of *Peridinium*. The animalcules which, according to Salt, produce the red color in the Red Sea, may also be due to this form. and the same cause may perhaps be ascribed to the red color of the sea off Iceland in 1649. Porter quotes 'the following passage from an eye witness of a similar occurrence at Porebunder, on the coast of Khattywar, India, where the red water is extremely common, viz.: "the color of the sea water on Saturday evening last, Oct. 27, 1849, was changed from its usual tint to a deep red, emitting a most foul smell; the fish speedily were all destroyed and washed upon the beach in large quantities, etc."' Though the narrator believed that this might be due to a submarine eruption of mud, Mr. Carter is inclined to ascribe it to some 'animalcule,' most probably *Peridinium*. He also directs attention to the Mosaic account of the plague of Egypt given in the following verses: 'And all the waters that were in the river were turned to blood.' 'And the fish that was in the rived died; and the river stank, and the Egyptians could not drink of the water of the river; and there was blood throughout all the land of Egypt.'"

The Cuvier Banquet.

The twenty-fifth annual banquet of the Cuvier Club was held Nov. 22, "with all the ancient glory, with some new features introduced, and with possibly a greater crush than ever known before." The menu was, as usual, the perfection of the art, with the choicest trophies of the sportsman's prowess in evidence throughout. There were handsome decorations, music by a brass band and a little excellent speaking, and the dinner, which began at 5 o'clock, was not over with till almost 10.

Of the 400 members of the club, there were few absentees, and there were present as guests of honor Prof. W. H. Venable, the poet and historian, and Coates Kinney, well known as the author of "The Rain on the Roof." The venerable president of the club, Alexander Starbuck, was present to second the efforts of the reception committee and to add a welcome to the guests, and there were present both of Cincinnati's congressmen and the many men eminent in professional and business circles of the city who constitute so large a portion of the membership of the club.

Along one side of the club dining room was set a long table, which bore as decorations the pieces de resistence—huge Kennebec and California salmon and muscallonge—as well as fruit pieces, stands of flowers, etc. The dining room had seating accommodations for about seventy-five persons at a time, and as fast as the tables were vacated others stood ready to take the places, until the 400 had all feasted. The banquet committee was made up of George Gerke, A. N. Sackett and A. J. Conroy. The menu card was a very handsome specimen of engraved and embossed printing, and presented an extremely tempting array, served under the direction of Max Basse, whose fame as a caterer is widely known.

During the progress of the banquet a band of music marched through the front door and circled the dining room, playing a popular march, and afterward taking up its stand in the museum, where it played during the evening. This was a pleasant surprise to the members, planned by President Starbuck.

Later in the evening Mr. Coates Kinney, the venerable poet, read, with much feeling and effect, a patriotic poem, "The American Citizen," which was greeted with much enthusiastic applause; and succeeding Mr. Kinney Prof. Venable made a brief and felicitous speech, in which he said:

In a city famous for clubs—commercial, political, literary—the Cuvier Club is distinguished and unique. This society has other functions than to give exquisite dinners. The outings of its members are but incidents in their busy life. The Cuvier is an educational body. It fosters science; it teaches good fellowship and genuine humanity.

The true, modern sportsman possesses the manliness of a man, and the gentleness of a gentleman. He is not cruel. Away to the lakes he hies, away to the prairie or the wildwood, under God's blue sky, feeling the joy of vigorous life in body and in soul. He likes sport—he loves his dog, his gun, his angling rod, but he loves nature and humanity more. He is a naturalist—he dedicates his club house to the name of a great scholar. Any citizen of Cincinnati may well feel proud to sit a guest at this board.

For myself, I cannot claim to be much of an expert in sportsmanship, by land or by water, though I might tell a fish story. My exploits in boyhood, shooting squirrels in the big woods, or quail in my father's stubble fields, or catching fish in Newman's Run, fill a large volume in memory. But then, and since, on various excursions, I confess that I have often forgotten the trout in poring o'er the brook that babbles by, and have lost sight of the birds in the grass listening to the birds in the trees. Though I have not "named all the birds, without a gun," I hold this in common with old Walton and with most "brothers of the angle" and of the gun—a full enjoyment in being out of doors. I will venture in conclusion to read you some homemade verses, celebrating, in a capriccio, the marvelous performance of a catbird whose college of music is in my orchard trees on Mount Tusculum:

My Catbird.

Nightingale I never heard,
Nor the skylark, poet's bird;
But there is an æther-winger
So surpasses every singer
(Though unknown to lyric fame)
That at morning, or at nooning,
When I hear his pipe a-tuning,
Down I fling Keats, Shelley, Wordsworth,
Shakespeare, too—for what are bards worth
When my *Mimus carolinensis*
(That's his Latin name),
When my catbird wild commences
Song's hilarious rhapsody,
Just to please himself and me.

Prime cantante,
Scherzo, andante,
Piano, pianissimo,
Presto, prestissimo,
Hark! Are there nine birds or ninety and nine
And now a miraculous gurgling gushes
Like nectar from Hebe's Olympian bottle,
The laughter of tune from a rapturous throttle,
Such melody must be a hermit thrush's,
But that other caroler, nearer,
Outrivaling rivalry with clearer
Sweetness incredibly fine;
Is it oriole, redbird or bluebird,
Or some strange un-Auduboned new bird?
All one, sir, both this bird and that bird,
The whole flight are all the same catbird.

The whole visible and invisible choir you see
On one lithe twig of yon green tree,
Flitting, feathery Blondel!
Listen to his rondel!
To his lay romantical,
To his sacred canticle.
Hear him lilting,
See him tilting
His saucy head and tail, and fluttering,
While uttering
All the difficult operas under the sun,
Just for fun;
Or in tipsy revelry,
Or at love devilry,
Or, disdaining his divine gift and art,
Like an inimitable poet
Who captivates the world's heart,
And don't know it.
Hear him lilt!
See him tilt!

Then suddenly he stops,
Peers about, flirts, hops,
As if looking where he might gather up
The wasted ecstacy just spilt
From the quivering cup
Of his bliss overrun.
Then, as in mockery of all,
The tuneful spells that e'er did fall
From vocal pipe, or ever more shall rise,
He snarls, and mews, and flies.

The Vermont League.

The annual meeting of the Vermont Fish and Game League was held at Montpelier, Nov. 22. The attendance was the largest in the history of the association. One hundred and seventy-five plates were laid.

At the business meeting in the afternoon the following officers were elected for the year ensuing:

President, J. W. Titcomb, St. Johnsbury; secretary, Edward T. Bradley, Swanton; treasurer, Charles F. Lowe, Montpelier; vice-presidents, W. R. Peake, Bristol; N. W. Fisk, Isle La Motte; F. D. Proctor, Proctor; E. C. Smith, St. Albans; W. S. Webb, Shelburne; T. N. Vail, Lyndonville; Erastus Baldwin, Wells River; J. G. McCullough, Bennington; P. H. Hadley, Bellows Falls, and an executive committee comprising one from each county, as follows: Addison county, D. H. Lewis, Vergennes; Bennington county, J. W. Fowler, Manchester; Caledonia county, Henry Blodgett of St. Johnsbury; Chittenden county, J. B. Henderson, Burlington; Essex county, F. D. Hale, Lunenburgh; Franklin county, T. M. Deal, St. Albans; Grand Isle county, E. S. Fleury, Isle La Motte; Lamoille county, C. H. Stearns, Johnson; Orange county, F. C. Kinney, Greensboro; Rutland county, Ira R. Allen, Fair Haven; Washington county, L. Bart Cross, Montpelier; Windham county, Kittredge Haskins, Brattleboro; Windsor County, J. E. Pollard, Chester. The total membership of the league is now 636.

Following the discussion of the good things provided by the banquet committee, President Titcomb announced that the skin of the bear which the party had just eaten would be auctioned off by Representative Ballard, of Georgia, who made a humorous speech and finally disposed of the pelt to Representative Viall for $13.

George M. Powers, as toastmaster, introduced Secretary of State Howland, who said in part:

"Mr. Powers has frequently asked me to visit him at Morrisville, and has always told me that I should find a little game going up there. All fish and game interests have been wonderfully advanced and improved by the efforts of Mr. Titcomb. But a few sessions ago only three or four bills concerning these matters came up at each session, and now they are a most important feature. Interest your members and senators to do what they can to promote all legislation for the benefit of this great industry."

Hon. H. C. Ide said: "The fish and game laws in the British colonies are well defined and executed. Hunting and fishing is licensed to individuals in the open season. The original settlers brought their game laws from old England. In New Zealand rabbits were introduced and carefully protected for game purposes. They breed so fast that residents are compelled by law to hunt and exterminate them. In the Fiji Islands rats destroyed everything, and the mongoose was brought in to exterminate the rats. Now the mongoose is so plenty that a price is put on his head. I hear that deer are becoming so plenty that they are devastating your fields and gardens, and it may be that in the near future you will make laws to compel yourselves to shoot deer to prevent them from destroying everything." Mr. Ide objected to the multiplicity of tax collectors, and suggested an open season for them. He had noticed a law in prospect making a close season for millionaires in Vermont, or preventing their hunting by tax collectors for a number of years. Then there might be an open season of a few days each year.

Ex-Lieutenant Governor Fisk said: "The difference between millionaires in Vermont and rabbits in New Zealand is that the former do not multiply as rapidly as we could wish. All the millionaires in Vermont belong to this league, and are among its most useful members." He commended the great work of Mr. Titcomb for good and wholesome laws, and hoped he would in time be in the office of United States Fish Commissioner.

Mr. Titcomb then addressed the gathering: "I would not care to be a commissioner unless I had the League behind me," he said. "Let us all see that the laws are enforced and upheld. Speak well of the work and the object of it. Show your neighbors what is being done. In every town in Vermont into which we haven't sent trout we have sent blanks to the selectmen and they have been ignored. Every application is answered and filled. Streams are being constantly fished and must be constantly filled."

Fishing at Carlsbad.

Sing Sing, N. Y.—*Editor Forest and Stream:* Several weeks ago a correspondent of yours wrote of "Trout Fishing in Carlsbad, Bohemia." I will tell you of an experience I had at the same place.

We hired a conveyance and were driven to a place called Puchstein, about six miles in the depths of the Schwarzwald, southeast of Carlsbad. It is here that the famous Gieshuebler Spring is situated. For a small amount I was allowed to fish in the stream flowing by the hotel. At the end of an hour I succeeded in hooking foul a muddy carp—the stream had been pronounced well stocked with forellen! This wasn't the end of my fishing.

Flowing from the east through a beautiful valley, and on through the center of Carlsbad, is a stream which teems with trout. I doubt if any lover of trout fishing ever passed this brook without casting covetous glances in the clear pools, where lurked monster trout plainly visible to the naked eye. This brook was at the foot of Franz Joseph's Höhe—so the gentleman who wrote the article will probably recollect it. In my daily walks between sips of Sprudel and Felsenquelle, I would take rolls, pieces of bread and even large red ox-heart cherries, which would be snapped up in a twinkle by the voracious denizens of the forbidden stream.

I endured this for weeks, till at last one day I found myself buying fish-hooks in the shop on the corner back of the Kurhaus. The next morning, with my cane, a piece of twine and a couple of cherries sliced I sneaked out of the hotel, and without getting in line for my customary drink soon reached the spot where a certain old "thumper" held forth. The only people in sight were two elderly gentlemen, whom I knew to be visitors in search of health, like myself. I slipped in between the rails, and in the time it takes to tell it had my tackle hitched on the cane and made a cast. Splash! I pulled too quick; at least four big trout came after the cherry. I glanced around, and saw three guards coming leisurely down the path about 200yds. from me. I crouched down under the wall and they passed without seeing me. Out went my cherry. Zip! I had him the minute it touched the water. After as gamy a struggle as a trout could put up against such railroading tactics I had him at my feet, a 2-pounder. His head went into an envelope, the envelope in my pocket and the fish I had for dinner—all the sweeter for the risk.

The River Eger, flowing through the Valley of Hans Huyling, north of Carlsbad, is reported to be well stocked with trout. Chas. G. Blandface.

Illinois Bass Stocking.

Nov. 12.—President Nat. H. Cohen, of the Illinois Fish Commission, writes me this week, conveying some very good news about the work with the young bass this season, and expressing the hope that the people of Illinois will take a hand in this saving of the innocents next year, and hold up the hands of the commission in this interesting and valuable work. It is proof of the soundness of the methods of the Illinois Commission, in that they have been copied by men of other States, as Wisconsin and Minnesota, though this method of saving bass has not been, I think, taken up officially by the commission of any State but Illinois. The letter of the hustling commissioner follows:

"I take pleasure in informing you that the Illinois Fish Commission has been making several plants in the State in the last few weeks, liberating in public and private waters 25,000 black bass, most of them taken in and about Meredosia, from the sloughs and bayous adjacent to the Illinois River. Car No. 3 has taken its full capacity this week to deposit at Lake Villa, and in lakes in Lake county. These are unusually large for this year's fish, and if sufficient protection could be afforded in lakes mentioned, a few years would show wonderful results. Over 150,000 bass have been taken by the commission from the waters mentioned. Most of these fish would have perished in August and September by the heat evaporating the water, leaving the fish without access to the deeper waters. Our work is almost closed for the season, and I consider this the greatest year the Illinois Fish Commisison has ever had in the distribution of bass. If the next Legislature increases our appropriation sufficiently to procure a larger boat and employ a larger crew, we will be able to save and distribute hundreds of thousands of bass that now perish."

E. Hough.

FIELD TRIALS.

Dec. 5.—Continental Field Trial Club's trials, Lexington, N. C. W. B. Meares, Sec'y.

1899.

Jan. 16.—West Point, Miss.—U. S. F. T. C. winter trials. W. B. Stafford, Sec'y.

Feb. 6.—Madison, Ala.—Alabama Field Trial Club's third annual trials. T. H. Spencer, Sec'y.

E. F. T. C. Trials.

The Subscription Stake.

THIS stake was open to all setters and pointers. The conditions were $50 subscription, payable Oct. 1, 1898. First prize, $300; second, $150; third, $50. Each subscription entitled the subscriber to start any dog he arranged to run, whether it was his property or not. The subscription was transferable to any party not objectionable to the club. The heats in the first round were two hours' duration; afterward at the discretion of the judges.

There were six starters, run in the following order:

W. W. Titus' setter dog Joe Cummings, V. Humphrey, handler, with P. Lorillard, Jr.'s, b., w. and t. setter dog Roland (————), C. Tucker, handler.

George Crocker's pointer dog Tick's Boy, V. Humphrey, handler, with Charlottesville Field Trial Kennels' setter bitch Pin Money, C. E. Buckle, handler.

George Crocker's setter dog Sam T., V. Humphrey, handler, with J. P. Green's pointer dog Young Jingo, Geo. E. Gray, handler.

This stake was run on Monday, Nov. 21. The weather conditions were all that could be desired either for pleasure or field trial competition. The morning was frosty, with a warm sun, which soon dissipated frost and mist. A light, mild wind blew gently betimes. The temperature was quite warm in the midday hours. Birds were found in ample numbers, but the finding and pointing by the competitors were far less than the opportunities which were presented. A number of bevies were ridden up by the horsemen or walked up by the handlers, and most of these the dogs should have found and pointed. The general character of the work was decidedly inferior. The stake as a whole was weakly contested.

The judges were Messrs. Arthur Merriman, of Memphis, and Mr. Theodore Sturges, of New York. Mr. R. V. Fox could not spare more time than what he devoted to the All-Age Stake. This stake was handled and judged very skillfully, and the awards were strictly in accord with the merits of the dogs' performances.

A start was made at Gibson's well, and the stake was concluded near Conover.

Joe Cummings and Roland commenced at 8:21. They competed weakly. The heat was largely a succession of errors and lost opportunities. There was much roading, but little locating. Roland pointed a single of some marked scattered birds, and Joe made a point on a bevy in open sedge. Roland was not a wide ranger at any time in the heat. Toward the last he showed signs of weariness. Each backed well. Joe did not put much energy in his work. Neither had any chance for a place in the list of winners.

Tick's Boy and Pin Money were cast off at 10:26. Pin Money did about all the bird work, though she lost some easy opportunities to find and point. Tick made a couple of unsatisfactory points where scattered birds were marked down, seemingly pointing on footscent rather than accurately pointing the birds. At all events the scattered birds flushed were not to his points. Pin pointed two bevies and a single, doing some fair roading and locating, though her work was marred by some points to which nothing was found. She had a decided advantage over her competitor in every respect, though she was frivolous at times. Her work, however, was the best.

Lunch was eaten at Yount's place.

Sam T. and Young Jingo were started at 1:21. There was more work done on birds in this heat than in any of the others. Much of the point work, however, was of an uncertain nature, mixed in with good work, such, for instance, as pointing near where birds were afterward flushed, and also pointing birds with the assistance of the handlers. Jingo made six or seven good single-bird points, a bevy point, and another bevy point to which he was assisted by his handler. He shared two points on bevies with Sam. The latter, in addition, found and pointed two bevies nicely, made two or three other points on singles, flushed one bird, and made several points to which nothing was found. Jingo was much the more finished in his work, and performed in a higher class form in every respect.

An hour's intermission was allowed before the final heat began.

Final.

Pin Money and Young Jingo started at 4:22. Pin Money roaded nicely to a point on a bevy in the early part of the heat. Thereafter they were worked mostly on scattered birds. One of the handlers walked up a bevy. Jingo took a cast in the open field near where the bevy was marked down, and was steadying on it when his handler's whistle called him in, and he flushed the birds excusably. Pin Money made three points on scattered birds; Jingo made two points and a flush on a single. Pin Money was going with more dash than her competitor. Jingo was working steadily, and showed good judgment in working on birds, but the long run had taken some of the keenness from him. The heat ended at 5:14.

The judges declared Pin Money first, Young Jingo second and Sam T. third. The decision was accurately made.

This concluded a stake which, in many of the competitive features, was exceedingly weak and uninteresting.

After the trials Mr. George E. Gray returned to Catfish, N. C., where he will give his dogs further preparation for competition in the Continental trials next week.

Mr. C. E. Buckle is staying at Sherrill's Ford, N. C., giving his dogs a schooling in field work, and also preparing his field trial entries for the competition of the Continental trials.

Mr. George F. Nesbitt, of Wilkes-Barre, Pa., a famous trap shooter, remained at Newton till Saturday of last week, enjoying some quail shooting with Mr. Edmund H. Osthaus and Mr. S. C. Bradley, the club secretary. The work of Ripsey in discovering the quail bird and pointing it accurately excited his admiration.

Mr. Theodore Sturges and Mr. J. B. Baker, of New York, are domiciled on their preserve, about five miles from Newton, in a most charming section of country. Messrs. Osthaus, Merriman and Waters were Mr. Sturges' guests on Nov. 24, and partook of a Thanksgiving dinner which was such as to fervently wish that there were 365 Thanksgiving days in the year instead of one.

Col. Arthur Merriman departed for Memphis, Tenn., on Thanksgiving night. His next engagement as field trial judge is in California, at the forthcoming trials of that section.

Miss E. B. Bradley and Miss E. Corbett were the only ladies who followed the trials this year. The latter is an accomplished horsewoman, who has been in many cross country rides in England. She has visited many foreign lands. She is a relative of Mr. C. E. Buckle, who is now a finished American.

Mr. H. K. Nichols, of Philadelphia, arrived in Newton on Nov. 24, and enjoyed several days' shooting there. His beautiful $650 Greener was just provocation of envy in the hearts of those who love fine guns. The years have not lessened his enthusiasm, nor made the day too long for him.

Mr. S. Murray Mitchell and wife, of Philadelphia, stayed in St. Hubert's Inn a few days during the trials, thence went to Asheville, thence to the northern part of North Carolina, to spend several days shooting.

Mr. Washington A. Coster, who was secretary of the E. F. T. Club many years, is spending the winter in Titusville, Fla. He is not in evidence at the trials, as in the years gone by, but he has not forgotten them.

Messrs. Edward Dexter, H. B. Duryea, F. A. Hodgeman, W. S. Bell, F. R. Hitchcock, Pierre Lorillard, Jr., J. E. Orr and C. H. Phelps, Jr., were of the missing this year. It is to be hoped that another meeting will find them present as in days gone by.

Monongahela Club's Trials.

CARMICHAELS, Pa., Nov. 22.—*Editor Forest and Stream:* The annual field trials of this club were held, with the town of Carmichaels as headquarters, on the preserved grounds of the club, about sixty miles from Pittsburg, Nov. 21, 22. Various were the disappointments of many of the members of the club in not being able to attend, a fact which cut down the number of starters to five in each of the Derby and All-Age stakes. The attendance was light and the weather unfavorable, which made it hard to find birds in greater numbers. Yet, all dogs that were tried had opportunities on game. The grounds were of such character as would fully test the pace, range and searching qualities. The Derby was finished on Tuesday, the All-Age Stake on Wednesday. Mr. W. S. Bell and Major I. M. Taylor judged both stakes.

The Derby.

The dogs were drawn to run as follows.

Frank Kruse's liver and white pointer dog Rex, by Rush—Frankie, with A. C. Peterson's orange and white English setter bitch Daisy Hunter III., by Marie's Sport—Nelly Bly.

George Battison's blue belton English setter dog Tony Rogers' Gale, by Tony's Gale—Daisy B. II., with Reed Kennedy's orange and white English setter dog Seminole, by Marie's Sport—Nelly Bly.

Monongahela Kennels' orange and white pointer dog Seminole, by Plain Sam—Belle of Lancaster, a bye.

Rex—Daisy Hunter III.—There was little work on game, the only opportunites being on a small bevy of four or five birds, pointed by Rex, Daisy backing. The pace and range of the brace were commendable, and were well sustained throughout the trial, lasting more than one hour. Rex was handled by Albert Shira, Daisy Hunter III. by J. R. Bell. Rex was stanch in work, Daisy a little unsteady at times.

Tony Rogers' Gale—Seminole.—George Battison, of Detroit, Mich., was owner and handler of Tony, with J. W. Phillips in charge of Seminole. Seminole found a bevy, which he flushed before his handler reached him. Following the birds to woods, both dogs secured points, but went into flushes quickly afterward. Seminole chased beyond control, Tony being under fair command was checked. Seminole best in pace and range hunting, with high head, and doing all his point work in good style. Tony was industrious in limited range.

Cherokee, a bye.—Mr. J. W. Phillips handled Cherokee, the dog starting slowly and running in same accomplished but little, not finding within the hour, but just after he was ordered up a bevy was flushed by footmen, when he was put down again. He made successive flushes in numbers, and was ordered up. It was now lunch time.

Second Round.

As the number of starters was small, and there was plenty of time, the judges decided to give all the dogs another trial, braced in different order.

Rex—Tony Rogers' Gale.—Running from 1:15 to 1:50 without finding, they were ordered up. Rex ran in form shown previously, while Tony improved his chances for place by better pace and range.

Daisy Hunter III.—Cherokee.—No birds were found with this brace, though they passed near a bevy, which they lost on account of a high wind, passing near, but up wind of them. Sent on, Daisy did her usual work in searching, while Cherokee continued working in limited range, except when led out by Daisy, trailing her.

Seminole, a bye.—He was only tried a few minutes, the rain now falling fast, when he was ordered up, failing finally to be placed by his unsteadiness.

The awards were at once announced, giving first to the pointer dog Rex; second to Daisy Hunter III., with third to Tony Rogers' Gale.

The All-Age Stake.

In the drawing there were seven, but messages from Pittsburg, showing detention of some members, reduced the starters to five. A sudden change of weather during the night, which brought severe cold and frozen ground, did not make conditions of the best, and not until the afternoon were they more favorable.

The dogs were drawn to run as follows:

Frank Kruse's liver and white pointer dog Rex, by Rush—Frankie, with S. H. Vandergrift's black, white and tan English setter dog David Copperfield, by Whyte B.—Betsy Trotwood.

Monongahela Kennels' orange and white English setter bitch Hoosier Girl, by Dad Wilson—Daisy Hunter, with George Battison's blue belton bitch Lucy Rogers, by Tony's Gale—Daisy B. II.

R. S. D. Hartrick's orange and white English setter bitch Bird H., by Gath's Mark—Ruby's Girl, a bye.

Rex—David Copperfield.—Albert Shira handled Rex, with Mr. J. W. Phillips in charge of David Copperfield, the latter ranging and hunting in a stylish and merry way, which produced favorable impressions as to his work; Rex had been too kindly treated by his owner during the night in being too heavily fed, destroying all the dog's chances for place, yet he struggled along bravely, doing the best he could with the load he carried, and tender feet. Only one bevy was found during the trial, just at the close of it, when both dogs were close together, Rex being nearest the birds. A part of the bevy was followed, but none were found. After over an hour's trial they were ordered up.

Hoosier Girl—Lucy Rogers.—Mr. J. W. Phillips handled the former, Mr. George Battison, the owner, Lucy Rogers. Hoosier Girl was the only one doing any point work, having a chance or two on singles after a bevy had flushed wild. She was best in range and pace. Lucy went well enough in rather limited range at times, but was stylish in all work, and easily controlled.

Bird H., a bye.—Handled by Mr. J. W. Phillips, she was soon on stylish point of a bevy. In work on scattered birds she failed to take advantage of several opportunities for points. After quite a run she was sent to find birds of marked bevy, which had settled in an orchard, but she only succeeded in flushing, later flushing a single in stubble near by. She was stylish in point work, working busily in limited range, but stanch. This finished the first round in time for lunch.

Second Round.

As in the Derby, all the dogs were given a second trial, the first tried being:

Hoosier Girl—David Copperfield.—The Girl was away at once, busy searching in good style with plenty of range and pace, David appearing to have lost his desire for it, and while some of his time away near a barnyard with turkeys, which he seemed loth to leave. Hoosier Girl was first to find, and after pointing, flushed a single, being a little unsteady. Returning, she stanchly pointed the bevy. David in the meantime coming up refused to back, and went in to a flush. The birds were not followed. A short run after this, David caring little for the hunt, they were ordered up. Hoosier Girl had increased her chances, while David seemed to have lost all chance for place.

Bird H.—Rex.—Bird H. was soon on a bevy point, and held it stanchly, notwithstanding Rex refused to back and passed in ahead; both were stanch to flush. Following the birds, Bird made two or three points, Rex passing her and flushing. Rex seemed entirely off in nose, and now lost all chance for place, a lesson to his owner, wanting proper care.

Lucy Rogers, a bye.—Lucy had not been on game, and was sent away alone to find. She soon had a bevy, pointing it very stylishly, following with good point work on singles. She started slow, but after finding game went in a merry way. She was stanch always, and under good command.

Third Round.

Hoosier Girl—Bird H.—This brace had proved the best, with Hoosier Girl in the decided lead, yet they had to be put down together. Hoosier Girl soon proved her superiority in range, pace and searching, when they were ordered up.

David Copperfield.—The judges gave David a chance to redeem himself, trying him alone to see if he would return to the form shown in the first trial, but he showed little desire to hunt, and was quickly ordered up, when the awards were at once announced, giving first to Hoosier Girl; second to Bird H.; third to Lucy Rogers.

The preserve of the club is located in a good section of country, the "lay of the land" being very favorable to show the best qualities of the dogs. Birds were found in sufficient numbers to test all the dogs. Carmichaels, a town in Green county, was selected as headquarters, where plenty of good livery was to be had. Mr. A. C. Peterson, the club's secretary, had all details well in hand, and not a hitch or word occurred to mar the pleasure of the meet. RONKONKOMA.

Champion Field Trial Association.

Editor Forest and Stream:

The fourth annual trial of the Champion Field Trial Association will be held at West Point, Miss., commencing Jan. 23, 1899.

W. B. STAFFORD, Secretary. EDWARD DEXTER, President.

Central Beagle Trials.

OWING to a discrimination by the secretary of the Central Beagle Club, the detailed report of the running promised for this week is not given.

Indiana Field Trials.

IN the report of the Indiana trials, page 412, the illustration titles "Rod's Pansy" and "Jingo's Johnny" were transposed.

Canoeing.

Canoeing in England.

After a long continued period of depression while the sport was most flourishing in the United States, canoeing experienced a marked revival in England a few years ago, about the same time declining in this country. At the present time, while there is practically no canoe racing in America except the meager display at the A. C. A. meet, there has been a general activity in the sport about its British center, the Thames. This has been under the management of the Royal C. C., the recognized head of canoe racing in Great Britain, the British Canoe Association concerning itself almost exclusively with camping and cruising.

During the past season, which has only recently closed on the Thames after an early beginning, there has been a great deal of racing in the different classes. Mr. Linton Hope, the designer, has returned to canoeing, and this alone has helped the sport, as he has both designed canoes and taken actual part in the races. The autumn meeting of the R. C. C. took place on Oct. 29, some very important changes of rules being made; these are given as follows in the Field:

The alterations made in the cruising class rule of the R. C. C. include several small revisions of dimensions and some rewording, and the rule was voted upon clause by clause, and in each case the voting was unanimously in favor of the new rule. After this opportunity for fault-finding and amending, we do not think any member of the club can honestly say that the rule is imperfect; anyway, the rule in its amended form was printed and in the hands of the members for a whole week before the meeting, and the only change made at the meeting was an agreed increase of skin thickness from three-sixteenths to one-quarter.

Among those who voted for the rule at the meeting were some of the most expert canoe men and well-known naval architects of the day, and therefore it is not saying too much to suggest that other canoe clubs would do well to adopt the class; there is no doubt about the ability and comfort of these canoes, and the safeguards of the rule are such that the class has pretty nearly all the benefits of a "one-design" class, its closeness of competition, without absolutely tying the owner down to one particular model or rig. The rule, as passed, reads:

"A cruising canoe shall, for racing purposes, comply with all the following dimensions and requirements: She shall be sharp at each end, with no transom or flat stern; any metal keel, centerplate, or ballast shall be detachable from her. Dimensions: Maximum length over all shall not exceed 17ft.; beam, not over 42in. No seat shall be extended beyond the side of the canoe. Fixed draft, including keel or drop keel, when hauled up, shall not exceed 14in. Extreme length of any spar shall not exceed the load line or rating length of the canoe; in respect of a mast, such length of spar will be measured from waterline to extreme top of the mast. Minimum dimensions: The depth inside from deck to skin (to be taken at any distance within 3ft. of mid over all length, and at not less than 10in. out from middle line) shall not be less than 12in. Depth outside from top of deck at middle line to under side of keel (taken anywhere up to 2ft. from either end of the canoe) shall not be less than 12in. Construction: There shall be a sleeping compartment between two fixed complete transverse bulkheads of wood, which are to be not less than 5ft. 6in. nor more than 8ft. apart, and not more than 5ft. from mid over all lengths, and of such compartment a length of 3ft. on the flooring shall be clear of centerplate case, and shall extend from side to side of the canoe; to such portion of the compartment there shall be a direct hatchway above it of not less than 16in. in width, extending 3ft. in length, and any bucket well or covering of any kind fitted in or over such hatchway or any part of such hatchway shall be detachable from the canoe. To each compartment, forward or aft of the above-mentioned bulkheads, there shall be a door or hatchway of not less than 80sq.in. opening. Scantling: The substance of the skin or planking shall not be less than ¼in., and of the deck shall not be less than 3-16in., in finished state, and the substance of the bulkheads above-mentioned shall not be less than 3-8in. in finished state. Rudder: Where an under-body rudder is fitted it shall be liftable through the body of the canoe until it is above the lower edge of the keel, at such place, and also shall be removable from the canoe. Rating: The rating of the canoe $\left(\frac{\text{Length of L.W.L.} \times \text{sail area}}{6{,}000}\right)$ shall not exceed 0.3. Sails: The certificate of rating shall be given in respect of one type of rig or suit of sails only, and under such certificated sails or sail only shall a canoe be qualified to compete, except that a smaller suit may be used; only one certificate shall be granted to or held at a time by any canoe. The restrictions in the construction clause, and as to scantling and rudder, shall not adversely affect any cruising canoe which was built prior to the autumn meeting of 1898, so long as such elements remain unaltered in such canoe. (Rule 26 as to certificates and marking L.W.L. shall apply to cruising canoes.)"

Such is the R. C. C. classification, which is practically set for five years. The canoe-yawl rule is exactly the same, except that all dimensions are increased by half over those of the cruising class, and the scantling of skin and deck to be 3-8in. finished, and of the bulkheads not less than ½in. finished, and the rating is not to exceed 0.5. Therefore those who contemplate building have now before them practically a five years' investment, with a safely limited class for cruising canoes, and a vague and practically unlimited class for racing canoes.

The craft built to these dimensions and restrictions will be able and handy boats when afloat, but so far as actual canoeing goes they are canoe-yawls, and not canoes; except that they draw about twice as much, they are the same as what have been called Class C or canoe-yawls in this country. While undoubtedly abler and roomier than the true sailing canoe as long as they are afloat, they lack the distinguishing characteristics of the 16 by 30 craft as a one-man boat; minimum dimensions, compact form, light weight. Once well afloat, they are all right, except where paddling is concerned, and this is merely a secondary point in sailing canoes; but when they are considered in connection with the shore, as every canoe must be, they are far inferior to the old 16 by 30 craft. The latter are in an eminent degree portable, beachable, houseable, and generally manhandleable; their compact form, shoal draft, flat floor and light weight when stripped of movable fittings making it easily possible for the crew of one to haul the boat out on a bank or bulkhead, to beach her quickly and haul clear of the sea, and to house her snugly in a limited space on floor or rack in the club house. With a second man to help, the craft could be carried a long distance. Such use is not possible with a craft of 14in. draft, and many of the best characteristics of the old canoe are missing in the new one.

What is of vital importance in this country, convenience of rail transportation, is a serious bar to any increase of size over 16 by 30; it is the custom to carry canoes for long distances by rail, with several transfers, and this cannot be done with much larger hulls.

In the racing class the legislation took a very peculiar and unexpected turn. In the course of the meeting an entirely new amendment was sprung, removing all limit of length, so that a new racing canoe may go to any extreme in this important direction. It would seem that this amendment was passed in order to kill off the class.

The recognition of the under-body rudder, hung beneath the bottom of the boat, and well forward of the stern, instead of abaft the sternpost, is another blow at the distinctive canoe nature. Even though such rudders may be fitted so as to lift out through wells, they present serious disadvantages from the standpoint of general use, and tend to make the cruising class boat but a racing machine.

However pleasing it is to know that the good old sport of canoe sailing has still a firm hold in its birthplace, we regret that the craft itself has been allowed to develop into something so different and in our opinion so inferior to the old sailing canoe.

Yachting.

The executive committee of the Y. R. A. of Long Island Sound is now at work on a plan for regulating the construction of a part of the racing fleet. This has proved quite as difficult a matter as was anticipated, the trouble being mainly how to classify the yachts which are to come under the scantling restrictions. The racing division will probably be left as at present, the 30ft. R.M. and all lower classes by the Seawanhaka rule, with no limitations to construction. In the cruising division the most practicable plan yet proposed is to give arbitrary limits to each class, similar to those of the knockabouts, with specific sizes of parts for each class. It is probable that several more meetings may be necessary before the details are complete, but the committee hopes to be able to submit its work to a general meeting of the Association prior to the holidays.

The latest report concerning Shamrock is that she is to be commenced this week, the plating being nickel-steel furnished by Krupp, of Essen.

The Yacht Racing Association of Massachusetts.

In publishing the third annual record of the Yacht Racing Association of Massachusetts, Sec'y Bliss, who is personally responsible for the excellent books of the Association, has reprinted the two previous books, of 1896-7, so that members may obtain for preservation the complete records up to date. These records, with the year books published each spring, give indisputable evidence of the success of the Association, and every guarantee of its permanence; the regular racing under uniform rules, with public and official records of performances, have become so much matters of course that it is already difficult to realize that the very reverse existed up to three years ago. The value of organization and system has been so fully demonstrated about Boston that there is no fear of their abandonment, and an object lesson has been given that may be studied with advantage in other localities.

There is no place in the country better fitted for the experiment of union and association than Massachusetts Bay, through the number of small but flourishing clubs, the many small yachts, and the host of good sailors, accustomed to both racing and cruising in equal proportions. When the conditions are compared with those existing about New York, in spite of the extent and magnitude of the yachting interests of the latter locality, it is plainly evident that in all that tends to the production of a homogeneous and well-developed racing fleet Boston has great advantages.

The Y. R. A. fleet of 1898, as officially enrolled, includes 101 yachts, divided as follows:

	Cabin.	Open.	Total.
30ft. Class	10	..	10
25ft. Class	19	2	21
21ft. Class	12	11	23
18ft. Class	..	21	21
15ft. Class	..	10	10
Knockabout Class	16	..	16
	57	44	101

The races sailed under the auspices of the Association numbered twenty-eight, between May 30 and Sept. 10, the highest number of starters in any one being thirty-nine; as a rule there were from eighteen to twenty-five starters. These races included a territory extending from Provincetown to Newburyport.

The official summary is as follows:

Class B.—30ft. cabin yachts.

	Starts.	Firsts.	Seconds.	Thirds.	Blanks.	Total Percentages.	Association Percentages.
Meemer	11	10	1	0	0	1075	97 8-11
Ashumet	11	6	3	0	2	875	79 6-11
Elfreda	7	0	2	3	2	325	46 3-7
Emma C.	7	0	1	2	4	275	39 2-7
Harbinger	4	0	1	0	3	125	20 7-11
Class D.—20ft. cabin yachts.							
Hermes	21	6	5	3	7	1300	61 19-21
Eleanor	21	6	5	4	6	1275	60 5-7
Little Peter	21	4	4	6	7	1175	55 20-21
Beatrice	20	3	3	3	11	900	45
Nettie	10	1	1	1	7	400	38 1-10
Areyto	6	2	2	0	2	375	35 7-10
Thordis	5	1	1	1	2	250	23 4-5
Tantrum	5	0	2	0	3	225	21 2-5
Class L.—21ft. yachts.							
Bud	8	6	2	0	0	750	93 3-4
Cleopatra	8	3	3	0	2	550	68 3-4
Tacoma	15	5	2	2	6	850	56 2-3
Alanka	1	1	0	0	0	100	13 1-3
Recruit	3	1	0	0	2	100	13-1-3
Class S.—21ft. cabin yachts.							
Privateer	11	9	2	0	0	1050	95 5-11
Arab IV.	11	8	2	0	1	950	86 4-11
Harriet	8	1	2	2	3	425	53 1-8
Thetis	3	0	2	1	0	200	36 2-5
Omeme	8	0	1	0	7	225	28 1-8
Class T.—18ft. yachts.							
Duchess	10	7	2	0	1	875	87 1-2
Circe	16	8	5	0	3	1225	76 9-10
Vamoose	15	2	7	4	2	975	65
Alpine	10	4	1	1	4	550	55
Bobolink	6	1	2	3	0	400	50
Maori	5	1	1	1	2	275	34 3-8
Fantasy	4	0	0	1	3	125	15 5-8
Woodbine	3	0	0	0	3	75	10 5-7
Class X.—15ft. yachts.							
Vitesse	14	10	2	0	2	1150	82 1-7
Katydid	12	5	6	0	1	950	79 1-6
Ray	9	2	0	6	1	500	55 5-9
Glide	6	0	3	0	3	300	42 6-7
Attilla	8	0	2	0	6	275	34 3-8
Knockabouts.							
Jilt	7	5	2	0	0	650	92 6-7
Chinook	6	1	1	1	3	300	50
Gosling	5	1	1	0	3	225	45
Mongoose II.	3	0	0	2	1	125	30 5-7
Dafila	3	0	1	0	2	100	28 2-3
Hazard	3	0	0	1	2	100	28 2-3
Typhoon	3	0	1	0	3	100	28 2-3
Simtram	2	0	1	0	1	100	28 2-3
Spindrift	3	0	0	0	3	50	14 1-3
Tunipoo	3	0	0	0	0	75	11 1-2
Quill	2	0	0	1	1	75	11 1-2

The executive committee has awarded the Y. R. A. bronze medals and pennants for 1898 as follows:

30ft. cabin class, Meemer, Roland C. Nickerson; 25ft. cabin class, Hermes, A. W. Chesterton; 21ft. cabin class, Privateer, A. E. Scharf; 21ft. open class; Budd (schr.), S. N. Small; 18ft. class, Duchess, Chas. Hayden, Arthur H. Parker and J. H. Blanchard; 15ft. class, Vitesse, E. H. Clapp; knockabout class, Jilt, W. O. Gay.

Meemer, whose picture, from a photo by N. L. Stebbins, is here given, was designed and built this year by C. C. Hanley, at his new shops, Quincy; the winner in the 25ft. class is also from the same shop this year, but she had a very dangerous rival, as the figures show, in Eleanor, designed by R. M. Wood. Bud is a new boat, a schooner, designed by her owner, S. N. Small, of Dorchester, an amateur. The much-discussed change of class limits and abolition of time allowance, made last winter, moved one old boat, Privateer, from the middle of the old 24ft. class to the top of the new 21ft., and she won from two new boats. Duchess, the winner in the 18ft. class, is a new boat, designed by C. D. Mower, whose Vitesse, winner last year, is again at the head of the 15ft. class, with the new yawl Katydid, designed by J. F. Small, second. In the knockabout class the honors go to the new Herreshoff boat Jilt, a keel boat, with the Purdon centerboard Chinook second. As many races of the raceabout class were sailed apart from the Y. R. A. events, the complete record of the class places Chinook much lower than in this list.

A new feature of the book, which promises to be of material value in the future, is a record of all decisions of the executive committee on appeals from the decisions of local committees in the years 1896-7-8. The official publication of such decisions does much to build up those precedents which are essential to the successful operation of even the most perfect racing rules.

Raters and Half-Raters.

The question we have so often answered has lately come to us anew: "What is a one-rater and a half-rater?" A "rater" of any denomination is a yacht built to the "rating rule" adopted in Great Britain in the fall of 1886, and abandoned in favor of what is termed the "linear rating rule" in the fall of 1895. Under this rule the "rating" of a yacht was measured by the product of her L.W.L. and S.A. divided by 6,000; thus, 20ft. l.w.l. multiplied by 300sq.ft. of sail and divided by 6,000 equaled one rating, and 15ft. l.w.l. and 200sq.ft. of sail gave one-half rating. Under the rule the small classes, one-half, one, two and a half and five rating, came into existence and prospered for some years. The rule was never adopted in America save in one or two isolated cases, and there is no good ground for applying the term "rater" to American yachts. When the half-rater Spruce IIII. came to this country to race in 1895 a new class under the Seawanhaka rule, of 15ft. racing measurement, was established; and she increased her sail area until she was over her old English measurement of one-half rating in her races with Ethelwynn. The only correct designation of this class is the 15ft. class, just as the next larger is, the 20ft. class; but a great many Anglomaniacs in this country have preferred to sail the boats and to write of them as "raters." As a matter of fact, though the boats of the two countries are generally similar in size of hull, the American boats carry much more sail and would measure very much over the limits of the "one rating" and the "one-half rating" classes by the British rule. Now that the rule has been abandoned, the term "rater" is practically out of use.

An Exposition of Yacht Racing Rules.

In the course of its quarter-century of existence the British Y. R. A. has done much for the improvement of racing methods by the publication of the numerous official decisions of protests and disputed questions by the Council; these tending to expose defects in the rules (which have been subsequently remedied), and also to make clear the full meaning of the rules to yachtsmen. As secretary of the Y. R. A., Mr. Dixon Kemp has been very closely associated with this particular work from the formation of the Association, and he has long been regarded as an authority upon racing rules and their interpretation. Under the title of "An Exposition of Racing Rules," he has lately prepared a book, published by Horace Cox, London, in which the racing rules of the Y. R. A. are discussed in detail. Under each rule are given such decisions as may have been made by the Council, with a discussion by the author of the special points involved, including many references to historical incidents in yacht racing. Where the case calls for it diagrams are given to explain the positions of the yachts. The book forms a most useful guide both to racing men and to race committees.

MEEMER.
30ft. sloop, designed and built by C. C. Hanley for R. C. Nickerson, 1898. From photo by N. L. Stebbins.

Frederick Sherwood Rathbun.

THE sixth commodore of the American Canoe Association, Frederick Sherwood Rathbun, secretary and treasurer of the Rathbun Company, of Deseronto, Ontario, died suddenly at that place on Nov. 26 of heart trouble.

He was born at Deseronto, Jan. 26, 1856, and was educated in New York city, after which he went into business with his father and brother, and rapidly rose to the position held at his death.

He married Miss Jean McMurrich, of Toronto, in October, 1877, and besides his widow there survive him two daughters and a son, in his own immediate family, as well as his brother.

Com. Rathbun was one of the old-time members of the A. C. A., who made the meets of 1884-5-6 at Grindstone so delightful to all who took part in them. His personal qualities endeared him to all who came in contact with him.

Lucien More.

IT is with deep regret that we record the death, in the early part of this month, of a historic figure in yachting, Lucien More, the French yachtsman and oarsman. We know of no one to-day in either sport who can equal the long and honorable record of earnest work which has just closed. Mr. More was born in France in 1817, and as long ago as 1836 he was known as an oarsman, prominent in boating, or as the sport is termed in France, "canotage." At this early date the pastime had by no means attained the dignity of public recognition as a sport, but the numerous successes of Mr. More attracted attention to it; in 1844 his crew defeated the crew of sailors of the Prince de Joinville, attached to the service of the vessels of the royal family at Neuilly, and in the following year he took part in the regattas at Havre, the first essay of the Parisian oarsman on sea courses. These and similar events served to bring the sport into general notice, and really mark its public recognition and the beginning of the prominence which it has since attained in France. Mr. More's efforts in its behalf, from the first, were not confined to the oar alone, but with tongue and pen he labored to perfect and popularize it; while he was always active in the work of club organization and legislation. In 1853, though by this time devoted to yachting as well as rowing, he founded the Societe des Regattes Parisiennes, for the promotion of rowing; and in 1858 he was the leader, with the aid of Alphonse Karr and several others, in the publication of the first volume of nautical sporting literature in the French language, "Canotage en France."

It was but natural that as yachting became known as a sport, about 1844, Mr. More should take to it as he had to rowing, and in 1854 he was equally prominent in the two. In this year he took charge of the little American centerboard catboat New York, imported into France by Mr. Goupil, and raced her with wonderful success against the native yachts, establishing the type in France from that time forth. Later he took up the Connecticut sharpie, and made her known to French yachtsmen. He was one of the first supporters of the Yacht Club de France, serving as secretary of the maritime committee, and from 1874 to 1879 he was president of the Cercle de la Voile de Paris. For the past twenty years he has written regularly for Le Yacht, the national yachting journal of France, his efforts covering the entire field of yachting. He was perfectly familiar with every branch, practical sailing and racing, the theory and practice of design and construction, club organization and detail, and yachting legislation; his numerous articles on type and design have been of the highest value in the development of yachting in France. Honest, fair-minded, capable, and thoroughly devoted to yachting and canoeing, Lucien More has left in these two sports, now permanently established in France, an imperishable monument to his name.

Valkyrie III.

THERE was quite a pilgrimage of yachting men to Greenock last week to inspect Valkyrie III. in the Garvel docks, where she was taken on Tuesday. The value of having Sir Thomas Lipton's challenger tried against her, especially as Defender will try the new boat which is to defend the Cup, has been repeatedly pointed out in the Yachting World, and rumor was busy when Valkyrie was towed out of Greenock Bay, where she has lain since her return. It was freely stated that she was to be refitted for the coming season, and although this statement has proved premature, there is ground for belief that it may have some foundation. She went to Greenock and was docked for hull cleaning and inspection. This is the first time she has been docked since she left the builder's hands, and a number of enthusiasts took the opportunity of having a look at her when out of water.

The bottom was found fearfully dirty, and some tons of mussels had to be removed before a fair idea of her lines could be obtained.

Her great beam, very hollow sections and extraordinary draft gave her a look of power, and taken in conjunction with the easy curves of entrance and run explained her wonderful speed in light winds.

Valkyrie, it may be remembered, was never coppered, but coated simply with a composition resembling black varnish. It was feared that under these conditions and considering that she has been afloat continuously for over three years, the wood might be sodden. On a trial being made, however, it was found that this was by no means the case. The composition had proved an excellent preservative, and the wood was as fresh and "live" as when built.

The growth of barnacles and mussels had told somewhat heavily on the surface, and strange to say, the hardwood, the oak of the stem, sternpost, etc., had suffered more from this cause and was more deeply pitted than the softer wood with which she was planked. It was apparent that to plane her down and get a proper smooth surface again would be a work of much difficulty and expense, and the probability is that before she is raced again—if it should happily be her fate to be again fitted out—she will require to be coppered all over.

After having been cleaned, examined, and recoated with black varnish, she was towed back again to her moorings in Gourock. It seems a thousand pities that this, undoubtedly the most handsome and fastest vessel ever built on this side, should be left as a breeding ground for shellfish.—The Yachting World, Nov. 11.

YACHTING NEWS NOTES.

On the evening of Nov. 22 about twenty of the older members of the Seawanhaka Corinthian Y. C. met at the club house, the occasion being a dinner to Mr. John Hyslop, the measurer of the club, who returned to New York on the Lucania on Nov. 12. The narrow escape of Mr. Hyslop, already recounted in the FOREST AND STREAM, was emphasized by the fact that in the course of the same day he had attended the funeral of a fellow passenger on the ill-fated steamer Mohegan, whose body had been recovered and sent to New York. In the absence of Com. Rouse, Mr. Tams occupied the head of the table, the company including Messrs. Foulke, A. Cary Smith, Langdon Ward, Zerega, Wetmore, Foster, Eaton, Stevens, Kerr, Sherman, Wendell, Owen, Stephens, Crane and others. After a very pleasant dinner the party adjourned to the parlors at 9 o'clock, where Mr. Hyslop held a reception, many other members being present. He told at length in a simple but very forcible manner the story of the loss of the Mohegan, and in particular of his escape. The work of launching the boats failed almost entirely, it being impossible to swing them clear of the ship in the short time between the crash and her final sinking, estimated by Mr. Hyslop as under fifteen minutes. There being more than enough about the deck to load such boats as were being launched even if the attempts should prove successful, as they did not, Mr. Hyslop, as the bow sank and the stern rose, secured a life buoy from the after rail and made for the mizen rigging, but fell into a break in the deck and was submerged, though he managed to seize a ratline. After thus getting clear, the ship sank so rapidly that he was again submerged, but he clung to the rigging and again climbed clear, reaching a position some distance above the water, with half a dozen men above him. After the vessel settled so far that she was evidently on bottom this party was joined by a quartermaster and the assistant stewardess, who leaped from a water-logged boat into the rigging. This party, with one man on the funnel and others in the fore and main rigging, clung on in the dark and cold from about 7 o'clock in the evening until 2 o'clock the next morning, when they were taken off by the lifeboat from St. Keverns. The rescue was a slow and difficult matter, the boat being compelled to anchor to leeward of each mast in succession. When near the mizenmast Quartermaster Juddery swam to her with a line, and finally a traveling bight was rigged on a heavier line and the party was taken off one at a time, each being lowered into the sea and drawn along or under the water to the lifeboat. Even then it was nearly three hours more before they were landed and cared for. In spite of the exposure, Mr. Hyslop suffered no injury. He has no explanation to offer as to how the vessel ran so far off her course, and the mystery will probably never be explained.

Ingomar, schr., J. D. Barrett, has been sold to M. F. Plant. She is one of the best schooners built of late years, a roomy and serviceable craft, of moderate draft, 88ft. over all, 66ft. l.w.l., 18ft. 6in. beam, and 8ft. draft of hull. She was designed by H. C. Wintringham and built by Lawley & Son in 1896.

The schooner Ariadne, owned by the Hon. Mrs. Meynell Ingram, has been let to an American gentleman for a prolonged cruise to the South Pacific. It will be remembered that Ariadne was built by Messrs. Camper and Nicholson for the late Capt. Charles Thellusson, and is the largest sailing schoner at present afloat. Capt. Thellusson named her Boadicea, and she had the longest masts ever put into a sailing vessel, but they were cut down after her famous match with the yawl Latona, from Torquay round the Eddystone, in a gale of wind, in 1876. She took part two years ago in the first match for the German Emperor's Heligoland cup and won a prize. At the time he had her built, Capt. Thellusson was commodore of the Royal Victoria Y. C., and there is an oil painting representing her under canvas in that club.

Uvira, cutter, C. V. Brokaw, has been sold to Robert Doremus, of New York. Mr. Brokaw has purchased the steam yacht Althea of Chas. Sooysmith.

At the annual meeting of the Knockabout Association on Nov. 25, Frank Brewster was re-elected president, J. J. Souther secretary and treasurer, and F. Elliot Cabot official inspector. T. E. Jacobs, J. P. Loud and H. H. Buck were elected as a board of judges for Association races. It was voted to make no change in existing rules and restrictions for the classes controlled by the Association. A change was desired in the racing rules so that a boat fouling a mark should at once withdraw and leave a clear field for the others, and a committee was appointed to suggest the change to clubs giving races for Association classes, particularly for the raceabouts. If it is found that the clubs do not care to take action, the Association is likely to incorporate such a rule in its own rules.—Boston Globe.

The fifth regular meeting of the Seawanhaka Corinthian Y. C., for the year 1898, was adjourned to meet on Tuesday, Dec. 6, at the town club house, 19 East Twenty-second street, at 8:30 o'clock P. M. The adoption of the following proposed amendments to the by-laws will be moved at the meeting:

Chapter VII. Section 12, to strike out the word "first" from the first line and to substitute the word "second."

Chapter XIV. Section 1, to change the period to a semi-colon and to add: "provided, however, that when any such date falls on a legal holiday, the meeting shall be held on the succeeding Tuesday."

The first meeting of the navigation class will be held at the club house on Thursday evening, Dec. 1, at 8:30 o'clock, and it is expected that weekly meetings will thereafter be held during the winter months. The instruction will be free, and all members of the club and

their friends are invited to become members of the class, at which it is hoped there will be a large attendance. The meeting will be preceded by the usual mess dinner at 7 o'clock. Members intending to join the class are requested to notify Mr. Allen E. Whitman, at the club house.

Rifle Range and Gallery.

Cincinnati Rifle Association.

CINCINNATI, O., Nov. 27.—The following scores were made in regular competition by members of the Cincinnati Rifle Association at Four-Mile House, Reading Road, to-day. Conditions: 200yds., off-hand, at the German ring target. Gindele was declared champion with a score of 229 on that target. Drube wins the honor medal with a score of 66. Gindele wins the Uckotter trophy this month with a score of 229. Early in the shoot a heavy smoke rolled over the range from town, which almost obscured the targets for an hour, much to the discomfiture of the contestants. Scores:

Champion score:

Gindele	24	21	23	25	23	24	25	22	20	22—229
Payne	19	18	24	18	21	25	16	19	20	20—200

Conlin's Gallery.

MR. JAMES S. CONLIN tells us that he will shortly reopen the shooting gallery at Broadway and Thirty-first street, this city, where he was established for so many years. The ranges will be fitted up for pistol and revolver shooting, with Mr. Conlin in personal attendance.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

Nov. 30-Dec. 1.—Sterling, N. Y.—Tournament of the Sterling Rod and Gun Club. C. F. Wayte, Sec'y.

Dec. 1.—New Brunswick, N. J.—New Jersey Tray-Shooters' League; live birds; open to all comers.

Dec. 3-4.—Milwaukee, Wis.—Tournament of Milwaukee Gun Club; live birds and targets.

Dec. 7-8.—Kewanee, Ill.—Tournament; live birds and targets. E. E. Baker, Manager.

Dec. 13.—Burnside Crossing, Ill.—John Watson's tournament; live birds only.

Dec. 19-21.—Kewanee, Ill.—Tournament; live birds and targets. E. E. Baker, Kewanee, Ill., and V. Studley, Neponset, Ill., Managers.

Dec. 19-23.—Indianapolis, Ind.—Grand Central Handicap; targets first day; sparrows two days; pigeons two days. H. T. Hearsey, Sec'y.

Dec. 27-30.—St. Thomas, Can.—Tournament of St. Thomas Gun Club. Jack Parker, Manager.

1899.

Jan. 17-19.—Hamilton, Ont.—Annual tournament and grand Canadian handicap of the Hamilton Gun Club; $1,000 guaranteed. H. Graham, Sec'y.

April 4-7.—Baltimore, Md.—Tournament of Baltimore shooting Association; targets and live birds; money added. Geo. L. Harrison, Sec'y.

April 6-8.—Utica, N. Y.—Fulford's handicap at live birds. E. D. Fulford, Manager.

April 11-13.—Elkwood Park, Long Branch, N. J.—The Interstate Association's seventh annual Grand American Handicap tournament.

April 18-20.—Lincoln, Neb.—The Lincoln Gun Club's second annual interstate tournament; targets and live birds; $500 added. Geo. L. Carter, Sec'y.

April 18-21.—Baltimore, Md.—Prospect Park Shooting Association's tournament; added money. H. A. Brehm, Pres.

May 16-19.—Erie, Pa.—Ninth annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Reed Hurst Gun Club. Frank W. Bacon, Sec'y.

May 16-20.—St. Louis, Mo.—Tournament of the Missouri State Fish and Game Protective Association. H. B. Collins, Sec'y.

May 24-25.—Greenwood, S. C.—Annual live-bird tournament of the Greenwood Gun Club; 25-bird Southern Handicap. R. G. McCants, Sec'y.

June 7-9.—Columbus, O.—Tournament of the Ohio Trap-Shooters' League, under the auspices of the Sherman Rod and Gun Club. J. C. Porterfield, Sec'y, O. T. S. L.

DRIVERS AND TWISTERS.

C. C. Beveridge, alias The Dominie, has been heard from. This week he has been in Rochester, N. Y., and has been doing some shooting, as well as attending to business. When he first arrived in that city Sim Glover offered to shoot him a match at 100 targets, the Dominie to receive 8 misses as breaks. But Mr. Beveridge refused to annex the cinch; he was opposed to expansion in the way of gathering in shoe pegs or sides of sole leather; as he would most certainly have done, for it is an awl to a piece of wax that Glover could not beat him once in a blue moon at those odds. As it was, they shot together as friends, and the Dominie went out with 93 out of his 100. What Glover made is unknown, but it is sure he made a good score, for he made a run of 50 straight in the 100.

New York got a poor deal in the matter of Thanksgiving Day weather; at least the trap-shooters of this city did. It rained hard all the morning until about 10 o'clock; then it rained and drizzled off and on "until after dinner," when snow set in, and by nightfull there was a couple or so inches of slush on the sidewalks for theater-goers to wade through. Under such conditions, it is not to be wondered at that all or nearly all the clubs that had shoots announced for that day, called them off for lack of patronage. Live birds were shot at the Westminster Kennel Club and at the West Chester Country Club. At the Westminster Kennel Club's grounds Mr. Walter Ferguson won the cup with 12 kills, Oakleigh Thorne being second. There was a good attendance of shooters, who refused to be stopped by the rain or snow.

A little item that may be news to some people is the fact that Tom Keller has deserted New Jersey and taken up his abode in New York. Next year Mr. Keller will be found at Buffalo, during the New York State shoot, taking part in the State events as a full-fledged member of the Brooklyn Gun Club, of Greater New York. Tee Kay's business address is still 88 Chambers street, but his home address is somewhere in the neighborhood of 133d street—car fare, a nickel each way, with no ferry to cross!

Considerable interest is evinced in the contest for the New Jersey target championship which is to take place on the grounds of the Bergen County Gun Club, at Hackensack, N. J., on Wednesday, Dec. 7. In answer to inquiries received at this office, it will be as well to mention that the E. C. cup and the title which goes with it are open only to residents of the State of New Jersey, who must also be members of clubs that are members of the New Jersey State Sportsmen's Association.

E. D. Fulford's idea of getting up a petition to the members of the Interstate Association, with a view to changing the division of the purse in the Grand American Handicap from high guns to class shooting, does not seem to find favor with the shooters of this section. In another column Mr. Edward Banks gives some figures, showing what the division of the purses in the last three Grand American Handicaps would have been had it been "class shooting" instead of "high guns." The figures are worth noting before signing any petition to have the system changed. It is generally understood that the members of the Interstate Association have had for some time under consideration a plan whereby the number of moneys, "high guns" as usual, may be increased so as to make more prize winners.

Tom Morfey is matched to shoot a 100-bird race with Aaron Doty, of Paterson, N. J. The match is to be shot on Wednesday, Dec. 14, probably at Arthur Bunn's grounds, Singac, N. J., and is for $100 a side. This is the first individual match that Morfey has engaged in for some time, and it is very generally expected that the young Paterson shot will make him kill 90 or better to win out, no matter how good Bunn's birds are. Morfey's sweepstake scores have not been anything remarkable of late, but he is well known to be a hard man to beat in an individual match.

We have received a programme of the three days' shoot to be held at Kewanee, Ill., Dec. 19-21. The shooting will take place at the Fair Grounds, and will be at targets and live birds. Eighteen target events and nine live-bird events are on the programme, and the management announces that as many matches and extra sweeps can be shot as the shooters desire. The Sergeant system will govern the target shooting, and the live-bird events will be class shooting, handicaps 26 to 32yds. Average prizes are offered for both the live-bird and the target events. E. E. Baker, Kewanee, Ill., and V. Studley, Neponset, Ill., are the managers.

The Boiling Springs Gun Club, of Rutherford, N. J., was about the only target-shooting club in this vicinity that did any shooting to amount to much. J. J. U. M. C. Hallowell was on hand, taking his last crack at targets prior to a trip after quail into Maryland with Jake Blenderman as his side partner. Altogether there were about twenty shooters on hand, the club's free turkey lunch and the sweepstakes for turkeys (all handicaps) being the drawing cards on this occasion.

W. M. Harding, of this city, has been in hard luck lately. On Saturday, Nov. 12, he made some excellent scores at the traps, and laid his plans to outdo those scores on Nov. 19. That day was as wet as it could be, so Mr. Harding's gun was kept in its case. He then fixed upon Thanksgiving Day for his next essay; but Thanksgiving Day was no day for trap-shooting. Neither was Saturday, Nov. 26, with its blizzard! Perhaps it is only a matter of bad luck; or is it possible that Mr. Harding has a hoodoo?

A match has been arranged between J. Fleming and Melrose Hayes, which has aroused considerable interest among the New Jersey shooters. The match is to take place on the grounds of the Forester Gun Club, Newark, at 10 A. M. on Jan. 1, and will be at 100 targets, expert rules, for $25 a side; $5 forfeit was posted by each man with the stakeholder, H. E. Winans, on Thanksgiving Day.

Harvey McMurchy is expected in the city this week, if he can be spared from the factory at Fulton, N. Y., where L. C. Smith guns are being turned out night and day to supply the demand. Tom Keller hopes to have Harvey on exhibition at New Brunswick, N. J., on Thursday of this week, and at the Boiling Springs Gun Club's shoot on Saturday afternoon, Dec. 3.

F. D. Kelsey, of East Aurora, N. Y., was in the city last week, combining business in Maiden Lane with sight-seeing in the Navy Yard, etc. Mr. Kelsey was to have taken part in the shoot at Rutherford, N. J., on Thanksgiving Day, but the elements were too much for him.

Manager John S. Wright, of the Brooklyn Gun Club, says that his club is going to be more liberal in the matter of prizes next year than it has been in 1898. Surely the treasury of that club must be in a pleasing condition if that is the case, for the club's prize shoots this year have been numerous and well attended.

Will K. Park, the trap editor of Sporting Life, is fast recovering from his attack of typhoid fever, and is well on the road to convalescence. The fresh air in and around Athens, Pa., will do much to restore his health, now that he has been able to leave Philadelphia for his native heath.

There was no shooting at the Carteret Club's grounds on Thanksgiving Day, the greater attractions at the Westminster Kennel Club and the West Chester Country Club proving too much for the shooters who usually patronize the Carteret traps.

Captain Money has just received a cablegram from his son, Noel E. Money, stating that he cannot spare the time to make a visit to the United States, the business that would have brought him here having been arranged satisfactorily.

The Chicago Challenge Trophy.

CHICAGO, Nov. 25.—*Editor Forest and Stream:* Knowing that you would not willingly publish a statement calculated to reflect upon any one, or to serve as an unjust criticism of the acts of others, I beg space in which to refer to a statement appearing in your issue of Nov. 26, under the caption of "Chicago Challenge Trophy," a contribution by Mr. A. C. Paterson. It reads: "Trustees for the Chicago challenge trophy (notwithstanding A. C. Paterson's challenge to the holder was mailed first in Chicago) have decided that E. S. Rice is to shoot for the trophy at the next contest," etc.

Under the rules governing the holder of the Chicago challenge trophy, a challenge shall not be lodged until the conclusion of the match that determines the holder. In other words, a challenge shall not be considered until the holder of the trophy is known.

At the last contest for possession of the Chicago challenge trophy, between Messrs. T. P. Hicks, challenging, and Silas Palmer, the holder, the match was started at exactly 3 P. M. One hundred birds per hour from a single set of five traps is admittedly good time, and yet Mr. Paterson, I believe, claims to have been present at the match in question, at which 52 birds were trapped, and to have deposited his challenge in the Chicago post-office (twelve miles distant from the Burnside grounds) at about 3:30 P. M., or ahead of my challenge, which was deposited at exactly 3:57.

As a matter of fact, Mr. Paterson left the Burnside grounds before the match between Messrs. Hicks and Palmer was concluded, posted his challenge from Station R, Grand Crossing, and it did not reach the trustees until hours after my challenge had been delivered and receipted for by the trustees. In this connection I would suggest that brother Paterson in future, depending upon the exact moment of posting letters rather than the time of their receipt, do not expend his money for special delivery stamps. Mr. Paterson has already had six opportunities of shooting for the Chicago challenge trophy; would it not be modest in that gentleman to give some one else a chance? Many contributed to the purchase of this medal and many are interested therein.

E. S. RICE.

New Utrecht Gun Club.

WOODLAWN, L. I., Nov. 26.—Three enthusiastic members of the New Utrecht Gun Club had the courage to face the traps and the northeast snowstorm at their bi-monthly live-bird shoot at Woodlawn to-day. The wind and snow blew right into the faces of the shooters, and made it at times impossible to see the birds. Under the conditions, Hegeman's shooting was not far from being phenomenal. The birds were all right after they got started. Targets next Saturday at Woodlawn. Traps ready at 1:30. The return match with the Endeavors has been postponed to an early date in the new year. Scores:

Class B.

A A Hegeman, 29..1111111112—10 D A Gregory, 27...0122220011— 7
E G Frost, 28.....0222011210— 7

Shell shoot, 3 Birds:

A A Hegeman, 29.....121 E G Frost, 29.....220

E. G. FROST, Sec'y.

Ossining Rifle and Gun Club.

SING SING, N. Y., Nov. 24.—A live-bird shoot was held here on Thanksgiving Day afternoon, under the auspices of the Ossining Rifle and Gun Club. In spite of a heavy wind, laden with sleet, blowing in the faces of the shooters, creditable scores were made:

Blandford .....1*22212122—9 L Washburn.....1222020*122—7
Hall.....2120*11222—8 Sherwood .....022**1*112—6

No. 2, 5 live birds: Hall 5, Washburn 4, Blandford 4, S. Sherwood 4.

Match, 8 live birds: Hall 7, Washburn 6.

Trap around Reading.

READING, Pa., Nov. 24.—The annual Thanksgiving Day target shoot of the South End Gun Club, of this city, was held to-day on their shooting grounds, along the Schuylkill River. The club shoot for the three medals was the principal event, and all events were pulled off in a blinding snowstorm. Several times during the shoot disputes arose as to small pieces being broken from targets, but owing to the snow falling so fast and thick the protests were not allowed. The scores of the club shoot follow:

Class A, 25 targets, 18yds.:

Eshelman .....1100100011011011001010001—12
Capt Yost .....0011001011011111011110010—15

The South End Gun Club's team, picked to shoot at Pottstown Nov. 30, is Yost (captain), Essick, Jack Harrison, Eshelman and Jones.

Pottstown, Pa., Nov. 24.—The annual Thanksgiving target tournament of the Shuler Shooting Club, which was scheduled to be shot to-day, had to be postponed, owing to the unfavorable weather. A heavy snow began to fall here at 6:30 A. M., and at 9:30, the time set to start the events, the ground was entirely covered over, and throughout the day there was a heavy fall of snow. At 10 A. M. the tournament committee held a short meeting and decided to postpone the shoot until Wednesday, Nov. 30, as stated in the programme, when the entire programme will be shot, as advertised. Manager Arthur A. Fink, of Reading, was on the grounds early, and had everything ready for shooting to begin at 9:30, but no events were shot until 10 A. M., when a programme of sweeps was commenced. Among the shooters present were Jack and Harrison, of the South End Gun Club, of Reading; Adams, of Phoenixville Gun Club; Urner, of Twin City Gun Club, of Spring City; Irwin, Gilson, Stone, Slonaker, Pennypacker and Smith, of the Shuler Gun Club.

A strong northwest wind blew across the traps and made shooting hard, and good scores were impossible. The magautrap was used, and worked very satisfactorily throughout the events. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19

Spring Valley, Pa., Nov. 22.—The annual fall target and live-bird tournament opened at the Spring Valley shooting grounds to-day, and will be continued on Wednesday under the auspices of the proprietor, Henry J. Seidel. Owing to the inclement weather but few shooters participated in the different events. The Spring Valley grounds are situated along the East Penn Railroad, and only two trains during the day stop at this place, thus making it very hard to reach from the city unless one walks or drives. Mr. Seidel certainly has the finest live-bird grounds in the State, being fitted with the underground system of traps for live birds, and a magautrap for target shooting. Arthur A. Fink, of Reading, had full charge of the tournament. Owing to the small crowd of shooters each day but few events were shot. Only one Reading shooter was present during the tournament, where there should have been not less than twelve present. The bad weather caused many to stay away, and thus all interest was lost in the shoot.

Among the shooters present were Thomas H. Keller, of the Peters Cartridge Co., New York city; F. W. Moffett, also of New York city; M. S. Brey, of Zionsville; Lee Wertz, of Temple; Harvey Clouser, of Gibraltar; W. I. Irwin, of Pottstown, and Francis Yost, of Reading. Chas. Bechtel was referee in all events, and gave entire satisfaction. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Targets:	10	10	10	10	10	15	10	10	10	10	5	5	5	5	5

Irwin	..	..	..	..	..	8	..	6	9	8	6	..	..	..	..

Second Day.

The live-bird events resulted as follows:

Match between Wertz, of Temple, and Winthrop, of Gibraltar, for $5 a side, loser to pay for birds:

Wertz, 26 .....1212111222—10 Winthrop, 23 .....2*2111011*— 7

Second match, Wertz vs. Winthrop, 10 birds each, $5 a side, loser to pay for birds, 28yds. rise, 50yds. boundary:

Wertz .....2011121221—9 Winthrop .....2012121201—8

Third match, Climax vs. S. S. S., at 10 birds each, $10 a side, loser to pay for birds, 30yds. rise:

Climax .....2211221121—10 S S S .....*222222222— 9

Fourth match, Climax vs. S. S. S., Climax 10 birds to shoot against S. S. S.'s 12 birds resulted:

Climax .....21*2221212—9 S S S .....02*201221110—8

Several practice matches for price of birds only followed.

DUSTER.

Bison Gun Club.

BUFFALO, N. Y., Nov. 24.—The Bison Gun Club's Thanksgiving Day shoot was attended by twenty shooters, most of whom took part in the entire programme. There were ten 20-target events shot, scores of which follow:

Events:	1	2	3	4	5	6	7	8	9	10

O'Hare	..	..	..	..	..	..	..	..	12	7

J. A. H. Dressel, president of the Interstate Association, started for Boston on Saturday afternoon, Nov. 26, in the height of the blizzard. How far he got on his way is not known at the time of writing, for his desk at 313 Broadway was dark on Monday. It is conjectured that he went to church on Sunday in the snowdrifts around New London, for very few eastbound trains got any further than that point up to late on Sunday night.

WESTERN TRAPS.

Unfortunate.

CHICAGO, Ill., Nov. 26.—Elsewhere is mentioned the race between Mr. Mussey, of this city, and Mr. Davenport, a well-known gentleman of New York, whom in this case I think best to name openly as Mr. Louis Duryea, a shooter very well and favorably known in this city for his uniform skill and his uniform courtesy and fairness at the traps, where he is a performer of known reputation. Mr. Mussey defeated Mr. Duryea, a fact which gave the latter perhaps nearly as much pleasure as it did the former, and which certainly caused him no concern. A day later Mr. Duryea was shooting at the Washington Park Club grounds, the guest of Mr. Walt Dupee, of that club. He went prepared to shoot a race which he had arranged with Mr. F. H. Smith, also of that club, the terms of which had been agreed upon, 100 birds, Mr. Smith to be given 25 dead in the 100, wager of $50 on the result. There was also to be a team race, Mr. Smith and Mr. R. R. Donnelly, Jr., vs. Messrs. Duryea and Dupee. When Mr. Duryea announced his readiness to shoot the 100-bird race Mr. Smith made the rather remarkable reply that he had thought it over and concluded not to shoot, as he was sure he would lose, since he had been advised that Mr. Duryea would surely defeat him, and he did not want to make a spectacle of himself. Mr. Duryea politely called attention to the fact that the match had been made and he was ready to shoot, but his opponent neither shot nor paid, a fact which called upon him much censure from others of the club. The team race was not shot, Mr. Duryea declining to shoot with the circumstances as they were. As perhaps Mr. Smith is ignorant of the position in which he thus places both himself and his club, and as the matter is certain to attract unfavorable comment in the Eastern clubs, and perhaps make unhappy complications, I deem it unavoidable to make this statement of the facts, feeling, however, quite sure that the governors of the Washington Park Club will advise Mr. Smith to make what prompt and full amends he may in ignorance or carelessness have withheld from Mr. Duryea. The latter is too well known here and too much respected to be allowed to go away with any but the most pleasant recollections of his treatment in Chicago, and I am sure that not only Mr. Duryea, but all the shooters of the country, will understand that Mr. Smith's action is not a customary one in Chicago clubs, but only an unfortunate one, which it will be best to correct and forget as quickly as possible.

Mr. Duryea tells me that Mr. Mussey will soon go East and shoot a little return race with him. It is by no means unlikely that honors will then be easy. Mr. Duryea thinks he lost his race here by reason of the fact that he used 7½ shot instead of 7s. He had a great many dead just over the wire.

Watson's.

The cold weather has helped the flying at Watson's, and long runs are probably a thing of the past for a while. This bodes well for the quality of the sport at John Watson's big live-bird shoot, which begins Dec. 13. John has his programmes out, and the boys may learn all particulars by applying for a programme. Sweeps will begin Monday, Dec. 12, and they will last all the week. Besides the old reliable traps at the left-hand score, which all shooters know already, Mr. Watson has put in a full set of brand new Fulford's traps on the right-hand side of the park. The divisions of the money will be tried on the equitable plan, four moneys in the purse, this for the 15-bird daily event. The trophy offered for the 25-bird sweep of the last day ($15 entrance, handicap) is quite worthy of John Watson's reputation and cost $150. The programme is scheduled the same for each day, sweeps at 7, 10 and 15 birds respectively, miss-and-out fillers if any time remains. Birds at 20 cents, and stem winders, too. This shoot ought to stir things up a plenty.

Limited December Shoot.

The programme is out for the second Grand Central Handicap tournament of the Limited Gun Club, of Indianapolis, Ind., Dec. 19-23, open to all. This follows Watson's shoot, and will find many shooters in this vicinity. A full and varied programme on targets, sparrows and live birds is offered, the rules well considered and liberal, fair to all. Send for the programme to H. T. Hearsey, secretary, Indianapolis.

Louisville.

The Portland Gun Club, of Louisville, Ky., has been organized, with Dr. E. C. Underwood president and H. H. Hartman secretary. Shoots will be held each Saturday, and this new club for the shooting city of Louisville should make history rapidly.

Ottumwa.

Ottumwa Gun Club, of Iowa, closed its annual tournament Nov. 22, after a season of the bad weather which swept over this section about that time. None the less, the attendance was good and the shoot a success. Marshall, Grimm, Gilbert and Budd were among the crackerjacks on hand. The Dago chief tied Gilbert the last day, with 139 out of 150.

"Eau Claire."

In a recent edition of the Leader, Eau Claire, Wis., I note the following clipping and comment:

"The cast iron medal and the championship of America at live birds were won at Eau Claire, Wis., on Aug. 27, by Mr. R. O. Heikes, who killed 99 out of 100.—FOREST AND STREAM, London, Eng., edition.

"The fame of Eau Claire reaches a long way. To be here is a blessing, and to be born here an inestimable privilege. It is equal to Lord Palmerston's famous 'I am a citizen of Rome.' The proudest claim that one could make in the palmy days of the Empire, and which was used with such effect by St. Paul when at extremity with his enemies."

That's all right about Eau Claire, and everybody who is anybody knows that Eau Claire is a redhot sporting town and full of sportsmen as an egg is of meat; but while we are speaking of Eau Claire, and St. Paul and London, why not take into consideration for comment the fact that it was through the columns of FOREST AND STREAM that Eau Claire got the reputation it has in London? I do not remember whether Lord Palmerston was a shooter, but if he was, he no doubt read FOREST AND STREAM, or was singularly behind the times for one in his position. This is the oldest and the best sporting paper printed—indeed, to use a certain phrase, it is the Daddy of them All.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

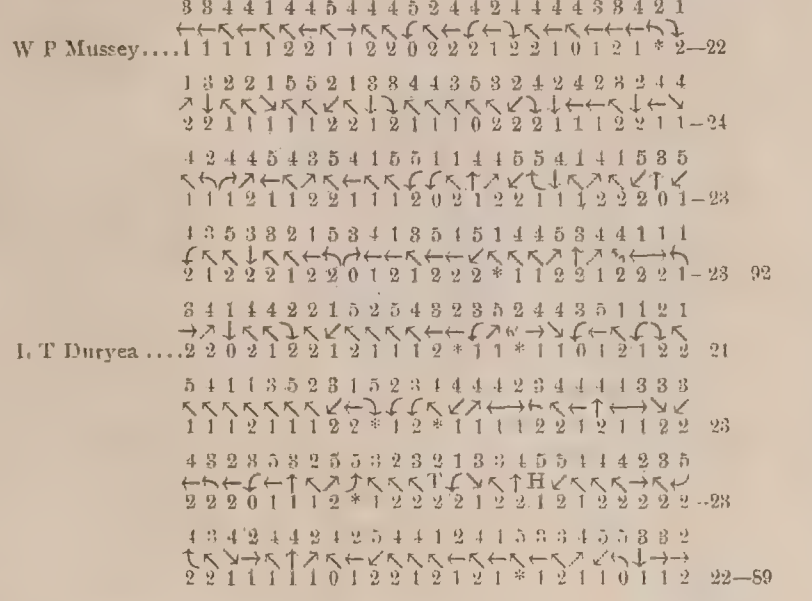
Mussey vs. Duryea.

On Wednesday afternoon, Nov. 23, an interesting race at lively birds took place at Watson's Park between L. T. Duryea, of New York, and W. P. Mussey, of Chicago, in which the latter won by the narrow margin of three birds. The race was at 100 live birds for the price of birds and other considerations. Both gentlemen shot in excellent form, though Duryea was somewhat handicapped by shooting small shot in his first barrel; many of his birds were hard hit and centered, but fell dead out of bounds, as will be seen by the score following.

The attendance was small on account of the event not having been published. Among those from out of town were Mr. and Mrs. C. H. Pardee, of Brooklyn; Mr. and Mrs. L. T. Duryea, of New York; Mr. Peevey, of Cripple Creek; C. H. Wilcox, and several other regular visitors.

The wind blew strong and puffy from the left quarter, accompanied with a strong snowdrift. The birds were strong and fast, without a loafer in the lot. Both participants shot Francotte guns and Schultze powder. Duryea, 48grs., 1¼ 7½ and 7 in Smokeless cases; Mussey, 48grs., straight 7 in Trap cases.

Mussey went to the score first, killing his first five handily, using his first barrel only. His 6th, a strong tailer to the left quarter, hard hit with the first and nicely stopped with the second. He also made a good stop with the second of a black outgoer in the 10th round. His 12th, a black left-quartering incomer, slightly hit with the first, was undershot with the second. His 13th, a strong black bird, dropped near the trap on the first barrel, finally recovered sufficiently to get away close to the wire before exhausting its energy. His 20th he undershot. His 24th was a white left-quartering incomer; though hard hit, it fell dead out of bounds. His 34th was a lucky blue one, which struck the wire and fell in bounds. His 62d and 72d were both lucky, falling close to boundary line. His hardest bird was a black twister, which was nicely stopped with the second.



Mussey took a lead of one on the first 25, and increased it to two on the second 25; held it even on the third 25, and gained one on the last 25, and went out with 92, which was considered a good score, considering the day and birds.

Duryea dropped his 3d, a white left-quarterer, by not leading enough. His 14th, a copper-color, fell close to the trap; after using both his barrels the bird recovered sufficient strength, aided by the wind, to get out of bounds. His 20th, though hard hit with the first, was missed clean with the second and got away. He made an excellent stop with one barrel of his 28th bird, which was a swift left-quartering tailer. His 35th, a white right-quartering incomer, was hard hit, and fell dead out of bounds. The same luck followed in the 38th and also in his 59th. He made a good kill of his 62d, which was a white left-quartering towerer. His 76th was a blue circling outgoer, which fell dead against the outer boundary wire. His next was a good, swift left-quartering tailer and was well killed. His 83d was a similar bird, apparently not hard hit. His 92d was hard hit and fell dead out of bounds. He made a clean miss of his 97th, and went out with 89, with five dead out of bounds.

Mr. Duryea was unable to overcome his opponent's lead of two birds, and increased it to three on missing his 83d. Mussey followed, missing his 84th, decreasing his lead to two, and subsequently to one on missing his 91st, leaving him only one bird ahead. Duryea missed his next, the 92d, and 97th, and lost by three birds.

Following is detailed score:

Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

Mr. Duryea signifies his intention of shooting another match on the 28th inst., provided he shall be in Chicago on that day.

Milwaukee vs. Chicago.

The Milwaukee Gun Club, of Milwaukee, loses the series of live-bird races to the Sheridan Gun Club, of Chicago, in the final contest, Saturday afternoon, Nov. 26, at Watson's Park, Burnside Crossing, by 13 birds. This is the third race between the clubs; the Milwaukee winning the first and the Sheridan the two following. The secretary, Mr. Flanigan, also Mr. Biedenweg, were unable to take part on account of the absence of Messrs. White and Hay, of the Milwaukee; hence only eight men were shot on each team.

The race was at 25 live birds to each participant, 30yds. rise, for the price of the birds and suppers. It was full of interest from start to finish, though the Sheridan's lead could not be overcome. Many good, clean kills were made by the contestants on each side.

Among those present were J. J. Smith, H. E. Wiley, Henry Levi, R. Simonetti and others. Good kills were roundly applauded. The wind blew hard from the right quarter, and the birds were largely left-quartering tailers, which started fast. The ground was covered with a light snow, and the strong sunlight which prevailed made white birds hard to see. After the race was over the Milwaukee boys gave a rousing three cheers for the Sheridans, of Chicago, which was followed by a similar act on the part of the Sheridans.

The score in the preliminary practice is as follows:

No. 1:

J F Wulf	11112	Dick Dwyer	02120
J E Bush	11112	Geo Deiter	00*20
G A Crane	20121	Jas Pease	01212

Alpine Club.

The Alpine Club will have a team race at live birds among those comprising its membership. The race will be at 10 live birds per man, for the price of the birds and some glory. The race will be held at Watson's Park, Wednesday afternoon, Nov. 30, at 2 P. M. Team picked by R. Simonetti will be R. Simonetti, S. Tony, G. Chiesa, G. Biagi and J. Plonzek. Team picked by J. B. Barto will be J. B. Barto, D. Bacci, G. Marvigilia, P. Checola and C. Fangrande.

It is expected to be a close race.

Milwaukee Gun Club.

The Milwaukee Gun Club, of Milwaukee, Wis., announces its second annual tournament, to be held on their grounds in Chase's Valley, south of city, in Milwaukee, Dec. 3 and 4, under American Shooting Association rules. They will throw targets at 2 cents, and trap live birds at 20 cents each. Targets will be thrown under the Sergeant system. In all events there will be four moneys, divided 40, 30, 20 and 10.

Garfield Gun Club.

The Garfield Gun Club, of Chicago, held its first monthly live-bird contest at the traps on the club grounds, corner West Fifty-second avenue and Monroe street, on Saturday afternoon, Nov. 26. There was a large crowd in attendance, and nineteen participated in the main event.

The wind blew hard on the backs of the shooters at the score, which made the birds largely tailers. The ground was covered with snow, accompanied with a strong sunlight, which handicapped many of the participants on light-colored birds. The club will give a series of six contests, which will take place monthly, consisting of 10 live birds to each contestant. There will be three prizes awarded to the three highest averages, based on the four best scores during the series.

The club has not shot live birds on its own grounds for the past two years, until this time. The large attendance is largely due to this fact, as most of the club members reside within a reasonably close distance from the grounds.

The high scores of the contest were made by R. Kuss, C. E. Comley, who went out straight. The contest is at 10 live birds, distance handicap. Following are detailed scores:

S Palmer, 30	1112011022— 8	S E Young, 28	1112021112— 9
R Kuss, 30	1122121222—10	W Riddiford, 28	0210211012— 7
J W Meek, 27	2201102101— 7	E S Rice, 29	1110101202— 7
J Workman, 28	1210200200— 5	T P Hicks, 31	1110122110— 8
J Gardiner, 29	2100122212— 8	W A Jones, 27	1100111120— 7
C Steiger, 28	0001202022— 5	P C Bradley, 29	1111012121— 9
C E Comley, 29	1211121112—10	M H Shaw, 26	0011011201— 6
N Nusley, 28	1022101121— 8	Geo Bartelme, 27	0200019012— 4
C P Richards, 28	0020110001— 4	T Eaton, 26	0010100002— 3
A Fehrman, 29	0220112221— 8		

Following the trophy event was a sweep at 6 birds, which resulted as follows:

S Palmer	201201—4	Fehrman	010011—3
W A Jones	121200—4	Hicks	021120—4
A Gardiner	111010—4	Workman	110200—3
C W Steiger	211111—6	J Gardner	101111—5

C E Comley	211112—6	T Eaton	211120—5

A. C. PATERSON.

The Grand American Handicap.

Figures for Fulford.

NEW YORK, N. Y., Nov. 26.—*Editor Forest and Stream:* Mr. Fulford is apparently responsible for a very wide-open statement in your last issue that certainly calls for comment. Nothing could be further from Mr. Fulford's wishes than to mislead the trap-shooting public; yet he does so in his brief communication.

After stating that he is getting up a petition to have the system of dividing the purse in the Grand American Handicap changed from "high guns" to "class shooting," and asking for letters from shooters granting him permission to use their signatures, Mr. Fulford makes the following explanation for such action on his part:

"The man who can kill 25 will be handsomely rewarded, and nearly all the rest will more than get their entrance back."

Coming as it does from a man of Mr. Fulford's standing, the claim made in the above paragraph is remarkable. Mr. Fulford has shot in so many 25-bird races, $25 entrance, birds extra, that he should know that the results in those races have seldom come anywhere near his statement of the case. I can refer him to the late contest at Belle Meade near Nashville, where, with $500 added, not guaranteed, there were only thirty-six shooters. Did the results at that shoot justify his statement?

I might mention several other similar events, some with added money and some without, in which Mr. Fulford competed; but what use would it be? So many shooters have taken part in those events, with results so uniformly in opposition to Mr. Fulford's statement, that nothing need be said further as to such shoots.

Just an Ordinary 25-bird Event.

The fact of the matter is that, if the Interstate Association were to make the division of moneys under the "class shooting" system, the Grand American Handicap would be no longer the Grand American Handicap, but would sink down to the level of an ordinary 25-bird race, $25 entrance, birds extra. If the Grand American Handicap would be such a great success if class shooting was adopted, why are not all the other similar events equally grand successes? The Association gave a cup to be competed for this year, but it has never added any money to the purse, for the reason that the shoots costs the Association a good, big round sum of money every year. Why then should the Grand American Handicap be as big an event even as the late Belle Meade handicap, at which $500 in solid cash was added to the purse, with a handsome trophy thrown in?

In 1895.

In April, 1895, the conditions of the Grand American Handicap were $1,000 guaranteed to the three high guns; all surplus added. As it happened, Messrs. Messner, Elliott and Class all made 25 straight, and shut out the 24s and 23s, some of whom, however, came in on a division agreed to on the evening of the first day, when only a few men were left in with straight scores. There were sixty-one entries that year.

In 1896.

For 1896 the Association made a change in the conditions, again guaranteeing $1,000 to the three high guns, but dividing the surplus; that is, all the money in the purse above $1,000, between a certain number of other guns next below the three high guns. Messrs. Daly, Sr. and Jr., donated a silver cup to the winner. The result of the change was evidently popular, for there were 109 entries, 104 of whom contested for a purse of $2,710. There was no straight score, nine 24s and thirteen 23s dividing the purse. I cannot give the moneys paid out to the 24s or 23s, but under Mr. Fulford's system the 24s would each have received about $90, while the 23s would each have drawn down something like $52 apiece. Total entrance fee is $32.50. What the other eighty-two shooters would have got is problematical. They would certainly not have got back more than entrance fee, nor anything like their entrance fee, for the whole of the purse not accounted for above would not have given them quite $15 apiece, if they had divided it up equally between them.

In 1897.

In 1897, when the 22s came in for money, the division of moneys, class shooting, would have been as follows: T. A. Marshall, first money alone, $1,063; nine 24s, $98.50 each; eleven 23s, $64.22 apiece; thirteen 22s, $40.90. It is quite true in this case that the 25 was handsomely rewarded, and that the 24s, 23s and 22s got back more than their entrance fee, but it should not be overlooked that there are yet 110 shooters or thereabouts out of the 140 odd who shot in the event who have only some $350 left to divide among them. In other words, thirty-four men would have drawn down about $3,200 out of a total purse of $3,545!

In 1898.

Last March nine straights and twenty-two 24s cut up the purse of $5,075. The straights received $412.65 each, the 24s got $61.85 apiece. The sum of $1,500 was guaranteed to the three high guns, and the rest of the purse up to 170 entries (at the time supposed to be an outside figure) was divided among the twenty-two next high guns. To allow for any surplus, it was stated in the programme that any surplus over 170 entries should be divided into ten equal parts and go to the ten high guns. As there were thirty-seven more entries than the figures set—170—there was a large surplus to be divided among the ten high guns. As the straights pooled their moneys, the division was as above.

But suppose it had been "class shooting"? Straights would have paid $169.16; each 24 would have got $57.66. As there were forty-five in the 23 hole, each of them would have received only $22.55. The above figures dispose of the whole of the purse with the exception of about $1,270, with 121 shooters still unprovided for, or about $10 apiece. Their entrance back? Oh, no! The 23s would have lost $10 of their entrance fee even!

Why Change the Conditions Radically?

Why should the conditions of the Grand American Handicap be radically changed? The conditions as they have been in the past have proved to be drawing cards. There were twenty-one entries in 1893 and 207 in 1898. No one man caused all that increase in the number of entries. The increase was due to the fact that the conditions made it worth while for men, good men, crackerjacks, to come from a distance to compete in the event. The presence of those men was a drawing card, for there were 133 entries last March from States east of the Ohio and north of Mason and Dixon's line. Take away the chance of a man's paying his entrance fee and expenses, and such men will not come and compete. Mr. Tom Marshall's "first money alone" in 1897 would not be repeated in all probability for some years to come.

The above are my impressions as to the situation. If the Grand American Handicap had ever been a failure, I would be one of the first to say: "Change the conditions." As matters stand, I hope to see the old conditions, with possibly more moneys, retained for the Handicap of 1899; and I have yet to hear one good common-sense reason as to why the Interstate Association should make a radical change for its shoot next April.

EDWARD BANKS.

Philadelphia Trap-Shooters' League.

PHILADELPHIA, Pa., Nov. 19.—The ninth tournament of the Philadelphia Trap-Shooters' League was held to-day on the grounds of the Florists' Gun Club, at Wissinoming, under the auspices of the Delaware River Gun Club. Rain fell heavily, and good scores were hard to make. The Florists' team, with 168 targets to shoot at, won the team race by 6 targets over their nearest competitors, the Southwark Gun Club, 185 targets. In the sweeps Jack Hallowell carried off first honors, but he was hard pressed all the way through by Ridge, who was only 3 targets behind. Scores:

Pawling Rod and Gun Club.

PAWLING, N. Y., Nov. 24.—The second annual tournament of the Pawling Rod and Gun Club, held on Thanksgiving Day, can be called a pronounced success, despite the inclement weather. The morning dawned with a decidedly damp prospect, and all the participants that were expected from New York and vicinity were evidently frightened by the gloomy outlook and did not appear; those from the North and West were evidently made of different stuff, and put in their appearance.

At 10 o'clock the shoot began with six shooters, which number was increased to thirteen by noon. The regular programme of twelve events was shot out, although the snow and sleet were decidedly disagreeable, and it was simply impossible for any one to make large scores. Mr. I. Tallman, of Millbrook, who is evidently at home in inclement weather as well as when the sun shines, carried away the honors as well as most of the wealth. Messrs. H. Nelson and E. I. Foster were also right up in the front row.

Despite the severe storm the shooters faced the traps for five extra events, and even then some of the most enthusiastic wished to continue. Had the weather been pleasant there would doubtless have been one of the largest attendances of sportsmen ever seen here. A most bountiful lunch was served in the club house at noon, to which all did ample justice. The shoot was managed by our new captain, Mr. H. Nelson, who, as usual, looked after the various wants of the visiting sportsmen in a most agreeable manner, as all present can attest. The cashier's department was looked after by Messrs. Daniels, Arnold and Williams in a way that was appreciated by all the shooters.

Referees, Mr. T. E. Roberts and Mr. Morton Haines. Scorer, Mr. B. Chapman.

At the annual election of officers, held this month, the following were chosen: President, F. C. Taber; Vice-President, Morton Haines; Secretary, G. S. Williams; Treasurer, G. A. Daniels; Captain, H. Nelson.

The scores:

G. S. WILLIAMS, Sec'y.

IN NEW JERSEY.

East Side Gun Club.

Newark, N. J., Nov. 24.—The Thanksgiving Day shoot of the East Side Gun Club was not as well attended as it might have been, but this was entirely the fault of the inclement weather. The shooters who did appear had some good sport. Four live-bird events were shot. The first was a handicap, but the rest were shot from the 28yds. mark. The scores:

Boiling Springs' Turkey Shoot.

Rutherford, N. J., Nov. 24.—Thanksgiving Day was about as bad a day for trap-shooting as could be imagined, hence the shooters did not turn out in as large numbers as was expected. The snow fell heavily, and a strong wind blew. Nevertheless seventeen shooters participated in the turkey shoot of the Boiling Springs Gun Club. There were three turkey events and three ordinary sweeps. Fifteen turkeys were offered, four each in Nos. 1 and 2, and seven in No. 3. The shooting in the turkey events was at 25 targets, handicap allowance. Scores:

No. 1: G. Piercy, 3, 25; L. Piercy, 4, 24; Hatfield, 6, 23; Hallowell, 1, 22; Seeley, 4, 21; Pierson, 10, 20; De Long, 5, 22; James, 6, 19; Black, 10, 17; Coe, 9, 20; Banta, 4, 24; Van Dyne, 4, 15; Bock, 4, 14; Paul, 4, 19.

No. 2: G. Piercy, 0, 21; L. Piercy, 2, 19; Hatfield, 4, 21; Hallowell, 0, 22; Seeley, 4, 19; Pierson, 10, 16; De Long, 5, 23; Black, 10, 22; Banta, 4, 23; Van Dyne, 4, 16; Bock, 4, 18; Paul, 4, 18; Jeanneret, 5, 24; Borchart, 8, 25; Frank, 4, 23.

No. 3: G. Piercy, 3, 20; L. Piercy, 4, 20; Hatfield, 6, 25; Hallowell, 0, 20; Seeley, 4, 19; Coe, 9, 25; Banta, 4, 25; Bock, 6, 19; Paul, 4, 22; Jeanneret, 2, 19.

Forester Gun Club.

Newark, N. J., Nov. 24.—The members of the Forester Gun Club had arranged for a good day's sport on Thanksgiving Day, but the day was a most disagreeable one for trap-shooting, and everybody was disappointed. A number of prizes left over from Saturday's shoot were to have been shot for to-day, but owing to the small attendance they have been put over, to be shot for on Christmas. The scores to-day were poor, as it was difficult to distinguish between the targets and the snowflakes. Events Nos. 1, 2, 3, 6, 8, 13 and 14 were at known angles; the balance at unknown angles. Scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14

ON LONG ISLAND.

Knebel's Shoot at Springfield.

Springfield, L. I., Nov. 24.—A live-bird and target shoot was held here to-day at Dooley's Hotel. The shoot was managed by Henry Knebel, Jr. Four live-bird events and two target events were shot. The live-bird events were all at 5 birds, $1.50 entry, 50yds. boundary, 28yds. rise, class shooting. The birds were a good lot, but the weather was very bad. Scores:

Crescent Athletic Club.

Brooklyn, N. Y., Nov. 26.—The Crescent Athletic Club's weekly shoot was held here to-day. Snow fell heavily, but the members stuck to the shooting till all the events had been shot. The principal event was the November cup race. Stake won this, and the cup becomes his property, he being three targets ahead of Geddes, his nearest competitor. In the team shoot for the Sykes cup Geddes and Stake won by 8 targets. White beat Halleck in a 100-target race by 59 to 54. Scores:

November cup event:

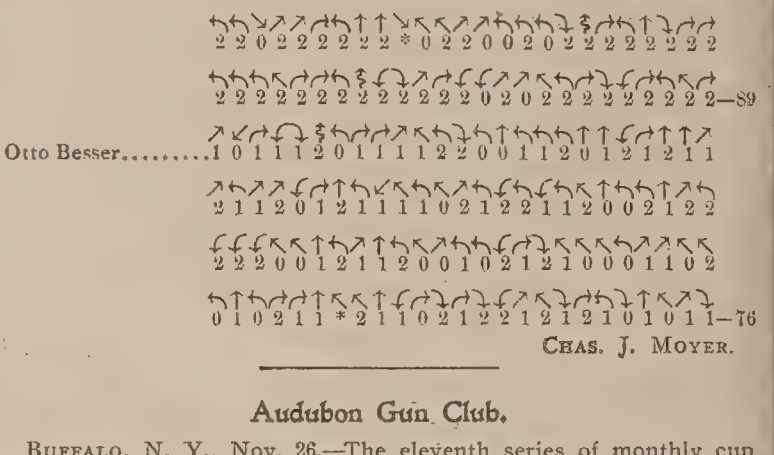
Brooklyn Gun Club.



Nov. 26.—John Wright said he would have a shoot to-day no matter what the weather was. It began to snow about noon, and it kept on snowing; but Wright and three other Brooklynites entertained Louis Harrison, of Minneapolis, Minn., with an afternoon shoot in a snowstorm. Nine events were decided, all being "for targets only." Scores follow:

Burkhardt vs. Besser.

BUFFALO, N. Y., Nov. 24.—In a 100-bird match for a purse of $200 and the championship of Buffalo, C. S. Burkhardt defeated Otto Besser by the score of 89 to 76. The match was shot at Audubon Park, the grounds of the Audubon Gun Club. About 500 people witnessed the match, and it was the opinion of all present that a better lot of birds was never trapped. Betting on the result was very lively, Burkhardt being the favorite. He led Besser by three birds at the first quarter, by six at the 50th round, by nine at the third quarter, and finished thirteen birds in the lead. The winner shot U. M. C. factory-loaded shells, 1¼oz. No. 7½ shot, 3½drs. Du Pont powder in first barrel, and 1¼oz. No. 7 in second. Jack Fanning was referee, and Chas. Hebard trap-puller. The flight of the birds is given below in FOREST AND STREAM'S copyrighted trap-score type:

Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

Audubon Gun Club.

BUFFALO, N. Y., Nov. 26.—The eleventh series of monthly cup events for this season was shot to-day at the Audubon Gun Club's regular club shoot, and was won by E. C. Burkhardt, who made the grand score of 26 out of 27 targets shot at. This event was No. 4 on the programme. No. 3 was the club badge shoot. E. C. Burkhardt won Class A, E. N. McCarney and R. H. Hebard tied for Class B, McCarney winning shoot-off, and Porter won Class C. On Saturday next the Hebard trophy will be contested for.

Another feature of to-day's shoot was the match at 50 live birds per man between E. C. Burkhardt and E. N. McCarney, which was won by McCarney by the score of 42 to 41. The same men will shoot a match under the same conditions next Saturday. The following is a summary of the scores:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	15	15	25	25	25	Targets:	15	15	25	25	25

CHAS. J. MOYER.

The One-handed Record.

MR. LOUIS DURYEA, of New York city, on New Year's Day, two or three years ago, on the New Utrecht grounds, near Coney Island, shot a one-handed race with Maj. Coulson. Mr. Duryea (who shot under the name Davenport) defeated his opponent with a score which I think was 48. A friend says that Davenport's score was 47. Will the editor of FOREST AND STREAM please be so good as to state, at earliest convenience, what was the score in this race? The columns of the paper will show it, but I have not the latter accessible. This score is the one-handed record, and I would like to have it correctly stated, also terms of race. The answer will oblige H.

[On Jan. 1, 1896, on the grounds of the New Utrecht Gun Club at Woodlawn, L. I., L. T. Duryea and G. W. Coulson shot a match, which was to be at 50 birds. Both men stood at 30yds., and Duryea was allowed the use of only one hand. His opponent used both hands. At the end of the 32d round, with the score standing 25 to 15 against him, Duryea withdrew. His withdrawal was due to the high wind which blew across the grounds, and placed him at a decided disadvantage. On Jan. 7 the same men shot another match, with the conditions slightly changed. The match was at 50 live birds per man, $100 a side, Duryea to stand at 28yds. and use one hand, Coulson to stand at 32yds. and allowed the use of both hands. The scores were: Duryea 47, Coulson 40. One of Duryea's birds fell dead out of bounds.]

Pennsylvania State Association.

PITTSBURG, Pa., Nov. 26.—*Editor Forest and Stream:* I have been requested by the Reed Hurst Gun Club to announce that the ninth annual tournament of the Pennsylvania State Sportsmen's Association will be held at Erie, Pa., May 16, 17, 18 and 19, 1889. ELMER E. SHANER, Manager.

PUBLISHERS' DEPARTMENT.

The many friends of the Savage rifle will be pleased to learn of the success the arm is meeting everywhere. The demand for it has far exceeded the production, and has resulted in the equipping of one of the finest plants in existence with the most advanced type of machinery, especially adapted for manufacturing high-grade modern smokeless powder rifles. The rifle was introduced a little over two years ago, and its fame has penetrated the most distant countries of the globe, orders having been received from out-of-the-way towns in Siberia, Java, Finland and Japan. The greatest criticism has been the fear that so small a caliber as the .303 would not be sufficiently large for moose, grizzly bears, and big game generally, but this has come from those who have never used or seen the effect of small expanding high velocity bullets on flesh and bone.

Arthur W. Savage, the inventor of the Savage rifle, was the first person to shoot big game with the modern smokeless powder, small caliber cartridge. In 1889 twenty samples were secured of the first French smokeless powder cartridges manufactured by that Government, and a chamber in a special rifle was made to take them.

The Savage Arms Company in purchasing the machinery and organizing their establishment has utilized the skill and experience of practical, up-to-date gun mechanics, and thoroughly competent business men, with the resultant perfection of product only attainable when conditions are right. All criticism on the Savage rifle brought to the notice of the company for the past two years has been carefully tabulated, and the result of this foresight is the improved 1899 model, in which the principle has not been changed, though many minor improvements have been added.

The greatest attention is given to inspection and the proof testing, so that every rifle that leaves the establishment is known to be perfect and sound. The rifle will be constructed both with a newly designed steel shotgun butt plate and the regular metal rifle butt plate, either of which can be had at the same price.

THE FLINT-LOCK.

A FEW years ago there was printed in the FOREST AND STREAM a note of the gun-flint making industry, conducted on a large scale in European factories, to supply the trade of Africa and Asia. Mr. Belknap's inquiry for a flint to complete the mechanism of his Hudson's Bay relic has again brought out the fact that flint making is by no means a lost art. As is told in another column, there is still a market for gun-flints, and the supply is equal to the demand. As for the African and Asian trade, that is readily understood. Hunters who live a primitive life must have primitive weapons. With them the gun must be preserved in its simplest form. For the flint-lock only powder and ball are required, and these are standard commodities throughout vast regions where it would be difficult if not impossible to distribute cartridges and primers. In some regions, too, the flint-lock is not only all sufficient for its purpose, but to its continued use, in place of more perfected weapons of the chase, is due in large measure the permanence of the game supply. If the repeating rifle and the double-barreled shotgun are marvels of convenience and accuracy and effectiveness, this is only another way of saying that they are tremendously destructive agencies of game depletion. Consider what would have been the hunting conditions of our own country if the generations which have had part in the shooting had been confined to the use of the flint-lock; and then reflect that over vast stretches of territory in foreign lands this is the very condition which has prevailed. The flint-lock may be out of date and the hunter who uses it may be behind the times; but in his own land, because of game more abundant in supply and less wary because less mercilessly pursued, he may yet be on a level with his more perfectly equipped brother.

We look upon the flint-lock as so antiquated and so crude at the best, in comparison with our own guns, that we are apt to take for granted that when the percussion lock came along it was accepted without hesitation and with eagerness by the progressive sportsmen of the day. But the fact is that the gunner has always shown himself to be a conservative, wedded to the old ways, and reluctant to abandon the tried and the trusted for the new and unproved.

Every radical improvement in firearms has been forced to make its way in the face of distrust and opposition, and with hard won and grudging approval on the part of the veterans. The first volumes of the FOREST AND STREAM show communications from many a dubious convert to the new order of breechloaders which were then supplanting the muzzleloader. In the early years of the century, when the percussion lock came in, there were sportsmen and good sportsmen too, even the best, who made sturdy defense of the flint-lock, and surrendered to the new-fangled arms with reluctance and distrust. Col. Peter Hawker was one of the accepted authorities on shooting in those times; in 1816 he published a volume of "Instructions to Young Shooters," which was so popular as a text-book that it went to an eighth edition by 1838. This was three years after the death of Joseph Manton, the most celebrated maker of flint-lock guns that ever lived. A "Joe Manton" was regarded as the perfection of sporting arms; and he is to be envied even at this day who possesses one as a relic. The period from 1816 to 1838 elapsing between these editions of Hawker's book were times of transition from flint to fulminate; and although long before his eighth edition the Colonel capitulated to the detonators, as the percussion arms were called, he did so not without a mental reservation in favor of the old gun. "Though, like the rest of the sporting world, I have long been kidnapped," he wrote, "into the constant use of detonators, still I have no reason to alter the opinion I gave in 1822; and were my time to come over again, I might probably be content with the flint; though I have, of course, as every one does, shot more accurately and missed fewer quick shots with the detonator."

Within a short period prior to 1838 the detonators had been improved by being bored to detain the shot longer in the barrel, in order that the powder "might have time to kindle"; but this increased the recoil and produced leading; and despite the many wadding devices resorted to for overcoming this fault, no detonator of equal weight could be made to "shoot quite so strong and regular as a flint gun." The stronger shooting of the flint Colonel Hawker insisted upon, as, after an experience of eighteen years with both arms, "the more shots I fire," he writes, "the more I am persuaded that the flint gun shoots the strongest into the bird, and by far the easiest against the shoulder." And the Colonel was sportsman enough to back up his convictions when it came to a bet, which appears to have been in his day as it is in ours the one incontrovertible argument to prove a point and vanquish an apponent. On a certain occasion in the establishment of a gun-maker, a well-known sportsman being present, the maker offered to bet the Colonel fifty guineas that a detonator of equal size would beat a flint gun. "I immediately took up the bet," the Colonel records, "and told the clerk to book it, and offered to double it if he lost. He then fought off and would not stand to what he had proposed." Subsequently it was developed that the gun-maker had only been bluffing for the purpose of getting from the well-known sportsman, who was a listener to the colloquy, an order for a brace of detonating guns.

The formal dictum of this old-time shooting authority, as given to Joseph Manton, was that "for neat shooting in the field or covert, and also for killing single shots at wildfowl rapidly flying, there is not a question in favor of the detonator, as its trifling inferiority to the flint is tenfold repaid by the wonderful accuracy it gives in so readily obeying the eye. But in firing a heavy charge among a large flock of birds, the flint has the decided advantage."

There was one quality of the old-style gun which we are persuaded does not attach in such degree to the new, in the affection its youthful possessor entertained for it. In these days of beautiful arms, so numerous and so cheap, is it possible that the ownership of a gun can mean so much as it did to those boys who are now old men, looking back to their first gun through the haze of the years?

SNAP SHOTS.

It is to be hoped that something may come of the action of the Massachusetts Fish and Game Protective Association in its invitation to the farmers' clubs to co-operate in the care of the game interests of the Commonwealth. That the Boston market should be open the year around for the reception of illicit game from Maine and from the West is nothing short of a national disgrace. If Massachusetts alone were concerned in this matter, the citizens of other States might have no just ground of complaint; but the condition now existing is one which does affect Maine and Vermont and Michigan and Minnesota and every other State to which the Boston marketman stands in the relation of a fence, a receiver of stolen goods. In maintaining an open game market the Commonwealth is behind the age; not less is it strangely deficient and unprogressive in the requisite machinery of game protection. If the public resources of field and stream are worth preserving at all, they are worth caring for in a business-like and effective way. Massachusetts should have a competent and efficient game protective service, appointed to do actual work, and paid for doing it. Whatever is accomplished now in this direction is mainly the result of individual or associated enterprise of private citizens. No enlightened State can in these days shift the responsibility of taking care of its resources; and only a pauper State should depend on the voluntary activities of its citizens to do for it what it should do for itself.

We print a communication from Jackson's Hole, Wyo., which relates that the permanent residents and substantial members of the community are united in an effort to insure that the game of the country shall be given the protection which the law contemplates for it. The game question held such a place in the last State election as to be a determining factor in the result; and now an appeal will be made to the Legislature to remedy the defects in the statute by which constant raids on the game supply have been perpetrated. What is needed in Wyoming, however, is not so much a new law as upright, straightforward and determined officials to enforce the one already on the books. In numerous instances talk about defective law is talk wide of the issue. The law is all that could be asked if it were only enforced; an ounce of execution is worth a hundredweight of amendment. The Jackson's Hole live elk export scandal in 1897 was possible only because of official connivance in the violation and defiance of the prohibition against taking live game out of the State. The exportation enterprises carried on this year and complained of by our correspondent have been possible only by deliquency of officers whose sworn duty it was to arrest the poachers.

You may not believe in luck, just pure downright luck; but how can you expect to dissuade from firm faith in its potency the moose hunter who goes into the woods season after season for five years and comes home empty-handed, only to see another man, on his first trip and on the first afternoon after arrival in camp, stumble upon the game, bring it down, and having all the law allows—not twelve days in camp—pack up and put for home?

A man in Massachusetts boards the train with ticket for Sauk Center, Minn. A duck leaves its home up North Pole way, bound for High Island, Texas. Here begins a chain of circumstances, acting through thousands of miles of space and along lines of latitude and longitude, and so ordering things to the minute, that the man from Boston and the duck from the British Possessions strike the Minnesota pass at the same moment, and the gunner reduces the fowl to possession. If the man had been a day earlier or a day later he might have got another duck, and if the duck had passed on before it might have fallen to some other gun further south; but that this particular man should accumulate this particular duck was purely fortuitous, that is to say, is was luck.

If we deny luck, we eliminate one of the most potent factors of hunting, that recognized element of uncertainty in the pursuit which consoles for disappointments and encourages and gives heart for renewed effort. There is marvelous mitigation of chagrin over failure in the reflection "Just my luck!" and a stiffening of the backbone in the sanguine self-assurance of "better luck next time." The more experience one has to draw upon the more pursuaded is he that successful shooting and fishing are not altogether matters of careful preparation, and the simple exercise of skill and perseverance. Beyond these, and more potent than all else, is that factor of fortune which we call luck.

In his report on the Yellowstone National Park, Capt. James P. Erwin, the acting superintendent, gives high praise to Lieut. Lindsley, of the Fourth Cavalry, and Scouts Morrison and Whittaker, who with the assistance of the soldiers on winter station and in garrison did "work which was of the highest importance to the Park in the protection of its game, to a large extent prevented poaching, and resulted, in connection with the mild weather of last winter, in a large increase of game life of all descriptions." The buffalo in the Park are estimated at fifty, and Capt. Erwin expresses the opinion that they are not increasing; but the reports we have had of calves having been seen south of the Park give ground for belief that the number is growing. The vermin problem in the Yellowstone, as our correspondents have more than once pointed out, is coming to be a serious one; the bears and coyotes are multiplying at a rate which must some time compel the adoption of heroic measures for their control.

The visitors to the Park this year, between June 1 and September 30, numbered 6,538, as compared with 5,438 in 1895, 4,659 in 1896, and 10,680 in 1897. The extraordinary showing for 1897 was due to the influx of the army of Christian Endeavorers, who improved the opportunity of their excursion to the Pacific Coast to make a side trip into the Park. The increased travel of 1897 indicates a growing appreciation of this magnificent public domain; yet when the natural wonders and sublimities of the Yellowstone are considered, the number of visitors, large as it is, is ridiculously out of proportion with what it should be.

The Sportsman Tourist.

A Visit to Rowland Robinson's.

The other day I made a pilgrimage by boat and bicycle to the home of the sage of the Little Otter. The house stands on a rocky elevation, twenty or thirty rods back from the main road, surrounded by a native growth of oak and beech and hickory, except in front, where the exotic locusts and Lombardy poplars mark the approach. A mile away on either side are Lewis and Little Otter creeks, and in front is Lake Champlain, though no water can be seen from the house.

The principal feature of the landscape is the Adirondack Mountain range, of which there is a magnificent view. The house is a fine old mansion, the newer portion dating back of the war of 1812, and the older part antedating the Revolution.

Inside is a wealth of trophies and much interesting and beautiful material of especial interest to sportsmen. There are arrow-heads and implements used by the primeval hunters of the Champlain lowlands, and bullet moulds and rifles of the white men who followed. The antlers of a Vermont moose are over the door, and near by are antlers of elk and deer. On the walls hang half a dozen guns, and sketches and paintings of game and fishing and shooting subjects abound. The atmosphere of the home is distinctly artistic, for not only master and mistress have the talent for visual expression, but also one of the daughters. Mrs. Robinson's oil paintings of game are truthful and felicitous, but in father and daughter the love of line, as exemplified in black and white illustration, is the ruling motive.

In his latest book, "A Hero of Ticonderoga," is an admirable portrait of Rowland E. Robinson. It is the face of a strong, thoughtful and broad-minded man—a man who, despite the fact that he cannot see his surroundings, takes the keenest interest in every-day life, and criticises men and events with a philosophy that is alike humorous and kindly. What the picture does not describe is the good coloring and hardy physique of the sixty-five-year-old six-footer.

Mr. Robinson does not strike you as being a blind man. Certainly no one ever parted with eyesight more gracefully.

In conversation his look follows the speaker, and there is no feeling of anything out of the way or call for sympathy or special attention that is sometimes so awkward and constraining. Robinson is a born host, and instinctively puts his guest at his ease.

Our conversation was largely about Forest and Stream. Mr. Robinson has a love of the paper nourished by many years' friendship with its editors and contributors. He mentioned them all by name, and included Schember and Day, of the printing office force, but for fear I should leave some of these Forest and Stream friends out I will not attempt to give the list. Of two of the brotherhood who have gone to the majority he made particular mention. One was Ufford, whose story of the Irishman treed by a pseudo grizzly recurred to memory and furnished a good laugh, and the other was O. O. S., the quizzical humorist, who hid tragic suffering behind a jester's mask. Robinson corresponded with O. O. S., and has one letter written two days before the latter's death which is as free from repining or self-commiseration as the moon is of green cheese.

Of himself Mr. Robinson said little, and he took more interest in talking of what others had written than of his own stories of the old Yankee frontier life. In a general way I gathered that his first love had been for drawing and illustration, rather than writing, and that he had only taken up the pen when the pencil and brush were denied him. He is a natural story-teller, as any one who listens to him five minutes finds out, and his keen natural observation, strengthened by artistic training, has apparently gained in power indirectly through his misfortune. The little touches in his descriptions of landscape or such a commonplace as the expression of berries falling in the basket in "Ras'berrying in Danvis" show the refinement of observation.

Sam Lovel, Mr. Robinson says, is a creation and not a portrait, but the statement will not make him any the less a portrait to those who have known the fox-hunter and fisher on the Slang.

Sam Lovel is a character with whom most sportsmen are acquainted, and to such the truth of the likeness is a source of never-failing pleasure.

I arrived at the Robinson homestead before the family had risen from dinner, and was shown into the old-fashioned dining room, about which was that air of homeliness and hospitality that seems the special property of old houses. I had already dined, but was persuaded to take some bread and honey, and then some mushrooms, but lo and behold! when the time came the mushrooms were all gone. Mr. Robinson said the incident reminded him of the case of an old Quaker lady at whose house a visitor arrived cold and wet after a long drive.

"Thee are cold and wet," said the old lady. "Thee needs spirits; won't thee have spirits? But we haven't any spirits in the house."

As it turned out, however, the case wasn't a parallel. Some fresh mushrooms were put on and cooked and served up on toast, deliciously hot and appetizing, and better than any I had ever eaten before.

I happened to allude to the fact that Mr. Robinson was called Judge Robinson on the New York side of Lake Champlain, and the fact amused him greatly. "These people over here don't appreciate me," he said, with a smile; "they're more apt to call me Rowl, or any old nickname, than Judge."

"But aren't you a judge?" I asked.

"No," said Robinson, "not that I know of."

Some one suggested that the title might have been given in an honorary way, and then Mrs. Robinson's brother, who is an old-time Colorado frontiersman, said: "Why, Rowland, you're a Justice of the Peace, aren't you? In parts of New York State they call a justice Judge. You'd better move across the lake and get the benefit of your title."

J. B. Burnham.

Three Trips into Maine.
